Ridge Cover Height

-----Original Message-----

From: Boutsikakis, Georgios (G.I.) [mailto:gboutsik@FORD.COM]  
Sent: Thursday, May 15, 2003 3:55 PM  
To: Jerry Miers (E-mail); Gehl, Laxman (L.D.)  
Subject: FW: Agenda and Suggestions for 2:00PM Meeting Today

**EOL Test Data Review**

Parts tested multiple times and show different readings on WOT and Idle voltage (%Vref) the range is as high as 80%.  
A few parts that show extremely high readings all across the tracks for Idle and WOT is due to light curtain violation.

**Action to investigate data differences**

- \* Take on part and run through the tester 50 times at the production line speed and record the data.
- \* Talk to the operators that doing the testing we need to understand the difference in the data.

**Potential X's on the WOT/IDLE Variability**

- 1) Cover ridge height
- 2) Rotor milling angle
- 3) Rotor milling depth
- 4) Lever "D" angle
- 5) Lever idle radius.

**Action to investigate the potential X's**

- \* Provide Capability analysis data for sensor housing ridge by cavity
- \* Provide data for rotor milling angle by milling nest
- \* Provide rotor "D" depth data by milling nest
- \* Provide data for "D" slot angle of the lever
- \* Provide data for idle radius of the lever
- \* Provide Poke Yoke proposals for element placement into housing and rotor placement into housing.

If you have any questions or you want anything to add please let me know.  
Thanks.

- > To: Jerry Miers (E-mail); Gehi, Laxman (L.D.)
- > Subject: Agenda and Suggestions for 2:00PM Meeting Today

Agenda

- 1) Review raw data of 5/7/03 and 5/08/03 - (Laxman' File)
- 2) Review Gage R&R process and data again
  - Some of the parts are tested multiple times
  - Raw data show larger range than Gage R&R for the same part
  - Some parts change between pass and fail when tested multiple times
- 3) Review Cause and effect Diagram for Completeness
- 4) Identify Potentials X's
- 5) Develop Data gathering plan on the Xs
- 6) Open discussion (whatever is in you mind)

Suggestions and questions

- Have the person that did the R&R as part of our discussion
- How does the tester read %Vref (Circuit Diagram might be helpful)
- Get a digital photo of the tester for our discussion

Jerry,

Please provide us the required specs for milled rotor depth and angle (in the file there are two specs mentioned...what are those?). It will help us understand better if you also let us know how these were arrived (a little back ground or logic). I will see you Sunday/Monday.

Thanks.

**Subject:** Agenda Items 05-16-03

Attached are the capability charts for the Milled Rotor Depth by Nest from Present Data and the capability study of historical data for the Milled Rotor Angle (Not By Nest. By nest will require a full study and I think the order of MSA for the metrology lab should be as follows, 1. Ridge Height by

PER3-044 24025

cavity. 2. Rotor mill angle by nest. 3. Lever "D" angle and radius. The results for these are forthcoming however the timing for each is about 1.5 days; therefore we are looking at about 4 days for completion of all I will send them to you as they are complete.

#### EOL Test Data Review

Parts tested multiple times and show different readings on WOT and Idle voltage (%Vref) the range is as high as 80%.

A few parts that show extremely high readings all across the tracks for Idle and WOT is due to light curtain violation.

#### Action to investigate data differences

- \* Take on part and run through the tester 50 times at the production line speed and record the data.
- \* Talk to the operators that doing the testing we need to understand the difference in the data.

#### Potential X's on the WOT/IDLE Variability

- 1) Cover ridge height
- 2) Rotor milling angle
- 3) Rotor milling depth
- 4) Lever "D" angle
- 5) Lever idle radius.

#### Action to investigate the potential X's

- \* Provide Capability analysis data for sensor housing ridge by cavity
- \* Provide data for rotor milling angle by milling nest
- \* Provide rotor "D" depth data by milling nest
- \* Provide data for "D" slot angle of the lever
- \* Provide data for idle radius of the lever
- \* Provide Poke Yoke proposals for element placement into housing and rotor placement into housing.

If you have any questions or you want anything to add please let me know.  
Thanks.

Reasons for retesting product.

- 1 Hysteresis failures are tested a second and third time, if unit passes it will be shipped. This is a customer feel issue.
- 2 Force failures will get retested if they are on the boarder line or may get actuated and retested if they are a Newton or two out of spec. If they pass they will get shipped.
- 3 Units tested three and four times are generally an engineering study of sorts.
- 4 Increase in volts is due to an adjustability feature (rework) in the debris cover. This will in general change the output by as much as 2%.

To: Gehl, Lasman (L.D.); Boutsikakis, Georgios (G.I.); Miers, Jerry  
Subject: RE: Updated: Phone conference with Williams

Data 05-7-03.xls

The GRR were faxed to Georgios Friday Afternoon.  
The large number you (billions) are due to open resistance or infinite  
resistance. This is also due to cracked elements.

Data to show 05/7 and 05/08.
