SB #:

WB #:

Category: 8 - ELECTRICAL

Item #:	Year:	Model:	Engine:
1	2005	RS - Caravan, Voyager, Town and Country	All Engines

Issue Description: Please make sure you follow the procedures in the service manual to remove the switch panel. If you don't release the clips from the back, the switch will be damaged. When installing the new switch, if you notice any interference with the foam near the edges of the switch mounting tabs, it can be cut away with a sharp knife to allow the switch bezel to sit flush in the panel.~ Note - Since 2003 only vehicles built with auto headlamps will have lighted headlamp switches. 2001 and 2002 model year RS minivan switches do have lighting.

MIS REPORTING

Each Product Line is at its stated MIS. The Totals are at the current reporting MIS.

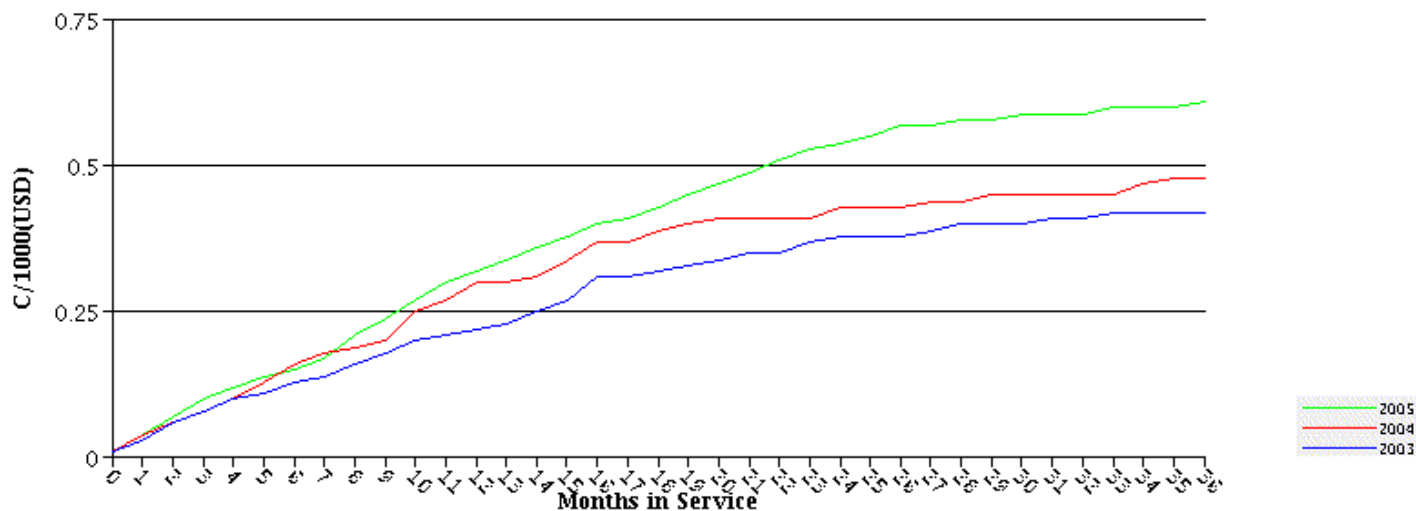

CAR

- 2009 JC launched in January, 2008.
- 2008 LZ launched in May, 2008.
- 2008 JX launched in March, 2007.
- 2008 JD launched in January, 2007.
- 2007 PM launched in February, 2006.
- 2006 LX launched in April, 2005.
- 2005 LX launched in March, 2004.
- 2005 Crossfire Convertible (ZX Product Line) launched in April, 2004.
- 2005 2005 CS launched in April, 2004.
- 2005 PT Convertible (PX Product Line) launched in January, 2004.
- 2005 RS launched in January, 2004.
- 2004 JR ("JR" and "JX" Product Lines) launched in February, 2003.
- 2004 CS launched in March, 2003.

TRUCK

- 2008 DA (Sterling) New for 2008.
- 2006 WS (Grand Cherokee SRT-8) launched in January, 2006.
- 2006 NM launched in October, 2005.
- 2005 WK launched in September, 2004.
- 2004 WJ launched in January, 2003.
- 2002 KJ launched in May, 2001.
- 2001 DR'S Built Jan-Jul 2000 are coded as 2000 MY.
- 2001 and prior XJ warranty coded as KJ for comparison.

