MAR 26 2014

CEO;

Several days ago I received a recall for my 2005 Honda Accord EX V6, recall NHTSA 12V-222 dealing with leaking power steering hose, cracking and leading to possible under-hood fires.

I will take it in for replacement repairs.

My concern thou is much more. My wife has a 2006 Honda Odyssey Touring Van with a V6. In calling, they tell me that there is not a recall on it. I seriously wonder why not, I see good reason to suspect the same problem on the 2006 V6. This past fall my wife had to replace the power steering pump, hose and tank, all three had fluid leaks and failures, the power steering fluid was almost all gone. Detected by a Honda service agent when he noticed a strange hum.

Now I find it hard to believe there is not a recall on the 2006 Odyssey for power steering replacements for this problem, appears almost identical and similar to the recall of my 2005 Honda.

Please verify to me and the NTSB in writing that there is NO problem with the 2006 V6 power steering.

Secondly, we have just had to replace the GPS Navigation unit on the 2006 Honda Odyssey , screen just went dead, however Honda service says there is power to it.

In talking with Honda, they tell me there will be a recall on the 2006 Odyssey for a fuel pump cover problem causing leaks, notification coming in April 2014 and new parts installed in June 2014.

Honda and Toyota always had stellar reliability, but now both have a lot of recalls too. Also now the GM fiasco with ignition switches since 2000 which was covered up apparently until now, causing a number of deaths. Sure makes me wonder what we are producing today. NOT GOOD.

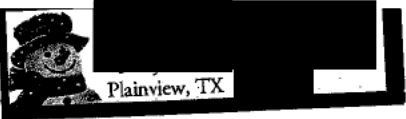

Sincerely,
