December 8, 1997

Jackson, Mississippi [REDACTED]

To: [REDACTED] et al v Ford Motor Company
Case No: [REDACTED]
Your File No: 24-F-0224-403/24-1018-100
DML: 12/6/96
PTI Project No: 97-3039

Dear [REDACTED]

At your request, I traveled to Jackson, Mississippi on December 3 & 4, 1997 to examine a 1992 Mercury Grand Marquis belonging to the [REDACTED] along with evidence removed from the vehicle by [REDACTED]. In addition, I reviewed an investigative report prepared by [REDACTED] on the above referenced loss, dated April 29, 1996; a recorded statement of the [REDACTED] taken by Malcolm Houston of State Farm; and a recorded statement of the [REDACTED] taken by Johnny Masoner of State Farm. You requested that I attempt to determine the cause of the subject fire and specifically if the fire was of an electrical cause, to identify the specific failure that caused the fire.

On December 3, 1997 I traveled to the offices of [REDACTED] to examine the artifacts that he had retained during his investigation of this loss. The materials in [REDACTED] possession included 9 bags of asserted electrical components from the [REDACTED] 1992 Grand Marquis (see Figure 1).

The first bag contained pieces of 2 small relays (see Figures 2 and 3). There was nothing remarkable about this material as relates to the origin and/or cause of the fire.

The second bag contained a piece of metal mesh, a small DC motor, a solenoid with 2 wires attached and some melted aluminum (see Figure 4). The metal mesh was part of the vehicle's air filter. I did not determine the original location of the small motor. The damage to the motor was indicative of the motor having been damaged as a result of exposure to the fire. The solenoid was examined and determined to have been damaged as a result of external fire exposure (see Figure 5). I determined the solenoid to be the Air Suspension Compressor Motor and Vent Solenoid. An examination of the 2 wires attached to the solenoid found them to be approximately 7 inches in overall length. I found melted and beaded copper at the end of one of the conductors (see Figure 6). The melted and beaded copper is indicative of electrical short circuiting involving this conductor.

The third bag contained a small printed circuit board, a connector, 1 loose piece of wire, 2 "bundles" of wire and other melted debris (see Figure 7). There was nothing remarkable about these materials.

The fourth bag contained 9 pieces of wire (see Figure 8). Two of the pieces were solid copper wire, while the remainder were stranded wire. The solid wire was not part of the vehicle, but was most

probable part of the residence's wiring system. There was nothing remarkable about the condition of any of this wiring.

The fifth bag contained a large DC motor (see Figures 9 and 10). This was determined to be the air pump motor. Also in the bag were some associated mechanical components, including what appeared to be a piston from the air compressor. I noted melting to the cast aluminum end cap for the motor. The melting was heaviest at the upper left corner of the end cap (see Figures 11 through 15). Two wires entered the end cap on the left side of the cap. I examined this wiring and found beaded and melted copper at the ends of these conductors (see Figures 16 through 18). I examined the motor windings and found them to be damaged as a result of external heat exposure (see Figure 19).

The sixth bag contained an assortment of electrical wiring (see Figure 20). There was nothing remarkable about this wiring.

The seventh bag contained a multi-conductor connector (see Figure 21). There was nothing remarkable about this connector.

The eighth bag contained an assortment of electrical wiring (see Figures 22 and 23). There was nothing remarkable about the condition of this wiring.

The last item examined was some miscellaneous wiring that had been located at the bottom of a bag used to store some of the evidence (see Figure 24). There was nothing remarkable about this wiring.

On December 4, 1997 I traveled to Copart Auto Salvage near the Jackson Airport to examine the remains of the [REDACTED] Grand Marquis. The vehicle was heavily oxidized, and showed evidence of degradation due to exposure to the elements. Despite the vehicle's current condition, it was apparent that the vehicle had been involved in an extensive fire loss, with nearly all combustible materials in the vehicle having been consumed (see Figures 25 through 30). I noted that the left front cast aluminum wheel had melted during the course of the fire (see Figure 31). There was a partial melting of the cast aluminum wheel at the right front of the vehicle (see Figure 32).

