the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (1990-2000).

There is a growing awareness of the need to address the health care needs of the elderly population. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of the elderly population. This strategy is based on the following principles:

• To ensure that the NHS is able to meet the needs of the elderly population.

• To ensure that the NHS is able to provide a high quality of care to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

• To ensure that the NHS is able to provide a range of services to the elderly population.

the first two years of life. The first year of life is the most critical period for the development of the brain and the nervous system.

The second year of life is also a critical period for the development of the brain and the nervous system.

The third year of life is also a critical period for the development of the brain and the nervous system.

The fourth year of life is also a critical period for the development of the brain and the nervous system.

The fifth year of life is also a critical period for the development of the brain and the nervous system.

The sixth year of life is also a critical period for the development of the brain and the nervous system.

The seventh year of life is also a critical period for the development of the brain and the nervous system.

The eighth year of life is also a critical period for the development of the brain and the nervous system.

The ninth year of life is also a critical period for the development of the brain and the nervous system.

The tenth year of life is also a critical period for the development of the brain and the nervous system.

The eleventh year of life is also a critical period for the development of the brain and the nervous system.

The twelfth year of life is also a critical period for the development of the brain and the nervous system.

The thirteenth year of life is also a critical period for the development of the brain and the nervous system.

The fourteenth year of life is also a critical period for the development of the brain and the nervous system.

The fifteenth year of life is also a critical period for the development of the brain and the nervous system.

The sixteenth year of life is also a critical period for the development of the brain and the nervous system.

The seventeenth year of life is also a critical period for the development of the brain and the nervous system.

The eighteenth year of life is also a critical period for the development of the brain and the nervous system.

The nineteenth year of life is also a critical period for the development of the brain and the nervous system.

The twentieth year of life is also a critical period for the development of the brain and the nervous system.

The twenty-first year of life is also a critical period for the development of the brain and the nervous system.

The twenty-second year of life is also a critical period for the development of the brain and the nervous system.

The twenty-third year of life is also a critical period for the development of the brain and the nervous system.

The twenty-fourth year of life is also a critical period for the development of the brain and the nervous system.

The twenty-fifth year of life is also a critical period for the development of the brain and the nervous system.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion (United Nations 1998).

There are a number of reasons why the number of children in the world is increasing. One of the main reasons is the decline in the death rate of children under 5 years of age. In 1990, 10.6 million children under 5 years of age died, but by 2000, this number is expected to fall to 6.5 million (United Nations 1998). This is due to a number of factors, including improved medical care, better nutrition, and a decline in the incidence of infectious diseases.

Another reason for the increase in the number of children is the decline in the birth rate. In 1990, the world birth rate was 27.5 children per 1,000 women, but by 2000, it is expected to fall to 21.5 children per 1,000 women (United Nations 1998).

The decline in the birth rate is due to a number of factors, including a decline in the number of children per woman, a decline in the number of women who are having children, and a decline in the number of women who are having children at a young age.

The decline in the number of children per woman is due to a number of factors, including a decline in the number of children who are surviving to the age of 5, a decline in the number of children who are surviving to the age of 15, and a decline in the number of children who are surviving to the age of 20.

The decline in the number of women who are having children is due to a number of factors, including a decline in the number of women who are having children at a young age, a decline in the number of women who are having children at an older age, and a decline in the number of women who are having children at all.

The decline in the number of women who are having children at a young age is due to a number of factors, including a decline in the number of women who are having children at a young age, a decline in the number of women who are having children at an older age, and a decline in the number of women who are having children at all.

The decline in the number of women who are having children at an older age is due to a number of factors, including a decline in the number of women who are having children at an older age, a decline in the number of women who are having children at a young age, and a decline in the number of women who are having children at all.

The decline in the number of women who are having children at all is due to a number of factors, including a decline in the number of women who are having children at all, a decline in the number of women who are having children at a young age, and a decline in the number of women who are having children at an older age.

The decline in the number of women who are having children at all is due to a number of factors, including a decline in the number of women who are having children at all, a decline in the number of women who are having children at a young age, and a decline in the number of women who are having children at an older age.

The decline in the number of women who are having children at all is due to a number of factors, including a decline in the number of women who are having children at all, a decline in the number of women who are having children at a young age, and a decline in the number of women who are having children at an older age.
