

Dear sirs,

I have a 2019 Subaru Sport it has 64,000+ miles
ON it check engine light comes ON (thermo control
value issue) If you go online you can see it is
a common problem. When the check engine light
comes on it disables these safety features
the rear auto braking, Lane departure warning,
collision avoidance (Auto Braking to prevent
rear ending someone.) Should not this have a
safety recall? Thank you