Enclosure 11

Headlamp System

BCM & FCM Functions

BCM controller Functions:

- All chime functions (seatbelt unbuckled, headlamps "on", key "in", turn signal warning, etc.)
- All Power Door Locks functions (from RKE, switch activation, rolling locks etc.)
- All Interior reading, courtesy & map lamps control
- All interior dimming functions for the (cluster, radio, switches etc.)
- Panic feature
- Vehicle Theft Alarm
- Radio Volume control from steering wheel
- Battery drain protection with key "off" (headlamps, interior lamps, reading lamps)
- All exterior lighting mode functions Park, Low & High beam (FCM connected physically to the lights but BCM commands the actions it takes)
- All turn signal / hazard functions
- Vehicle in Reverse Lamps
- Vehicle Mileage (odometer)
- Cluster fuel gauge
- Front Wiper mode control (FCM physical controls the motors but BCM reads the switch and sets the modes).
- Rear Wipers
- Power Folding Mirrors (BUX only)
- Three Ignition power feeds to (ABS, HVAC & Compass Module)
- Liftgate release for non-power liftgate applications

FCM Functions:

- Front Wipers
- Low Washer Fluid
- Front & Rear windshield washer motor (switch status comes from BCM)
- Exterior lamps Park, Fog, Low & High beam outputs
- Horn Functions (PANIC, VTA, RKE, Steering Wheel Switch)
- Brake Shift Interlock
- Accessory Power Feed
- Power Feeds for Airbag Module including Side airbags
- Power Feed for Transmission Controller Module
- HVAC Blower Motor Control
- Heated Back Window Defrost
- Premium Radio Amplifier power feed control
- Adjustable Brake Pedal Interlock

BCM basic fault controls for exterior lamps:

Upon reading the headlamp switch if:

An open circuit is detected the BCM holds the last headlamp state until the fault matures then if (key is "on" the BCM's J1850 signal to the FCM is set to park & low beams "on"). When the (key is "off" then all lights are turned "off").

For an short circuit is detected the BCM holds the last headlamp state until the fault matures then if (key is "on" the BCM's J1850 signal to the FCM is set to park & low beams "on"). When the (key is "off" then all lights are turned "off").

If switch indicates Auto and there is no J1850 ambient sensor module or it's not communicating on the bus then if (key is "on" headlamps default to "on". If key is "off" then all lights are turned "off").

FCM basic fault controls for exterior lamps:

If FCM loses J1850 communication with BCM it holds last headlamp state until the fault matures and then if (key is "on" headlamps default to "on". If key is "off" then all lights are turned "off").

Enclosure 11

Lights Owner Manual

Periodic Safety Checks You Should Make Outside The Vehicle

Tires

Examine tires for excessive tread wear or uneven wear patterns. Check for stones, nails, glass, or other objects lodged in the tread. Inspect tread and sidewall for cuts or cracks. Check wheel nuts for tightness, and tires (including spare) for proper pressure.

Lights

Have someone observe the operation of exterior lights while you work the controls. Check turn signal and high beam indicator lights on the instrument panel.

Fluid Leaks

Check area under vehicle after overnight parking for fuel, engine coolant, oil or other fluid leaks. Also, if gasoline fumes are detected or fuel, power steering fluid or brake fluid leaks are suspected, the cause should be located and corrected immediately.

LIGHTS

All of the lights, except the hazard warning lights, are controlled by switches to the left of the steering column on the instrument panel.

Headlight Switch

Interior Lights

Interior lights are turned on when a door or liftgate is opened, the keyless entry transmitter is activated, or when the dimmer control is moved to the extreme top.

The interior lights will automatically turn off in about 15 minutes if any of the following occur.

- A door, sliding door or the liftgate is left open.
- Any overhead reading light is left on.
- If the dimmer control is in the extreme top position.

NOTE: The key must be out of the ignition switch or the ignition switch must be in the OFF position for this feature to operate.

Park Lights

 Turn this switch to the first detent to turn the park lights on. This also turns on all instrument panel lighting.

