The Department of Transportation

JAN 20 2015

in regards to a vehicle malfunction for a defective sensor that is known to go out on my 2001 Mercedes-Benz ML55 AMG.

On November 20, 2013 just as I left my residence in Shreveport, LA, I was headed home when the right/front tire of my S.U.V. locked up completely by surprise sending me and my vehicle into the opposite lane avoiding parked vehicles on my right, forced me to cut off oncoming traffic making a U-turn and causing the vehicles that I cut off to collide and sent my S.U.V. onto the sidewalk missing parked vehicles and somehow the same sensor that is suppose to prevent rollovers in harsh conditions such as snow, ice, rain etc... caused my vehicle to rollover onto it's roof, then back on all four tires.

In a situation such as mine and the year, make, and model there should have definately been a recall on the defective part. as a safety precaution something that Mercedes-Benz is reputable for. However and for whatever reason it wasn't and now the gift

that I had purchased for myself on June 15, 2013 as a graduation gift is totaled back with the financing company and I'm the one that has to pay for it.

With the assistance of the Dept. of Transportation, I would like to pursue this incident with the appropriate person(s), even if it means settling in or out of court. I'm not sure if I'm writing the right authorities concerning this mishap that could have been avoided just like the defective airbags and faulty ignitions that has caused numerous death and hospitalized for injuries associated with defective equipment from Toyota, Ford, and GM just to name a few.

Please write back promptly regarding this incident with information that I can use to fwd. this to the proper authorities that deals with issues as such.
