RE: Safety Complaint-2002 Honda Passport
Veh. ID 4S6DM58W824[redacted]

Gentlemen:

I purchased this vehicle new in 2002 and currently still have this vehicle. It has approximately 97,000 miles driven, and was used only for going back and forth to work.

The integrity of the entire under section has been compromised by severe correction and rust. Both sides of the frame rail sections are so rusted out that the traction bars are in danger of detaching from the frame rails. The vehicle is now unsafe and no longer drivable. This corrosion is obviously the result of a manufacturing defect that has created a serious safety issue and warrants an immediate recall. Does anyone have to die before Honda will act and take action?

I am requesting that your agency take action and issue a recall for this vehicle.

Sincerely,

[redacted]
