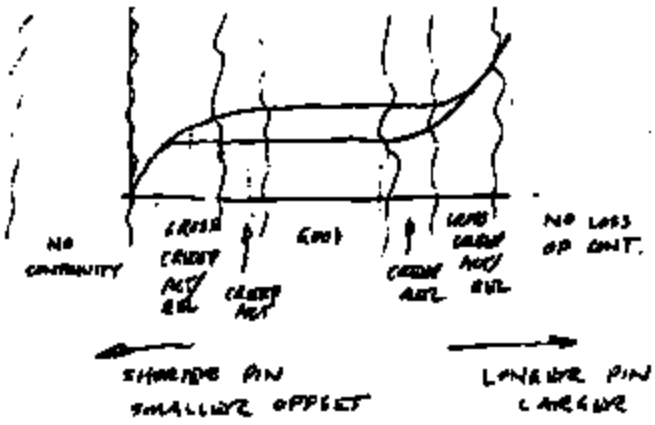
NORYL THERMAL TESTING

→ WORKING WITH PARTS MADE OF NORYL (BLACK BASES, PULL IN COLOR JUST LIKE 4300 R.D.T. BUT WITH OFFSET KEYS) WHICH HAVE BEEN BUILT TO A VARIETY OF "OFFSETS"



→ CHARACTERIZE THIS GROUP, RECORDING ACT, REL (IF THERE IS ONE, OF COURSE) AND CREEP TIME

→ CHOOSE 2 DEVICES AT EACH OFFSET, STARTING W/ THE GROUP THAT HAS NO CONTINUITY, THRU TO THE OTHER SIDE OF THE HATCHET (ABOVE)

→ RUN THE THERMAL CHARACTERIZATION AS USUAL :
- PICTURE ON CCAS CYCLER W/ LED'S ATTACHED
- SOAK @ 10°C INCREMENTS, FROM 30 – 150 °C
- OBSERVE LED'S FOR LOSS OF CONTINUITY @ EACH TEMP INCREMENT
- WORK BACK FROM 150 → 30°C ; THIS IS 1 CYCLE
- RUN 30 → 150 → 30 3 MORE TIMES (NO SOAKS OR OBSERVATIONS, JUST CYCLE)
- ON FIFTH, REPEAT FIRST

4/9/92

B.A.M. CHECK STATION SORTING CHANGES
HIGH TEMP SHIFT/SILENT DISC

CURRENT SYSTEM:

1.) SORT TO +/-.002 @ CHECK STATION.
2.) UNLOAD SORTED +/- .002 RANGE ON UNLOAD STATION # 1, "GOOD CAL".
3.) UNLOAD ASSY'S OUTSIDE +/-.002 RANGE IN UNLOAD STATION # 2, "BAD CAL".
4.) UNLOAD ASSY'S WITH MISSING OR BAD PARTS IN ON UN-LOAD # 3, "BAD PARTS".

EFFECTIVE OUTPUT TO F.A.M. = +/-.002 WINDOW OF CAPABILITY.

PROPOSED SYSTEM:

1.) SORT TO TWO +/-.002 WINDOWS @ CHECK STATION, 0/+.002 AND 0/-.002. HI & LO GAGE.
2.) UNLOAD HIGH GAGE, 0/+.002, ON "GOOD UNLOAD".
3.) UNLOAD LO GAGE, 0/-.002, ON "BAD CAL." ALSO UNLOAD ASSY'S OUTSIDE 0 +/-.002 ON "BAD CAL." DIVERTER CHUTE SHOULD THEN SERPARATE ASSY'S OUTSIDE 0 +/-.002 FROM LO GAGE RANGE, 0/-.002. LO GAGE ASSY'S WILL THEN BE FINAL ASSEMBLED WITH A PIN SELECTION .002 LESS THAN HI GAGE ASSY'S.
6.) UNLOAD ASSY'S WITH MISSING OR BAD PARTS IN ON "BAD PARTS".

EFFECTIVE OUTPUT TO F.A.M. = +/-.001 WINDOW OF CAPABILITY.

PROBABLE CHANGES TO SEPARATE AND DIVERT.

