Subject: Defective ECM computer

Re: VIN# 1NXBR30E17Z [REDACTED] 2007 Toyota Corolla LE Sold in  
California.

To whom it may concern

Please double check if this vehicle has any or has had any  
problems as a model or any vehicle of Toyota which uses the  
same ECM computer.

I recall that soon after it was purchased some engine  
control computer was replaced. It had some issue with  
stalling and restart.

This car now constantly indicates a random miss fire from  
the same cylinder however no cause can be found for it.

I realize this part would be extremely expensive to  
purchase and have installed correctly with no assurance it  
would work and incurring further labor charges.

Again; please confirm if any issues exist that relate to  
this symptom.