There was evidence of fire damage throughout the engine compartment (see Figures 33 through 37). I noted evidence of melting of cast aluminum components at the front of the engine, with the most extensive melting occurring on the left side of the engine. I examined the remaining wiring within the engine compartment and found no evidence of electrical short circuiting.

A pump/control unit for the anti-lock brakes (ABS) was located on top of the left side frame rail, near the left front corner of the engine. An examination of this unit found evidence of melted aluminum, with the heaviest melting of aluminum occurring on the left side of the pump (see Figures 38 and 39).

The vehicle's alternator was located at the top front of the engine, at the center of the engine (see Figure 40). I noted evidence of some softening or deformation of the cast aluminum housing of the alternator. The terminal and connector contacts at the rear of the alternator showed no evidence of any unusual or abnormal conditions.

I reviewed [REDACTED] report on this loss. I noted the following relevant information: the fire occurred at approximately 1 A.M.; the fire was discovered by [REDACTED] who found the left front

tire of the vehicle on fire; [REDACTED] attempted to extinguish the fire but was unsuccessful - he also noted burning in the area of the left front tire; the car was last driven the day before the fire and was parked in the garage at approximately 1:30 P.M.; other than routine maintenance, the only other repair was the replacement of an air conditioning compressor; the car was purchased as a demonstrator, with approximately 25,000 miles on it at the time of sale; there were approximately 70,000 miles on the vehicle at the time of the fire.

A review of the recorded statements taken by Malcolm Houston provided additional details regarding [REDACTED] initial observations of the vehicle immediately after discovering the fire. The only new information provided by these statements was an indication of some ignition related repairs, possibly involving the replacement of spark plug wires. This repair occurred in 1984.

A review of the recorded statement taken by Johnsey Masoner provided no new information. This statement reconfirmed the observations of [REDACTED] of seeing the fire initially at the area of the left front tire of the vehicle.

The statements of [REDACTED] place the origin of the fire at the left front corner of the engine compartment, near the left front tire. The air suspension compressor motor and the ABS pump were both located in this general area of the vehicle. The fire damage to both of these components was consistent with a fire originating near the front of the left front tire and progressing outward from that location. I noted that there was evidence of electrical short circuiting on wires associated with the air suspension compressor motor and solenoid. The vehicle's battery was located at the right front corner of the engine compartment. The fact that there was short circuiting on wires by the air suspension compressor indicates that the fire was on the left side of the vehicle and had progressed to the right side. Had the fire originated on the right side of the engine compartment, the fire would have attacked the battery prior to the tire reaching the air suspension compressor. This would have caused an interruption in the electric power to the air suspension compressor. The short circuiting by the air suspension compressor is clear evidence that the fire was in this area of the vehicle prior to progressing to the location of the battery.

The fire was discovered after the vehicle had been parked for almost 12 hours. With this time frame a mechanical malfunction within the engine compartment can be eliminated as the cause of the fire. The only viable ignition sources consistent with this time frame are an electrical malfunction or a fire caused by a human act. No evidence has been presented to me to indicate that this fire was other than accidental, nor that any human act, accidental or deliberate, may have been the cause of the fire. Therefore, the most probable cause of the fire is an electrical malfunction within the engine compartment, in my opinion.

The physical evidence, combined with the witness statements places the area of origin within the engine compartment, at the left front corner of the vehicle. An examination of wiring and electrical components from this area of the vehicle found evidence of electrical short circuiting on wires associated with the air suspension compressor motor and its associated solenoid. A review of electrical schematic diagrams for this vehicle determined that there is a constantly "Hot" feed to the compressor motor solenoid. Based upon these facts, it is my opinion that the short circuiting noted at the air suspension compressor motor and solenoid represent the most probable cause of the fire.

