Dear Sirs,

I am writing to you because I believe that General Motors has a problem with their windshields. When you are driving in the evening, with the sun shining in your face or at night, when the lights from an oncoming vehicle hit you; it is like looking thru a cobweb. The lines will turn colors, red, blue and other colors. This distorts your vision with all these lines. I believe that this is a safety hazard.

I bought a new 2024 Equinox in July 2023. I called General Motors about this matter. They do not want to replace the windshield. The local dealer, where I bought the vehicle, could see what I was concerned about.

They know that there is a problem, but they do not want to replace it. I believe that the windshield glass did not cure out right causing this problem.

How many more vehicles out there with the same problem?

Sincerely,

CERRO GORDO, IL
