Phil/Mike/Katherine/Gail,

Please note this analysis, I had this done for other reasons than just follow up on TT, but there are some alarming issues we need to be sure we are following up on.

Please note via your quarterback reviews and ensure you have plans.

Paul, again thanks very much, can I get a \$ MIS R/1000 versus month of production?

Brian:

R/1000 by calendar month does not make sense because it is calculated for vehicle population at a specific time in service. For example if we want the R/1000's for 2002 MY Explorer we have to find out the Explorer populations and the numbers of repairs at 0, 1, 2, 3, ... months in service. The R/1000 is the number of repairs divided by the vehicle population at a specific month in service. At any given calendar month the vehicle population is made up of vehicles at different months in service.

Attach is an update file with Repair Counts Chart by QBs by vehicles.

Paul,
This is great, thanks.
Is there a way to also get this in R/1000 as well?

Attach are the data you requested.

- Over all from the warranty spending standpoint the Fuel Systems and the Driveline QB's appear to have the greatest opportunity for warranty cost reduction, especially in the diesel applications area.
- There is an adverse trend in 2002 MY for diesel applications in the Accelerator Controls area.
- There seems to be an emergent Fuel Systems issue with the 2003 MY 6.0L Diesel applications.
