Stranded!! I am afraid to tow it any farther. I have a 2004 Terry 5<sup>th</sup> Wheel camper model 365FLTS which has a safety recall which I can not get fixed. It has a "Rod and Angle" cross member weld and poor design weakness problem. NHTSA recall #05V289000 and Fleetwood #50615 .--

On 5 different occasions, I called Fleetwood owner relations, the help received was names and phone numbers of the nearest dealer. First I called Lee's RV at Batesville Indiana. They knew nothing of the recall and didn't want anything to do with it, even though that is where I bought it. The next 4 dealers, for one reason or another would not do the work. One dealer was called 4 different times to no avail, others said they were not dealers even though Fleetwood Owners Relations said they were.

Lippert components, who makes the chassis, was called 3 different times. The last time I was told what was required to fix the problem.

In order to safely pull the trailer. I found a local machine, welding shop who did the required work for me at a cost of \$337.50.

Fleetwood Enterprises needs to reimburse me for the expense.
