Brake Pressure Switch Disassembly Protocol

1. Prior to disassembly, still photographs will be taken of the switch to document its condition.

Photographs will include:

- a. the date code
- b. longitudinal, front
- c. longitudinal, back
- d. the port
- e. the base

2. Visual inspection will be made of the base and the connector, if any. The terminals in the base (both sides) and the connector receptacles and seals, if any, will be photographed. Any contamination will be noted and specifically photographed.
3. Electrical resistance measurements will be taken from terminal to terminal and each terminal to the hex-port in a vertical orientation, base up, and recorded. For terminal to terminal measurement, the positive lead is attached to moveable terminal and the negative lead is attached to stationary terminal. For terminal to hex-port measurements, the positive lead is attached to terminal and the negative lead is attached to the hex-port. The readings will be taken approximately 10-15 seconds after contact. The connection to multimeter will be made by alligator clips directly to the base terminal.
4. Prior to disassembly mark the crimp ring, base and connector by scribing a mark that will preserve the relative orientation of those parts, and the component re-photographed. The crimp ring that secures the connector to the base will be removed using a Dremmel tool and an abrasive disk. One cut will be made at a point on the crimp ring that does not disturb any markings on the ring, and the crimp ring unrolled. Photographs will include:
 - a. internal switch contacts
 - b. inside of crimp ring
 - c. top of cup
 - d. base

An opportunity to inspect the internal switch contacts under a microscope will be given to all parties present.

5. Take a sample of fluid or other material found, if any, and preserve for analysis. The protocol for analysis to be determined.
6. A lathe will be used to carefully remove the outer retaining ring to permit access to the diaphragm and the Kapton layers.
7. The two parts of the switch will be carefully separated with little or no disturbance.

Photographs will include:

- a. Face of box-port
 - b. Top of Kapton piece, whole frame view (still in the cup)
8. Remove the environmental seal.
 9. Prior to Kapton diaphragm removal, mark the same successive corner of each layer of Kapton diaphragm with a unique mark. This will preserve the relative orientation of the Kapton diaphragm layers and the diaphragm. Photographs will be taken of the diaphragm and the Kapton diaphragm layers after marking and prior to removal.
 10. The fluid seal and the three Kapton diaphragm layers will be removed and photographed individually using a clean dry photographic background and a close-up lens. Photographs will include:
 - a. whole frame views of each piece of Kapton, one on each side
 - b. the fluid seal (each side)

After all layers of Kapton have been photographed, each layer will be placed under the microscope and made available for examination by all parties present. No specific probing or alteration of the Kapton diaphragm pieces, other than specified in this protocol, shall be made.

11. Take washer, converter, disk assembly and Kapton spacer layer out of cup. Separate into individual components and photograph each side of each component, as well as the inside of the cup. An opportunity to inspect the components under a microscope will be given to all parties present.
12. All disassembled parts will be packaged individually, marked with proper identification, and retained for storage using appropriate evidence storage procedures.

Data Form for Examination and Disassembly of Brake Switch

GENERAL INFORMATION

Long Tag Number: 0071080211
VIN: 2FA1P74W1P2 Build Date: 11/26/92
Vehicle Location - City: GIAN DARS
Vehicle Location - State: ARIZONA
Vehicle Model: CROWN VICTORIA
Vehicle Model - Year: 1993

Part Prefix Number: F2VC
Part Base Number: 9F924
Part Suffix Number: AB
Date Code: 2294

Resistance: Terminal-to-Terminal: .1 Ω
Resistance: Stationary Terminal to Hex Port: OPEN
Resistance: Moveable Terminal to Hex Port: OPEN