Headlights

 Turn the headlight switch to the 2nd detent to turn the headlights and park lights on. This also turns on all instrument panel lighting.

To change the brightness of the instrument panel lights, rotate the dimmer control up or down.

Dimmer Control

With the park lights or headlights on, rotating the dimmer control for the interior lights on the instrument panel upward will increase the brightness of the instrument panel lights.

3

Dome Light Position

Rotate the dimmer control completely upward to the second detent (extreme top position) to turn on the interior lights, except the front reading/courtesy lights. The interior lights will remain on when the dimmer control is in this position.

Interior Light Defeat (OFF)

Rotate the dimmer control to the OFF position (extreme bottom). The interior lights will remain off when the doors or liftgate are open.

Parade Mode (Daytime Brightness Feature)

Rotate the dimmer control to the first detent. This feature brightens the odometer, radio and overhead displays when the park lights or headlights are on.

Automatic Headlights — If Equipped

This system automatically turns your headlights ON or OFF based on ambient light levels. To turn the system ON, turn the headlight switch to the extreme counter-clockwise position. When the system is ON, the Headlight Time Delay feature is also ON. This means your headlights will stay

ON for up to 90 seconds after you turn the ignition switch OFF. To turn the Automatic System OFF, turn the headlight switch clockwise to the OFF position.

NOTE: The engine must be running before the headlights will come ON in the Automatic mode.

Daytime Running Lights (Canada/Fleet Vehicles Only)

The Daytime Running Lights will come on whenever the vehicle is running, the headlights are off, and the parking brake is off. The headlight switch must be used for normal night time driving.

Lights-on Reminder

If the headlights or the park lights are left on, or if the dimmer control is in the extreme top position after the ignition switch is turned off, a chime will sound when the driver's door is opened.

Battery Protection

This feature provides battery protection to avoid wearing down the battery if the headlights, park lights, or front fog lights are left on for extended periods of time when the ignition switch is in the LOCK position. After 3 minutes of the ignition switch being in the LOCK position and the headlight switch in any position other than

OFF or AUTO, the lights will turn off automatically until the next cycle of the ignition switch or headlight switch.

The battery protection feature will be disabled if the ignition switch is turned to any other position other than LOCK during the 3 minute delay.

3**Headlamp Delay — If Equipped**

This feature provides the safety of headlight illumination for up to 90 seconds, when leaving your vehicle in an unlighted area.

To activate the delay feature, turn off the ignition switch while the headlights are still on. Then turn off the headlights within 45 seconds. The 90 second delay interval begins when headlight switch is turned off. If the headlights or park lights are turned back on or the ignition switch is turned on, the delay will be cancelled.

The driver can choose, when exiting the vehicle, to have the headlamps remain on for 30, 60, or 90 seconds, or not

remain on. refer to Electronic Vehicle Information Center (EVIC) "Customer Programmable Features" for more information.

If the headlights are turned off before the ignition, they will turn off in the normal manner.

NOTE: The headlights must be turned off within 45 seconds of turning the ignition off to activate this feature.

Front Fog Lights — If Equipped

#D To activate the front fog lights, turn on the park lights or the low beam headlights and pull out on the headlight switch control knob. An indicator in the headlight switch shows that the front fog lights are on. Pressing the headlight switch control knob in will turn the front fog lights off.

MULTIFUNCTION LEVER**Turn Signals**

Move the Multifunction Lever up or down and the arrows on each side of the base instrument cluster or Information Center flash to indicate proper operation of the front and rear turn signal lights. You can signal a lane change by moving the lever partially up or down.

If either indicator flashes at a rapid rate, check for a defective outside turn signal light bulb. If one of the indicators fails to light when the lever is moved, it would suggest that the indicator light is defective.

Turn Signal Switch

Turn Signal Warning

If the vehicle electronics sense that the vehicle has traveled at over 18 mph (29 km/h) for about one mile with the turn signals on, a chime will sound to alert the driver.

Headlight Low/High Beam Selector Switch

Pull the multifunction lever toward the steering wheel to switch the headlights between HIGH and LOW beam.

Passing Light

You can signal another vehicle with your headlights by lightly pulling the multifunction lever toward the steering wheel. This will cause the headlights to turn on at high beam and remain on until the lever is released.