An examination of an exemplar vehicle revealed that the air suspension compressor motor was located at the left front corner of the engine compartment, below the air filter housing and windshield washer fluid reservoir. A plastic cover was found beneath the air filter housing and above the air suspension compressor. Given the location of the air suspension compressor motor, it

is well protected from casual contact which might occur during normal maintenance activities within the engine compartment. The location of this unit actually requires a significant amount of deliberate action to uncover and gain access to this motor. Therefore, there is no reason to believe that the air suspension compressor motor and associated wiring would have been damaged, either deliberately or inadvertently, during the course of normal maintenance activities within the engine compartment. Accordingly, it is my further opinion that the most probable cause of the short circuiting which caused this fire was damage to the wiring's insulation that occurred during the manufacturing of the vehicle.

Based upon my examination of a 1992 Mercury Grand Marquis belonging to [REDACTED] and a review of other pertinent information, I have reached the following conclusions regarding a fire loss which occurred on December 6, 1992:

- The fire originated at the left front corner of the engine compartment. The specific area of origin was at or near the air suspension compressor motor.
- The fire was accidental.
- The fire was caused by electrical short circuiting of wires associated with the air suspension compressor motor and associated solenoid.
- The short circuiting was the result of damage to the wiring's insulation. This damage occurred during the original manufacturing of the vehicle.

Enclosed with this report are additional photographs taken during the course of the investigation, but not referenced in this report. Should you have any questions regarding this report, or the investigation in general, please do not hesitate to contact me. I appreciate this opportunity to have been of service.

Sincerely,

Richard W. Kovarsky, P.E.
President/Fordweld Engineer

SOUTHERN DISTRICT OF MISSISSIPPI

[REDACTED]

PLAINTIFFS

VS.

CAUSE NO. 251-97-360CIV

FORD MOTOR COMPANY

DEFENDANTS

AMENDED COMPLAINT

COMES NOW the Plaintiff, [REDACTED] by and through the undersigned Counsel and pursuant to FRCP 24 and files this Amended Complaint against Ford Motor Company, and in support thereof would show unto the Court the following:

PARTIES

1.

Plaintiff [REDACTED] is an adult resident citizen of Meridian, Lauderdale County, Mississippi.

2.

Defendant, Ford Motor Company ("Ford"), is a corporation organized and existing under the laws of the State of Delaware doing business in the State of Mississippi and may be served with process by serving its attorney in this action Gregory K. Davis, Davis, Goss & Williams at 188 East Capitol Street Suite 295, Jackson, Mississippi 39201 pursuant to FRCP 5(b).

FACTS

3.

Ford, designed, manufactured, assembled and distributed the 1992 Mercury Grand Marquis, VIN 2MECM75W6N[REDACTED] which is the subject vehicle described in this Complaint.

4.

On information and belief, Ford designed, manufactured, assembled and distributed the alternator, the leveling pump and all related component parts on the engine of the subject vehicle.

5.

In 1992, the [REDACTED] purchased the above described vehicle for their personal use. Plaintiff, [REDACTED] is the widow of [REDACTED] and was his wife at all times relevant to this Complaint.

6.

At approximately 1:30 p.m. on December 5, 1995, [REDACTED] parked the subject vehicle for the evening in the carport at his residence located at [REDACTED] Collinsville, Mississippi. At approximately 2:30 a.m. on December 6, 1996, [REDACTED] heard a frying or burning sound coming from the carport. After waking her husband, the [REDACTED] observed a fire burning around the left front tire and under the engine compartment of the subject vehicle. The [REDACTED] attempted to extinguish the fire by pouring water onto the hood and left front tire of the vehicle without success. The fire spread from the engine compartment of the subject vehicle to the [REDACTED] residence causing extensive damage to the [REDACTED]'s real and personal property.

7.

At all times prior to December 6, 1995, the [REDACTED] operated and maintained the subject vehicle in a reasonably foreseeable manner and their actions in no way contributed to the fire.

8.

