INFORMATION ON TIRE FAILURE(S) (IF APPLICABLE)

TIRE IDENTIFICATION NO.*

D O T

MANUFACTURER/TIRE NAME

SIZE

Firestone upgraded to Michelin

* The identification number consists of 7 to 10 letters and numerals following the letters DOT. It is usually located near the rim flange on the side opposite the whitewall or on either side of a blackwall tire.

NARRATIVE DESCRIPTION (CONTINUED)

Bob Bell Ford has attempted to repair my vehicle 5 times^{with Ford Motor Co. direction}. They are now trying again & refuse to accept that the vehicle is dangerous & a lemon. ~~They~~ Bob Bell Ford & Ford Motor Co. are trying to force me to drive an unsafe vehicle. They have attempted to fix the brakes/rotors, etc. Then they had to replace ~~them~~ ^{them} & then replace the braking system again, etc. (who knows what else they have guessed at). The dealer Bob Bell has the vehicle again (Hb) & they have had it ~~since~~ 3 days & do not know how to fix it (do not know where the clunk/pop in steering) is coming from. Ford Co. & Bob Bell Ford are sending to somewhere else to try & fix it. They do not know how to or where the problem is! It is dangerous. See attached for more info. So much wrong/replaced, etc. I may have missed something, see attached just in case & to get more clear info. All tires were replaced & upgraded so they were supposed to help with handling/stability.

now Michelin

SIZE

* The identification number consists of 7 to 10 letters and numerals following the letters DOT. It is usually located near the rim flange on the side opposite the whitewall or on either side of a blackwall tire.

NARRATIVE DESCRIPTION (CONTINUED)

As stated before: Sway bar required - upside down;
mounts, bushings, bolts, springs - missing, in backwards, come
untightened, ~~fix~~ over & over. Handling & Stability terrible
has trouble recovering after going over speed bump, etc.
Steering lost 2 times. Steering wheel pops from clunk
under vehicle, etc.

So many things have been "attempted" to repair.
I have attached copies of docs, just in case. I have
left anything out. It is difficult to keep it all
straight. All tires were replaced also to help w/
handling & stability. Did not work. Yet another guess
have unbalanced wheels over & over saying that
is part of problem.

NARRATIVE DESCRIPTION (CONTINUED)

If I missed anything it is because so much has been

Vehicle clanks, steering pops, have lost steering 2 times. Bob Bell Ford said that (Tom Miller, Serv. Mgr. + Dan Disney, Serv. Tech) said that when you apply the brakes lightly + you ~~try to turn the steering wheel~~ try to turn the steering wheel, it is a normal characteristic of this vehicle to not respond - the steering not to respond / turn. Is that safe + I surely was not told that, nor does it say that in the vehicle manual or warranty info. Both also stated that the vehicle is made to drive rough + vibrate "like you are riding a horse," that is another normal characteristic that I had no idea about, nor does any documents I have researched ~~state~~ state this. I would not of purchased a vehicle that you can't turn or one that vibrates + bounces which throws the handling + stability way off. Swaybars were on upside down mounts were missing + springs, etc. in backwrd so missing also. ~~Mounts~~ mounts became loose + springs move, etc. Dangerous!! - attached