3

Windshield Wipers and Washers

The wipers and washers are operated by a switch in the multifunction lever. Rotate the end of the lever to select the desired wiper speed.

WARNING!

Speed Control can be dangerous where the system can't maintain a constant speed. Your vehicle could go too fast for the conditions, and you could lose control. An accident could be the result. Don't use Speed Control in heavy traffic or on roads that are winding, icy, snow-covered, or slippery.

OVERHEAD CONSOLE — IF EQUIPPED

The overhead console can contain courtesy/reading lights, an optional universal garage door opener (HomeLink®), storage for sunglasses, compass/temperature display, a mini-trip computer, optional electronic vehicle information center (EVIC), power sliding door switches and an optional power liftgate switch.

Overhead Console

Courtesy/Reading Lights

At the forward end of the console are two courtesy/reading lights.

Press the lens to turn these lights on. Press a second time to turn the lights off.

30, 60, or 90 seconds, or not remain on. Pressing the "STEP" button when in this display will select 30, 60, 90, or "OFF."

Headlamp On With Wipers (Available with Auto Headlights Only)

When this feature is selected and the headlight switch has been moved to the "AUTO" position, the engine is running and, the front wipers are turned on for 10 seconds, the headlights will turn ON. The display will remain on Parade Mode (Daytime Brightness) for ease of viewing. Pressing the "STEP" button when in this display will select "Yes" or "No."

Power Accessory Delay

When this feature is selected, accessory power will be supplied for up to 45 seconds for the power windows,

radio, power vent windows, power outlets, and removable center console, when the ignition switch is turned off or until the key is removed and either front door is opened.

GARAGE DOOR OPENER — IF EQUIPPED

3

The HomeLink® Universal Transceiver replaces up to three remote controls (hand held transmitters) that operate devices such as garage door openers, motorized gates, or home lighting. It triggers these devices at the push of a button. The Universal Transceiver operates off your vehicle's battery and charging system; no batteries are needed.

For additional information on HomeLink®, call 1-800-355-3515, or on the internet at www.homelink.com.

air conditioning system at idle for about five minutes in the fresh air and high blower setting. This will insure adequate system lubrication to minimize the possibility of compressor damage when the system is started again.

REPLACEMENT LIGHT BULBS

LIGHT BULBS — Interior	Bulb Number
Center & Rear Dome Light	578
Center & Rear Reading Lights	578
Front Door Courtesy Light	578
Front Header Reading Lights — If Equipped	578
Instrument Cluster Lights	PC74
Liftgate Light(s)	578
Overhead Console Reading Lights	PC579
Removable Console Light — If Equipped	194
Visor Vanity Lights	6501966

NOTE: For lighted switches, see your dealer for replacement instructions.

All of the interior bulbs are glass wedge base or glass cartridge types. Aluminum base bulbs are not approved and should not be used for replacement.

LIGHT BULBS — Exterior	Bulb Number
Back-up, Tail, Stop, Turn Signal, & Sidemarker	3057
Center High-Mounted Stop Light	921
Fog Light — If Equipped	9145
Front Side marker, Park/Turn Signal	3457AK
Headlight	9007
Headlight (Long Wheel Base)	H13
License	168

BULB REPLACEMENT

Headlights

1. Remove the three screws securing the **headlight** module.

809c0b2e

2. Turn the bulb socket retaining ring or the bulb assembly counterclockwise.

809c0bc6

3. Disconnect the electrical connector and replace the bulb. **7**

NOTE: On some vehicles it may be necessary to slide the red release lock rearward and push forward on the connector while depressing the release tab.

2. Twist the turn signal socket to remove from the **headlight** module and pull bulb from socket.

809c0bd6

3. Replace bulb, reinstall socket and then reinstall the headlight module.

Front Fog Light

1. Reach behind the front fascia from under the vehicle.
2. Twist the front fog light bulb to remove from the fog light housing.
3. Disconnect the electrical connector and replace the bulb.

CAUTION!

Do not touch the new bulb with your fingers. Oil contamination will severely shorten bulb life. If the bulb comes in contact with an oily surface, clean the bulb with rubbing alcohol. **7**

428 MAINTENANCE SCHEDULES

Once a Month

- Check tire pressure and look for unusual wear or damage.
- Inspect the battery and clean and tighten the terminals as required.
- Check the fluid levels of coolant reservoir, brake master cylinder and transmission, add as needed.
- Check all **lights** and all other electrical items for correct operation.

