Subject: 2003 tahoe steering problem

*Received
1/19/05*

i am having a problem with clunking in my steering mid level shaft. my dealer tells me that there is currently no fix for it. this chunk is getting worse and i fear a steering failure may be possible. chevrolet has been contacted, but has no answers. there are 150,000 requests nationwide for a fix for this. i am very concerned given the fact that this vehicle tips up in safety tests. please advise. thank you.
