To whom it may concern,

10136673

We are the owners of a 2005 Winnebago Sightseer model 29R. We believe there is a serious safety problem with the seat belt system in this RV. The problem is there is no vertical adjustment for the seat belt and in Mrs. Wolf's case the seat belt would cause serious damage to her if she were in an accident (see attached photos). I hope you can do something to get Winnebago to correct this problem. Their Technical people have told us there is nothing that can be done.

Yours truly,

cc. Winnebago Industries Inc.
