Dear Personnel,

While driving my 2003 Dodge Caravan, the accelerator stuck wide open. We avoided an accident. My Dodge dealer said the warranty wouldn't cover it because the linkage "gummed" up due to varnish. They said this could come from bad gas or unclean air filters. I don't mind the warranty doesn't cover as the repair bill was only \$105. But when I questioned them if cleaning that linkage was part of a tune-up, they said no. In fact it is not listed anywhere in their maintenance manual.

I wanted you to know.

Sincerely,

Renner, SD
