Summary Description of	of "c" Crash	n, Injury, Fatality Repor	ts and "e" Property Dan	nage - Key Re	moved, not	year in Park	
N012005-10-2501200	Crash	GRACEY	JHMCG56442C	HONDA	ACCORD	2002	Customer states that she was able to take the key out of the ignition while the vehicle was out of park and her vehicle crashed into her neighbors brick wall.
N032007-07-1601914	Crash	WEISSBERG	JHMCG56752C	HONDA	ACCORD	2002	The customer stated that he parked the vehicle on a hill and was able to remove the key from the ignition while the vehicle was in reverse. The customer stated that he thought the vehicle was in park, which is why he left the vehicle, which rolled down a hill and was stopped by a tree.
N032005-09-2200807	Crash	ADKINS	JHMCG56702C	HONDA	ACCORD	2002	The customer stated after getting out of his vehicle and taking the key out of the ignition his vehicle roll into a building and someon told him this vehicle had a recall on it.
N012008-07-1401600	Crash, Property Damage	WINN	1HGCG165X2A	HONDA	ACCORD	2002	The vehicle was stopped, turned the ignition off and removed the key assuming the vehicle was in park. Mr. proceeded to exit the vehicle and closed the door when he noticed the vehicle drifting. Mr. stated he attempted to stop the vehicle from striking vehicle number two but was unsuccessful. Vehicle number two was struck in the right front bumper and vehicle number one was truck in left rear bumper.
N032004-02-2000043	Crash, Property Damage	MARCUCCI	JHMCG66832C	HONDA	ACCORD	2002	She stated that she left her car in gear, removed the key from the ignition and the car rolled back. Her car rolled back and hit another vehicle. Her car sustained some damage as well as the car her vehicle hit.
N012003-11-0401572	Crash	MORGAN	JHMCG56612C	HONDA	ACCORD	2002	Customer states that his vehicle he forgot to put his vehicle in park and took the key out. He did not put the parking brake up and the vehicle rolled down the hill and hhit another car.
N032005-03-3101224	Crash	MESTAS	JHMCG56622C	HONDA	ACCORD	2002	The customer also states that on 3/11/04 at 2pm, he parked the vehicle on an incline while making a delivery of napkins to a business. When he came out, the car moved about 10 inches and hit a sign I received a call from jerlyn at the dealer who stated that YES the key does come out of the ignition when the vehicle is in any gear.

Source	Туре	ClaimantLastName	VIN	Make	Model	Model	Summary
N032005-12-2300605	Crash	HASLETT	JHMCG660820	HONDA	ACCORD	year	She states that her keys will come out when the vehicle is in park, reverse or neutral. She states that the vehicle was off, but the shifter was in drive, so she took the keys out like normal, and she also had her parking brakes on. She states that she left her vehicle to go to work and the parking attendant had to go and find her because her vehicle rolled and hit the cement post and then it went into an embankment that went into the next level.
N032005-04-0400649	Crash	MARQUIS	JHMCG668220	HONDA	ACCORD	2002	The customer stated that about Midnight on a night in November the vehicle rolled while shut off and the key was removed from the ignition.
N012009-02-0601040	Crash	VERSLUIS	1HGCG16512A	HONDA	ACCORD	2002	He stated that he is not having a problem with his vehicle but that last week he removed the key from the ignition switch and the vehicle rolled back and hit a vehicle.
N032006-05-3000624	Crash	MCSHANE	JHMCG56732Q	HONDA	ACCORD	2002	Customer contacted AHM and stated that on April 25th 2006 she parked her car at a restaurant at 6140 north Mesa EI Paso Texas and when she went outside, she saw that her vehicle had rolled backwards and hit another vehicle. Customer stated that she did not put the car in park when she took the key out of the ignition and did not use her parking brake when she parked.
N032005-11-2801860	Crash, Property Damage	OLIVER	JHMCG564820	HONDA	ACCORD	2002	The customer states that on November 13, 2005 the vehicle was involved in an accident where her vehicle rolled from the top of her driveway down into the street where her neighbors vehicle was parked and her vehicle crashed into the parked vehicle. The customer states that it occurred at about 6:30pm that evening and she drove into her driveway and removed her key without pulling on the emergency brake not realizing that her vehicle was not in park.
N012007-01-1600629	Crash	JOYCE	1HGCG22502A	HONDA	ACCORD	2002	The customer stated that you can take the key out of the ignition while in gear. The vehicle was in drive and rolled down the street and he damaged his bumper.

N012008-10-2001297	Crash, Property Damage	GINGRAS	3HGCG564X2G	HONDA	ACCORD	year	She advised that on 10/1/08, she had parked her vehicle into the lot at work and put up the sun shade and left the car. She advised that she had turned behind her and saw a vehicle coming towards her. She advised that she did not realize it until after that it was her car rolling from the spot She claimed that when she had gone into the vehicle, she had noticed that it was not in park and that she was able to remove her key from being in park.
N012005-05-0201903	Crash	CARVER	1HGCM66573A	HONDA	ACCORD	2003	Customer is calling regarding an incident that occurred on Friday April 29th, 2005. Vehicle was parked in a parking lot near the intersection of HWY 75 and Howell Mill. Incident occurred around 18:30. He claims that he parked the car with the shift selector in the Park position. He left the vehicle, keys in his hand, and went into a supermarket. When he returned the vehicle has rolled backwards some 20-30 feet and struck another vehicle. There is damage to Mr. Carver's vehicle on the rear burner as well as the right rear quarter panel. The other vehicle, a late model Sentra has damaged to the right front door.
N012005-03-0901125	Crash	CAUSBY	1HGCM56693A	HONDA	ACCORD	2003	The key can come out when the vehicle is in gear. Vehicle has already rolled once and caused damage to bumper which the dealer has repaired. Customer states the key coming out of the ignition is continuing to happen on an intermittent basis. Customer states when she gets out of her car and she is talking on the cell phone the key can come out of the ignition when the vehicle is not in park. Customer states she has a picture of this occuring.
N012004-10-1300151	Crash, Property Damage	HILDEN	JHMCM566X3Q	HONDA	ACCORD	2003	Customer stated that her parked vehicle had rolled from her parking space on the evening of 10/12/04 and hit another parked (vehicle). The customer stated that when she saw the vehicle it was locked and the shifter selector it was in neutral. The customer stated that she was able to take the key out of the ignition with the shift selector in neutral. The customer stated that there was significant damage to the rear bumper of her vehicle and the rear bumper of the vehicle her vehicle hit.

March 2, 2005

Safety Recall: Ignition Key Is Removable With the Shift Lever Out of Park

BACKGROUND

Limited batches of ignition switch interlock levers do not have sufficient surface hardness. An ignition switch with a defective interlock lever may wear excessively, making it possible to remove the key when the shift lever is out of Park. If the driver does not set the parking brake when parking, the vehicle could roll, and a crash could occur.

VEHICLES AFFECTED

Less than half of the vehicles within the affected VIN ranges are affected by this campaign. To verify eligibility, you must check at least one of these items:

- · The customer has a notification letter.
- The vehicle is shown on your campaign responsibility report.
- The vehicle is shown as eligible on an iN VIN status inquiry.

In addition to the bulleted verification items, check for a punch mark above the 15th character of the engine compartment VIN. A punch mark in that location means the key interlock has already been repaired.

Some vehicles affected by this campaign may be in your used vehicle inventory. According to federal law, these vehicles cannot be sold or leased until they are repaired. To see if a vehicle is affected by this campaign, do a VIN status inquiry before selling it.

CUSTOMER NOTIFICATION

All owners of affected vehicles will be sent a notification of this campaign. An example of the customer notification is at the end of this service bulletin.

CORRECTIVE ACTION

Inspect the interlock function of the ignition switch, and depending on whether or not the key can be removed, install the appropriate key interlock repair kit (A or B).

Failed Part: P/N 35100-S84-A31

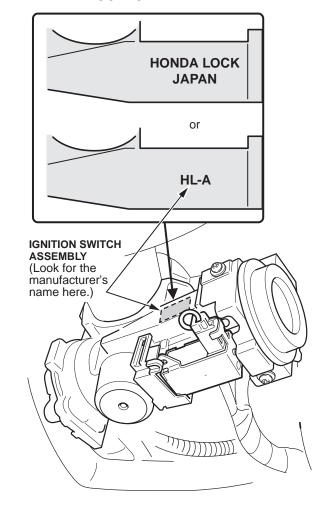

H/C 5435425

Defect Code: 5EE00 Symptom Code: P6800

Skill Level: Diagnostic Technician

INSPECTION PROCEDURE

- 1. Set the parking brake, and turn the ignition switch to the ON (II) position.
- 2. Press the brake pedal, and move the shift lever to any position other than Park.
- 3. Try to turn the ignition switch to the LOCK (0) position and remove the key.
 - If you can remove the key, go to REPAIR PROCEDURE B.
 - If you cannot remove the key, go to step 4.
- Remove the steering column covers. Refer to section 17 (Steering) of the appropriate service manual.
- Check the manufacturer's name on the ignition switch assembly.
 - If the name is "HL-A," go to step 6.
 - If the name is "HONDA LOCK JAPAN," go to REPAIR PROCEDURE A.

6. Reinstall the steering column covers.

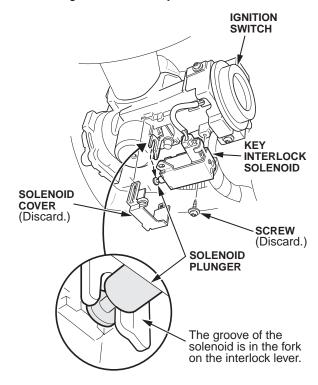

05-007 **3 of 15**

7. Center-punch a completion mark above the 15th character of the engine compartment VIN.

REPAIR PROCEDURE A

 Remove and discard the plastic solenoid cover from the ignition switch key interlock solenoid.

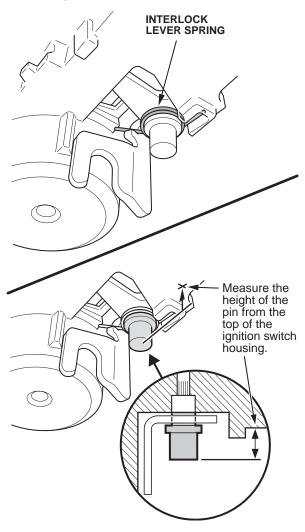

- 2. Note the position of the interlock solenoid plunger; you'll need to reinstall it the same way.
- Remove and discard the screw from the interlock solenoid. Keep the solenoid attached to its electrical connector.

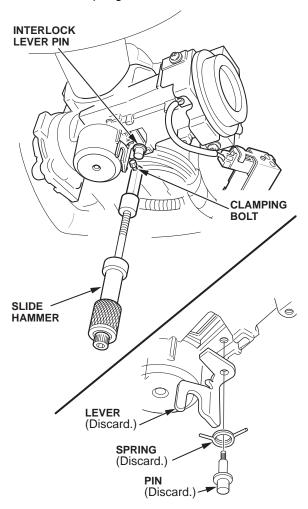

NOTE:

- Be careful not to lose the solenoid plunger; it slides out easily.
- Keep the plunger free of dirt or grease while it's removed from the solenoid.

4. Note the position of the interlock lever spring; you'll need to install the new spring the same way. Also, measure the installed height of the interlock lever pin with vernier calipers. This measurement will be used in step 8.

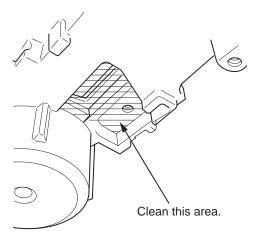

5. Attach the slide hammer to the interlock lever pin, and use it to remove the pin. Discard the pin, the lever, and the spring.

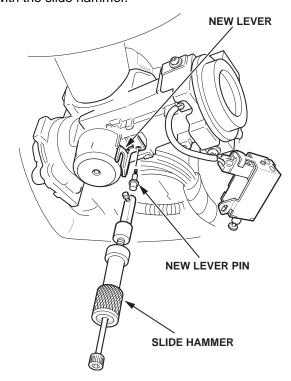

6. Wipe off any debris from the lever's sliding surface on the ignition switch with a clean cloth or a cotton swab.

NOTE: To keep debris out of the ignition switch, do not clean it with compressed air.

 Attach the slide hammer to the new lever pin, insert the lever into the ignition switch, and seat the pin with the slide hammer.

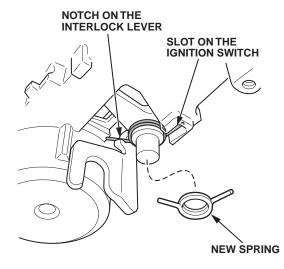

8. Use vernier calipers to measure the installed height of the lever pin. The height should be close to the measurement you made in step 4. If the height is more than 5.3 mm, the pin is not seated. If needed, reattach the slide hammer, then seat the pin.

NOTE: It's normal for the interlock lever to be loose, even when the pin is fully seated.

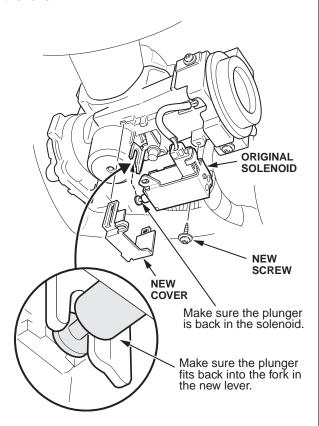

05-007 **5 of 15**

- 9. Install the new spring on the lever. Make sure you attach the ends of the spring correctly:
 - The right end goes into the slot on the ignition switch.
 - The left end goes behind the notch on the interlock lever.
 - Once the spring is correctly installed, make sure the lever moves freely and returns properly.

10.Insert the plunger into the interlock solenoid, then install the solenoid using a new screw. Make sure the groove of the solenoid plunger is in the fork on the lever.