1. SOFTWARE MODIFICATIONS. INCLUDING CHECK STATION OVERRIDE OF CALIB. DESIGNATION AS "BAD". CHECK STATION HAS FINAL SAY ON ACCEPTABILITY.
2. ADDITION OF A DIVERTER. HARDWARE AND SOFTWARE.

PROPOSED SYSTEM, LONG TERM:

SAME AS ABOVE BUT THE CALIBARTOR WILL ULTIMATELY BE CONTROLLED BY THE CHECK STATION. THE CHECK STATION WILL PERIODICALLY MAKE AN ASSESSMENT OF THE CALIBRATOR DISTRIBUTION AND DETERMINE IF NOMINAL SHIFTING IS REQUIRED TO OPTIMIZE YIELDS. ADDITIONALLY, THE CALIBRATOR TARGET RANGE WILL BE REDUCED TO FURTHER IMPROVE CALIB. SIGMA.

TESTING MUST ALSO BE CARRIED OUT THAT TRIES TO DEFINE VARIABLES IN THE CALIBRATOR THAT CAUSE THE PRESENT REPEATABILITY ISSUES. SOFTWARE AND HARDWARE ON THE EQUIPMENT AS WELL AS PRODUCT VARIABLES.

ADDITIONAL PROCESS CONTROLS REQUIRED:

1.) SPC ON PIN HEIGHT AS REFERENCED FROM SENSOR SEAT.
2.) POSSIBLE 100% LVDT MEASUREMENT OF PIN HEIGHT.
3.) HIGH TEMP CONTINUITY TEST ON SAMPLES FROM EACH SENSOR LOT TO DETERMINE IF PINNING IS TOO SHORT LEADING TO LOSS OF CONTINUITY AT HIGH TEMP.
4.) HYPOT TEST 100% TO DETERMINE IF PINNING IS TOO LONG LEADING TO CONSTANT CONTINUITY AT LOW TEMP.

SUBJECT: CRUISE CONTROL QUIET DISC

I BELIEVE THAT THE PROPOSED SPEC - ie. MINIMUM DIFFERENTIAL DISC, MAY GIVE US REDUCED THROW AT TEMPERATURE.

THE CHARACTERISTICS, NOTED IN OUR TESTING OF THE 52 PS DISC 36656-1 (62/48) AT 125C, SHOWED A DROP IN THE PEAK FORCE OF 10%, AND AN INCREASE IN CREEP OPEN. THE SLOPE OF THE CREEP OPEN CURVE SHIFTED TO THE RIGHT (FALL OFF IN MODULUS). THE TESTING WAS DONE BY FRED MAY IN ADV. DEVEL.

SIMILAR TESTING ON 455 STAINLESS SHOWED MINIMAL SHIFT.

REGARDS,

TED
tap

DALE SOGGE 4-30-92

PROPOSED SPEC FOR QUIET DISC 36656-35

VALUES ARE FOR DISC AFTER FINAL HEAT TREATMENT

MATERIAL PART # 75525-2
BLANK STRIP # 7438-2

ACTUATION MEAN : AS REQUIRED BY MFG ENGINEERING (NOMINAL TARGET : 22 psi)

ACT MEAN TOLERANCE: ±1.0psi

ACT SIGMA MAX: 1.0 psi

MAXIMUM MEAN DIFFERENTIAL: 5.5psi

DIFFERENTIAL SIGMA MAX : 1.0 psi

MINIMUM MEAN TRAVEL TO 14psi ON ACTUATION : 0.0035 inches

MAX SIGMA, TRAVEL TO 14psi ON ACTUATION : TO BE DETERMINED

MINIMUM MEAN TRAVEL TO 32 psi ON ACTUATION : 0.0240 inches

MAXIMUM SIGMA, TRAVEL TO 32 psi ON ACTUATION : TO BE DETERMINED

ADDED 5/1/92 D.S. — MIN MEAN TRAVEL BETWEEN 14 AND 32 PSI: 0.020"

PRESSURE CALIBRATION

1) METHOD

MEASUREMENT TO BE TAKEN IN A STANDARD FIXTURE PRINT # XXX, USING THE FOLLOWING MEASUREMENT PROCEDURE;

A. CYCLE DISC THREE TIMES ACTUATION TO RELEASE

B. FROM RELEASE INCREASE PRESSURE TO 14psi ± 0.5 psi AND RECORD DISC TRAVEL.

C. CONTINUE PRESSURE INCREASE UNTIL ACTUATION. RECORD ACTUATION PRESSURE.

D. INCREASE PRESSURE TO 32 psi ± 0.5 psi AND RECORD DISC TRAVEL.

E. DECREASE PRESSURE TO RELEASE AND RECORD RELEASE PRESSURE

ALL RAMP RATES SHALL BE LESS THAN 0.5 psi/SEC.

