Incident Information

Approximate Incident Date

10/18/2011

For multiple incidents enter the first date of occurrence.

Was there a Crash?  Yes  No

Was there an Injury?  Yes  No

Failure Mileage

54,279 miles

For multiple incidents enter the first failure mileage.

Number of Persons Injured, if any

Speed (at time of incident)  45 mph

Number of Deaths, if any

Description (up to 1900 characters)

This description, exactly as you enter it, may appear in a public NHTSA database. Do not include any personal information (name, street/email address, phone number, vehicle identification number, Vehicle Identification Number (VIN), etc...).

This problem has occurred several times since October 18, 2011. At 45/50 mph when the jeep experiences the "death wobble" whereby the jeep's wheels suddenly begin to wobble to the point that one almost must be slowed down immediately. This condition appears to be quite common in the jeep wrangler at this point as it occurs so frequently.

If your component is not listed below, please describe the component.
