This vehicle was purchased New in 1985. Has been played by numerous boats of STalling, at all speeds. Until recently was unable To find sources. It appears To be a module on distributor, placed near engine block. IT appears To be a belt problem. I have contacted Ford and received no response. With a manual Trans. The Vehicle usually restarts itself.

The Vehicle has also had problems with Speedometer cable and I do not know exact Mileage

Describe any additional incidents. (Include date and mileage)
