Subject Non-responsive content removed FW: Complaint CP4.1 - particles in the intake valve v_21_03_08

Hello
at the previous Q meeting we received a CP4.1 from Non-responsive content remov ed at VW Chem-nitz.
In the VW Chemnitz cold test, the pump made noises and was analyzed in the manufacturing plant
at BOSCH Jihlava.
Details can be found in the email below for info.

Best regards

Subject: FW: Complaint CP4.1 - particles in the intake valve

Hello,

Attached I am sending the 8D on the complaint regarding pump HP-CP4.1 0 445 010 507

Compl. file:
SN: BPT 0315
DoM: 2/14/2008
IQIS: 230001964628
Customer ref. no: AV3 1214515
Compl. Type: 21- 0Km, installed
Failure date: 2/25/2008
Grounds of complaint: Noises when refueling

JhP findings: Chip in intake valve

Full analysis, slide with measures and 8D please see slide.

Non-responsive content removed

My name is Non-responsive content removed and I am a Customer Account Manager at the BOSCH Jihlava plant

for AUDI and VW customers.

According to information from [redacted] I am to issue an 8D report for complaints regarding the HP-CP4.1
with aluminum particles in the intake valve and sent this to you.

Due to the fact that I have an all-day business call from AUDI Hungaria, I will try to draw up an 8D report after the call and
send it.

Many thanks for your patience and best regards from Jihlava.

Open points / tasks in the revised open point list Q meeting/cleanliness

Increase in capacity for metering unit manufacture (duplication)

Desktop factory: Inspection of the automatic station intake valve pre-assembly
Result: Inspection took place. Further development of the topic in the management of change framework
Additional point from the change discussion: Discussion of release C coating.

EA11003EN-00400[2]	Result: Topic was discussed.	Further development of the topic in the management of change framework

AOB:

Definition with [redacted]:
For CP4 complaints from VW plants, the history of which [redacted] cannot fully understand, the complaint shall be tested by way of re-installation into the engine.

Once the plausibility of the complaint has been tested (through history / re-installation), the article is be sent on to Bosch for analysis.

Best regards

Subject: WG: TPI / analyse result CR-pump US-07 / no trouble found
Attachments: WG: 8D-Reporte HD-Pumpen US07; HDP_Späne2020693.pdf

Hello all;

Please find enclosed a additional information, regarding the last analys result for CR-pumps.

In the past Bosch had received via VW Non-responsive content removed a respectable numbers of claimed CR-pumps Typ CP4 for US-07.

Regarding the preanalyse at the VW [redacted] plant and detailed analyses at the Bosch investigation point, we'd like to inform you about a important topic.

We received a few pumps with the fault description from your local VW-partner: "Metall particel at the filter". In a few cases the partner use this as an indication, to verify a mechanical breakdown from the CR-pump.
To improve this action, we'd prefer additional to remove the measuring unit on the top of the pump. If it's possible to find particel at this component, then we confirm the repair to exchange the whole fuel system.
Please note;
To find some partcel or dust in the main filter box, can not be prevented. Usually you can find aluminium particel, because the housing of the filter box ist made of aluminium splash.

Attached please find a service information from your AUDI-colleagues. They have already implemented this improvement.

Mit freundlichen Grüßen / Best regards

Importance: High

Non-responsive content removed

The analysis at Bosch has taken place.
We set additional steps for the analysis onsite for some of the HP pumps (see Table).
Drivetrain damage was found in 5 of the HP pumps with the cause "Turned Tappet".
Bosch already has corrective measures for this case of damage as you know (including hair-line test , visual inspection catalog
roller support, etc.)
With the HP pumps still t.b.d., lab analyses and test bench runs are being run in order
to be able to reliably determine the cause of the damage.
The HP pumps are relatively far apart in terms of their date of manufacture.

Further processing:
Classification of damage cases by time to measures taken by Bosch
With vehicles with 0-km mileage but relatively "old" production period (around 1 year) we need to check whether these vehicles
were used as show vehicles at the dealer
Get date for the information still needed to prepare the documents
Issue of 8D reports by Bosch
Concluding evaluation with measures

We will keep you up-to-date on the progress and conclusion of this analysis

Findings from the analysis : Exact analysis results for HP pumps are only possible when the analysis was performed **by Bosch** (where possible with VW employees).
There are analysis procedures at. Bosch for problem HP pumps,
These procedures are available and are documented in the relevant AP.
The existing installed test systems at Bosch are acceptable for the analysis statements and damage findings.

