PLEASE THE FOLLOWING TO : ATTACHED COPY OF COMPLAINT NO.
10125611 dated 17 Jun 05:

A defect has developed on the car mentioned in attached VOQ. The car cannot be filled thru the fuel pipe to the gasoline tank, and the fuel gage on the dash is stuck on "full". Upon examination by the dealer, it was found that the car will not take any fuel, nor will the gas gage register anything but "full". The dealer has decided that the vehicle needs a "kit" to be placed on top of the fuel tank. I must now run the car until the tank is empty or at least half full, so that the tank can be removed and repairs can be made.

I certainly hope that my car is the exception to the rule. Otherwise, Chrysler will show a loss for the year if many of these early "300"s are so afflicted.

New Hampton, VA