At Each Oil Change

- Change the engine oil filter.
- Inspect the exhaust system.
- Inspect the brake hoses.
- Inspect the CV joints and front suspension components.
- Check the automatic transmission fluid level.
- Check the coolant level, hoses, and clamps.

Block Diagram and Functional Description

Electrical Wiring Diagram and Circuit Functions for Headlamp System

DESCRIPTION

LAMP SYSTEMS

Lighting circuits are protected by fuses. Lighting circuits require an overload protected power and high side drivers source, ON/OFF device, lamps and body grounds to operate properly. Plastic lamps require a wire in the harness to supply body ground to the lamp socket. Replace sockets and bulbs that are corroded.

Some of the interior and exterior lighting functions are governed by the Body Control Module (BCM). The headlamp, dome, and the door ajar switches provide signals to the BCM. The BCM in turn sends a Programmable Communication Interface (PCI) bus message to the Front Control Module FCM,(AKA IPM) to enable the necessary drivers to set the required illumination configuration.

Wire connectors can make intermittent contact or become corroded. Before coupling wire connectors, inspect the terminals inside the connector. Male terminals should not be bent or disengaged from the insulator. Female terminals should not be sprung open or disengaged from the insulator. Bent and sprung terminals can be repaired using needle nose pliers and pick tool. Corroded terminals appear chalky or green. Corroded terminals should be replaced to avoid recurrence of the problem symptoms.

Begin electrical system failure diagnosis by testing related fuses in the fuse block and intelligent power module. Verify that bulbs are in good condition and test continuity of the circuit ground. Refer to the appropriate wiring information.

AUTOMATIC HEADLAMP SYSTEM

The Automatic Headlamp system turns the instrumentation and exterior illumination lamps ON when the ambient light levels are Night and the engine RPM is 450 or above, and OFF when light levels are Day.

DAYTIME RUNNING LAMPS

Operating the high-beam headlamps at reduced power provides daytime running lamps, which are required on all new Canadian vehicles. Daytime running lamps are functional when 450 rpm's are reached.

HEADLAMPS ON WITH WINDSHIELD WIPERS

For vehicles equipped with the Automatic Headlamp System, the instrumentation and exterior illumination lamps will be turned ON when the headlamp switch is in the AUTO position, RPM > 450 and the windshield wipers have been in the intermittent, low or high mode of operation for more than ten seconds. When the windshield wipers are turned OFF the Body Control Module will determine if the instrumentation and exterior illumination lamps should remain ON base upon the current ambient light level.

DESCRIPTION (Cont'd)

HEADLAMP SYSTEM

The configuration of the headlamp system of headlamps, park lamps and fog lamps is determined by the BCM. The BCM determines the lighting configuration as a result of the inputs from the ignition switch, headlamp switch and multi-function switch. A PCI bus is transmitted from the BCM to the FCM, AKA IPM to enable the necessary drivers to set the illumination configuration. Four wires are connected between the headlamp switch and the BCM. The first wire contains information regarding the position of the headlamp switch (Off, Automatic Headlamps, Automatic Headlamp switch fog, Park with Fog, Head, or Head with Fog Lamps). The second wire contains information regarding the position of the dimmer switch (Dome Lamp, Daytime Brightness, Dimming Level or Off). The third wire is a dedicated signal return (ground) wire. The fourth wire provides power to the front fog lamp indicator.

HEADLAMP TIME DELAY SYSTEM

The headlamp time delay system is controlled by the Body Control Module (BCM) via a PCI bus message transmitted by the BCM to the FCM (IPM) to turn off the headlamps.

OPERATION

AUTOMATIC HEADLAMP SYSTEM

Automatic headlamps are controlled by the Body Control Module (BCM). With the headlamp switch in the AUTO position, the BCM will control the headlamp, parking, side marker, tail and instrumentation lamps based on ambient light levels. Ambient light levels are monitored by the BCM using the Day/Night signal and Electrochromatic Mirror (ECM) present from the Compass Mini Trip (CMTC) located on the front windshield in front of the rear view mirror ECM. Ambient light readings are averaged to limit cycling the lamps ON and OFF when passing through areas with varying light levels. The automatic headlamps will only function when the engine is running with RPM > 450. When the headlamp switch is in the AUTO position (Automatic mode), the Headlamp Time Delay system will function when the ignition switch is placed in any position other than run/start.