Yours sincerely,

Subject: Preliminary analysis results 10 USA pumps

Dear Mr Non-responsive content removed
as promised a summary of our results.

It is not a PDF file but in Excel format to allow Mr Non-responsive content removed to add columns or to correct the mileage (in red).
I would like to hold off on sending the official "statement" out to a larger distribution list until the list is completed. The first 8D reports are expected to be completed and sent next week.
Once again many thanks for the great work.

Best regards

Hello

FYI see pump damage. I have never seen so many before.

Best regards,

Function Test9: V155_4L_55_____1_0605_21_USA

Test Step / Action | Outputs | Result

Test Step : Short description of test
Signal **With this test program you can check the following component/system: Motor for fuel tank lid unlock -V155-**
Required test equipment:
I If necessary, VAG 1594/13 Clamps Test Probes from VAG 1594 A Connector Test Kit
Beginning sub-function: sys_4l_____1_0305_21_fehlerspeicher
Test Step : Checking DTC memory
Signal DTC memory will be checked.
- Please wait B
Test Step : Init. Malfunction location general
Test Step : Init. Malfunction location rear (ILM I) -J393-
Test Step : Init. Malfunction location (ILM) II -J773-
Test Step : Init. Malfunction location J605-Left High/Low Beam
Test Step : Initialization malfunction type 1
Test Step : Initialization malfunction type 2
Test Step : Defining numbers of DTC entries
Diagnosis — OK
OKAY
0
Test Step : No DTC memory entry
Signal The DTC memory of the **Comfort system central control module -J393-** stores no malfunction.
- Press **<Done>** to continue with program.
End sub-function: sys_4l_____1_0305_21_fehlerspeicher — OK
Test Step : Designation of malfunction type
Test Step : No malfunction available
Signal **There is no malfunction. Further procedure:**
- Check function of **Motor for fuel tank lid unlock -V155-** via an output diagnostic test.
- Check voltage supply of **Comfort system central control module -J393-** and of **Motor for fuel tank lid unlock -V155-** .
- Check wiring for open/short circuit/contact corrosion according to wiring diagram.
- Check harness connector for:
I Correct seating or loose contact;
I Bent, pushed-in pins;
I Widened connector terminals;
I Water entry, contact corrosion;
I Pinched or scraped wiring.
YZ ***NOTE:*** *In the following output DTM is added to the test plan.*
- Start program from the test plan.
Signal END OF TEST

Test Step / Action	Outputs	Result
Test Step : Note for warranty claim		
Signal	YZ ***NOTE:*** *When ending Guided Fault Finding the diagnostic protocol is automatically transferred online.* *The diagnostic protocol must includ the correct work order number and Vehicle Identification Number (VIN). If no diagnostic protocol is available, warranty claims will be rejected.*	

The diagnostic connector may only be disconnected prematurely when instructed to do so.

Input - Enter correct work order number:

Test Step : Note for test requirements

Signal **General test requirements:**

I Battery voltage OK.
I Fuses OK. A *Wiring diagram*
I Ground (GND) connections tight and without corrosion or oxidation *(loosen and clean GND connections)*. A *Wiring diagram*
I Electrical wiring as well as test instrument leads should only be connected or disconnected with the ignition switched off.

Test Step : Notes on Start/Stop System

Signal **Safety precautions for vehicles with start/stop system.**

ST ***WARNING!***

Risk of personal injury due to automatic engine start on vehicles with start/stop system.
J *On vehicles with activated start/stop system (recognizable by a message in the instrument cluster) the engine may start automatically, as required.*
J *When working on the vehicle, make sure the start/stop system is deactivated (switch ignition OFF, if required switch ignition ON again).*

Test Step : .
Signal
ST ***WARNING!***
There is risk of personal injury because components of the engine and exhaust system may be hot.
If necessary, put on suitable working gloves or wait until components are cooled off.