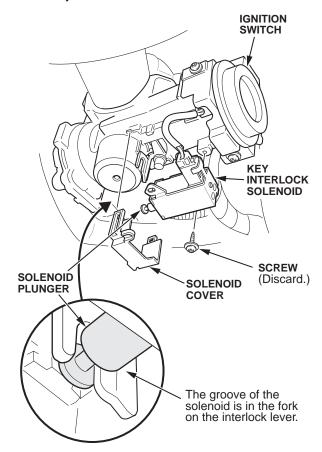

- 11.Install the new plastic solenoid cover on the interlock solenoid.
- 12.Set the parking brake, then turn the ignition switch to the ON (II) position.
- 13. With the brake pedal pressed, shift the transmission to Neutral.
- 14. Try to turn the ignition switch from the ON (II) position to the LOCK (0) position **five** times.
 - If you cannot turn the ignition switch to the LOCK (0) position, your repair was successful; go to step 17.
 - If you can turn the ignition switch to the LOCK (0) position, go to step 15.
- 15. Remove the solenoid cover, and make sure the groove of the solenoid plunger is installed in the fork on the lever.
 - If needed, correct the position of the solenoid plunger, then go to step 16.
 - If the solenoid plunger is correctly installed, there
 is an electrical problem with the interlock system;
 refer to the Automatic Transmission section of
 the appropriate service manual for
 troubleshooting information. Once the interlock is
 working normally, go to step 16.
- 16. Install the solenoid cover.
- 17. Install the steering column covers.
- 18. Center-punch a completion mark above the 15th character of the engine compartment VIN.

REPAIR PROCEDURE B

- Remove the steering column covers. Refer to section 17 (Steering) of the appropriate service manual.
- 2. Remove the plastic solenoid cover from the ignition switch key interlock solenoid.

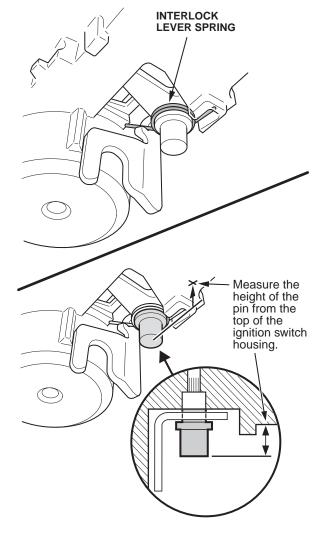

- Turn the ignition switch to the ON (II) position, then press the brake pedal, and move the shift lever out of Park.
- 4. Turn the ignition switch to the ACCESSORY (I) position, then push in the key while you watch the solenoid plunger/interlock lever fork.
 - If the solenoid plunger/interlock lever fork moves when you push in the key, go to step 8.
 - If the solenoid plunger/interlock lever fork does not move when you push in the key, go to step 5.
- 5. Troubleshoot the interlock system, then go to step 6:
 - Refer to page 14-96 of the 1998–02 Accord Service Manual, or
 - Online, enter keyword INTERLOCK, and select Interlock System - Shift Lock System Circuit Troubleshooting (B7XA) or (BAXA) from the list.
- Turn the ignition switch to the ON (II) position, then press the brake pedal, and move the shift lever out of Park.

- 7. Try to turn the ignition switch to the LOCK (0) position and remove the key.
 - If you can remove the key, go to step 8.
 - If you cannot remove the key, go to step 4 of INSPECTION PROCEDURE.
- Note the position of the interlock solenoid plunger; you'll need to reinstall it the same way.
- Remove and discard the screw from the interlock solenoid. Keep the solenoid attached to its electrical connector.

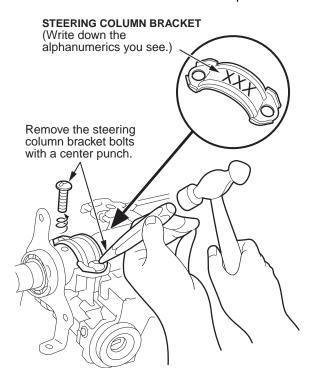

NOTE:

- Be careful not to lose the solenoid plunger; it slides out easily.
- Keep the plunger free of dirt or grease while it's removed from the solenoid.
- 10. Note the position of the interlock lever spring; you'll need to install the new spring the same way. Also, measure the installed height of the interlock lever pin with vernier calipers. This measurement will be used in step 31.

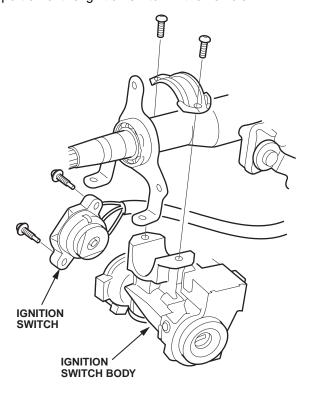

05-007 7 of 15

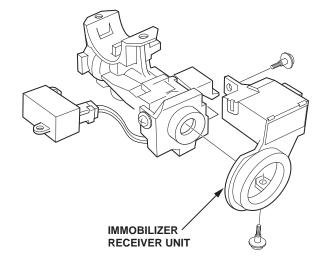

- 11. Make sure you have the anti-theft code for the radio, then write down the radio station presets, and remove the key from the ignition switch.
- 12. Disconnect the negative cable from the battery.
- 13. Using a center-punch and a hammer, carefully "walk out" the two bolts from the steering column bracket. Discard the bolts. Before you discard the bracket, write down the alphanumerics stamped on the center of it. You'll need them for step 38.

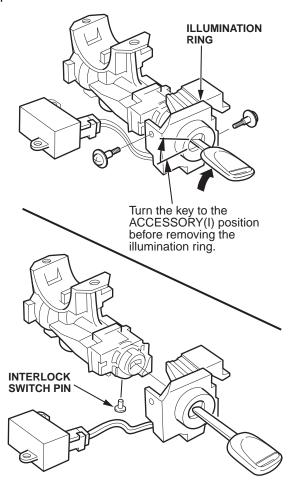

14. Remove the ignition switch body from the ignition switch, and discard the screws. Leave the electrical portion of the ignition switch in the vehicle.

15. Remove the immobilizer receiver unit from the ignition switch body, and disconnect the receiver unit connector. Discard the two screws.

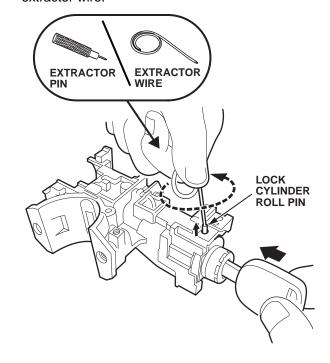

- 16. Remove the illumination ring from the ignition switch body, and disconnect the illumination ring connector:
 - Insert the key, and turn the ignition switch to the ACCESSORY (I) position.
 - Remove and discard the two screws from the illumination ring.
 - Pull the illumination ring partially away from the ignition switch body to clear its microswitch from the interlock switch pin.
 - Remove the key, the illumination ring, and the interlock switch pin. Discard the interlock switch pin.

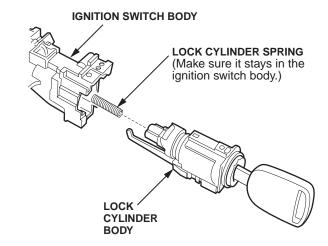

17. Insert the key, and keep the ignition switch in the LOCK (0) position.

18.Insert an extractor pin into the lock cylinder roll pin hole. While pushing the key into the ignition switch, tilt and rotate the extractor pin to "walk" the roll pin out of its hole. Discard the roll pin.

NOTE: If you don't have an extractor pin, use an extractor wire.

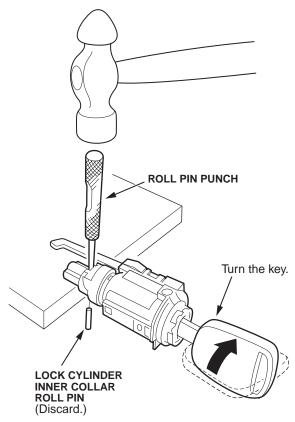

19. Pull the lock cylinder body out of the ignition switch body. If the lock cylinder spring also comes out, put it back into the ignition switch body.

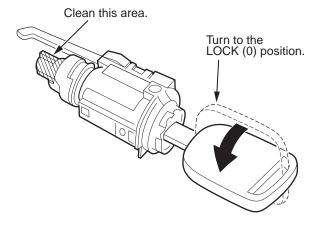

05-007 9 of 15

20. Turn the key 90 degrees clockwise to expose the lock cylinder inner collar roll pin. While supporting the lock cylinder shaft on a flat surface, carefully remove the inner collar roll pin with the roll pin punch and a small hammer. Discard the roll pin.

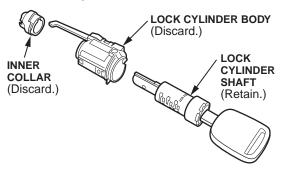

21. Wipe off the end of the lock cylinder shaft with a clean cloth, then turn the key to the LOCK (0) position.

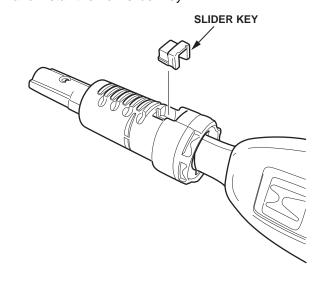

22. Slide the inner collar off the lock cylinder shaft, and remove the shaft from the lock cylinder body. Retain the lock cylinder shaft. Discard the inner collar and the lock cylinder body.

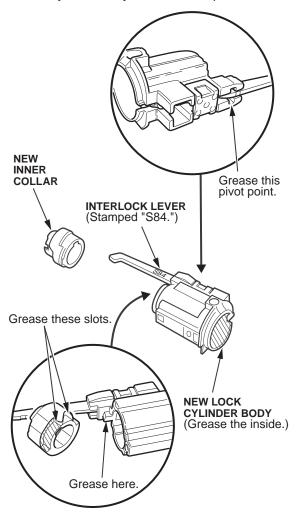

NOTE: Do not remove the key from the lock cylinder shaft. If you do, the tumblers will fall out.

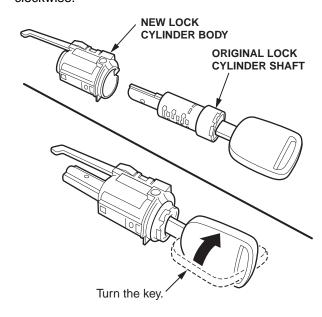

23. Remove the slider key from the lock cylinder shaft, and install the new slider key.

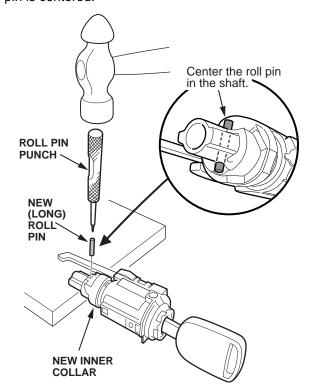

24. Apply Permalube grease to the new lock cylinder body and the new inner collar in the areas shown. NOTE: On all models, the interlock lever on the new lock cylinder body must be stamped "S84."

 Insert the original lock cylinder shaft into the new lock cylinder body, then turn the key 90 degrees clockwise.

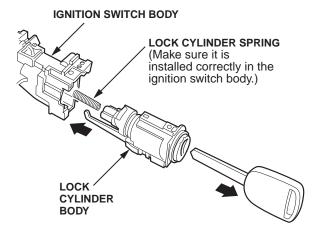

26. With the roll pin notch on the inner collar facing up, slide the inner collar onto the lock cylinder shaft. Carefully install the new (long) roll pin using the roll pin punch and a small hammer. Make sure the roll pin is centered.

05-007 **11 of 15**

27. Turn the key to the LOCK (0) position, then remove it. Slide the lock cylinder body into the ignition switch body.

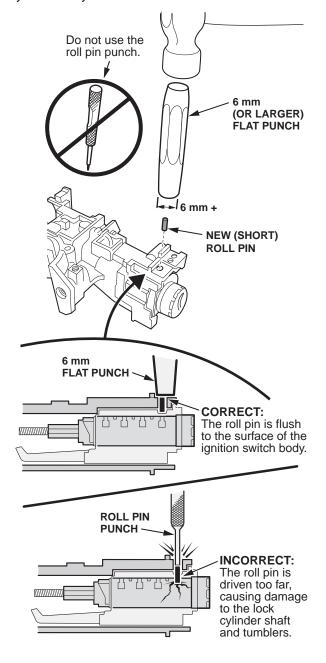

28. Install the new (short) roll pin in the hole on the lock cylinder body with a 6 mm (or larger diameter) flat punch and a small hammer. *Do not use the roll pin punch to drive the new roll pin.* When correctly installed, the top of the roll pin is flush with the lock cylinder body.

NOTICE

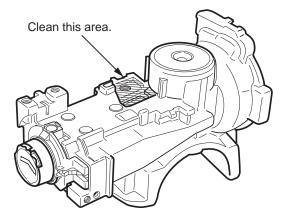

To avoid damaging the lock cylinder shaft and its tumblers, do not drive the roll pin past its flush position on the lock cylinder body.

NOTE: The new roll pin is about 1/2 mm longer than the original one. Do not install the original roll pin; it cannot be fully seated in the new lock cylinder body.

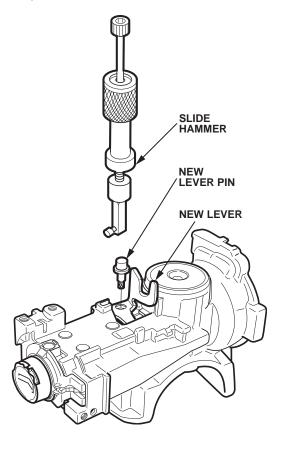

29. Wipe off any debris from the interlock lever's sliding surface on the ignition switch with a clean cloth or a cotton swab.

NOTE: To keep debris out of the ignition switch, do not clean it with compressed air.

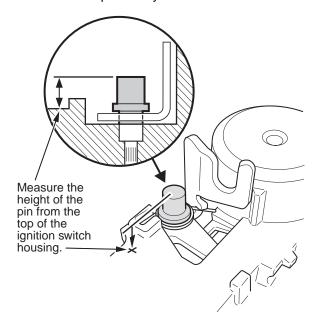

30. Attach the slide hammer to a new lever pin, then insert the lever into the ignition switch body, and seat the pin with the slide hammer.