DAYTIME RUNNING LAMPS

Power is reduced using pulse-width modulation to the high beams, where by the power is switched on and off rapidly instead of remaining on continuously. The duration and interval of the power pulses is programmed into the FCM (IPM). Daytime running lamps are functional when 450 rpm's are reached.

HEADLAMP SYSTEM

The headlamp system will default to headlamps ON position when ignition switch is ON and when an open or short circuit failure occurs on the headlamp switch input or PCI data bus communication between the BCM and the FCM (IPM) fails. The system will return to normal operation when the open or short is repaired. A fault will be reported by the BCM when a failure occurs on the dimmer or headlamp switch input.

If the exterior lamps are ON and the headlamp switch is in any position other than OFF or AUTO and with the ignition switch OFF (LOCK) after 3 minutes the BCM sends a message via PCI bus to the FCM (IPM) informing the FCM (IPM) to turn off the headlamps, park lamps and fog lamps. This feature prevents the vehicle battery from being discharged when the vehicle lights have been left ON.

OPERATION (Cont'd)

HEADLAMP TIME DELAY SYSTEM

The headlamp time delay system is activated by turning the headlamps ON (high or low beam) while the engine is running, turning the ignition switch OFF, and then turning the headlamp switch OFF within 45 seconds. The system will not activate if more than 45 seconds elapse between ignition switch OFF and headlamp switch OFF. The BCM will allow the headlamps to remain ON for 90 seconds (configurable) before they automatically turn off (If the key is in the ignition during the headlamp time delay mode, then both the headlamps and park lamps (including panel dimming) will be ON). Refer to the Owner's Manual for more information.

If the headlamp switch is in the Auto Headlamp Position, the headlamps are ON due to the night signal from the CMTC and the ignition switch is in any position other than run/start, the BCM shall enter a 90 second (configurable) Auto Headlamps time delay mode. If the key is in the ignition during the headlamp time delay mode, then both the headlamps and park lamps (including panel dimming) will be ON. If the key is not in the ignition, then only the headlamps will be ON. The BCM will allow the headlamps to remain ON for 90 seconds before they automatically turn OFF. Refer to the Owner's Manual for more information.

OPTICAL HORN/HIGH BEAMS

When the multi-function switch is pulled to the first detent (optical horn) signal, the headlamps are ON, key-in the ignition the BCM shall send a message via PCI bus to the FCM (IPM) to turn on the headlamps drivers to illuminate all four filaments (Low and High beams). When the multi-function switch is pulled to the second detent (high beam) signal and the headlamps are ON, the BCM shall send a message via PCI bus to the FCM (IPM) to turn on the headlamps drivers. The High Beams are illuminated and the Low Beams and Fog Lamps (if ON) are extinguished. If the headlamps were in the high beam configuration when power was removed from the headlamps, the headlamps will be configured as low beam the next time they are activated.

NOTE: For export vehicles, the low beams and front fog lamps will remain ON when high beams are activated.

POWER AND GROUND

HEADLAMPS (LEFT AND RIGHT):

Each of the headlamp is powered by the high side drivers (electronics) within the FCM (IPM). Each of the lamp is grounded through the return circuit back to the FCM (IPM).

HEADLAMP SWITCH:

Headlamp switch is grounded to the IP ground. The switch also has a signal return path through the BCM.

IPM and BCM:

IPM and BCM are fused and are powered by battery feed and ignition feeds. Both modules are grounded to ground studs. Since these modules power and ground several components, any loss of power or ground to these modules would have had significant failures which would not be limited to headlamps.

GROUNDINGS G200 and G300:

These ground studs ground several components. Any failure in the grounds such as corrosion, lose terminal, or lifted ground would have caused other systems to show erroneous functionality and would not be limited to headlamp operation.

Please refer to the detailed wiring diagrams for full grounding scheme.