Test Step : Safety precautions
Signal
- Observe the following when working on the reduction agent system:
ST***WARNING!***
I *The pressure lines of the reduction agent system may be under pressure.*
In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.
I *Skin irritation caused by reducing agent.*
Use hand and eye protection!

Signal
- When working with reducing agent, observe the following:
ST***WARNING!***
I *Avoid direct skin and eye contact!*
Use hand and eye protection!
I *If reducing agent came in contact with skin, wash skin with soap and water.*
I *If reducing agent gets in the eye, flush eye several minutes with water.*
I *Do not inhale or swallow reducing agent !*
I *In the event that reducing agent was swallowed, drink a lot of water and locate immediately a clinic for accidents or inform a Doctor.*

Test Step : Test sequence
Signal
I Check whether for this components all necessary fuses are correctly inserted and OK, see wiring diagram.
I If a measuring value channel for this component is present, check whether the displayed measuring values are plausible, see Guided Function <Read Measuring Values>.
I If available, perform the output Diagnostic Test Mode (DTM)/basic setting, see Vehicle Self-Diagnosis.
I Check the harness connectors on the component for bent, pushed-in pins or contact corrosion for water incursion or loose contacts.
I Check the voltage supply
(e.g. 5, 12 volts of terminal 15, 30, 78, from main engine relay, etc.) on connector of component, see wiring diagram.
I Check the Ground (GND) connection, if present, see wiring diagram.
I Check all signal wires on component for open circuit, short circuit to Ground (GND)/B+ or to each other.

Function Test **OK**

Function Test8: G295_4L_26_CCMA_1_0908_21

Test Step / Action	Outputs	Result
Test Step : Safety precautions		
Signal	**- Observe the following when working on the reduction agent system:** ST***WARNING!*** l *The pressure lines of the reduction agent system may be under pressure:* *In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.* l *Skin irritation caused by reducing agent:* *Use hand and eye protection!*	Instruction interrupted
Signal	**- Observe the following when working on the reduction agent system:** ST***WARNING!*** l *The pressure lines of the reduction agent system may be under pressure:* *In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.* l *Skin irritation caused by reducing agent:* *Use hand and eye protection!*	
Signal	**- When working with reducing agent, observe the following:** ST***WARNING!*** l *Avoid direct skin and eye contact!* *Use hand and eye protection!* l *If reducing agent came in contact with skin, wash skin with soap and water.* l *If reducing agent gets in the eye, flush eye several minutes with water.* l *Do not inhale or swallow reducing agent !* l *In the event that reducing agent was swallowed, drink a lot of water and locate immediately a clinic for accidents or inform a Doctor.*	
Test Step : .		
Test Step : P203B		
Test Step : Reducing Agent Temperature Sensor, value		
Signal	- Make sure the vehicle is standing on a level surface for further testing. - Now reconnect all harness connectors that were disconnected in the previous test steps. - Switch ignition on.	Instruction interrupted
Signal	- Make sure the vehicle is standing on a level surface for further testing. - Now reconnect all harness connectors that were disconnected in the previous test steps. - Switch ignition on.	
Diagnosis		OK OKAY 31.50
Diagnosis		OK
Signal	Measuring value on temperature sensor: 31.5 V Specified value: larger than 0 °C The temperature is OK.	
Test Step : 1 Measuring value Tank sensor		
Diagnosis		OK OKAY 1.88
Diagnosis		OK
Test Step : Checking harness connnectors		
Question	- Switch ignition off. - Check whether the electrical harness connector on the Tank sensor is connected and properly engaged. - Check also all other electrical connectors in the relevant wire path. **Were all harness connectors attached and properly engaged?**	Yes
Question	- Check harness connector on Tank sensor for:l Bent, pushed-in pins l Loose contact l Contact corrosion, water incursion. - Check also all other electrical connectors in the relevant wire path. **Are the connectors OK?**	Yes
Signal	An exact malfunction localization is not possible! Possible malfunction causes: - One or several wire connections damaged - Reducing agent tank sensor - Reducing agent metering system control module faulty - Engine control module faulty	
Signal	YZ ***NOTE:*** *After the function test has been completed, do not forget to reverse all steps that were necessary for the function test (for example: disconnected harness connectors, pulled out fuses etc.) and therefore re-establishing the vehicles original condition.*	
Question	K ***NOTE:*** *If reducing agent was drained, or the Active tank (not Passive tank) or the Reducing agent pump or the Reducing agent injector or a line for reducing agent or the ECM was replaced, then the* ***<Adapt Reducing Agent***	Yes

