Subject: Safety Recall (Special Service Campaign) - 90L Phase 1 Certain 2007 – 2010 Model Year Camry and Camry Hybrid Vehicles Potential Floor Mat Interference with Accelerator Pedal Vehicles Equipped with Accelerator Pedals Manufactured by Denso Corporation (USTT).

Toyota will initiate phase 1 of Safety Recall 90L - Certain 2007 - 2010 model year Camry and Camry Hybrid Vehicles - Potential Floor Mat Interference with Accelerator Pedal - Vehicles Equipped with Accelerator Pedal Manufactured by Denso Corporation.

Condition

As communicated last Fall, the defect is the potential for an unsecured or incompatible driver's floor mat to interfere with the accelerator pedal and cause it to get stuck in the wide open position. A stuck open accelerator pedal may result in very high vehicle speeds and make it difficult to stop the vehicle, which could cause a crash, serious injury or death. Toyota has determined that this defect does not exist in vehicles in which the driver's side floor mat is compatible with the vehicle and properly secured.

Remedy:

To make it less likely that an unsecured or incompatible driver's floor mat can interfere with the accelerator pedal, dealerships will be requested to do the following:

Modify both the rigid plastic accelerator pedal and the floor surface in the driver's foot-well. (On February 1, 2010, a dealer kit containing an accelerator template and gauge, an orbital sander and a reciprocating saw will be sent to each dealer via overnight air. The campaign tool kit will be marked with a florescent (green, orange, yellow, pink) label.)

If the vehicle is equipped with a set of optional genuine Toyota All Weather Floor Mats (AWFM), it must be inspected to determine if the AWFM set is of an older design. If it is, the older design AWFMs for the driver and the front seat passenger positions will be replaced with newly designed mats.

As an additional measure independent of the vehicle-based recall remedy, a newly designed override system will be installed on non-hybrid Camry vehicles to provide an extra measure of confidence. This system will cut engine power in case of simultaneous application of both accelerator and brake pedals at certain speeds and driving conditions. The Camry Hybrid already contains a fuel supply cut feature for Hybrid motor protection that achieves a similar result as the override system newly designed for the non-hybrid models.

Involved Vehicles:

There are approximately 787,000* Toyota 2007 – 2010 model year Camry and Camry Hybrid vehicles involved in the U.S.

The following SSC 90L Summary Reports will be provided shortly:

The number of involved vehicles in your dealership's primary marketing area for this phase.

The suggested initial parts order quantities for this phase.

A VIN List containing vehicles in dealer stock.

*NOTE: Due to the number of vehicles involved in the first phase of this campaign, the VINs will be loaded into TIS and the Warranty System in 2 groups over two days. Group 1 will include all affected Camry and Camry Hybrid vehicles produced up to December 31, 2009. Group 2 will include all affected Camry and Camry Hybrid vehicles produced from January 1, 2010, to the production change.

Please refer to the attached Region-PD Notification for additional information.
