3. Resolution desired?
 Refund Repair Contract rescission
 Other, explain Refund
4. Have you referred this complaint to:
 Another agency An attorney Small Claims Court
If yes, name: _____

OVER

Department of Consumer Affairs
County of Monmouth
September 4, 2015

In regards to an ongoing intermittent problem that I am experiencing with the Polaris Slingshot I purchased June 4, 2015. The Polaris Slingshot is a three wheel vehicle (two in front - one in back) which can be view online by searching Polaris Slingshot. It is registerd in the State of New Jersey as a motorcycle.

Polaris address is:
Polaris Industries, 2100 Highway 55, Medina, MN 55340
Telephone: 1-800-765-2747

The purchase was made at Metro Group of NJ located at 911 Middlesex Ave, Metuchen , NJ on 06/04/15. Telephone number 732-906-9292. Shortly after my purchase I began to experiencing extremely high engine revolutions during the process of shifting gears. This vehicle has a manual five speed transmission - one reverse

On July, 16 2015 I took the vehicle to the closest authorized Polaris dealership, Xtreme Machines which is located at 700 State Highway 33 West, Millstone Township, NJ. Telephone number: 732-786-9696. The mechanic performed a road test, but could not identify the problem regarding high engine revolutions during shifting.

I contacted Polaris and explained the situation. I was given a case number: [REDACTED]

On July 29, 2015 I returned to the dealership, Xtreme Machines, with the same concern regarding the high revolutions during shifting the transmission. At this time my concern turned to safety as the problem was occuring more often, and the engine revolutions between shifts were exceeding 3,500. The Xtreme Machine service manager advised me that there was an ECU update from Polaris which should correct the problem. The upgrade was performed by Xtreme Machines. IT DID NOT correct the problem.

I contacted Polaris again. Polaris then contacted Xtreme Machines requesting that they repeat the ECU update. A repeat ECU update was performed by Xtreme Machines AGAIN IT DID NOT correct the problem.

Xtreme Machines has sold two other Polaris Slingshots that developed the identical problem — excessive engine speed when shifting the transmission gears. (noted in the enclosed correspondence between Polaris and Xtreme Machines.

The problem still exist, and I need intervention to resolve it.

I will appreciate any and all assistance you may offer.

Sincerely

[REDACTED]

CUSTOMER AGREEMENT: The person(s) whose signature is affixed to this Agreement (the "Customer"), affirms that he or she is the lawful owner and/or equitable owner of the subject property, or such owner's authorized agent, and has authority to execute this Agreement; and Customer agrees to be personally responsible for all fees, charges, and costs associated with the property and make payment to Dealer upon demand to include but not limited to the post and pre-repair daily storage fees. Pick-up of stored property, or property deemed a total loss by an insurance carrier shall be Tuesday through Friday from 10 am to 4:30 pm. Customer authorizes Xtreme Machines® LLC ("Dealer") to store, make or cause to make repairs, modifications, and/or installations of original equipment manufactured ("OEM") parts, and non-OEM parts to the property in accordance with the repair order, purchase order, and/or estimates relating to the property which are hereby incorporated in this Agreement as if set forth in their entirety, for all sums stated therein, plus all additional sums for labor, repairs, expenses, materials, and parts that may be later expended and/or incurred on the property by Dealer if modifications, repairs and/or customization is done. Customer agrees to assume all risks associated with the property as modified, repaired and/or customized, and accepts same "as is", and acknowledges that Dealer has made no representations regarding same, except that such undertakings will negatively effect and/or void the manufacturers' warranty as well as compromise the safety and reliability of the property. Storage fees are \$35.00 per day or any part thereof, and stall tie-up fees after work has commenced are \$110.00 per hour (based on an 8 hour work day and 5 day work week). Storage fees will start to accrue 72 hours after the Customer has been notified that repairs have been completed; and after 24 hours of notice, in the event the property is left with Dealer without Customer's authorization to commence work on the property. Notice by Dealer to Customer shall be deemed complete for the purpose of this Agreement if made by mail, phone contact (including messages left at a phone number provided by Customer, or on an answering machine at a phone number provided by Customer), delivery service, fax transmission, or in person. In the event that Customer fails or refuses to make payment to Dealer for the full amount billed, Customer authorized Dealer to retain, repossess, and dispose of the subject property and retain all or part of all sums deposited on Customer's account as partial compensation for work and damages in addition to all legal remedies available to Dealer. Parts Retention: Customer acknowledges that he/she has been informed of their right to receive all

the old parts for which replacement is made, and has waived same unless otherwise noted in writing. In the event customer chooses to retain all such parts, and Customer subsequently fails to remove them when the property is picked up or when repairs are completed, whichever occurs first, then Customer consents to the disposal of all such parts by Dealer and Customer agrees to pay an additional \$75.00 to Dealer which is the cost agreed upon for such storage, handling, and disposal fees. Customer certifies that he/she is of legal age and hereby accepts the property "as is" and acknowledges receipt of a copy of this document. Before accepting the property, Customer acknowledges that he/she has inspected, caused the property to be inspected, or voluntarily chose to forego such inspection, and accepts the property "as is". Customer acknowledges that use of the dynamometer may result in damage to the vehicle and all of its components; and Customer agrees that all dynamometer testing is done at customers sole risk, and customer will hold harmless and indemnify Xtreme Machines for any and all damages and injury to persons and property which may result from performance tests, runs, evaluations, modifications, and the like which are done on Customer's vehicle. Customer understands that Customer acknowledges that Customer and its agents are not permitted to enter the service area, storage area, and dynamometer room for any reason, and it is agreed that such entry by Customer shall be considered as a willful trespass into a dangerous area at Customer's sole risk. Customer's removal of the property from Dealer shall constitute acceptance by Customer that all repairs, replacement of parts, testing, modifications, and all other services to the subject property have been completed to their complete satisfaction unless otherwise noted on Xtreme Machines' copy of this document.