	Tank adapt. values> *function must be performed.* **Is/was one of the listed works performed or is/was a component replaced?**	
Signal	- After replacing the listed components, perform the <*Adapting reducing agent tank adaptation values*> function. A See test plan!	
Function Test		**OK**

Function Test8: J623_4L_23_CCMA_1_0209_21_SCRTank_Anpassen

Test Step / Action	Outputs	Result
Test Step : .		
Signal	K ***NOTE:*** *If reducing agent was drained, or the Active tank (not Passive tank) or the Reducing agent pump or the Reducing agent injector or a line for reducing agent or the ECM was replaced, the reducing agent tank must be filled and the relevant adaptation value must be adapted in the ECM.*	
Question	- If the active reducing agent tank is not full, add at least **1 1/2 gallons (6 liters) of reducing agent**. *This minimum quantity is required to avoid technical problems.* *In ElsaWeb, Maintenance etc. are country specific values issued, these values should be maintained.* **Does the active reducing agent tank contain the minimum quantity now?** **Yes** --> Adaptation will be started **No** –> Function will be cancelled	Yes
Beginning sub-function:	SYS____23_____1_1006_21_SG_Module

Test Step : Safety precautions		
Signal	**- Observe the following when working on the reduction agent system:** S*T**WARNING!*** I *The pressure lines of the reduction agent system may be*	

under pressure:
In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.
I *Skin irritation caused by reducing agent.*
Use hand and eye protection!

Signal **- When working with reducing agent, observe the following:**
ST***WARNING!***
I *Avoid direct skin and eye contact!*
Use hand and eye protection!
I *If reducing agent came in contact with skin, wash skin with soap and water.*
I *If reducing agent gets in the eye, flush eye several minutes with water.*
I *Do not inhale or swallow reducing agent !*
I *In the event that reducing agent was swallowed, drink a lot of water and locate immediately a clinic for accidents or inform a Doctor.*

Test Step : .
Test Step : P205A
Test Step : .
Test Step : Checking harness connnectors

Question - Switch ignition off. — Yes
- Check whether the electrical harness connector on the temperature sensor is connected and properly engaged.
- Check also all other electrical connectors in the relevant wire path.
Were all harness connectors attached and properly engaged?

Question - Check harness connector on temperature sensor for:I Bent, pushed-in pins — Yes
I Loose contact
I Contact corrosion, water incursion.
- Check also all other electrical connectors in the relevant wire path.
Are the connectors OK?

Test Step : Wiring checking

Signal - Switch ignition off.
Auxiliary test equipment:
I Latest engine wiring diagram
I VAG 1598/42 Test Box 105 Pin
I VAG 1598/39-1 Adapter Lead

Question - Check both wires between temperature sensor and Engine Control Module (ECM) -J623- for: — Yes
I Open circuit
I Short circuit to B+
(e.g. terminal 15, 30)
Are the wires OK?

Test Step : Checking temperature sensor measuring value

Signal
- Switch ignition off.
- Reconnect the harness connector to temperature sensor .
- Connect VAG 1598/42 Test Box 105-Pin with VAG1598/39 Adapter Cable to engine control module and wiring harness.
- Jumper pin T60/57 to battery Ground (GND) using an appropriate test lead.
- Now switch the ignition on again.

Diagnosis — OK
OKAY
3.30

Diagnosis — OK

Signal
- Now switch ignition off.
- Remove jumper cable from test box.

Signal
Measuring value on sensor: 3.3 V
The engine control module is faulty.
- Replace Engine Control Module (ECM).

Question K ***NOTE:*** *If reducing agent was drained, or the Active tank (not Passive tank) or the Reducing agent pump or the Reducing agent injector or a line for reducing agent or the ECM was replaced, then the* ***<Adapt Reducing Agent Tank adapt. values>*** *function must be performed.* — No
Is/was one of the listed works performed or is/was a component replaced?

