

ATTN: Highway Safety OCT 24 2017

This letter is in regards to the
O.R.C. code 4513.03

It's about vehicle headlight and
how bright they can be and how many
lights can be on the front of a
vehicle.

Personally I believe the vehicle
manufacturers and the companies
making the bulbs are violating the laws.

Yes I own a 1995 F150 with the
old style headlights and the way
I rate this is like this.

These new headlights are just
as bright on the dim side as my
old truck is on the (bright side)

This needs to be corrected and
changed even if it means for them
to recall vehicles and put headlights
in that are not so bright.

I've always had problems with
them, but on Oct 12th 2017 at 11:00 pm
I had an Ohio highway patrolman
following me and his lights were
so bright when reflecting from
my mirrors they were blinding me to
the point I couldn't see the lines on the road
ahead of me!

I was on Rt 36 east and going
thru a town called Port Washington
I had no idea it was a state
trooper and when I went out of the
corp. limits I even kept my speed
down think the idiot would pass
me but he didn't.

He stayed right there and I
strongly believe he did it intentionally.

Hoping I would mess up and he
could pull me over and give me a ticket

The reason for saying that is because
that's exactly what happened.

Because of his ignorance, I
have to pay - All because he created
a hazardous driving condition.

And they wonder why people
don't respect them.

yes I've filed a complaint
with Sargent Bower of the New
Philadelphia Post, but he sided
with the patrolman.

Phone

patrol post ph.
