---

Good Day,

I am asking what can I do about MC 04 hatch with 40,000 mileage, maintained, garaged, that once off the warranty began to stall and placed family under an extremely dangerous situation when unable to move it while on busy highway. This situation repeated more than three times, no longer taken on highway or driven unless under a couple of miles distance.

How to go about reporting the danger of this car (and as I could read from multiple owners, based also on class-action suit in CA and one other state) we personally experienced?

The MINI/BMW claims they have never heard of any problems although similar situation described by many owners to the central corporate office.  
No responsibility taken on the "great engineering" - what guidance could we get from you?

Thank you,

[REDACTED]