Signal YZ ***NOTE:***
After the function test has been completed, do not forget to reverse all steps that were necessary for the function test (for example: disconnected harness connectors, pulled out fuses etc.) and therefore re-establishing the vehicles original condition.

Function Test — **X**

Function Test8: G685_4L_26_CCMA_1_0908_21

Test Step / Action	Outputs	Result
Test Step : Safety precautions		
Signal	**- Observe the following when working on the reduction agent system:** ST***WARNING!*** I *The pressure lines of the reduction agent system may be under pressure:* *In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.* I *Skin irritation caused by reducing agent.* *Use hand and eye protection!*	Instruction interrupted

Function Test — **?**

Function Test9: G685_4L_26_CCMA_1_0908_21

Test Step / Action	Outputs	Result
Test Step : Safety precautions		
Signal	**- Observe the following when working on the reduction agent system:** ST***WARNING!*** I *The pressure lines of the reduction agent system may be under pressure:*	Instruction interrupted

In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.
I Skin irritation caused by reducing agent. Use hand and eye protection!

Function Test4: GWK_Start_Hinweis_21

Test Step / Action	Outputs	Result
Test Step : Note for warranty claim		
Signal	YZ ***NOTE:*** *If the completed repairs are being claimed through warranty, it is absolutely necessary to send the diagnostic protocol online when exiting Guided Fault Finding. It is absolutely necessary that the diagnostic protocol contains the correct work order number and VIN. If no diagnostic protocol is present, the warranty claim will be rejected. The diagnostic connector can only be prematurely disconnected based on instructions.*	
Test Step : Note for test requirements		
Signal	**General test requirements:** I Battery voltage OK. I Fuses OK. A *Wiring diagram* I Ground (GND) connections tight and without corrosion or oxidation *(loosen and clean GND connections)*. A *Wiring diagram* I Electrical wiring as well as test instrument leads should only be connected or disconnected with the ignition switched off.

Function Test7: G685 4L 26 CCMA 1 0908 21

Test Step / Action Outputs Result
Test Step : Safety precautions
Signal **- Observe the following when working on the reduction agent system:**
S*T**WARNING!***
I The pressure lines of the reduction agent system may be under pressure:
In order to catch reducing agent when opening the pressure lines, cover the sealing part with rags and open carefully.
I Skin irritation caused by reducing agent:
Use hand and eye protection!
Signal **- When working with reducing agent, observe the following:**
S*T**WARNING!***
I Avoid direct skin and eye contact!
Use hand and eye protection!
I If reducing agent came in contact with skin, wash skin with soap and water.
I If reducing agent gets in the eye, flush eye several minutes with water.
I Do not inhale or swallow reducing agent !
I In the event that reducing agent was swallowed, drink a lot of water and locate immediately a clinic for accidents or inform a Doctor.
Test Step : .
Test Step : P205A
Test Step : .
Signal The DTC memory entry is sporadic.
An exact malfunction localization is not possible!
Possible malfunction causes are:
- Sensor supply or Ground (GND) wire damaged or contact problem
- Temperature sensor for reducing agent faulty
- Engine control module faulty
Question K ***NOTE:*** *If reducing agent was drained, or the Active tank (not Passive tank) or the Reducing agent pump or the Reducing agent injector or a line for reducing agent or the ECM was replaced, then the* ***<Adapt Reducing Agent Tank adapt. values>*** *function must be performed.* No
Is/was one of the listed works performed or is/was a component replaced?
Function Test **X**

Function Test8: A 8K 27 1 0906 21 batterietest

Test Step / Action Outputs Result
Test Step : Entry
Signal **In this test program the following steps will be performed:**
J Displaying measuring values
J Evaluating measuring values
J Possible results: - Battery OK - Replacing battery - Charging battery
No auxiliary equipment is required.
Signal - If a battery charger is connected, disconnect it now.
Question **What battery test should be performed?** - 1 -
1. Battery test for used batteries
2. Battery test for new batteries as part of the pre-delivery inspections
Test Step : Question
Question **Was the Battery Monitoring Control Module -J367- flashed in the last 5 days?** No
or
was a new battery adapted in the last 5 days?
Test Step : Visual inspection
Signal First, a visual inspection of the battery should be carried out. Check the following:
- Battery poles (should not be greased)
- B+ and Ground (GND) cable should be firmly fastened on battery poles (tightening torque of battery terminals: see Repair Manual; Repair Group 27)
- Battery housing for damage
- Acid level
Question **Is the battery and the wiring OK?** Yes
Signal - Switch on ignition.
Signal Additional data is read out.
Test Step : Communication test