The cause of the fire was a defective alternator and/or levelling pump and related components manufactured by Ford.

9.

Ford knew, or should have known in light of reasonably available knowledge, or in the exercise of reasonable care, that the alternator and/or levelling pump installed on the subject vehicle were defective and dangerously designed and created an unreasonably dangerous condition.

10.

Ford knew, or should have known in light of reasonably available knowledge, or in the exercise of reasonable care, about the dangerous condition of the vehicle resulting from the defective alternator and/or levelling pump that caused the fire, and knew, or should have known, that the [REDACTED] were unaware of the dangerous condition caused by the defective alternator and/or defective levelling pump and component parts. Despite its knowledge of the unreasonably dangerous condition caused by the defective alternator/levelling pump and component parts, Ford failed to provide the [REDACTED] with any warnings regarding the dangerous condition of the alternator and/or levelling pump and component parts.

11.

As a direct and proximate result of the failure of the defective and dangerous alternator and/or levelling pump and related components, and the resulting fire, the [REDACTED] sustained extensive loss and damage to their residence, its contents and three (3) automobiles. As follows:

- 1) Gross Dwelling Loss - \$161,792.62
- 2) Gross Contents Loss - \$93,690.27
- 3) 1992 Mercury Grand Marquis - \$ 12,159.00
- 4) 1986 Toyota Cressida - \$5,475.00
- 5) 1987 Buick LeSabre - \$4,725.00
- 6) Gross Resultant Loss - \$6,740.00

Total of Special Damages: \$284,581.89

In addition to the foregoing, Plaintiff sustained general damages including inconvenience, interruption of her life activities and loss of numerous other items of personal meaning that cannot be replaced.

**COUNT I
STRICT LIABILITY**

12.

Plaintiff hereby adopts and realleges Paragraphs 1-12 as set forth herein.

13.

The above described motor vehicle, specifically, the alternator and/or levelling pump and related components, were defective and dangerously designed by Ford and created an unreasonably dangerous condition which was the direct and proximate cause of the subject fire.

14.

Ford failed to warn the Billows of the dangerous condition of the alternator and/or levelling pump and related components on the subject vehicle before placing said vehicle in the stream of commerce.

COUNT II
BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY

15.

Plaintiff hereby adopts and realleges Paragraphs 1-16 as set forth herein.

16.

Ford impliedly warranted that the subject vehicle was fit for ordinary purposes for which such vehicles are used.

17.

The subject vehicle was not fit for ordinary purposes, in that the alternator and/or levelling pump and related components were defective as evidenced by the fact that the defective parts caused a fire after the vehicle had been parked for approximately thirteen (13) hours on the day of the fire.

18.

Ford's breach of implied warranties of merchantability was a direct and proximate result of the subject fire and resulting damages.

COUNT III
NEGLIGENCE

19.

Plaintiff hereby adopts and realleges Paragraphs 1-20 as set forth herein.

20.

Ford is liable to the Plaintiff arising out of one or more of the following negligent acts:

(a) Negligent design and assembly of the subject vehicle; specifically, the alternator and/or levelling pump and related components;

- (b) Negligent failure to warn the Billows of the dangerous condition of the subject vehicle; specifically, the alternator and/or levelling pump and related components;
- (c) Negligent failure to inspect the subject vehicle before placing it in the stream of commerce.

21.

As a direct and proximate result of one or more of the aforesaid negligent acts and omissions, the Plaintiff sustained the damages as set forth above:

WHEREFORE PREMISES CONSIDERED the Plaintiff, [REDACTED] prays for a judgment against the Defendant, Ford Motor Company for compensatory damages in the amount of \$384,581.89, plus pre-judgement interest, reasonable attorney's fees, all costs of this action and for such other and further relief as the Court finds just and proper.

Respectfully Submitted,

VS.

FORD MOTOR COMPANY

PLAINTIFFS

CAUSE NO.

