Problems with my 1997 Chevrolet Astro Van 4.3 Engine, V-6.

1. Bad wiper motor (recalled by G.M.)
2. Odometer lite went out while driving.
3. Air Condition Compressor went out and a certified mechanic removed the compressor and found a security lock was on this Van, to track this Van if the Van was stolen. It took my mechanic and his friends three days before they could get the Van started.
4. Driving 35-40 miles per hour the motor would cut off and the Van became hard to control.

5. The motor cut off with my family in the Van and I had a hard time controlling the Van. I tried the ~~brake~~ and the Emergency brake, finally I geared the Van down and got it to stop.

6. Bad computer

P.S. please check your Van and give me a prompt response!
