[REDACTED]
Celina, OH [REDACTED]

Dear [REDACTED]

Thank you for your correspondence dated November 3, 2005, concerning your 2005 Pontiac Vibe. Your correspondence was received by the National Highway Traffic Safety Administration's (NHTSA) Office of Defects Investigation (ODI) on November 29, 2005. Due to limited resources we were not able to respond to you in a more timely manner. We regret any inconvenience our delay may have caused you.

NHTSA is the Federal agency responsible for improving safety on our Nation's highways. We are authorized to order manufacturers to recall and repair vehicles or items of motor vehicle equipment when our investigations indicate that they contain serious safety defects in their design, construction, or performance. We also monitor the adequacy of manufacturers' recall campaigns. In order for the agency to initiate an investigation, we look carefully at the body of consumer complaints and other available data to determine whether a defect may exist. We cannot act on isolated problems or resolve disputes between individual owners, dealers, or manufacturers.

We appreciate the report you provided. Reports from motorists are a very important source of information for us. Each report is analyzed and entered into a database to help us determine whether an investigation into a possible safety defect is warranted.

We have reviewed our database in an effort to identify whether a safety defect trend exists with regard to problems associated with the air bag system and non-deployment in a crash in 2005 Pontiac Vibe vehicles. At this time, there is insufficient evidence to warrant opening a safety defect investigation. The information you provided has been entered into our database. It will be considered with other reports to identify any safety defect trends that may require our attention.

Each manufacturer designs its vehicles so the air bags will deploy if the severity of a crash exceeds a certain threshold. However, there is no Federal requirement establishing a particular threshold. Most manufacturers design their air bags to deploy when the crash severity is in the range of an 8 to 14 mph crash into a fixed solid barrier. This severity is about the same as a crash into another vehicle of equivalent weight at 16 to 28 mph. In lower speed crashes, where

888-DASH-2-DOT
888-327-4236

the air bag does not deploy, occupant protection is provided by the design of the interior surfaces in the vehicle, as well as by the safety belts provided at each seating position.

A number of factors, other than crash severity, can affect whether an air bag will deploy in a given crash; e.g., the angle of impact, the speed of the other vehicle, and the amount of force absorbed by the other vehicle or object that is impacted. Only an expert in crash reconstruction can provide an educated opinion as to whether the air bag in a vehicle should have deployed in a specific crash.

If you have not done so, you may consider contacting your local Consumer Protection Agency, Better Business Bureau, or the Ohio Office of the Attorney General regarding your problem and your rights under the Ohio Lemon Law. You may also ask your dealership for a meeting with General Motors district manager regarding your problem.

You can contact our toll-free Vehicle Safety Hotline (Hotline) at 1-888-327-4236. One of our representatives may be able to assist you on matters concerning motor vehicle and motor vehicle equipment safety recalls or to report an alleged safety problem. You can also request safety information. If our telephones are busy, or you call during non-working hours, you can leave your name, telephone number, and a brief subject on our recording system. A Hotline representative will return your call.

Additionally, we have an Internet Web site at <http://www.nhtsa.dot.gov> that you may want to visit. An electronic Vehicle Owner's Questionnaire (VOQ) is also available on this Web site at <http://www.nhtsa.dot.gov/ivoq>. This form is for vehicle owners to report safety related problems about their motor vehicles or motor vehicle equipment, e.g., child safety seats, jacks, tires, brake fluid, etc. The reports submitted are transferred to our database and are used to identify safety-related defect trends that require our attention. If you do not have access to the Internet, please use the enclosed VOQ to inform this agency of any future motor vehicle or motor vehicle equipment safety problems you may experience. Also, a summary listing of vehicle owners' complaints, safety recalls, manufacturers' service bulletins, etc., can be obtained at <http://www.nhtsa.dot.gov/cars/problems>.

If further assistance is needed, please contact Mr. Michael J. Jordan, Safety Defects Program Assistant, Correspondence Research Division, Office of Defects Investigation, at (202) 493-0576.

Sincerely,

Alberto A. Jimenez, Chief