RE: EN53 PARTIAL ISR / VALIDATION PLAN FOR F2AC-9F924-AA

Bruce, it is my understanding that we'll be pulling together an ISR package for your perusal during your visit to our plant on Monday, 13 April. This package will be essentially based upon similarity to the F2VC-9F924-AB ISR, since only two components will be changing. Those two components are the pressure-sensing disc and the molded plastic base (switch housing). The base will undergo a First Article Inspection (FAI) which is a detailed study of all print dimensions, and material certifications from the manufacturer will be included. Below you will find detail of the ES tests which will/will not be completed for the Partial ISR (from ES F2VC-9F924-AA):

III. A. Calibration, B. Voltage Drop, C. Current Leak, D. Proof.

Only the Calibration test will be performed on the 24 devices undergoing the Impulse test (E.) below.

III. E. Impulse.

A complete 500,000 cycle Impulse test will be performed per the ES, with the exception that no devices will undergo the Fluid Resistance Test (M.) beforehand. The Impulse test is an excellent test of the ability of the entire device to withstand mechanical (pressure) cycles combined with electrical loads at elevated temperatures, and is a key test to validate the pressure-sensing disc.

III. F. Burst.

Changes to the base and disc should have no effect on burst performance.

III. G. Humidity, M. Fluid Resistance.

The new base material, General Electric Noryl GTX 830, has been tested previously by TI per Ford ES F3AH-19D594-AA along with a host of other engineering plastics. This CCD ES includes Humidity, and Fluid Resistance tests which are similar to the tests called out in ES F2VC-9F924-AA. Noryl was found to pass all tests.

III. H. Salt Spray.

It has been deemed unlikely that changes to the base and disc would have any effect on salt spray performance. Bear in mind that the Fluid Resistance test invoked above included a saturated salt solution, helping to prove that chemical attack will not be an issue; furthermore the environmental sealing system has not been changed in any way providing confidence that salt ingress during salt spray testing will not be an issue either.

III. I. Vibration.

Changes to the base and disc should have no effect on vibration performance.

III. J. Terminal Strength.

The terminal strength test will be performed per the ES, with the exception that no devices will undergo the Fluid Resistance Test (M.) beforehand.

III. K. Vacuum.

Changes to the base and disc should have no effect on vacuum performance.

III. L. Temperature Cycle.

Extensive thermal characterizations have been performed on several materials recently, including the Celanex 4300 PBT material presently used on F2VC-9F924-AB, as well as Ultem, Noryl, and Fortron. While these results are presently undocumented officially, the consistently higher performance of Noryl in terms of dimensional stability relative to Celanex during these tests gives high confidence that changes to the base should have no effect on Thermal Cycle performance.

SJ: Weekly Highlights

FORD MY'92 ELECTRONIC SPEED CONTROL DEACTIVATE PS

SHO TAURUS: The last test lot we were able to ship to Florida before the evaluation ended used old ultra-low-diff truck discs with snubbers. Warren Pierce rated these as 8-9's, very acceptable. This is what Ford thinks they'll be getting in volume for SHO. Per Ted Ballard, we don't know how to build these discs in production, however. We are assuming that the "Lot F" Pass Car discs (which we do know how to build) will suffice.

EN53 (CROWN VIC & GRAND MARQUIS): We are moving ahead very rapidly to meet the extreme schedule Ford is requiring. Production switches, with "Lot F" discs and Noryl bases, will ship on Saturday to Dana-Weatherhead. In parallel, we are throwing together a Partial ISR package, primarily using similarity to 77PSL2-1. For RS testing, we are doing only Impulse and Terminal Strength. This package will be ready Monday for review by Bruce Maeroff (Supv. Brake Eng.) during his visit here. Our plan for full ISR will consolidate the SHO switch and the EN53 switch into one test procedure and report. This has been mistakenly promised to Ford for May 22, which is physically impossible to meet due to the Fluid Resistance test. Mid-June is more likely; we need to close with Ford on this.

