Dear Sir,

2005 JAN 13 AM 12:07

I have a 2001 Chevy pickup with 21,300 miles on it. When I took it to the dealer, I told them I had a clunking noise in the steering column. They said it was ~~that~~ intermediate steering shaft and it wasn't a safety concern.

I believe that it is a safety concern because it is progressively getting louder with only 23,300 miles on it now.

Please advise
