Randy Reid, Chief Correspondence Research Division
Office of Defects Investigation Enforcement

Thank you for your prompt response.

First I need to apologize about the window tint issue, I relied on a local tint shop's answer which was totally wrong, however this does bring up of what is allowed as window tint on vehicles. This tint was removed so there is no safety concern here any more.

The tire issue still bothers me even more because this vehicle has a spare tire well for a spare tire yet there is no spare tire available that I can purchase any where, a spare tire should be considered a safety device.

The run-flat tires are only made by two manufacturers that I know of and both are 50% more expensive than a good Michelin tire, in addition tread wear appears to be very short as one of these brands was successfully sued in court a few years ago.

Most people would prefer a tried and true spare tire than the reason not to have one.

On a different related issue, which I find unsafe is the different colors of vehicle lights; I have seen shades of red, purple, green, gold, blue and orange on headlights alone!

The rear it's just the license plate light being all colors of the rainbow.

Some times I see all colors of light below vehicles.

I thought colors were standardized?

The last issue which I find very unnecessary and a nuisance is vehicle noise from the motorcycles to these muscle cars and wannabes. According to my local police the problem is how the law is written so vague that it is useless to enforce and so they do not.

Perhaps your agency can make vehicle behavior more civil?

No response necessary, Thank you.