THERMAL SHIFT: At this point, Noryl parts have been characterized only; no therm shift testing has been accomplished yet. We are expediting the completion of this test now, because the cycler will also be needed ASAP for Impulse on EN53 parts. As soon as we complete an initial pass at thermal shift, we will immediately put Impulse parts in, and adjust the cycle rate to ensure they are complete by Monday.

VALIDATION: Final characterization of the two highest-priority lots (57PSF3-3 and 57PSL11-3) is in progress now. We need burst, current leak, and final act/rel on all devices, about 120. Loris will be continuing to work on this today and into tomorrow as needed. The report writeups, which are due to Ford on 4/15, have not begun as yet. These will need to be accomplished in a compressed timeframe over the weekend.

FIRST CYCLE SYNDROME: Nothing to report.

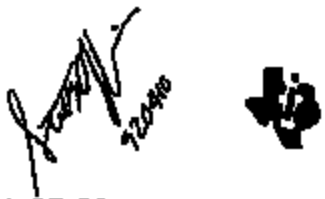
Week Ending 92-04-10



FORD MY'92 ELECTRONIC SPEED CONTROL DEACTIVATE PS

SHO TAURUS: The last test lot we were able to ship to Florida before the evaluation ended used old ultra-low-diff truck discs with snubbers. Warren Pierce rated these as 8-9's, very acceptable. This is what Ford thinks they'll be getting in volume for SHO. Per Ted Ballard, we don't know how to build these discs in production, however. We are assuming that the "Lot F" Pass Car discs (which we do know how to build) will suffice.

EN53 (CROWN VIC & GRAND MARQUIS): We are moving ahead very rapidly to meet the extreme schedule Ford is requiring. Production switches, with "Lot F" discs and Noryl bases, will ship on Saturday to Dana-Weatherhead. In parallel, we are throwing together a Partial ISR package, primarily using similarity to 77PSL2-1. For ES testing, we are doing only Impulse and Terminal Strength. This package will be ready Monday for review by Bruce Mazroff (Supv. Brake Eng.) during his visit here. Our plan for full ISR will consolidate the SHO switch and the EN53 switch into one test procedure and report. This has been mistakenly promised to Ford for May 22, which is physically impossible to meet due to the Fluid Resistance test. Mid-June is more likely; we need to close with Ford on this.

THERMAL SHIFT: At this point, Noryl parts have been characterized only; no therm shift testing has been accomplished yet. We are expediting the completion of this test now, because the cycler will also be needed ASAP for Impulse on EN53 parts. As soon as we complete an initial pass at thermal shift, we will immediately put Impulse parts in, and adjust the cycle rate to ensure they are complete by Monday.

VALIDATION: Final characterization of the two highest-priority lots (57PSF3-3 and 57PSL11-3) is in progress now. We need burst, current leak, and final act/rel on all devices, about 120. Loris will be continuing to work on this today and into tomorrow as needed. The report writeups, which are due to Ford on 4/15, have not begun as yet. These will need to be accomplished in a compressed timeframe over the weekend.

FIRST CYCLE SYNDROME: Nothing to report.

QUIET SWITCH - PRELIMINARY STUDIES

TI CONFIDENTIAL
TI STRICLY PRIVATE

I) Plastic connector stability

Purpose: To determine the acceptable pin lengths for quiet switch production given that the quiet disc has a smaller pin window. Also to evaluate the effects of a connector material change to increase the pin window so the device could be manufactured cost effectively.

Procedure: Devices were assembled at various contact preloads (pin lengths) using both celenax and noryl connectors. If the material changes dimensional with temperature it can result in an increased or decreased actuation pressure. The actuation and release pressures were measured at low and high temps.

Results: The results for Celenax are shown in Figure 1. Norly results are shown in Fig 2. The Noryl provided stable actuation and release pressure over a greater pin range. This matches other test results showing greater dimensional stability with noryl. During the test the parts were exposed to temps from -40 to +150, one cycle and there was no visual impact on the material.

II) Plastic connector stability

Purpose: Understand the ability of Noryl material to survive the typical underhood automotive environment.

