The camera in my 2011 MDX is far worse (useless) at night as compared to my 2008 TL. When I bought the TL, the salesperson specifically demonstrated the fact that the camera auto-adjusted at night. I'm wondering if this is a software miscue on the MDX. I asked previously when I had the car serviced and got a vague, "yeah, the back up lights don't help very much..." I think there's a problem with either the software or the camera itself.
