To whom it may concern:

I have a 2008 Pontiac Solstice with brake problems. When I apply the brakes first thing in the morning they do not work. The dealership has blown this off and told me that it's caused by a thin layer of rust on the rotor that has to "burn" off. They said it was because it was parked outside. This is a serious issue. The ability to stop backing out of my drive or parking lot from work is fundamental. Incidentally, they make horrible grinding noises when they are "burning the rust off". The VIN number of my car is 1G2MF35X18Y [REDACTED]. It is the GXP, turbo edition.

Thank you for assisting with this matter.

I am

Sincerely Yours
