I am concerned about Motorcycle safety problems.

I have a 2006 Honda VTX1300r. It had a very bad shake in the front. 4500est. mileage at time of Repair. The steering bearings were bad. I have reported to NHTS, with no response. Other people report the problem. They told me to contact you. I fell this should be a manufacture recall. Cause it is very dangerous. Handle bars get a violent shake at low speeds 35 to 45 miles per hour. Very dangerous and very expensive repair. Happens low mileage should have been covered By Honda Motorcycle Division. Thanks.