Test Step : Evaluate DTC memory		
Beginning sub-function:	Q___4L_28_CCMA_1_0908_21	
Test Step : NOTES:		
Signal	PQ*CAUTION!* *- Do not check the glow plugs for function using a 12V voltage source (e.g. starter battery). This will damage the glow plugs.* *- Wait 60 seconds after every output DTM of the Automatic Glow Time Control Module.* *- The ignition remains on.* *If the waiting time is not observed, and the ignition is switched off too soon and then switched back on, the glow plugs may be damaged, as the engine control module attempts, depending on the coolant temperature, to activate the glow plugs again.*	
Test Step : Checking Ground (GND) connection		
Test Step : Glow plugs test procedure		
Question	**Components to be checked:** **Glow Plug 4 -Q13-** - Check whether the glow plugs are properly installed. - Check connectors on glow plugs for: loose contact, corroded pin, wiring or wire strands torn out of connector. - Check that the connectors are correctly attached and their locks are OK. **Is/are the harness connector(s) OK?**	Yes
Question	**Components to be checked:** **Glow Plug 4 -Q13-** - If DTC memory entries are stored relating to <Glow plugs incorrect>, check that the correct glow plugs are installed using the spare parts catalog. **Are the correct glow plugs installed?**	Yes
Signal	**Components to be checked:** **Glow Plug 4 -Q13-** - For further test procedure see Function description button.	
End sub-function:	Q___4L_28_CCMA_1_0908_21	OK
Test Step : Glow plug test		
Question	- Check whether the Glow plug control module is correctly inserted in the relay carrier. **Was the Glow plug control module correctly inserted?** **No** –> Test procedure will be ended because this was the cause of the malfunction.	Yes
Question	- Pull Glow plug control module from the relay carrier. - Check the pins on the Glow plug control module and in the relay carrier for:I Bent, pushed-in pins I Loose contact I Contact corrosion, water incursion. **Are the pins OK?**	Yes
Test Step : Evaluate DTC memory		
Test Step : .		
Question	**Does one of the malfunction causes mentioned so far apply, or did you find the malfunction?** **Yes** --> Components must first be repaired, test procedure is ended. **No** –> Output DTM will be performed While performing the DTM, a check is made whether additional DTC memory entries have occurred.	No
Test Step : Output Diagnostic Test Mode (DTM)		
Signal	**Check the following requirements:** I Glow plug control module is now properly inserted in the relay carrier I All glow plugs installed I All connector attached, e.g. on all glow plugs, engine control module, etc. YZ*NOTE:* *During the following output diagnostic test a check is made for new DTC memory entries relating to the Glow Time Control Module.*	
Test Step : Erasing DTC memory		
Question	- Switch ignition on. **Should the DTC memory of the engine control module be erased?** **No** –> test procedure will be canceled	Yes
Beginning sub-function:	SYS____23_____1_1006_21_SG_Module	
Signal	**Please wait ...** Data is being transmitted	
Test Step : .

OFF
B **Please wait...**
The actuator is activated for approximately 20 seconds.
Signal — **36**
Diagnosis — OK
Signal — PQ***CAUTION !***
- Wait 60 seconds after every output DTM of the Automatic Glow Time Control Module.
- The ignition remains on.
- If the waiting time is not observed, and the ignition is switched off too soon and then switched back on, the glow plugs may be damaged, as the engine control module attempts, depending on the coolant temperature, to activate the glow plugs again.

Diagnosis OK
End sub-function: SYS____23_____1_1006_21_SG_Module OK
Test Step : Evaluate DTC memory
Test Step : .
Signal No DTC memory entry was stored during the diagnostic test mode of the Glow plug control module.
The Glow plug control module and the connected glow plugs are OK.
Signal YZ ***NOTE:***
After the function test has been completed, do not forget to reverse all steps that were necessary for the function test (for example: disconnected harness connectors, pulled out fuses etc.) and therefore re-establishing the vehicles original condition.