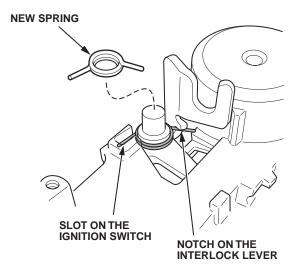

31. Use vernier calipers to measure the installed height of the lever pin. The height should be close to the measurement you made in step 10. If the height is more than 5.3 mm, the pin is not seated. If needed, reattach the slide hammer, then seat the pin.

NOTE: It's normal for the interlock lever to be loose, even when the pin is fully seated.

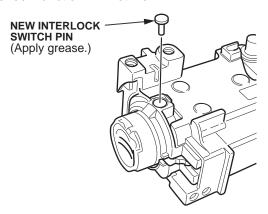

- 32. Install the new lever spring on the lever. Make sure you attach the ends of the spring correctly:
 - The left end goes into the slot on the ignition switch.
 - The right end goes behind the notch on the interlock lever.
 - Once the spring is correctly installed, make sure the lever moves freely and returns properly.

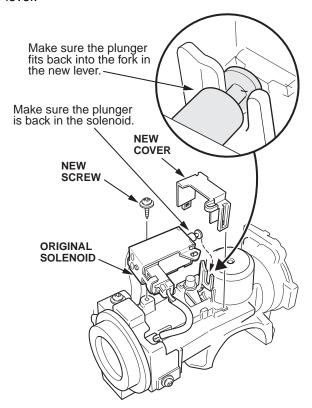

05-007 **13 of 15**

33. Apply a small amount of Permalube grease to the new interlock switch pin, then carefully install the pin on the lock cylinder body.

NOTE: Make sure the pin is installed, or the interlock function will not work.

- Install the illumination ring and the immobilizer receiver unit on the ignition switch body with four new screws.
- 35. Install the interlock solenoid on the ignition switch body with the new screw. Make sure the groove of the solenoid plunger is in the fork on the interlock lever.

- 36. Install a new plastic cover on the interlock solenoid.
- 37. Attach the ignition switch body to the electrical portion of the ignition switch with new screws.

- 38. Install the ignition switch on the steering column with two new shear bolts and a new steering column bracket. Tighten the bolts only finger-tight. NOTE: Make sure the alphanumerics stamped on the new bracket match those on the original bracket, as noted in step 13.
- 39. Reconnect the illumination ring and the immobilizer receiver unit connectors.
- 40. Reconnect the negative cable to the battery.
- 41. Set the parking brake, then turn the ignition switch to the ON (II) position.
- 42. With the brake pedal pressed, shift the transmission to Neutral.
- 43. Try to turn the ignition switch from the ON (II) position to the LOCK (0) position **five** times.
 - If you cannot turn the ignition switch to the LOCK (0) position, your repair was successful; go to step 45.
 - If you *can* turn the ignition switch to the LOCK (0) position, go to step 44.
- 44. Remove the solenoid cover. Make sure the groove of the solenoid plunger is installed in the fork on the interlock lever. Also make sure the interlock switch pin is installed on the ignition switch body (see step 33). If needed, correct the position of the solenoid plunger and install the switch pin, then reinstall the solenoid cover, and go to step 45.
- 45. Make sure the ignition switch turns freely. Remove the key, and make sure the steering column lock works correctly. If needed, reposition the ignition switch to make the lock work.
- 46. Tighten the two steering column shear bolts until their heads twist off.
- 47. Install the steering column covers.
- 48. Enter the radio anti-theft code, then enter the radio station presets, and set the clock.
- 49. Center-punch a completion mark above the 15th character of the engine compartment VIN.

Center-punch here.

Example of Customer Letter

March 2005

Safety Recall: Ignition Key is Removable with the Shift Lever Out of Park

Dear Honda Owner:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

What is the reason for this notice?

Honda Motor Co., Ltd., has determined that a defect relating to motor vehicle safety exists in certain 1999–02 Accords.

The ignition switch contains an interlock lever to prevent key removal unless the shift lever is in the Park position. If the interlock lever is not working correctly, it may be possible to turn the ignition switch to the OFF position and remove the key without shifting into Park. If the driver does not shift to Park and set the parking brake before removing the key, the vehicle could roll and a crash could occur.

What should you do?

Call any authorized Honda dealer, and make an appointment to have your vehicle repaired. The dealer will inspect the ignition switch interlock and replace all needed parts. This work will be done *free of charge*. Please plan to leave your vehicle for half a day to allow the dealer flexibility in scheduling.

Always shift the transmission to Park and set the parking brake before exiting the vehicle.

Who to contact if you experience problems.

If you are not satisfied with the service you receive from your Honda dealer, you may write to:

American Honda Motor Co., Inc. Honda Automobile Customer Service Mail Stop 500-2N-7A 1919 Torrance Blvd. Torrance, CA 90501-2746

If you believe that American Honda or the dealer has failed or is unable to remedy the defect in your vehicle, without charge, within a reasonable period of time (60 days from the date you first contact the dealer for a repair appointment), you may submit a complaint to:

Administrator

National Highway Traffic Safety Administration 400 Seventh Street, SW Washington, DC 20590

Or call the toll-free Safety Hotline at (888) 327-4236.

What to do if you feel this notice is in error.

Our records show that you are the current owner or lessee of a 1999–02 Accord involved in this campaign. If this is not the case, or the name/address information is not correct, please fill out and return the enclosed, postage-paid *Information Change Card*. We will then update our records.

Lessor Information.

Federal law requires that any vehicle lessor receiving this recall notice must forward a copy of this notice to the lessee within 10 days.

If you paid to have a defective ignition switch replaced sometime in the past, you may be eligible for reimbursement. Refer to the attached *Instructions for Reimbursement* for eligibility requirements and the reimbursement procedure.

If you have questions.

If you have any questions about this notice, or need assistance with contacting a Honda dealer, please call Honda Automobile Customer Service at (800) 999-1009.

We apologize for any inconvenience this campaign may cause you.

Sincerely,

American Honda Motor Co., Inc. Honda Automobile Division

ServiceNews

Can't Turn Ignition Switch? Check for Locked Steering

Got a service client complaining he or she can't turn the ignition switch to start the engine? The reason could just be the steering column lock pin is engaged with the front wheels turned. Here's what typically happens:

Some folks use the steering wheel to help support themselves while climbing in or out of the vehicle. It's very common among elderly or disabled drivers. Doing this, though, turns the front wheels, which twists the tires against the ground, and applies torque to the steering column. With the ignition switch in LOCK (0), the steering column lock pin is engaged. But the applied torque on the steering column binds the lock pin, making it tough to turn the ignition switch. The ignition switch won't turn to ON (II) if the lock pin isn't disengaged from the steering column.

Tell your client there's nothing wrong with the ignition switch itself. All he or she needs to do is turn the steering wheel from side to side while turning the switch. This usually releases the lock pin so the engine can be started. In some cases, though, your client may need to give a good tug on the wheel. This could easily happen when parking on a hill and the wheels are turned sharply before the engine is shut off.

This problem is common to all Acura models, but on '05–06 RLs, it could be misunderstood as a keyless access problem.

Engine Cranks but Won't Start or Starts Then Stalls

Got an '05–06 RL owner complaining the engine cranks but it won't start or it starts and then stalls? The reason might just be the PCM auto-start feature. When your turn and hold the ignition switch to START (III) for at least **1 second**, this feature keeps the starter motor running for up to **15 seconds** or until the engine starts.

Normally, the ignition switch returns to ON (II) when you let go of the switch. But due to a rather hefty spring inside, the switch can jump back to ACC (I) if you let go of it too quickly. In ACC (I), the engine, climate control, and gauges are off, but the audio system and navigation system stay on. Vehicle owners think they've got an engine starting problem and report it on the service drive as either a crank but no start problem or an engine start then stall problem.

There's nothing wrong with the ignition switch. Just tell your service clients they just need to avoid letting go of the switch too soon.

Sidewall Cracking on Low-Profile Tires

Low-profile tires are the hot setup these days, and sure look cool, but you've got to keep the tire pressures up to spec or the sidewalls can crack. A low-profile tire in good condition can lose as much as **1 to 2 psi** of pressure every month, so it's a good idea to check and adjust tire pressures at least once a month.

If you've got a vehicle in your shop with cracked sidewalls on a tire that's still under warranty, refer your service client to the appropriate tire dealer (one that services that brand) for possible goodwill consideration. Keep in mind, though, any reimbursement will likely be prorated. If your dealership does business with The Tire Rack, contact them for your client. Tire warranty is handled by a tire dealer and isn't covered under the vehicle warranty.

Dead Power Socket? Keep Electrical Load Below Max

NOTE: This article applies to '05–06 RLs, '02–06 RSXs, and '04–06 TSXs.

The accessory power socket is made to handle a maximum electrical load of **120 watts (10 amps)**. Exceed that limit over a period of time, and the socket could overheat and cause an open circuit.

If you've got a vehicle in your shop with a dead accessory power socket, check for continuity between the center contact and the wire terminal. If you find an open circuit, remind your service client to keep the electrical load **below 120 watts** or the problem could wind up happening again.

ServiceNews

Rearview Image Is Delayed in Reverse or Stays On in Drive

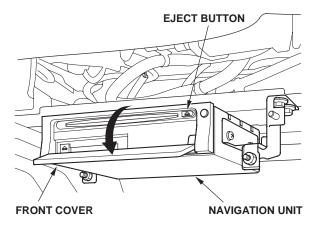

NOTE: This article applies to '05 Odyssey EX-L and Touring models with the navigation system.

If there's a **10-second or more** delay for the rearview image to appear on the navigation system display screen when you move the shift lever to **R**, or the rearview image stays on for an extended period of time once you move the shift lever to **D**, you may need to update the navigation system software. Later software cuts down the delay time to **1 or 2 seconds** and keeps the rearview image from lingering with the shift lever in **D**. Here's what you need to do:

- Check the software version that's listed on the System Information screen.
 - If the software version is 1.14.00, you've already got the latest software. Go to step 8.
 - If the software version is something earlier than 1.14.00, go to step 2.
- 2. Borrow a navigation DVD from a '05 Odyssey built after 3/3/05. That DVD is marked version 4.13c and has a *white* label.

IMPORTANT: *Never* try this procedure using the navigation DVD from a '06 Odyssey (software version 4.31). It would rewrite the operating system software, making your customer's DVD unusable.

3. Start the engine, then open the front cover of the navigation unit under the driver's seat.

- 4. Press the **EJECT** button on the front of the unit, and remove the DVD.
- 5. Insert the borrowed DVD (software version 4.13c), and close the front cover. Make sure you leave the engine running while the data uploads to the navigation unit.

- 6. Select **OK** on the disclaimer screen.
- 7. Press the **EJECT** button, remove the DVD, and insert the original one. The navigation system now has the updated software (version 1.14.00).
- 8. Check the rearview image as you move the shift lever to **R** and then to **D**.
 - If there's an image delay of about
 1 to 2 seconds, this is characteristic for this
 software.
 - If there's still an image delay of 10 seconds or more, replace the navigation unit.
- Refer to page 23-67 of the '05-06 Odyssey S/M, and do a map match. (Online, enter keyword NAVI, and select How to Troubleshoot the Navigation System (With Navigation) from the list.
- 10. Return the donor DVD to the donor vehicle.

Can't Turn Ignition Switch? Check for Locked Steering

Got a service customer complaining he or she can't turn the ignition switch to start the engine? The reason could just be the steering column lock pin is engaged with the front wheels turned. Here's what typically happens:

Some folks use the steering wheel to help support themselves while climbing in or out of the vehicle. This is very common among elderly or disabled drivers. Doing this turns the front wheels, which twists the tires against the ground. The twisted tires apply torque to the steering column. With the ignition switch in LOCK (0), the steering column lock pin is engaged. But the applied torque on the steering column binds the lock pin, making it tough to turn the ignition switch. The ignition switch won't turn to ON (II) if the lock pin isn't disengaged from the steering column.

Tell your customer there's nothing wrong with the ignition switch itself. All he or she needs to do is turn the steering wheel from side to side while turning the switch. This usually releases the lock pin so the engine can be started. In some cases, though, your customer may need to give a good tug on the wheel. This could easily happen when parking on a hill and the wheels are turned sharply before the engine is shut off.

No	Part ①	Part ②
Series	02M ACCORD(TL)	02M ACCORD(TL)
Frame No	1HGCG16572A038308	1HGCG165X2A013547
Prod date	2001.12.05	2001.09.14
Reg date	2002.06.22	2001.12.20
Occ date	2007.08.29	2008.05.12
Mileage	62,500mile	63,000mile
Location	US market (OH)	US market (WA)
Contention	AFTER PARKING IN THE DRIVEWAY, THE CONTACT REMOVEDTHE KEYFROM THE IGNITION WHILE THE GEAR WAS IN DRIVE. A FEW MINUTES LATER, THE VEHICLE ROLLEDFORWARD AT APPROXIMATELY3 MPH AND DAMAGEDTHE GARAGE. THE DEALER INFORMED HIM THAT NHTSA CAMPAIGN ID NUMBER 05V025000 (ELECTRICALSYSTEM:IGNITION:SWITCH) ONLY PERTAINS TO VEHICLESTHAT WERE MANUFACTURED IN JAPAN. THE CURRENTAND FAILURE MILEAGESWERE 62,500.	THE CONTACT PARKEDTHE VEHICLEON THE SIDE OF THE STREETAND IT DRIFTED INTO ANOTHER VEHICLE. HE RETURNED TO THE VEHICLEAND NOTICED THAT THE GEAR WAS IN DRIVE INSTEAD OF PARK. THEREWAS NO PRIOR WARNING TO THIS FAILURE AND BOTH VEHICLESSUSTAINED DAMAGES. THERE WAS PROPERTY DAMAGE RELATED TO THIS INCIDENT, BUT NO INJURIES. THE VEHICLEWAS TAKEN TO AN INDEPENDENT MECHANIC AND THEY STATEDTHAT THE FAILURE WAS RELATED TO THE IGNITION SWITCH. THE CONTACT WAS INFORMED THAT THE IGNITION KEY SHOULD NOT RELEASE IF THE VEHICLEWAS NOT IN THE PARK POSITION. THE VEHICLEWAS NOT REPAIRED. THE FAILURE MILEAGEWAS 63,000 AND CURRENTMILEAGEWAS 65,000.
Part No.	35100-S84-A33	35100-S84-A33
Part prod date	1K28 (28-Nov-2001, at HLA)	1I06 (6-Sept-2001, at HLA)

^{1.} Failed parts were made in 2001 and both have covered approx 60,000 miles, and is a durability failure

2. Interlock solenoid performance confirmation

<Interlock solenoid (electric circuit) performance inspection>

Both parts 1 and 2 show no abnormality with interlock solenoid performance.

