picked up vehicle 03/09/11, dealer said they did not see anything wrong with the trunk lid or any other problems with the car that could cause the noises I heard. mechanic said he is not paid to pull the rotors off to inspect inside, he can only perform a visual inspection. the car seems to be okay but time will tell, I will inform you as to the exact date the next time the trunk lid opens while driving or I find it open when car is parked or if something goes wrong with the car.
