4d. Description:	Some cars may develop a power-steering fluid leak from the cooler line as a result of either a split in the rubber hose section of the line closest to the steering gear (V6 & V8 engines) or a leak at the spring clamps where the rubber hose attaches to a metal pipe section (V6 engine) if the pressure in the power steering cooler line exceeds the capability of the parts.

5. Corrective Field Action

5a. Description of Correction:	Dealers are to replace the power steering cooler line for V8 engines. For V6 engines, replace the hose and clamps (a service clamp completed validation testing to the new requirements based on the improved validation testing from GM6210M on June 16, 2006.) The complete line will be used for service on the V6 until the hose and clamp are available (bulletin in process).