Honda Lock <Interlock solenoid (lever) response waveform> Part ① Part ②

Abnormality is not confirmed with response, with operating voltage of 9.5V.

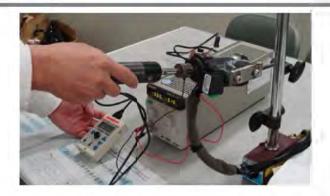

3. Interlock lever block confirmation

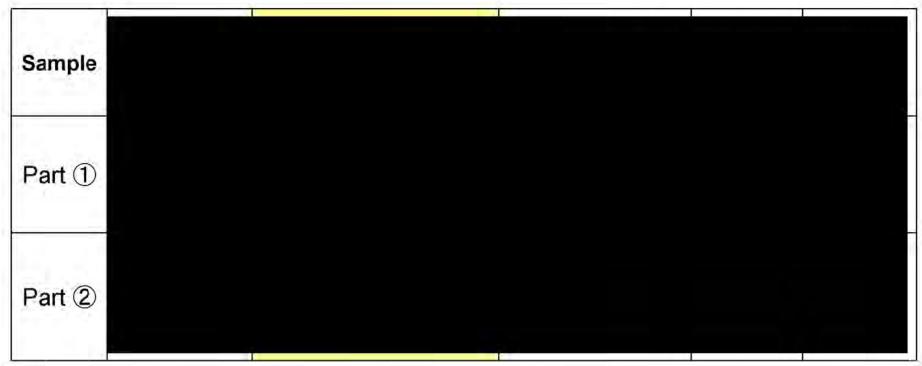

Honda Lock

<Interlock lever block confirmation>

Measurement method:

Measure slip out torque when key is turned from blocked condition (ACC to LOCK) by applying 9.5V to interlock solenoid.

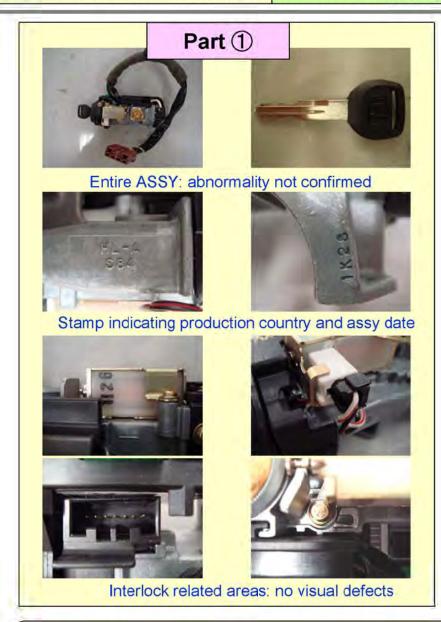

Confirmed slip out at torque below spec with interlock actuated, on both parts 1 and 2.

1. Appearance investigation

Honda Lock

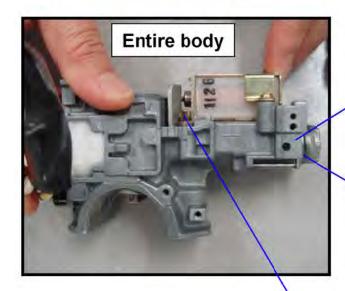

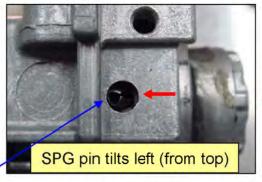

Visual defects such as damage or breakage could not be confirmed on both parts 1 and 2.

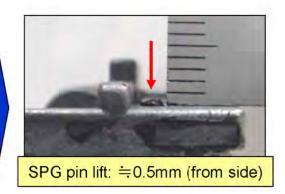

4. Disassembly investigations

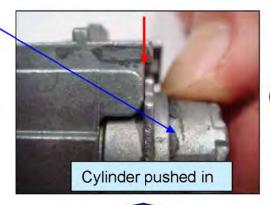

Honda Lock

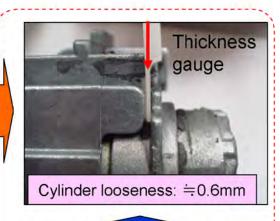

Part ①

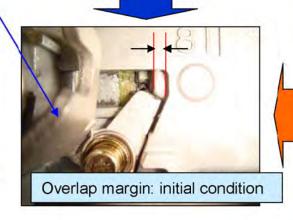

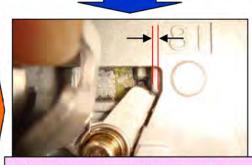

-Lifting and tilting of the SPG pin created looseness of the cylinder, which reduces the overlap margin of the lever and inner collar.

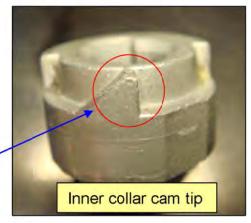

Overlap margin: when returned: below ½ of initial condition

4. Disassembly investigations

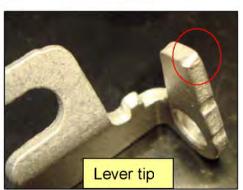

Honda Lock

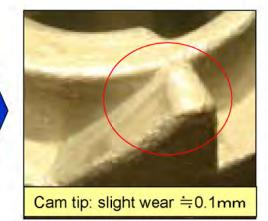

Part ①

Entire cylinder body GR

-Inner collar and cylinder cam tip wear is around 0.1mm, and is normal. -Lever tip drooped R is because it was forcibly turned with less overlap margin.

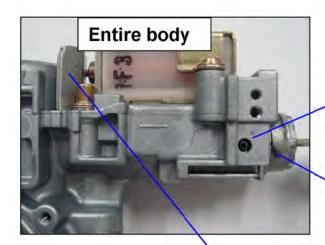

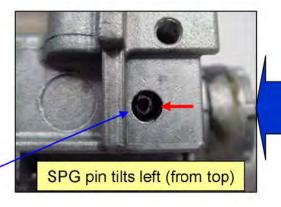

2. Parts investigation results

4. Disassembly investigations

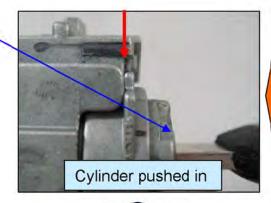

Honda Lock

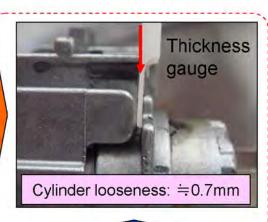

Part 2

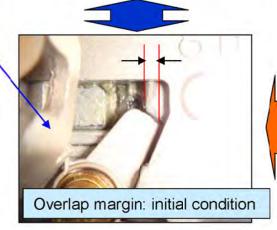

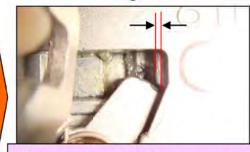

-Lifting and tilting of the SPG pin created looseness of the cylinder, which reduces the overlap margin of the lever and inner collar.

Overlap margin: when returned: below ½ of initial condition

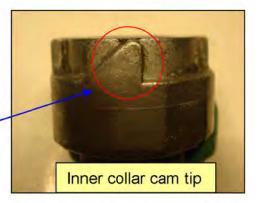

2. Parts investigation results

4. Disassembly investigations

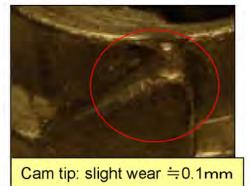

Honda Lock

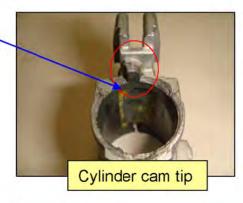

Part 2

Entire cylinder body GR

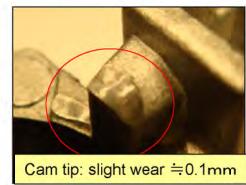

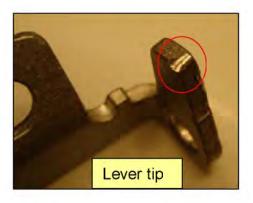

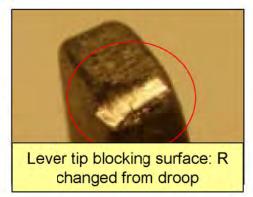

-Inner collar and cylinder cam tip wear is around 0.1mm, and is normal. -Lever tip drooped R is because it was forcibly turned with less overlap margin.

Background of SPEC settings

CONFIDENTIAL INFORMATION

Spec was set when Honda first launched interlock function.

Spec was set using steering lock developed between 1984~85. Details of the grounds in deciding spec is unknown as there are no documents, and the developer is no longer here.

S84/S5A/SEA all meet this requirement.

After the market action in January 2005, user monitoring was carried out to understand latest market usage situation.

Users subject to this investigation:

Honda Lock Alabama Factory associates, men only, 50 members.

Duration: 05/3/7~3/8

Monitoring vehicle: 04M ACCORD / 05M ODYSSEY

KEY SDA type / S3V type

User operating torque obtained from this monitoring activity was reflected to spec, and recurrence prevention was carried out by assuring this spec for future steering locks.

Spec already issued 05/7/1

User monitoring details

Measure torque on key from each of the following operation methods

NO	Target	Operati on	Interlock operation	Engine condition	Measurement cycles	Operation method
1	Normal operation Torque/load when key is operated normally	Normal operati on	No	Normal engine start	5 times / person (50 people)	Explanation: please operate normally. (1) Insert key (2) 0→ I → II → III (engine start) (3) III → II → I → 0→ remove key
2	Unexpected engine start up failure Torque/load with normal key operation, but without starting the engine	Normal operati on	No	No engine start	3 times / person (50 people)	Explanation: please operate normally. (1) Insert key (2) 0→ I → II → III *Add SW to immobi so that engine is not started, without the person knowing.
3	Unexpected interlock Torque/load with normal key operation but with interlock block	Normal operati on	Yes	Normal engine start	2 times / person (50 people)	Explanation: please operate normally. (1) Insert key (2) 0→ I → II → III (engine start) (3) III → II → I → interlock block *Add interlock SW so that interlock is blocked without the person knowing.
4	Limit torque Understanding MAX operating torque	Limit	Yes	No engine start	1 time / person (4 people)	Explanation: please operate as hard as you can. There are 3 types of operation -R turn stopper at II position -L turn stopper at I position -L turn stopper at 0 position

Interlock development history

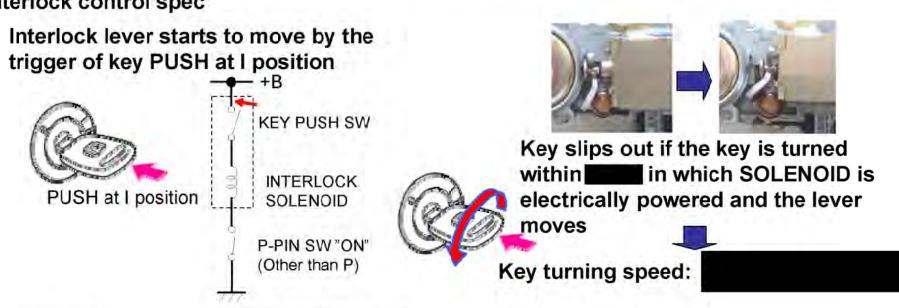

S84 Movement of interlock lever

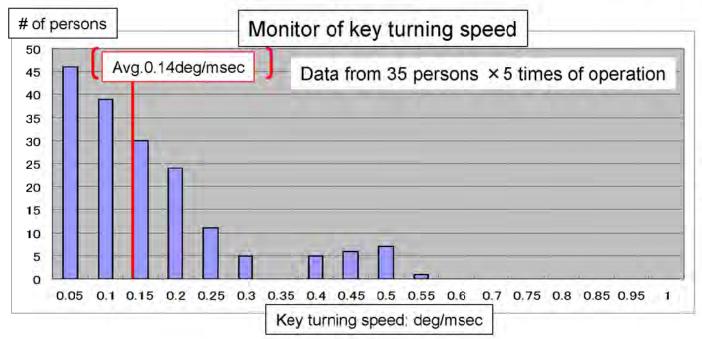

SOLENOID

S84 Control spec and toughness for quick turn

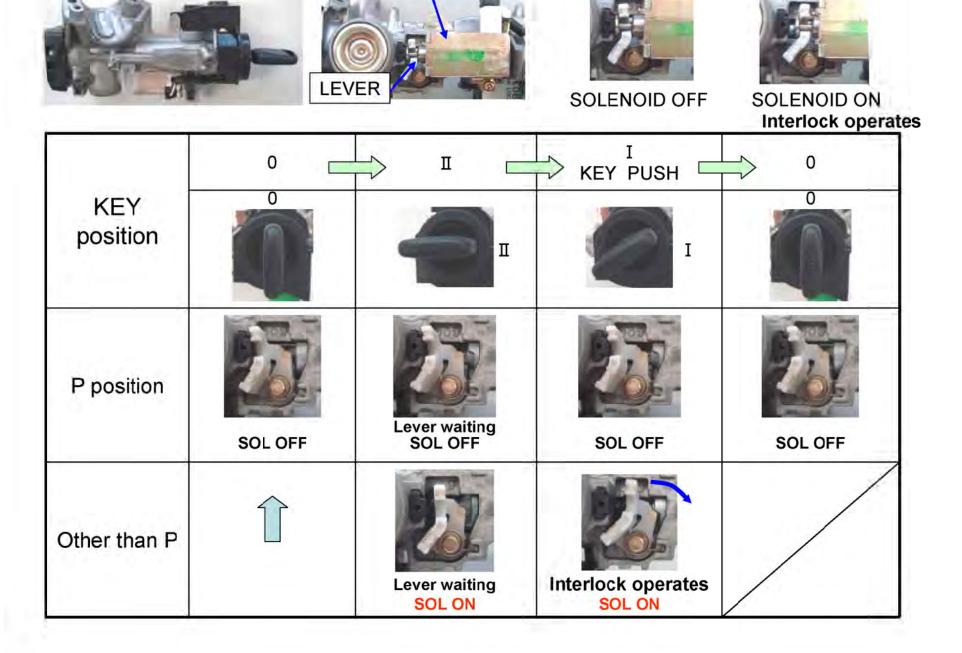

Interlock control spec

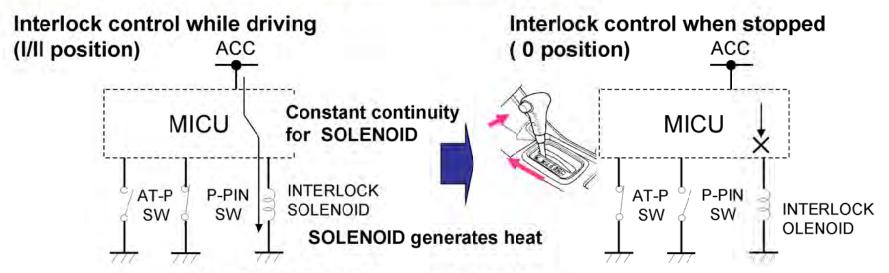

Key does not slip out at normal operation speed.