Procedure: Connectors were fully qualified in Norly material for an underhood Automotive Pressure Transducer (APT). This includes thermal cycling, chemical resistance, dimensional stability, impulse testing, impact strength, etc.

Results: The Norly is fully qualified as a connector to 135C. Long term storage has been acceptable at 150C.

III) Quiet Disc development

Purpose: A lower differential disc was needed to reduce the sound generated when the disc snapped.

Procedure: Various discs were developed. The differential was measured by building the disc into a sensor assembly and then measuring the disc deflection vs pressure with an lvdt(linear variable differential transformer).

Results: Figure 3 shows both a noisy production disc and a quiet disc. Note that the differential has been reduced from 100psi to approx 30psi. Correspondingly the available pin window has been reduce from 14.5 mils to 10 mils.

IV) Switch sound evaluation

ALERT DESC:
RECEIVED AT ST THOMAS ASSEMBLY PLANT WHILE TRANSPORTING STOCK TO THE VENDOR FOR REWORK. ST THOMAS ASSEMBLY PLANT IS TO SHIP P8-F2AC-2C320-CB ASSEMBLIES TO THE SUPPLIER'S CHARLOTTE(NORTH CAROLINA) ST THOMAS FACILITY WHERE THEY WILL BE REWORKED, CONTAINERS MARKED AS RWK, AND RETURNED TO ST THOMAS ASSY PLANT. REWORKED PIECES AND P1 PIECES WILL BE IDENTIFIABLE AS SUCH BY THE CREAM/PALE COLOR OF THE SWITCH AS OPPOSED TO THE BROWN COLOR OF THE SWITCH ON THE CURRENT ASSEMBLIES.

ANY TESTING OF THE SWITCH WILL BE LIMITED TO CALIBRATION, IMPULSE TESTING, AND A MODIFIED TERMINAL STRENGTH TEST IN ADDITION, MATERIAL CERTIFICATION AND DIMENSIONAL CERTIFI-

USERID: JL61BZ4 ACTIVITY: MC00 ENTRY DATE: 92/04/10

ALERT DESC:
CATION OF THE RUNS WILL BE COMPLETED.

P1-F2AC-2C320-CB ASSEMBLIES NEED NOT BE ESTA TESTED. TESTS AS SWITCH ABOVE WILL SUFFICE.

INITIAL SAMPLE WARRANT

No. 112389

PART INFORMATION

Part Name: Next Generation Speed Control Deactivation Safety Switch — Part Number: F2AC-9F924-AA

Control Item: ☐ Yes ☐ No — Engineering Change Level: _____ Date: _____

Engineering Change Authorization: Bruce Maeroff — Date: _____

Shown on Drawing No.: F2AC-9F924-AA — Part Weight: .062

Reason for Initial Sample:

- ☐ Initial Submission
- ☐ Engineering Change(s)
- ☐ Tooling Transfer
- ☐ Change in Optional Construction or Material
- ☐ Additional, Replacement, or Refurbished Tooling
- ☐ Correction of Discrepancy (Resubmission No. _____)
- ☐ Process Change
- ☐ Change in Subcontractor or Sourc
- ☐ Parts Produced at Additional Locati
- ☐ Other — Please Specify _____

SUPPLIER INFORMATION (Manufacturing Location)

Supplier Name: Texas Instruments — Street Address: 34 Forest St.

City: Attleboro — State: MA — Postal Code: 02703 — Country: USA

Supplier Mfg. Location Code — DUNS: T097K/7325814 — Customer Assigned: _____

CUSTOMER INFORMATION

Customer Name: Ford Motor Co. NAAO — Buyer: Fred Hendershot — Buyer Code: 165

Purchase Order Number: _____ — Sample Acceptance Level: _____

Application: Next GEneration Speed Control Deactivation Safety Switch

RESULTS

The results for dimensional measurements ☒, material tests ☒, and functional (ES) tests ☒ meet all drawing and specificat requirements ☒ Yes ☐ No — PARTIAL

Submission Checklist

- ☒ Checked Print
- ☐ Auxiliary Drawings/Sketches
- ☐ Correct Number of Samples
- ☒ Dimensional Results
- ☐ Material Test Results
- ☒ Certifications
- ☒ Functional (ES) Test Results Partial
- ☐ Product Engineering Approval
- ☒ Control Plan
- ☐ Process Capability Results
- ☒ Process Flow Diagram
- ☒ Gage (Measurement) Studies

Supporting data for all requirements are available upon request.

