**PART A – O**

**PART E**

## **Work Plan- Brake Pressure Switch**

### **Root Cause Investigation-**

**Identify the combustibles?**

**AVT EESE Materials Engineering**

**Identify the contaminants in returned parts?**

**Central Lab analysis**

**Identify source of contaminants?**

**Central Lab analysis**

**Identify causes of brake fluid leakage?**

**Central Lab and Texas Instrument**

**Identify heat source(s) start event?**

**AVT EESE Chassis Electronics**

**Create Event in Lab**

**AVT EESE Chassis Electronics**

**Collect Field Samples**

**LVC - Safety**

Run materials by Dow  
... ..  
... ..

**Root Cause Investigation Tasks**

**What are the combustibles?**

**AVT EESE Materials Engineering**

Are the switch materials compatible with brake fluid?  
by 2/18/99

Are the switch materials compatible with brake fluid in an electric field?  
by 2/18/99

Are the switch materials compatible with brake fluid and contaminants?  
by 2/18/99

Are the switch materials compatible with contaminated brake fluid in an electric field?  
by 2/18/99

→ Flash points for all materials? by *completed*

*TI provided to Norm LaPointe*

Get Dow assistance by 2/16/99

**How can a fire start with the switch given the constraints:**

Continuous Battery voltage applied between switch electrical components and the hydraulic connection, circuit fused at 15 amps, inductive load current of 0.5 amps switched when speed control is turned off, the switch cavity contains a black material containing at least copper, zinc, sulfur, and brake fluid ( probably containing water), vehicle underhood temperatures.

By 2/22/99

What is the difference in the base materials that look different?  
Texas Instruments by *complete*

*Color of plastic base identifies calibration. Also, plastic material change from Cellanex 4300 to Noryl GTX430 in MY 1995 when P/N changed from F2VC to F2AC*

What are the material call-outs for 1992 and 1993?

Texas Instruments by 2/15/99

Brake Pressure Switch  
P2VC-8P224-A#  
Material List for MY 82/93

Component Name	Material	Comment
Gasket	Elastomer Ethylene Propylene	JBL Compound # E-7104-70
Diaphragm	Kapton, Polyimide	Dupont 500 FN131L, 3 Diaphragms per switch
Base	PBT, Plastic	Grade Celanex 4300
Crimp Ring	Aluminum	Grade # 5052
Spacer	Kapton, Polyimide	Dupont #200H, Friction Reducer on Disc
Rivet	Brass	CDA 260
Transfer Pin	Ceramic	Shettis, L-3 Grade
Environmental Seal	Gilsons	JBL Compound # 87619
Converter	Cold Rolled Steel	Grade # 1008
Washer	Cold Rolled Steel, Zinc Plated	Grade # 1060
Cup	Cold Rolled Steel	Grade 1010
Spring Arm	Beryllium Copper	Grade # C17200
Movable Contact	Silver Plated Copper	Oxygen Free Cu, Fine Silver
Stationary Terminal	Brass + Silver Inlay	CDA 260
Movable Terminal	Brass	CDA 260
Disc	Stainless Steel	Grade 302
Hexport	Cold Rolled Steel, Zinc Plated	C10L10
Thread Cap	LDPE, Plastic	

What are the contaminants in returned parts?

Central Lab analysis

Results of Memphis part analysis by 2/18/99

Results of testing with corrosion simulation?

AVT EESE Chassis Electronics by complete

*Black corrosion recreated in lab on virgin parts. Given to Lab for analysis*

TI analysis results of the Memphis parts (crease marks in diaphragm, etc)?