S5A Movement of interlock lever

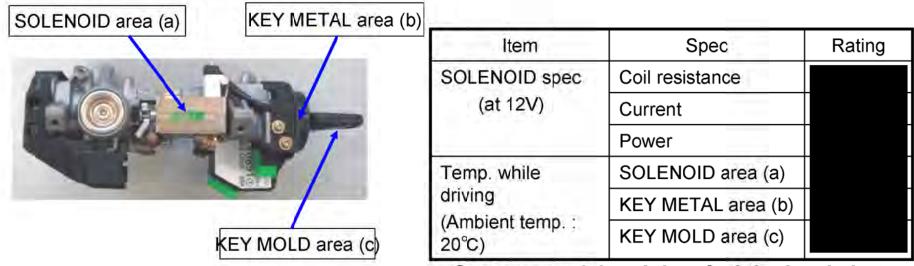

SOLENOID

S5A Interlock control spec and temperature rise

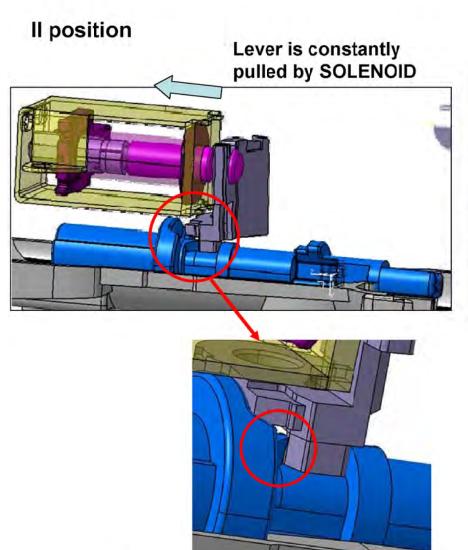

Key will not slip out even if it is turned quickly since the interlock lever is engaged

Influences by heat generation of SOLENOID

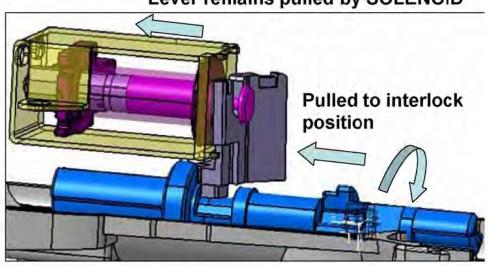

Customers claimed they feel the key is hot.

S5A Structure of interlock lever hold

I position: Interlock operates

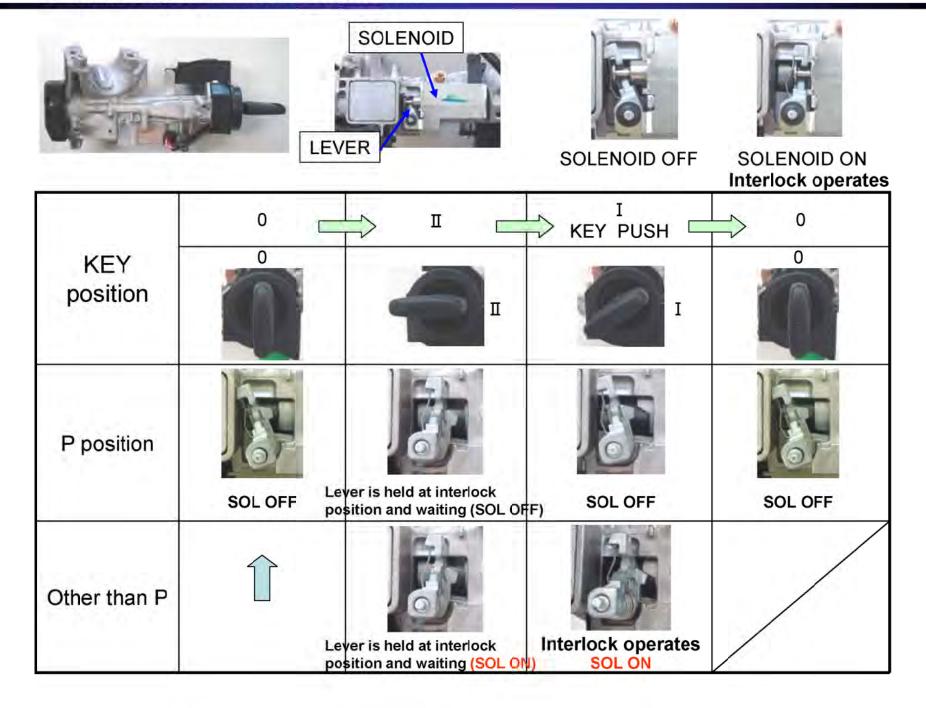

Lever remains pulled by SOLENOID

⇒ Even if the key is turned from II position to I position quickly, SOLENOID remains pulled and the lever is at the interlock position, therefore it will not slip out.

Lever is held by stopper so that it will not be pulled to the interlock position.

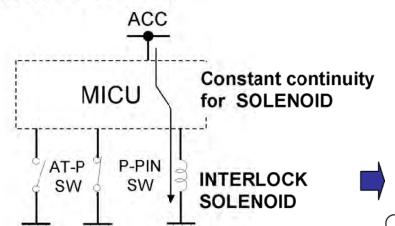

SEA Movement of interlock lever

SEA Interlock control spec and temperature rise

Interlock control while driving (I/II position)

Same control as S5A

Reduce temperature rise by spec change of SOLENOID by lowering current for S5A

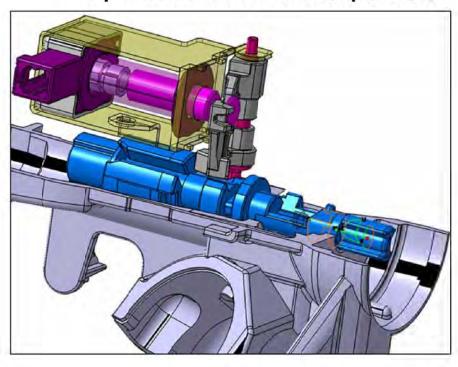

It became possible to reduce the retraction force of SOL, resulting in holding the lever by mechanical friction

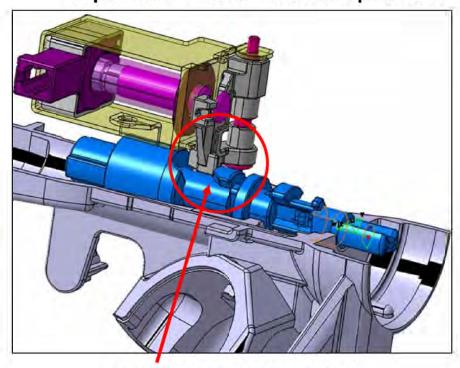

Item	Spec	Rating
SOLENOID spec	Coil resistance	
(at 12V)	Current	
	Power	
Temp. while driving	SOLENOID area (a)	
(Ambient temp. :	KEY METAL area (b)	
20°C)	KEY MOLD area (c)	

SEA Structure of interlock lever hold

O position = Lever neutral position

I position = Lever interlock position

Hold lever by inner joint

Possible to reduce electrical lever holding force by SOLENOID

No need to reduce lever weight

Cost reduction by change from S5A aluminum ⇒ zinc die-cast

1 | Step 1 "0" Position (with key removed)

In this positon the spring 8 is expanded and the end of the lock pin 3 engages the recess formed in the steering shaft to prevent the rotation.

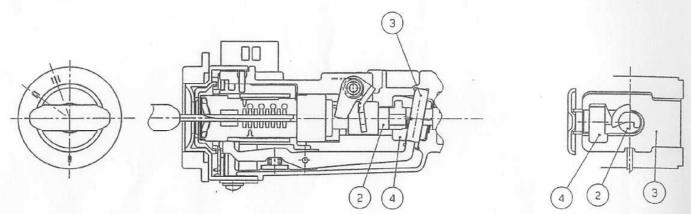

Further the forward end of the stopper plate 5 lifts up the key slider 6 by the force of the spring 7 whereby the key slider 6 enters into the key slot.

2 | Step 2 "0" Position (with key inserted)

When the key inserted into the key slot, the back of the key pushes the key slider 6 and away from the key slot whwerby the key slider 6 pushes down the forward end of the stopper plate 5 to compress the spring 7, whereby the backward the end of the stopper plate 5 presses against the lower side of the slider 4.

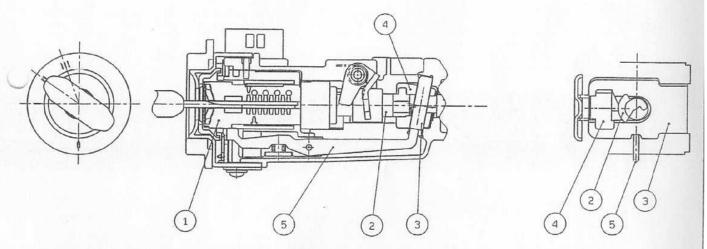

3 | Step 3 "1" Position

When the key is turn from "O'to"!", the semicylindrical cam of the joint inner 2 is rotated simultaneously and lifts up the slider 4, and withdraws the lock pin 3 from the steering shaft recess.

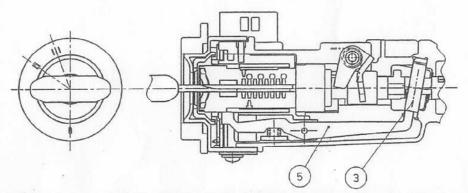

On the other hand the backward end of the stopper plate snaps into the recess of the slider 4 so as to retain the same position untill the key is completely withdrawn from the key slot whereby accidental locking of steering can be avoided.

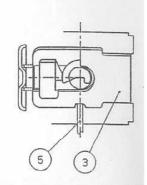

4 Step 4 "II" Position

when the key is turned from "I to "I" or "II", the stopper plate 5 and the lock pin 3 keep in same position since the forward end of the stopper plate 5 is on the surface of the inner cylinder 1 and the inside wall of the slider 4 is on the semicylindrical cam of the joint inner 2.

5 Step 5 'I' Position

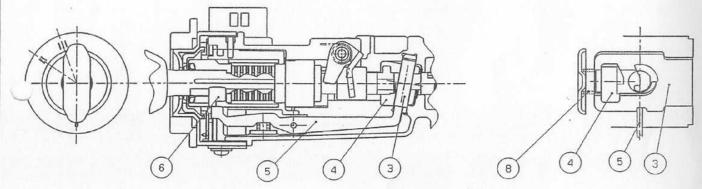

hen the key is turned counterclockwise direction from "" to "1", the stopper plate 5 and lock pin 3 keep in the same condition.

But the key should be pushed at the "I" position so as to turn back from "I" to "O".

6 Step 6 "0" Position (with key insert)

when the key is turned to "0" after pushing at the "1" position, the slider 4 is free from the inner joint cam.

But slider 4 remains in its position since the backward end of the stopper plate 5 engages the lower side recess of the slider 4 only upon almost complete withdrawal of the key is it made possible for the key slider 6 to enter into the key slot and the stopper plate 5 swings clockwise direction, whereupon the backward end of the stopper plate 5 frees the slider 4 and thereby the lock pin 3.

As a result of it, the lock pin 3 moves down by the force of the spring 8 and engages the steering shaft recess.

ECE NO. 18 (01) AND 95/56 / EEC CERTIFICATION OF STEERING LOCK GENERAL SPECIFICATIONS

Vehicle Make: HONDA

I certify herewith that the steering locks below mentioned possess more than 1,000 Key combinations and are satisfactorily in line with paragraph 5.6 in EEC regulation No.18 amend. 01 as follows;

5.6 The key locking system shall provide at least 1,000 different key combinations or a number equal to the total number of vehicles manufactured annually if less than 1,000. In vehicles of one type the frequency of occurrence of each combination shall be roughly one per 1,000.

Steering Lock Manufacturer : <u>HONDA LOCK MFG. CO., LTD.</u> Steering Lock Model No. : S84 (Side-Cutting Code Key)

(1) Interpretation

Example: Interpretation of Code No. 5126 Cutting 11136412.

Widths of a key without and between cuts have six dimensions;

- 1; Width without cuts that measures 7.8mm
- 2; Width between cuts that measures 7.16mm
- 3; Width between cuts that measures 6.52mm
- 4; Width between cuts that measures 5.88mm
- 5; Width between cuts that measures 5.24mm
- 6; Width between cuts that measures 4.6mm

Therefore, as cuts become deeper, Cutting No. will be larger.