25197-360CIV

DEFENDANT

JURY TRIAL DEMANDED

COMES NOW, the Plaintiff, [REDACTED] State Farm Fire & Casualty Company and State Farm Mutual Automobile Insurance Company and hereby file their Complaint against Ford Motor Company, and in support thereof would show unto the Court the following:

PARTIES

1.

Plaintiffs [REDACTED] (hereinafter collectively referred to as "the [REDACTED]"), are adult resident citizens of Collinsville, Lauderdale County, Mississippi.

Plaintiff, State Farm Fire & Casualty Company ("State Farm Fire"), is a corporation organized and existing under the laws of the United States of America and is qualified to do business in the State of Mississippi. Plaintiff, State Farm Mutual Automobile Insurance Company ("State Farm Auto"), is a corporation organized and existing under the laws of the United States of America and is qualified to do business in the State of Mississippi.

2.

Defendant, Ford Motor Company ("Ford"), is a corporation organized and existing under the laws of the State of Delaware doing business in the State of Mississippi and may be served with process by serving its registered agent for service of process in the State of Mississippi, CT Corporation Systems, 118 North Congress Street, Jackson, Mississippi 39201.

FACTS

3.

Ford designed, manufactured, assembled and distributed the 1992 Mercury Grand Marquis, VIN 2MBCM75W6N[REDACTED] which is the subject vehicle described in this Complaint.

4.

On information and belief, Ford designed, manufactured, assembled and distributed the alternator, the levelling pump and all related component parts on the engine of the subject vehicle.

5.

In 1992, [REDACTED] purchased the above described vehicle for their personal use. Attached hereto and incorporated herein by reference as Exhibit "A" is a copy of the Certificate of Title which reflects [REDACTED] as the owner of the subject vehicle.

6.

At approximately 1:30 p.m. on December 5, 1996, [REDACTED] parked the subject vehicle for the evening in the carport at his residence located at [REDACTED] Collinsville, Mississippi. At approximately 2:30 a.m. on December 6, 1996, [REDACTED] heard a frying or burning sound coming from the carport. After awakening her husband, the [REDACTED]

observed a fire burning around the left front tire and under the engine compartment of the subject vehicle. The [REDACTED] attempted to extinguish the fire by pouring water onto the hood and left front tire of the vehicle without success. The fire spread from the engine compartment of the subject vehicle to the [REDACTED] residence causing extensive damage to [REDACTED] real and personal property.

7.

At all times prior to December 6, 1995, the [REDACTED] operated and maintained the subject vehicle in a reasonably foreseeable manner and their actions in no way contributed to the fire.

8.

The cause of the fire was a defective alternator and/or levelling pump and related components manufactured by Ford.

9.

Ford knew, or should have known in light of reasonably available knowledge, or in the exercise of reasonable care, that the alternator and/or levelling pump installed on the subject vehicle were defective and dangerously designed and created an unreasonably dangerous condition.

10.

Ford knew, or should have known in light of reasonably available knowledge, or in the exercise of reasonable care, about the dangerous condition of the vehicle resulting from the defective alternator and/or defective levelling pump that caused the fire, and knew, or should have known, that the [REDACTED] were unaware of the dangerous condition caused by the defective alternator and/or defective levelling pump and component parts. Despite its knowledge of the unreasonably dangerous condition caused by the defective alternator and/or defective levelling pump and component parts, Ford failed to provide the [REDACTED] with any warnings regarding the

dangerous condition of the alternator and/or levelling pump and component parts.

11.

At the time of the fire loss, State Farm Fire had issued to the [REDACTED] a homeowner's policy of insurance, No. 24-95-3146-2 and State Farm Auto had issued an automobile insurance policy, No. 2194-745-A20-24.

12.

As a direct and proximate result of the failure of the defective and dangerous alternator and/or levelling pump and related components, and the resulting fire, the [REDACTED] sustained extensive loss and damage to their residence and the insured automobile. State Farm Fire, in accordance with the terms and provisions of the homeowner's policy of insurance, paid the [REDACTED] the total sum of \$140,803.00 for damages sustained by [REDACTED] to their residence. State Farm Auto, also paid the [REDACTED] the total sum of \$12,159.00, less a deductible of \$100.00, for damages sustained by the [REDACTED] to their automobile.

