Larry,

Thanks for forwarding this complaint to us. We will look to see if there is a safety related defect that needs to be pursued.

In the future if you would like to direct consumers in the right direction, I would encourage them to contact the agency in one of two ways.

1. Call the Auto Safety Hotline at 888-327-4236 or;
2. Visit <https://www.nhtsa.gov/> and click on Report a Problem

Hopefully this will stop them from coming directly to you.

Thank You,  
Bruce York

Steve,

Don't know why I keep getting these. I think this belongs with somebody in your Office, but not sure

who. He's asking about a possible safety defect.

Larry

**Subject:** 2007 Winnebago

I 'am the original owner of a 2007 Winnebago Voyage. VIN # 5B4MPA7G77 [REDACTED] I have a water leak on the driver side windshield. I took the motor home to Novus to have them reseal the windshield. Upon arriving at Novus, I was informed that the center bar of the windshield which supports the roof and the windshields. The windshields have not been removed or replaced, but yet water got into the seal and rusted out the center support. This seems to be a common problem with Winnebago class A motor homes according to Novus. I would think that this could be a safety problem if this support give way and the windshields fall out while driving down the road. Thank you for any information.