NOTICE: In the event that Customer causes damage to any item, Customer hereby gives Xtreme Machines, LLC permission to charge any one or more of Customer's credit cards for the retail amount for all such damage.

Resolution

Added On: 8/6/2015 1:27 PM by rstcroi
 Please refer to Team Tips SLI-15-07-02 (SLI-15-07-02 SLINGSHOT Improved Idle Control ECU Calibration). If this does not correct the concern, there is likely something else causing it such as air leak, driver habits, etc.

Added On: 8/6/2015 4:48 PM by rstcroi
 So you have downloaded DW annual version 3.7, updated to 6/29/2015 and performed a controller update on 3 units and they are all still exhibiting the same concern? This update corrects this concern and so far have not had any reports that say otherwise. You will have to bring these units in for inspection.

Added On: 8/19/2015 9:11 AM by rstcroi
 Can you please provide a status update on where your dealership is at with this vehicle? If the vehicle has been repaired please let us know so the case can be closed. >>>

Added On: 8/20/2015 11:58 AM by buebel
 Update from CS case:
 Customer states unit was reflashed. Unit still exhibiting RPM symptoms.

Added On: 8/20/2015 12:08 PM by rstcroi
 I Teddy,
 Please perform the controller update again. Make sure you're running Digital Wrench annual version 3.7 with most current update 8/13/2015 (or 6/29/2015) for this to work. If it still exhibits the same concern there may be other factors such as intake air leaks, etc. Thanks.

Rene

This might be related to the other discussion around the stalling from 2nd to 1st. But its a slightly different thing so I wanted to see if others see it as well.

When being a bit aggressive after pressing the clutch in and letting off of the gas I notice the RPM's hang, at whatever RPM it was before until you actually make your shift. (Its nice as you don't have to rev match etc, but its VERY odd and keeps hanging at a very high RPM with no load.)

Anyone else seeing it. Blipping the throttle doesn't seem to improve it either. (I let it go for 4-6 seconds before I gave in and shifted.) My dealer is going to contact Polaris about it.

SLINGMODS.COM

Yes it is annoying. It's as though the engine is rev matching on it's own.. but for way to long.

Mine was careening fast towards a car parked at a red light, and I DID NOT have my foot on the throttle. I pushed in the clutch fast to avoid a collision, and the rpm's shot up to the rev limiter (7,000rpms) and hung there for 5-10 seconds. That's the kind of stuff class-action lawsuits are made of! Terrifying is an understatement. I'm at 485 miles.... bringing it into dealer for the 500 with this list:

- 1- occasional stalling
- 2- scary as crap revs
- 3- cruise control has never worked
- 4- belt loose (easy fix)
- 5- rough idle (plugs?)

Everything else perfect. Potential to be a really sweet ride, just need to get these wrinkles ironed out

████████ SAID: ↑

When I let off the throttle and push in the clutch (simultaneously) the rpm's will hold steady for 2-3 seconds...

2-3 sec is a long time; are you sure you're counting that right - i.e "one thousand one, one thousand two...?"

A normal (some might say leisurely) shift takes about a sec or so.

Also, I don't see how you can get a smooth shift if the rpm doesn't drop, because it takes lower rpm to match the higher gear.

I have my flame suit on.....

I still dont like that it doesnt decel or drop revs as soon as I let off the gas and put the clutch in.

If I wanted an automatic Id buy something with an automatic.

Well I guess it good that they IMPROVED on the problem.

Same thing happened to Toyota Prius back then. They recalled lots of Prius do to gas peddle getting stuck. From hearing with the problems that Polaris is having with Rpm's going up or down seems like the same is happening but whether it's mechanical or electrical Polaris is looking into it. The good thing is that no one got hurt yet as a result of the problem. Cross our fingers that nothing bad happens to anyone because of the problem. Hope it's just a simple fix.

No disrespect intended but I have to agree with Evomind on this. Even though I am not a mechanical guru, unless you were speed shifting, you would think and hope that the RPMs would drop when you let off the throttle between gear changes. Maybe I am missing something here. I guess my question is, how can the hanging RPM problem be resolved when it remains about the same when you let off the throttle? However, I still want to thank Stan for the info. Happy Holidays

Dont know if this is the same, I had a manual trans car did the same thing, dealer told me the computer did that so it would meet emission standards, some crap about having to burn off the extra fuel during accel.

@LowBid just reported this on another thread...

"Yesterday, I was out for a spin, and cruising along in 5th and came to a hill, I let it lug a bit and when I clutched to downshift, the engine increased in RPM to about 7G, I pumped the gas pedal a couple of times and it came back down, this could be very dangerous if you weren't aware of the possibilities of it happening. THAT, I don't like. Along with that and the drop in RPM's at slow speed shifting, Polaris needs to come to the plate and do something. Very dangerous !!!"

This is not the first report of this issue... This has been reported several times which makes one think it is common in all units... This is very serious and must be addressed by Polaris ASAP... Are all units affected? Is current production coming off line affected? Polaris what is causing this? How can this be corrected??? Polaris do not wait until someone gets hurt before you address this....