13.

As a result of those payments, State Farm Fire is subrogated to the rights of the [REDACTED] to the extent of \$140,803.00 and State Farm Auto is subrogated to the rights of the [REDACTED] to the extent of \$12,159.00.

**COUNT I
STRICT LIABILITY**

14.

Plaintiffs hereby adopt and reallege paragraphs 1-13 as set forth herein.

15.

The above described motor vehicle, specifically, the alternator and/or levelling pump and related components, were defective and dangerously designed by Ford and created an unreasonably dangerous condition which was the direct and proximate cause of the subject fire.

16.

Ford failed to warn the [REDACTED] of the dangerous condition of the alternator and/or levelling pump and related components on the subject vehicle before placing said vehicle in the stream of commerce.

COUNT II
BREACH OF IMPLIED WARRANTY OF MERCHANTABILITY

17.

Plaintiffs hereby adopt and reallege paragraphs 1-16 as set forth herein.

18.

Ford impliedly warranted that the subject vehicle was fit for the ordinary purposes for which such vehicles are used.

19.

The subject vehicle was not fit for ordinary purposes, in that the alternator and/or levelling pump and related components were defective as evidenced by the fact that the defective parts caused a fire after the vehicle had been parked for approximately thirteen hours on the day of the fire.

20.

Ford's breach of implied warranties of merchantability was a direct and proximate result of the subject fire and resulting damages.

COUNT III
NEGLIGENCE

21.

Plaintiffs hereby adopt and reallege paragraphs 1-20 as set forth herein.

22.

Ford is liable to the Plaintiffs arising out of one or more of the following negligent acts:

- (a) Negligent design and assembly of the subject vehicle; specifically, the alternator and/or levelling pump and related components;
- (b) Negligent failure to warn the [REDACTED] of the dangerous condition of the subject vehicle; specifically, the alternator and/or levelling pump and related components; or
- (c) Negligent failure to inspect the subject vehicle before placing it in the stream of commerce.

23.

As a direct and proximate result of one or more of the aforesaid negligent acts and omissions, the Plaintiffs sustained the damages as set forth above.

WHEREFORE, PREMISES CONSIDERED the Plaintiffs, [REDACTED],

[REDACTED] State Farm Fire & Casualty Company and State Farm Mutual Automobile Insurance Company, pray for a judgment against the Defendant, Ford Motor Company, as follows:

1. State Farm Fire & Casualty Company prays for a judgment in the amount of \$140,803.00 plus pre-judgment interest and reasonable attorney's fees.
2. State Farm Mutual Automobile Insurance Company prays for a judgment in the amount of \$12,039.00 plus pre-judgment interest and reasonable attorney's fees.

3. [REDACTED] and pray for a judgment in the amount of \$100.00 plus pre-judgment interest and reasonable attorney's fees.

4. The Plaintiffs pray that all costs of this action be assessed to the Defendant. The Plaintiffs pray for such other and further relief as the Court finds just and proper.

Respectfully submitted,

[REDACTED]

ODOMETER DISCLOSURE STATEMENT

Federal law (and State law, if applicable) requires that I complete the following upon transfer of ownership. Failure to complete or return this statement may result in fine and/or imprisonment.

Bobbie Gustafson Lincoln Mercury, Inc. Registrant's name, Print

state that the odometer now reads 71,000 (the actual miles and to the best of my knowledge that it reflects the actual mileage of the vehicle described below.) Unless one of the following statements is checked:

- (1) I hereby certify that to the best of my knowledge the odometer reading reflects the actual amount of mileage in excess of its mechanical limits.
 (2) I hereby certify that the odometer reading is NOT the actual mileage.

WARNING - ODOMETER DISCREPANCY.