Cutting 11136412 will be read from the Position A to Position H in Fig.1 in this order, where the first digit represents the width at Position A in Fig.1 (width without cuts in this case) and the forth digit of cutting No.3, for instance, represents the width between cuts at Position D in Fig.1 (6.52mm)

(2) 3442 Different Keys

This Key covers 3442 different combinations from Code No. 5001 to Code No. 8442

TECHNICAL DESCRIPTION OF THE DEVICE

LIST OF THE KEY POSITIONS AVAILABLE IN SEQUENCE

SEQUENCE	FUNCTION	KEY INSERT/ WITHDRAW	ANTI-THEFT (STEERING) LOCK	ACCESSORY	IGNITION	SELF STARTER (STARTING) MOTOR
	withdraw		locked	flo	off	JJo
	insert O(LOCK)	possible	locked	off	JJo	JJo
	I (ACC)	impossible	nnlocked	uo	off	уJo
	II (ON)	impossible	unlocked	uo	uo	JJo
	皿(START)	impossible	nnlocked	ЭŲ	uo	uo
	II (ON)	impossible	nnlocked	uo	no	July
	push I (ACC)	impossible	unlocked	uo	Ju	off
	O (LOCK)	possible	unlocked	off	JJo	JJo
	withdrawn		locked	off	off	JJo

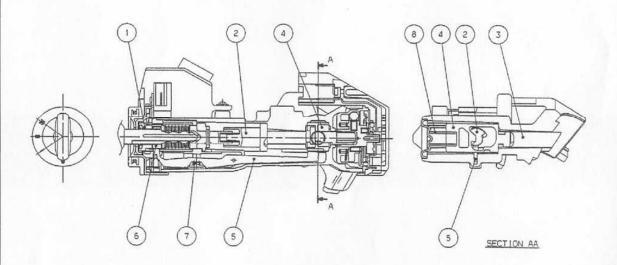

In this position the spring 8 is expanded and the end of the lock pin 3 engages the recess formed in the steering shaft to prevent the rotation.

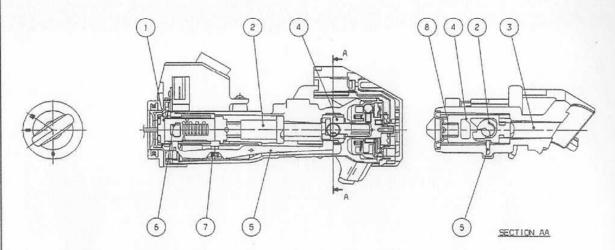

Further the forward end of the stopper plate 5 lifts up the key slider 6 by the force of the spring 7 whereby the key slider 6 enters into the key slot.

2 Step 2 "0" Position (with key inserted)

When the key inserted into the key slot, the back of the key pushes the key slider 6 and away from the key slot whereby the key slider 6 pushes down the forward end of the stopper plate 5 to compress the spring 7, whereby the backward the end of the stopper plate 5 presses against the lower side of the slider 4.

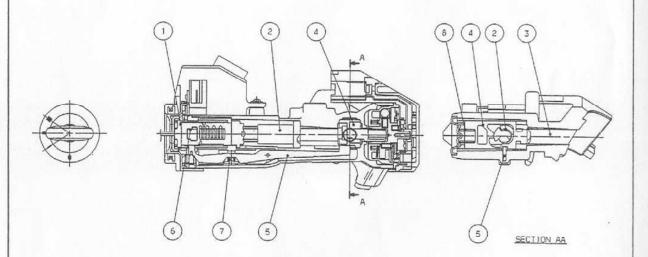

3 Step 3 "I" Position

When the key is turn from "0" to "I", the semicylindrical cam of the joint inner 2 is rotated simultaneously and lifts up the slider 4, and withdraws the lock pin 3 from the steering shaft recess.

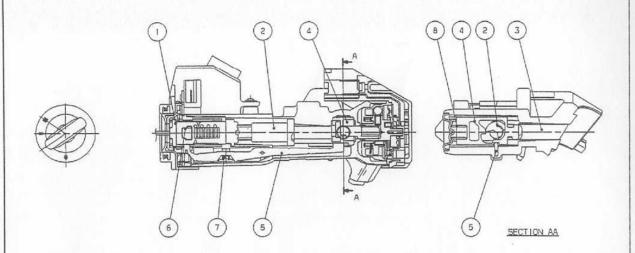

On the other hand the backward end of the stopper plate snaps into the recess of the slider 4 so as to retain the same position untill the key is completely withdrawn from the key slot whereby accidental locking of steering can be avoided.

4 Step 4 "I" Position

When the key is turned from "I" to "I" or "II", the stopper plate 5 and the lock pin 3 keep in same position since the forward end of the stopper plate 5 is on the surface of the inner cylinder 1 and the inside wall of the slider 4 is on the semicylindrical cam of the joint inner 2.

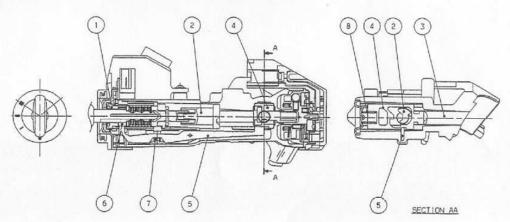

5 Step 5 "I" Position

When the key is turned counterclockwise direction from " \mathbb{I} " to " \mathbb{I} ", the stopper plate 5 and lock pin 3 keep in the same condition.

But the key should be pushed at the "I" position so as to turn back from "I" to "0".

6 Step 6 "0" Position(with key insert)

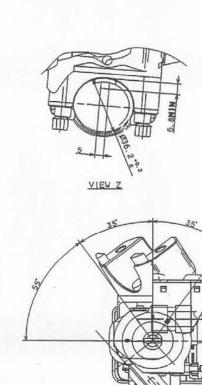

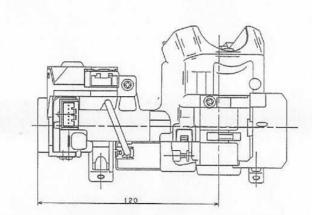

When the key is turned to "0" after pushing at the "I" position, the slider 4 is free from the inner joint cam.

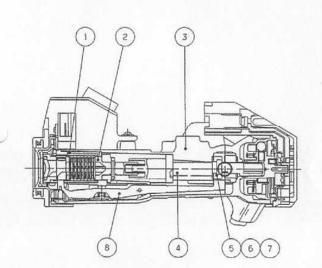

But slider 4 remains in its position since the backward end of the stopper plate 5 engages the lower side recess of the slider 4.

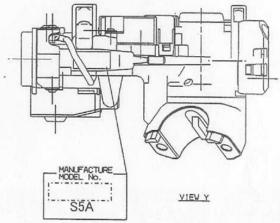

Only upon almost complete withdrawal of the key is it made possible for the key slider 6 to enter into the key slot and the stopper plate 5 swings clockwise direction, whereupon the backward end of the stopper plate 5 frees the slider 4 and thereby the lock pin 3.

As a result of it, the lock pin 3 moves down by the force of the spring 8 and engages the steering shaft recess.

95/56/EC

CERTIFICATION FOR DISC TUMBLERS SPECIFICATIONS OF STEERING LOCK

Vehicle Make : HONDA

I hereby certify the compliance with the requirements of the below items of paragraph 3.9.2 of Annex IV of EC directive.

3.9.2

For lock cylinders with disc tumblers no more than two identical tumblers operating in the same direction shall be positioned adjacent to each other, and in a lock there shall not be more than 50 % identical tumblers.

Steering Lock Manufacturer : Honda Lock Mfg. Co. , Ltd.

Steering Lock Model No. : S5A

Signed :

Title : Head in Charge of Engineering

Date : 11. JUL. '06

For and on behalf of Honda Lock Mfg. Co., Ltd.

95/56/EC

CERTIFICATION OF STEERING LOCK GENERAL SPECIFICATIONS

Vehicle Make : HONDA

I certify herewith that the steering locks below mentioned possess more than 1,000 Key combinations and are satisfactorily in line with paragraph 3. 6 of Annex IV in EC directive as follows;
3. 6 Mechanical locking systems shall provide at least 1,000 different key combinations or a number equal to the total number of vehicles manufactured annually if less than 1,000. In vehicles of one type the frequency of occurrence of each combination shall be roughly one per 1,000.

Steering Lock Manufacturer: HONDA LOCK MFG. CO., LTD.

Steering Lock Model No. : S5A(side-Cutting Code key)

Signed :

Title : Chief Engineer

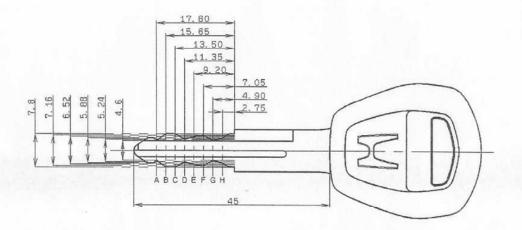

Date : 10. MAR., '00

For and on behalf of HONDA LOCK MFG. CO., LTD.

Interpretation of Key No. List

(1)Interpretation

Example; Interpretation of Code No. 5126 Cutting 11136412.

Widths of a key without and between cuts have six dimensions;

- 1; Width without cuts that measures 7.8mm
- 2; Width between cuts that measures 7. 16mm
- 3; Width between cuts that measures 6, 52mm
- 4; Width between cuts that measures 5.88mm
- 5; Width between cuts that measures 5. 24mm
- 6; Width between cuts that measures 4.6mm

Therefore, as cuts become deeper, Cutting No. will be larger.

Cutting 11136412 will be read from the Position A to Position H in Fig. 1 in this order, where the first digit represents the width at Position A in Fig. 1(width without cuts in this case) and the forth digit of cutting No. 3, for instance, represents the width between cuts at Position D in Fig. 1(6. 52mm)

(2)3442 Different Keys

This Key covers 3442 different combinations from Code No. 5001 to Code No. 8442.

TECHNICAL DESCRIPTION OF THE DEVICE

LIST OF THE KEY POSITIONS AVAILABLE IN SEQUENCE

SEQUENCE	FUNCTION	KEY INSERT/ WITHDRAW	ANTI-THEFT (STEERING) LOCK	ACCESSORY	IGNITION	SELF STARTER (STARTING) (MOTOR)
	withdraw		locked	flo	off	off
	insert O(LOCK)	possible	locked	JJo	off	off
	I (ACC)	impossible	nnlocked	uo	off	off
	II (ON)	impossible	unlocked	uo	uo	off
	III (START)	impossible	unlocked	ЭJo	uo	по
	II (ON)	impossible	unlocked	uo	uo	- Off
100	push I (AGG)	impossible	nnlocked	uo	JJo	JJo
	O (LOCK)	possible	nnlocked	JH0	JJo	JJo
	withdrawn		locked	- Ho	JJo	flo

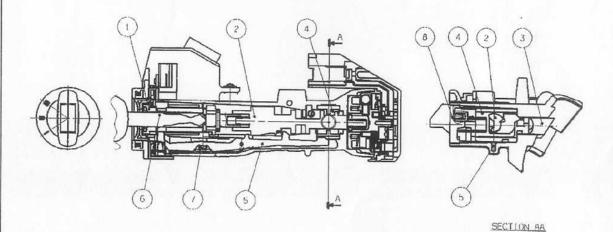

1 Step 1 "0" Position (with key removed)

In this position the spring 8 is expanded and the end of the lock pin 3 engages the recess formed in the steering shaft to prevent the rotation.

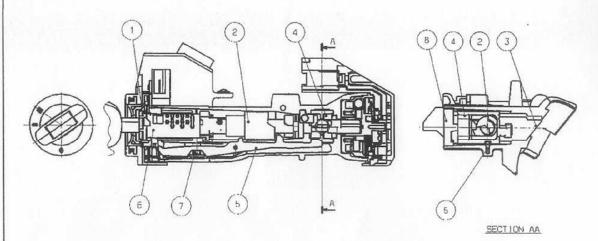

Further the forward end of the stopper plate 5 lifts up the key slider 6 by the force of the spring 7 whereby the key slider 6 enters into the key slot.

2 Step 2 "0" Position (with key inserted)

When the key inserted into the key slot, the back of the key pushes the key slider 6 and away from the key slot whereby the key slider 6 pushes down the forward end of the stopper plate 5 to compress the spring 7, whereby the backward the end of the stopper plate 5 presses against the lower side of the slider 4.

3 Step 3 "I" Position

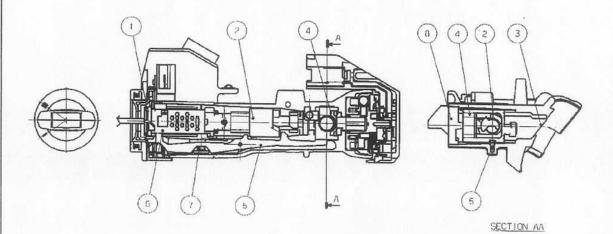

385

When the key is turn from "0" to "I", the semicylindrical cam of the joint inner 2 is rotated simultaneously and lifts up the slider 4, and withdraws the lock pin 3 from the steering shaft recess.

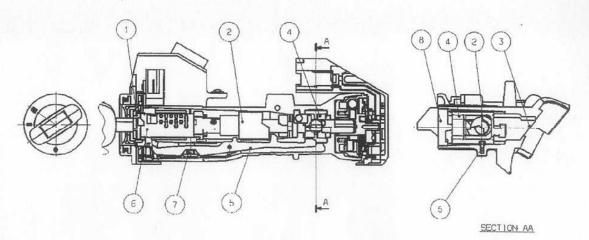

On the other hand the backward end of the stopper plate snaps into the recess of the slider 4 so as to retain the same position untill the key is completely withdrawn from the key slot whereby accidental locking of steering can be avoided.

4 Step 4 "I" Position

When the key is turned from "I" to "II" or "II", the stopper plate 5 and the lock pin 3 keep in same position since the forward end of the stopper plate 5 is on the surface of the inner cylinder 1 and the inside wall of the slider 4 is on the semicylindrical cam of the joint inner 2.

5 Step 5 "I" Position

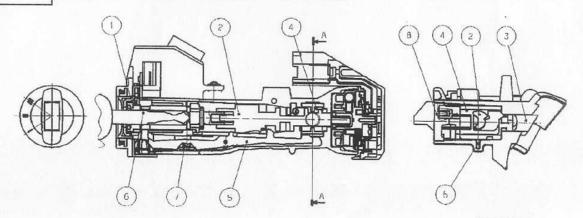

70

When the key is turned counterclockwise direction from "I" to "I", the stopper plate 5 and lock pin 3 keep in the same condition.