COMMENTS:

Partial ISW to expedite use of "Quiet"Switch, full submission to be complete by 6/22/92. Bruce Maeroff visited TI on 4/13, 4/14 to review program status.

DECLARATION

I affirm that the samples represented by this warrant are representative of our parts and have been made to the applicable custom drawings and specifications from specified materials, on regular production tooling with no operations other than the regular productio process.

Authorized Signature: Michael DeMattia — Date: 4-13-92

Print Name: MICHAEL DEMATTIA — Title: SQA ENGINEER — Phone No. (508) 699-30

1.0 GENERAL

1.1 Customer: Ford Motor Company, Passenger Car Brake Systems Engineering

1.2 TI Part Number: 77PSL3-1

1.3 Customer Part Number: F2AC-9F924-AA

1.4 Specifications: Ford Engineering Specification number (delta) ES-F2VC-9F924-AA

1.5 Date of Completion : 920413

1.6 Quantity of Units Tested: 36

1.7 Disposition of Tested Units:

1.7.1 All devices are retained under quarantine.

1.8 TI test number: 241-11-12
242-03-24

1.9 TI Pressure Switch test report number: PS/92/62

2.0 OBJECTIVE

See Memorandum in Appendix 4.1 which explains the scope, extent, and intention of this partial ISR. A full battery of ES tests is planned in the near future to complete a full ISR submission.

3.0 TEST PROCEDURES AND RESULTS

All switches were tested to Ford Engineering Specification (delta) ES-F2VC-9F924-AA, sections III. E. and J., with initial and final characterizations consisting of III. A. Raw data is included in Appendix 4.2 and 4.3.

TEST LOT NO.	TEST	DEVICE
TESTED BY		
APPROVED BY	TEXAS INSTRUMENTS MATERIALS & CONTROLS GROUP ATTLEBORO, MA 02703	DOC.
DATE 92-04-13		PAGE 1

3.1 CALIBRATION

3.1.1 Procedure: Calibration is checked at room temperature using ambient air as the pressure medium. Calibration settings, as specified on the part drawing, are actuation (electrical contacts opening) at 90 - 160 psig, and release (contacts reclosing) at 20 psig minimum. For the purpose of stabilization, actuation values are recorded on the sixth cycle, after subjecting the switch to two (2) pressure cycles to 800 psig minimum and back to zero, followed by three (3) cycles to 1.1 times actuation pressure minimum and back to zero. The change in continuity is measured while conducting 750 +/- 50 milliamps at 13.0 +/- 1.0 volts DC.

3.1.2 Equipment: Custom TI designed and built pressure check station, using Heise Model CM96365 pressure gage calibrated on a regular quarterly schedule. Continuity change measured on custom TI designed and built equipment meeting the above electrical parameters.

3.1.3 Initial Results: All 36 devices tested were found to be within specification.

3.1.4 Final Results: All 36 devices tested were found to be within specification.

3.2 VOLTAGE DROP

3.2.1 Equipment: Fluke Model 8020B Digital Multimeter, calibrated quarterly, used in conjunction with the continuity equipment in 3.1.2.

3.2.3 Final results: Performed on the Impulse devices only, as a check of degradation of the electrical contacts during the powered portion of the Impulse cycles. All values are significantly below the specification of 200 millivolts maximum.

TEST LOT NO.	TEST	DEVICE
TESTED BY		
APPROVED BY	TEXAS INSTRUMENTS MATERIALS & CONTROLS GROUP ATTLEBORO, MA 02703	DOC.
DATE 92-08-11		PAGE

3.3 IMPULSE

3.3.1 Devices tested: 242-03-01 thru -24

3.3.2 Procedure: Twenty four devices were run on the Impulse test as specified in the ES, with the exception that no devices were run on the Fluid Resistance test due to time constraints. The cycle rate used was actually 163 cycles per minute, again due to time constraints. All other parameters were as specified in the ES.

