[REDACTED]
West Monroe, LA [REDACTED]

Dear [REDACTED]

Thank you for your correspondence dated March 8, 2005, concerning a problem you encountered with your 2001 Ford F350 truck. Your correspondence was received by the Office of Defects Investigation on March 23, 2005. Due to limited resources we were not able to respond to you in a more timely manner. We regret any inconvenience our delay may have caused you.

The National Highway Traffic Safety Administration (NHTSA) is the Federal agency responsible for improving safety on our Nation's highways. We are authorized to order manufacturers to recall and repair vehicles or items of motor vehicle equipment when our investigations indicate that they contain serious safety defects in their design, construction, or performance. We also monitor the adequacy of manufacturers' recall campaigns. In order for the agency to initiate an investigation, we look carefully at the body of consumer complaints and other available data to determine whether a defect may exist. We cannot act on isolated problems or resolve disputes between individual owners, dealers, or manufacturers.

We appreciate the report you provided. Reports from motorists are a very important source of information for us. Each report is analyzed and entered into a database to help us determine whether an investigation into a possible safety defect is warranted.

Clearly, transmission failures and the cost of their replacement is frustrating. While frustrating, the type of transmission problem you described will not likely result in an unreasonable safety risk to public safety within the meaning of our authorizing statute. The transmission problem described typically provides warning signs to the vehicle owner before a complete loss of transmission failure would occur. Given the warnings provided to the owner and the result of mostly not being a safety risk to public safety, there is insufficient evidence to warrant opening a safety defect investigation. If you have not done so, you may consider contacting your local Consumer Protection Agency, Better Business Bureau, or the Louisiana Office of the Attorney General regarding your problem.

DOT AUTO SAFETY HOTLINE
888-DASH-2-DOT
888-327-4236

NHTSA is aware of Ford's Technical Service Bulletin (TSB) concerning intermediate Diode freewheel failure in certain Ford vehicles equipped with 4R100 transmission. However, the issuance of a TSB does not necessarily reflect the existence of a safety-related defect. Neither Ford nor NHTSA has determined that the vehicles in question contain such a safety-related defect. Therefore, NHTSA cannot require Ford to perform the corrective action described in the TSB on your vehicle at no cost to you.

You can contact our toll-free Vehicle Safety Hotline (Hotline) at 1-888-327-4236. One of our representatives may be able to assist you on matters concerning motor vehicle and motor vehicle equipment safety recalls or to report an alleged safety problem. You can also request safety information. If our telephones are busy, or you call during non-working hours, you can leave your name, telephone number, and a brief subject on our recording system. A Hotline representative will return your call.

Additionally, we have an Internet Web site at <http://www.nhtsa.dot.gov> that you may want to visit. An electronic Vehicle Owner's Questionnaire (VOQ) is also available on this Web site at <http://www.nhtsa.dot.gov/ivoq>. This form is for vehicle owners to report safety related problems about their motor vehicles or motor vehicle equipment, e.g., child safety seats, jacks, tires, brake fluid, etc. The reports submitted are transferred to our database and are used to identify safety-related defect trends that require our attention. If you do not have access to the Internet, please use the enclosed VOQ to inform this agency of any future motor vehicle or motor vehicle equipment safety problems you may experience. Also, a summary listing of vehicle owners' complaints, safety recalls, manufacturers' service bulletins, etc., can be obtained at <http://www.nhtsa.dot.gov/cars/problems>.

If further assistance is needed, please contact Mr. Michael J. Jordan, Safety Defects Program Assistant, Correspondence Research Division, Office of Defects Investigation, at (202) 493-0576.

Sincerely,

Alberto A. Jimenez, Chief
Correspondence Research Division