Texas Instruments by complete

*TI gave to Norm LaPointe on 2/10/99. Crease mark caused by degradation of Kapton. TI chemical analysis matches Ford analysis.*

**What is source of contaminants?**

**Central Lab analysis by 2/18/99**

**What causes brake fluid leakage?**

**By 2/24/99**

**Central Lab and Texas Instrument**

**What does TI DFEMA say about this failure mode?**

**Texas Instruments by 2/16/99**

*TI identifies potential for leaks. Copy to Norm Lapointe.*

**What are TI in-process test failures?**

**Texas Instruments by completed**

*TI provided IP and Weibull test reports to Fred Porter and Norm Lapointe. First leaker observed at 994,000 cycles. Test suspended at 1.6 million cycles. Leaker was by Kapton diaphragm.*

**Provide TI end-of-life lab test parts to Norm Lapointe.**

**TI by 2/18/99**

**Does the event occur only on vehicles with ABS?**

**LVC-Safety by 2/18/99**

**Characterize the real vehicle brake pressure seen at the switch.**

**AVT Chassis Brakes by**

**Characterize the real vehicle brake pressure during ABS and TC events seen at the switch.**

**AVT Chassis Brakes by**

**DOE work plan for TI activities.**

**TI by 2/16/99**

**Correlate Lab test cycle Kapton wear with field mileage Kapton wear.**

**TI and Central Lab by 2/29/99**

**What heat source(s) start event?**

**AVT EESE Chassis Electronics**

Analysis of harness pig-tails

AVT EESE OPD by 2/18/99

Use thermocouple to record switch temperature during and after driving. AVT EESE OPD by 2/18/99

**Recreate Event in Lab**

**AVT EESE Chassis Electronics**

What does it take to start an event? by on-going

If a switch is contaminated can it start the event? by on-going

*Switch with clean Brake fluid inside is being monitored for increase in leakage current.*

If current is stopped does combustion stop?

**Collect Field Samples**

**LVC - Safety**

Collect Brake Pressure switches and speed control servos with harnesses attached. By 2/22/99

**Miscellaneous**

Can the switch act as a fuse?

Team

by complete

*No.*

*Could a fuse (e.g. 2 amp) be added in series between the stop lamp fuse and the brake pressure switch? Failure parameters would have to be known.*

What are descriptions from AWS and CQIS?

LVC-Safety

by 2/18/99

What are we seeing in returned Speed control modules (FRACAS)?

Visteon Speed Control

by 2/17/99

Provide color photos of Econoline?

Texas Instruments

by complete

*There are no color photos.*

## Containment / Corrective Action Tasks

### Competitive Vehicles

How is switch packaged?

Is it always Powered (HOT\_ALL\_TIME) ?

Are the contacts opened when pressure applied?

What is fuse limit?

What is being switched?

Is it a redundant switch?

AVT EESE Competitive Analysis by 2/24/99

### What does Speed control FMEA say about Brake Switch ?

Visteon Speed Control by completed

*The Brake Pressure Switch (Deactivation Switch) coupled with the Stop Lamp switch are categorized as "Automatic Deactivation". The FMEA lists "Automatic Deactivation" as current design control for 66 different potential cause/mechanical failures.*

*Brake Pressure Switch (Deactivator Switch) is one of the most important safety features.*

### When was non-Pressure actuated switched introduced?

AVT EESE Chassis Electronics by completed

*95 Continental and T/Bird were first to use it.*

### Is the Circuit drive hi-side or low-side?

Visteon Speed Control by completed

*Circuit is low side driven.*

### How does speed control use this switch?

Visteon Speed Control by completed

- 1. Brake Pressure Switch provides electrical power to the speed control servo clutch circuit. The clutch circuit needs to be energized for the servo motor to pull the cable.*
- 2. Switch provides a redundant method of sensing brake application independent of the primary system deactivation mode; this is a SDS (SC-0005) requirement.*

- Signal from the stop lamp switch is primary deactivation mode for brake application.
- Under "hard" braking condition; Brake Pressure Switch provides redundant brake signal to the speed control logic (similar to stop lamp switch signal) and disconnects power to the clutch circuit; causing the speed control servo pulley to immediately return to the idle position. Note: Under normal braking conditions, only the stop lamp switch signal cancels speed control operation.