3.3.3 Equipment: Thermotron model S-4 Mini-Max environmental chamber capable of -55 C to +200 C, humidity uncontrolled. Custom TI designed and built cycler, utilizing Enerpak integrated hydraulic pressure source, TI315 Programmable Logic Controller, Moog servovalve and controller, Simpson signal generator, and opposing-piston fluid isolators, to produce a hydraulic-fluid flow-type primary with a brake-fluid dead-end-type secondary terminated with a 24-station manifold equipped with internal heaters. Capability to 5 Hz at 0-1450 psig cycle. Custom TI designed and built 24 station Switch Monitor Circuit which automatically stops the cycler in the event of abnormal switch action, defined as continuity change which does not track the signal from the signal generator. Thermocouple readouts calibrated quarterly. 12-station inductive load bank, per the schematic found in the ES (frame 18 of 18; figure 4.) used in the last 25K cycles.

3.3.4 Results: All devices passed.

3.4 TERMINAL STRENGTH

3.4.1 Devices tested: 241-11-01 thru -12

3.4.2 Equipment: Custom TI designed and built fixtures for gaging terminal movement after force application and for application of impact via a pendulum. This equipment is regularly used on the 57PS/77PS assembly lines in testing to TI Quality Assurance Specifications.

3.4.3 Results: All twelve devices passed the acceptance criteria found in the ES.

RE: EN53 PARTIAL ISR / VALIDATION PLAN FOR F2AC-9F924-AA

Bruce, it is my understanding that we'll be pulling together an ISR package for your perusal during your visit to our plant on Monday, 13 April. This package will be essentially based upon similarity to the F2VC-9F924-AB ISR, since only two components will be changing. Those two components are the pressure-sensing disc and the molded plastic base (switch housing). The base will undergo a First Article Inspection (FAI) which is a detailed study of all print dimensions, and material certifications from the manufacturer will be included. Below you will find detail of the ES tests which will/will not be completed for the Partial ISR (from ES F2VC-9F924-AA):

III. A. Calibration, B. Voltage Drop, C. Current Leak, D. Proof.

Only the Calibration test will be performed on the 24 devices undergoing the Impulse test (E.) below.

III. E. Impulse.

A complete 500,000 cycle Impulse test will be performed per the ES, with the exception that no devices will undergo the Fluid Resistance Test (M.) beforehand. The Impulse test is an excellent test of the ability of the entire device to withstand mechanical (pressure) cycles combined with electrical loads at elevated temperatures, and is a key test to validate the pressure-sensing disc.

III. F. Burst.

Changes to the base and disc should have no effect on burst performance.

III. G. Humidity, M. Fluid Resistance.

The new base material, General Electric Noryl GTX 830, has been tested previously by TI per Ford ES F3AH-19D594-AA along with a host of other engineering plastics. This CCD ES includes Humidity, and Fluid Resistance tests which are similar to the tests called out in ES F2VC-9F924-AA. Noryl was found to pass all tests.

III. H. Salt Spray.

It has been deemed unlikely that changes to the base and disc would have any effect on salt spray performance. Bear in mind that the Fluid Resistance test invoked above included a saturated salt solution, helping to prove that chemical attack will not be an issue; furthermore the environmental sealing system has not been changed in any way providing confidence that salt ingress during salt spray testing will not be an issue either.

III. I. Vibration.

Changes to the base and disc should have no effect on vibration performance.

III. J. Terminal Strength.

The terminal strength test will be performed per the ES, with the exception that no devices will undergo the Fluid Resistance Test (M.) beforehand.

III. K. Vacuum.

Changes to the base and disc should have no effect on vacuum performance.

III. L. Temperature Cycle.

Extensive thermal characterizations have been performed on several materials recently, including the Celanex 4300 PBT material presently used on F2VC-9F924-AB, as well as Ultem, Noryl, and Fortron. While these results are presently undocumented officially, the consistently higher performance of Noryl in terms of dimensional stability relative to Celanex during these tests gives high confidence that changes to the base should have no effect on Thermal Cycle performance.

PROJECT TITLE: Speed Control

CUSTOMER:

PURPOSE OF TEST: Part of Noryl base/silent disc validation

PROCEDURE: Production build 7PS with natural Noryl bases and 1st "F" silent discs. Characterize in pressure tester. Run standard terminal strength tests per Ford ES and recharacterize.