But the key should be pushed at the "I" position so as to turn back from "I" to "0".

6 Step 6 "0" Position(with key insert)

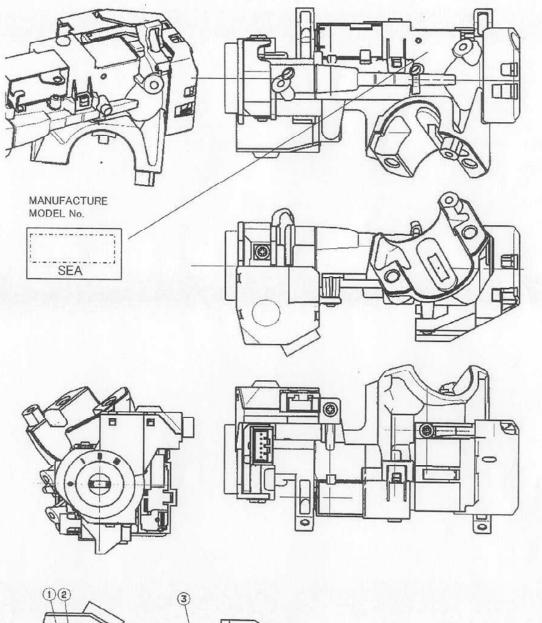

SECTION AA

When the key is turned to "0" after pushing at the "I" position, the slider 4 is free from the inner joint cam.

But slider 4 remains in its position since the backward end of the stopper plate 5 engages the lower side recess of the slider 4.

Only upon almost complete withdrawal of the key is it made possible for the key slider 6 to enter into the key slot and the stopper plate 5 swings clockwise direction, whereupon the backward end of the stopper plate 5 frees the slider 4 and thereby the lock pin 3.

As a result of it, the lock pin 3 moves down by the force of the spring 8 and engages the steering shaft recess.

CERTIFICATION OF STEERING LOCK GENERAL SPECIFICATIONS

Vehicle Make: HONDA

I certify herewith that the steering locks below mentioned possess more than 1,000 Key combinations and are satisfactorily in line with paragraph 3.6 of Annex IV in EC directive as follows;
3.6 Mechanical locking systems shall provide at least 1,000 different key combinations or a number equal to the total number of vehicles manufactured annually if less than 1,000. In vehicles of one type the frequency of occurrence of each combination shall be roughly one per 1,000.

Steering Lock Manufacturer : HONDA LOCK MFG. CO., LTD.

Steering Lock Model No. : SEA

Signed:

Name

Title : Chief Engineer

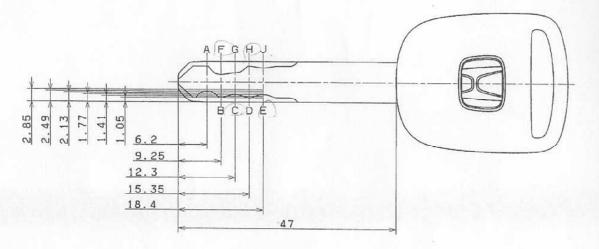

Date : 17. SEP., '02

For and on behalf of HONDA LOCK MFG. CO., LTD.

Interpretation of Key No. List

(1)Interpretation

Example ; Interpretation of Code No. K091 Cutting 113136512.

Depth from key end cuts have six dimensions ;

- 1; Depth from key end cuts that measures 1.05 mm
- 2: Depth from key end cuts that measures 1.41 mm
- 3; Depth from key end cuts that measures 1.77 mm
- 4; Depth from key end cuts that measures 2. 13 mm
- 5; Depth from key end cuts that measures 2. 49 mm
- 6; Depth from key end cuts that measures 2.65 mm

Therefore, as cuts become deeper, Cutting No. will be larger.

Cutting 113136512 will be read from the Position A to Position J in Fig. 1 in this order, where the first digit represents the Depth at Position A in Fig. 1(Depth from key end cuts in this case) and the forth digit of cutting No. 3, for instance, represents the Depth from key end cut s

at Position C in Fig. 1(1.77 mm)

(2)3718 Different Keys

This Key covers 3718 different combinations from Code No. K001 to Code No. N718.

S5A type Occurrence mechanism

Newly found mechanism in addition to the previous mechanism report to NHTSA

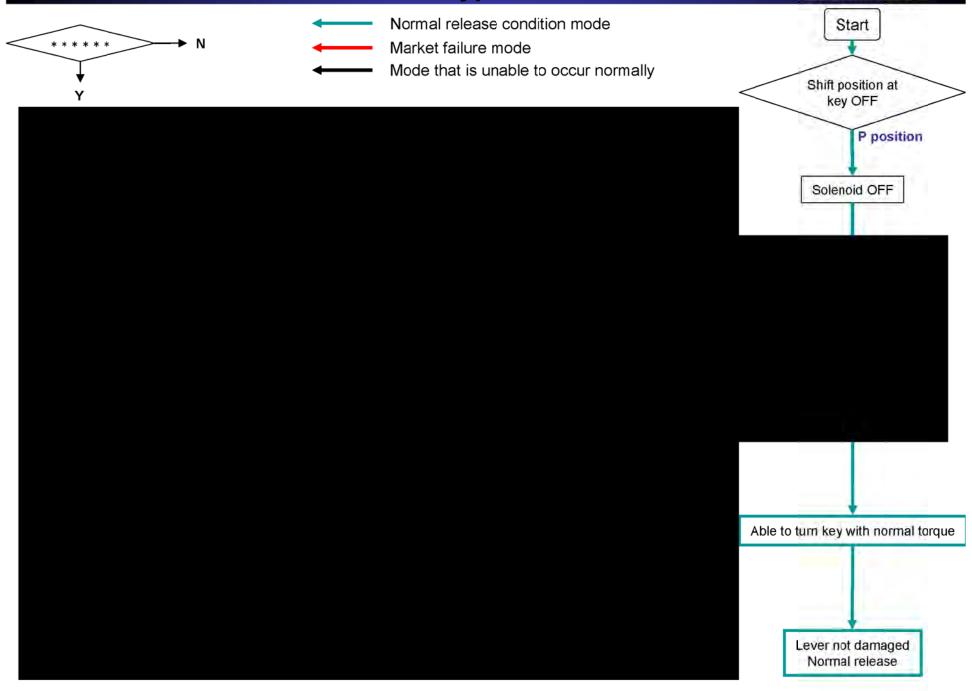

S5A Occurrence mechanism

0⇔I

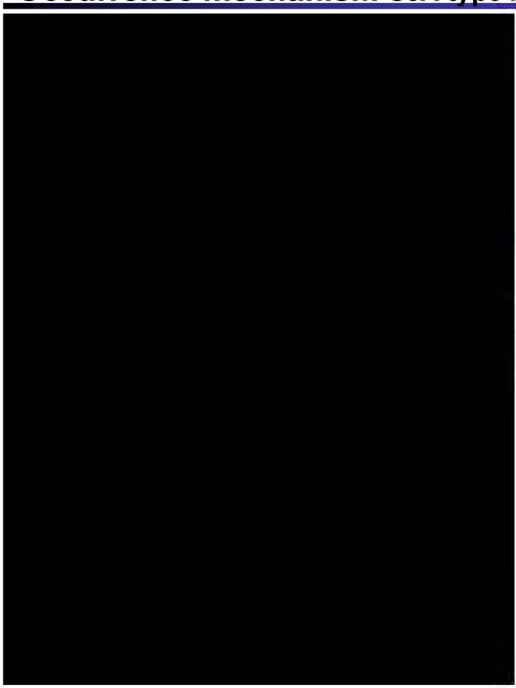

Occurrence mechanism S5A type ('03 ACCORD, '02'03 CIVIC, '03'04 ELEMENT)

Occurrence mechanism S5A type Monitor & duplicate test reult

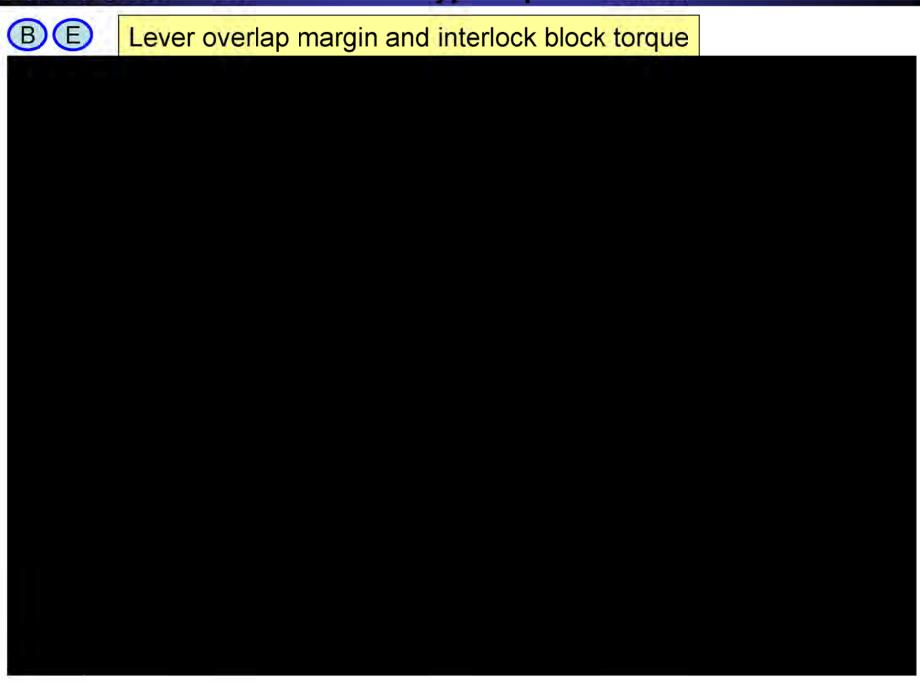

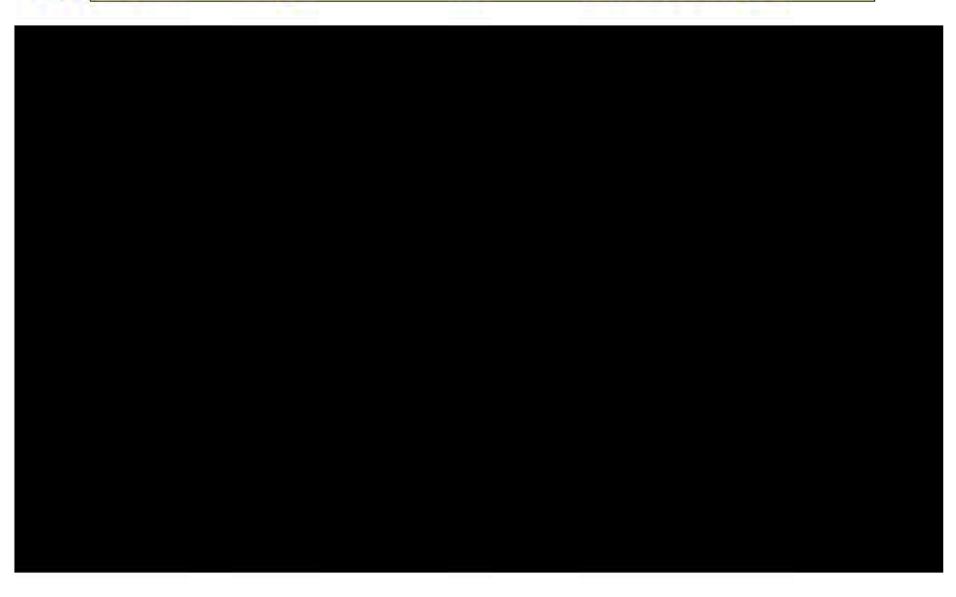

Occurrence mechanism S5A type Duplicate test result

Occurrence mechanism S5A type Duplicate test result

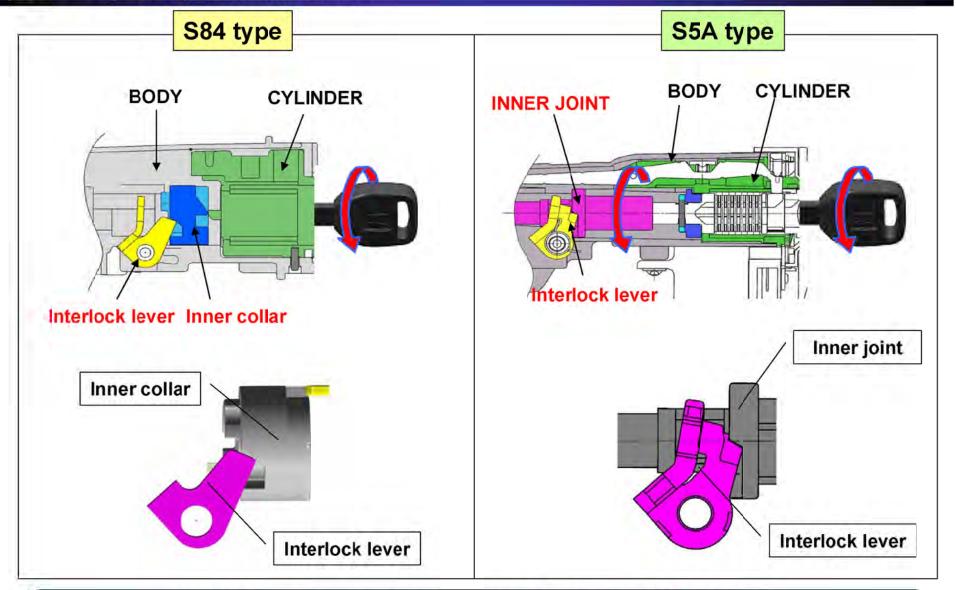

Durability times that results in key removal with strong key turn

EA09-001 HONDA 5-29-2009 ATTACHMENT Q13B English REDACTED

Q13-b [Inner joint] explanation

Parts blocked by lever are different between S84 and S5A

S84: Inner collar S5A: Inner joint

QIS:SCWA-03061804 VIN:5J6YH18513L005741

VIEW BEFORE COUNTERMEASURE

VIEW AFTER COUNTERMEASURE

Q13-h Test method

Measurement method for interlock block strength

Operate interlock lever.