**Do all Ford applications use switch between fuse and load?**

**YES** Visteon Speed Control by complete

**Do all Ford applications have switch connected to HOT-ALL-TIMES?**

**AVT EESE OPD** by 2/18/99

**Can Brake Pressure Switch function be removed from power feed circuit and placed in ground return circuit?**

**Visteon Speed Control** by completed

1. Would require redesign of the speed control electronics.
2. Additional isolated ground circuit is required.
3. From FMEA position switching the ground circuit is not as good as switching the B+ feed.
  - With a ground return circuit; short to ground (fault) it would override the deactivation switch.
  - With the current power feed circuit; short to ground make the speed control system inoperative. A short to power is required to override the deactivation switch; much lower potential to occur.

**Why is this switch connected to HOT-ALL-TIMES?**

**Visteon Speed Control** by completed  
Because the SDS requires it to be connected to the same fuse as the stop lamp.

**What is SDS requirement number?**

**Visteon Speed Control** by **completed**  
*SDS (SC-0068) states: The stop lamp switch and redundant deactivator switch must be on the same fused circuit.*

**Is it feasible to disconnect the switch as immediate containment?**

*Yes. The customer will not have use of the speed control.*

**Is it acceptable to Jumper out the switch as immediate containment?**

**Visteon Speed Control** by **completed**  
*NO... Would eliminate an important safety feature of the speed control system. The Brake Pressure Switch provides the redundant method for sensing brake application independent of the primary system deactivation mode. This is an SDS (SC-0005) requirement.*

*Elimination of this feature requires the concurrence of the OGC.*

**Other recommendations for immediate containment?**

**All** by **on-going**  
*Add fuse between the stop lamp fuse and the brake pressure switch?*

**Recommendations for increased Life of switch.**

**TI** by **3/5/99**  
*TI suggested looking at an Automotive ceramic diaphragm pressure transducer ( not a switch) that is used for ABS.*

Brake Pressure Switch Test Log  
Updated 2/18/99

Category	Test	Location	Test Parameters	Results Update
Lab Simulation of Potential Ignition in Switch	1	TI	Various Levels of Brake Fluid, Water, Detergent 14Vdc to one terminal, heoport grounded	100+ hours into test, max current 5mA No significant change with time
	2	TI	Various Levels of Brake Fluid, Water, Detergent 1 Amp through switch terminals	100+ hours into test No significant temperature rise with time
	3	AVT	Brake Fluid in Switch, 24 VDC to one terminal Heoport Grounded	> 200 hours into test, max current 7mA No significant change with time
	4	AVT	Brake Fluid in Switch, 24 VDC to one terminal Heoport Grounded, Ambient at 100 C	18 hours into test max current 5mA No significant temperature rise with time
	5	AVT	Brake Fluid in Switch, 18 Ampe Through switch terminals	Temperature rise of 20 C above room temp Delta T reached steady state at 20 C
	6	TI	Build heater element into Switch Heat till failure	Expected update 2/19
Life Cycle Reliability of Pressure Switch	7	TI	0-1400 psig pressure pulses at 135C ambient per EB	Parts at 600k cycles, no leaks. Will continue to failure
Diaphragm Wear	8	TI	0-1400 psig pressure pulses at 135C ambient	Parts withdrawn every 200k cycles, characterized for wear
Field vs Lab Correlation	9	Central Labs	Various Field returns, from dealer lots, junkyards	Parts in Central Labs, being processed
Design Of Experiments Evaluating Factors Effecting Diaphragm Wear	10	TI	Various Levels of Brake Fluid, Water, Under ES conditions, to failure	Test being structured. Expected Phase One to begin 2/19
On-Vehicle Characterization of Pressure & Temperature Profile in Town Car	11	AVT	Monitor Pressure and Temperature at Switch Location for ABS and non-ABS braking events.	Logistics being worked out.
