RE: Fraud and Scam

We have a 2023 Chevy Equinox LT made by General Motors. In May we had to have a fuel pump and driver module replaced. We and our repair company went through internet to check on recalls . We discovered there was a recall for those parts, but it did not include our Vin numbers, even though we had the same problem.

Needing our car ASAP we spent just south of two thousand dollars to replace said parts. We feel we were scammed or frauded, not by an individual in foreign countries, but by a company in the USA, General Motors.

Can someone who received this letter explain to us is this a scam and/or fraud??? Same car, same year, same trouble, but not our Vin number!!! Please tell us how this can be?

Thank you,
