Dear Sir:

I received a notice from Porsche Cars North America in November 2021 for recall NHTSA ID 21v-679. In January 2022 I received another letter advising me that parts were available to complete the recall. I have contacted my dealer multiple times, including last week when I had the car in for service, and was told that parts are not available. I have contacted Porsche Cars North America by phone, email, and letter and have not received any response. I would like to have my car repaired before, in Porsche's words, "wishbone mounts on the rear suspension can break, which would cause loss of control of the vehicle".

They are currently building new cars with these parts so why can't the dealers get them?

Thank you
