I forgot to add some info and my no is 11482895. The dealership said moisture could have got in there and caused the tail lights and all to blow. The only way that could happened if the gaskets aren't sealed right during manufacture. My car could have started a fire from what I saw with the burn marks back there. This is a safety concern . Those sockets get hot while car is running. I think the dealership should have to do something about this and fix it. Please look into this.
