Gentlemen: Subject; Total BRAKE System failure
of an (year) 1999, (MAKE) MERC Sable, V.I.N.

(V.I.N.) 1MEFM53S1XA purchased New, for
cash at Courtesy Lincoln Merc, Highway 60 Tampa,
(Brandon), Fla. Built in U.S.A. Aug. 99, delivered Sept.
99. car brake system completely failed, except
for the foot brake too left under dash. I was
lucky, as the failure occurred in my drive-way.
I re-filled the master cylinder tank with the
proper brake fluid and it again failed as the
"break" in the line was at the back left brake
line. My complaint is that when I (have) repair
the hydraulic line, it could happen at any time or
speed and it will be impossible too "find" the emer-
gency peddle too complete left in time too avoid
an collision. Please advise if there is anything
you or I should do. (brake wires?)