Read the peak torque when the block breaks and the key slips out using a torque meter.

Definitions of

- : Torque with which S5A type lever breaks.
- : Torque with which SEA type lever breaks.

(Measured applying torque by a jig, since the key torsion strength is

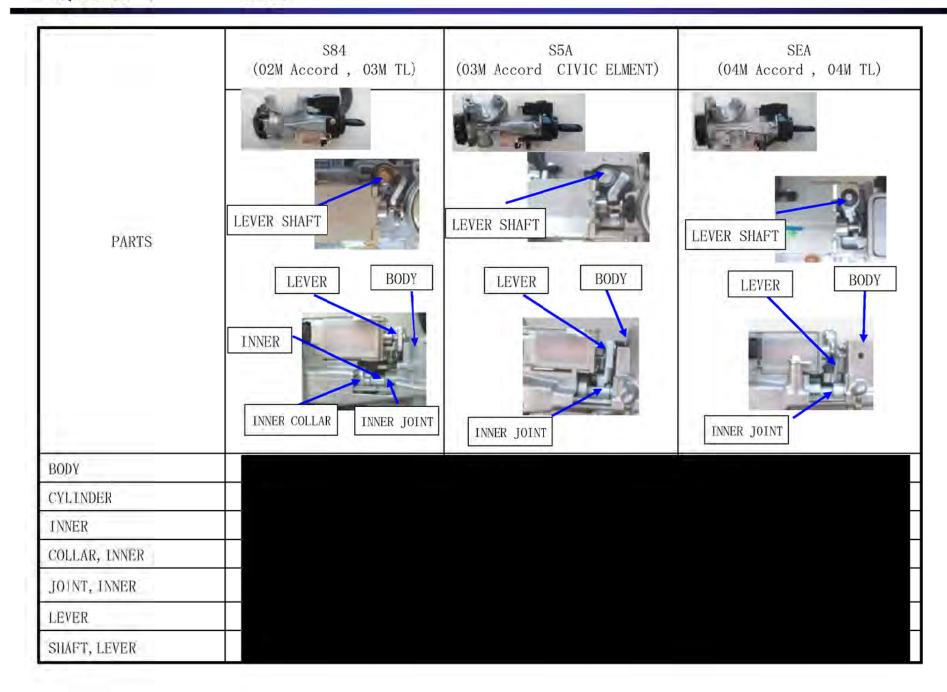

EA09-001 HONDA 5-29-2009 ATTACHMENT Q13C English REDACTED

Change point explanation Factor Change type to SEA

	S5A	SEA		
	Inner Joint (ZDC) Aluminum Lever	Inner Joint (ZDC)	SEA Strong Point	
ACC Off Torque	1.0 Nm	5.0 Nm	Impossible to Create Half Lock Mode	
Block Area Size	4.0 mm ²	6.6 mm ² (1.5 times)	Toughness Up for Mfg. Deviation	
Block Torque	9.0 Nm	15.0 Nm	Toughness Up for Mfg. Deviation

Q15-b Dimension And Tolerance(S5A)

Q15-b Dimension And Tolerance (SEA)

Q15-c Key strength and durability

Model	Acc	cord	С	ivic	ELEMEN T	TL
Model	02M	03M	02M	03M , 04M	03M , 04M	03M , 04M
Photo						
Key blade type	Tumbler	WAVE	Tumbler	WAVE	WAVE	Tumbler
Interlock type	S84	S5A	S5A	03M : S5A 04M : SEA	S5A	03M : S84 04M : SEA
Torsion strength durability						
Torsion strength				04M : SEA		04M

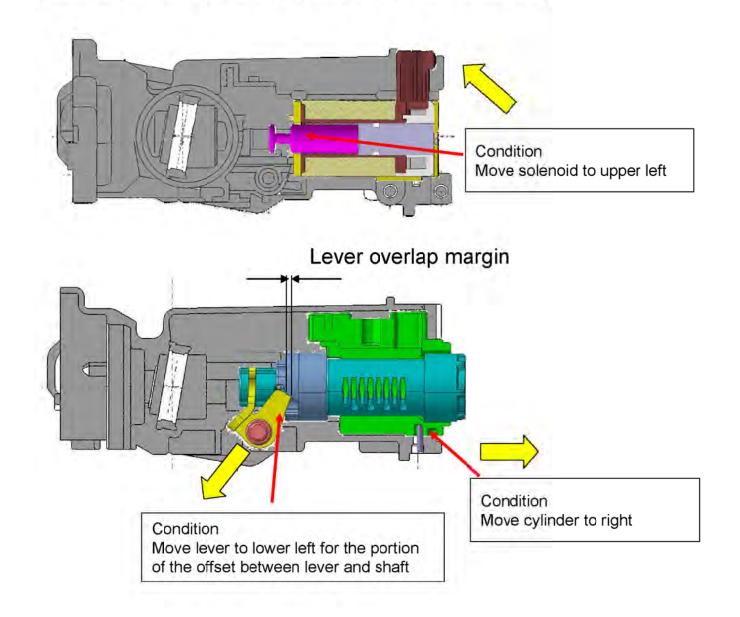

Q15-d Minimum lever overlap margin (Drawing set value)

	S84 (02 Accord)	S5A (03M Accord CIVIC ELMENT)	SEA (04M Accord)
Minimum lever overlap margin	3		

Q15-e Minimum lever overlap margin (Drawing set value)(S84)

- Calculation method for minimum lever overlap margin

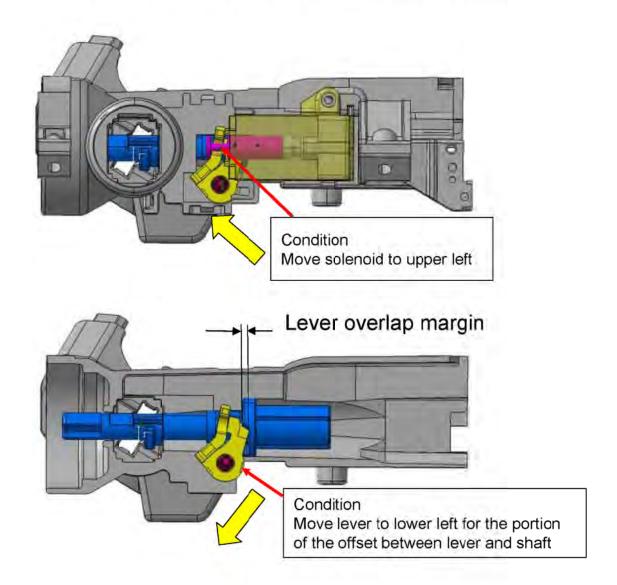

The dimension of each part was taken into consideration to make the overlap margin between the lever and the inner collar minimum, and the overlap margin was calculated using CATIA.

Q15-e Minimum lever overlap margin (Drawing set value)(S5A)

- Calculation method for minimum lever overlap margin

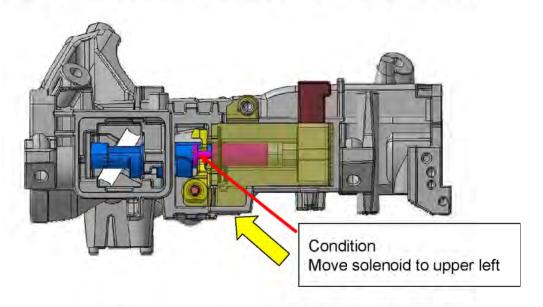

The dimension of each part was taken into consideration to make the overlap margin between the lever and the inner collar minimum, and the overlap margin was calculated using CATIA.

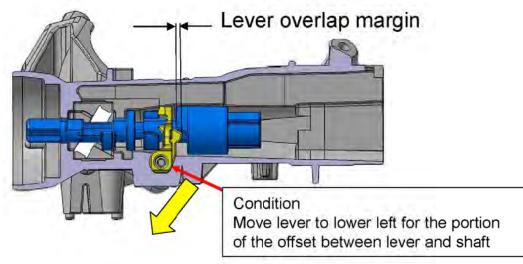

Q15-e Minimum lever overlap margin (Drawing set value) (SEA)

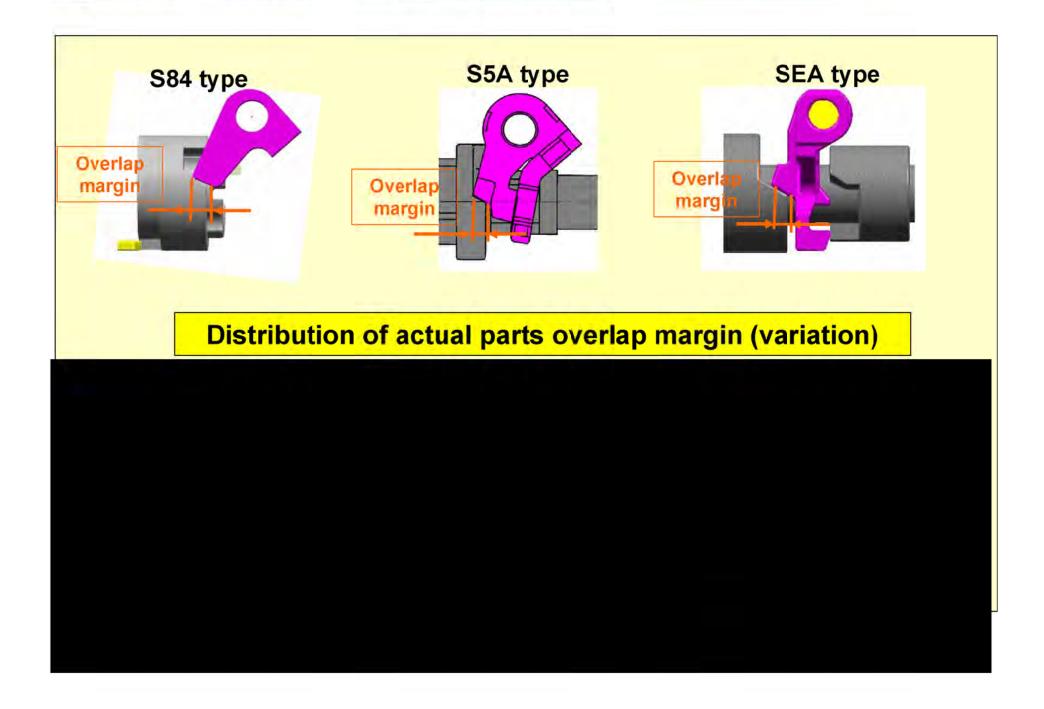

- Calculation method for minimum lever overlap margin

The dimension of each part was taken into consideration to make the overlap margin between the lever and the inner collar minimum, and the overlap margin was calculated using CATIA.

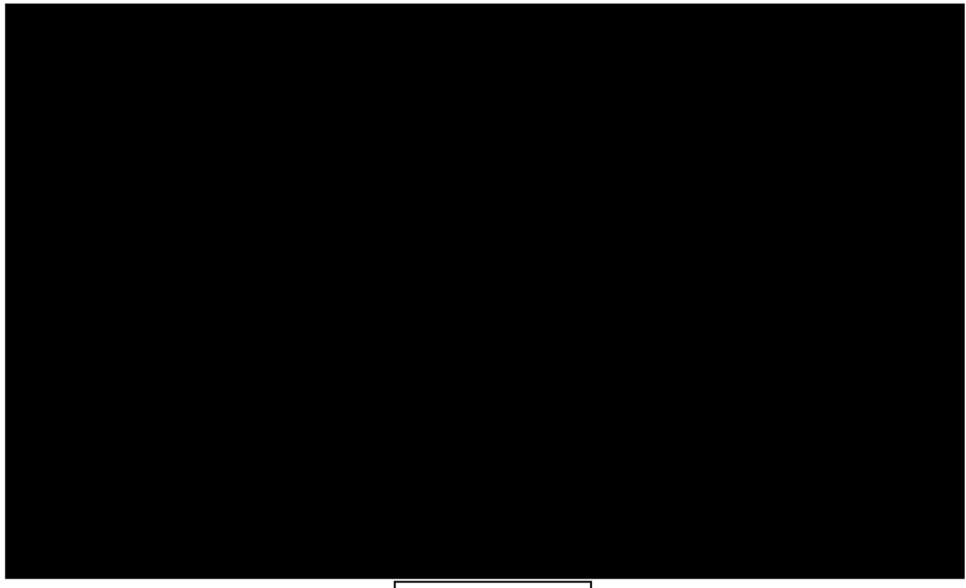

Q15-f Distribution of initial lever overlap margin

S84 type Occurrence mechanism

Occurrence mechanism S84 type ('02 ACCORD, '03 TL)

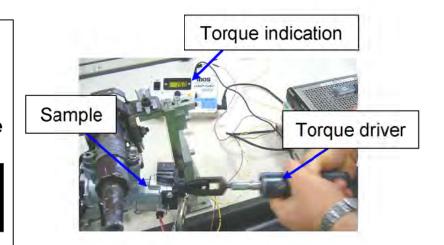

Unable to interlock and key slips out

Occurrence mechanism S84 type Monitor & duplicate test result

- Sample condition Identical feature with M/P parts (SPG pin
- Test conditions
- 1. Connect the power to the sample as shown in the photo and let the interlock engage.

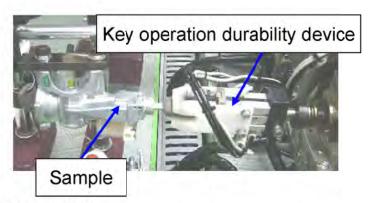

Occurrence mechanism S84 type Monitor & duplicate test result

- Sample condition
as shown below.
- Test condition
1. Set the sample to the key operation durability device as shown on the photo and test.

Distribution of pulling load at key operation (Based on 05/2 monitor)

Number of key operation times to SPG pin lift

Occurrence mechanism S84 type Monitor & duplicate test result

Sample 1	Sample 2	Sample 3
0	0	0
0	0	0
