Dear Sir:

On May 13, 2021 we purchased a 2020 Chevy Traverse LT VIN  
1GNERGKW2L[REDACTED]. Three times since the purchase, my husband's  
foot has slipped under the brake pedal when backing up and trying to use the  
brake. All three times, we have been blessed not to hit anything.

We traded a 2016 Traverse in so we are familiar with this model. Are there  
any other complaints of a safety defect between the brake pedal and foot  
feed? We did not have a problem with the 2016 Traverse doing this.

We checked with the Chevy service department July 22, 2021, and they  
stated there was no adjustment for this. I am concerned with our safety that  
this could happen again. Any feedback would be greatly appreciated.

Sincerely,

[REDACTED]