Hello Non-responsive content removed
and the chatter marks of the same pumps like in the recent Bosch diagnosis!
The camshaft turns into the picture.

With best wishes

Hello Mr. [redacted]

Here is the requested presentation. The difference to the reduced inlet pressure was not as distinct, but the statistics probably play a role here.

Best regards / mit freundlichen Grüßen

Hello Non-responsive content removed
Do you have images of the AWP2?

We ran the pump with reduced inlet pressure and wanted to see if it had an impact on the deposits:

Here is the pump that ran with 5bar inlet pressure:

CP42S-4,85-REC-MT20

ENT 301 181 KH

BPT 4325

Subject: Request for results overheads IAV

Hello Mr.
Before you draw up the minutes, could you please send the shown overheads from the analysis of IAV- to me and Non-responsive content removed ?

Thanks and regards, Non-responsive content removed

With best wishes

Subject: Analysis results "[redacted] pumps"

Hi all,

Bosch presented additional analysis results today of the 5 pumps that were removed from the blocked vehicles in [redacted] Deposits were discovered on all pumps.
These deposits consist of iron hydroxide [Fe (OH)2]. It is created from a reaction between iron and water (Bosch statement).

The remaining fuel from the RP2 from the Q verification run (Simmerl pump) contained gasoline according to the gas chromatography The concentration cannot be determined; the fuel sample will have to provide this.

Furthermore, the 5 pumps that were removed in [redacted] in the delivery state (pump did not rotate) were received by Bosch today. Analysis is underway.

Mr[redacted], how are the engines delivered in [redacted]? Are the containers leak-proof? Please clarify and provide information.

With best wishes

Hello Ms. Non-responsive content removed

Please call me back regarding the Bosch statement.
The subject will be discussed tomorrow at the damage meeting.
We have biggish problems in the field and already have 4 failures in teh Q verification in the U.S. (3 x Q7; 1 x Touareg).
I will be in Stuttgart for a technical meeting on this on Tuesday, one of you is welcome to attend.

Failure Q7 USA no. 3 is on its way to Germany; fuel samples as well; see attachment.
Disposition of Touareg failure unknown?

With best wishes

Subject: Information on pump failures in the U.S.

Hello Mr.

Please find enclosed a brief summary of the **diagnoses and activities** involved with the pump failures in the U.S.

A) Diagnoses

At the moment, we assume that both cases involve the primary damage "sluggish roller", resulting from a manufacturing fault.

However, we cannot rule out a "sluggish roller" due to water in the fuel.
(Water in fuel significantly increases the friction coefficient between roller and roller support).
Information about the fuel (fuel analysis) and status of water separators would be helpful here.

1) Details; pump 40,000km
<<EHC2_0209[redacted]Audi CP4 FG 21-05-2008 BIN5 Triebwerkschaden.pdf>>
2) Details; pump with 60,000km; **Diagnosis underway (pictures attached)**
<<Bilder_W19_BIN5_DNA2449.pdf>>

Pumps 3 & 4 will be diagnosed ASAP after receipt.

We have involved our R.B. colleagues in the U.S. and provided them with the necessary assembly information, which means once Audi approves, the pumps can be examined for onset drivetrain damage on site.

If no drivetrain damage is diagnosed, the pumps can be re-installed in the engines/vehicles and complete their verification ERs.

At the last technical meeting, Mr.[redacted]indicated that he might have another pump with the same DM as the first two failed pumps.

We would like to diagnose this (investigate for manufacturing variances)

<<W19 BIN Pump failures>>

B) Activities

1) Form an Audi-specific working group with a focus on W19 BIN5; cooperation with drivetrain task force

2) Start an R.B. pump CT analysis for W19 BIN5; the other two pumps are urgently required for failure hypotheses

Best regards / mit freundlichen Grüßen

Thema: WG: Performance drop AU716 98017 with shavings in the HPP

Dear Mr. [redacted]

attached please find the information about the "clogged" fuel filter. Apparently massive localized contamination is causal !

Regarding the DPF-Regeneration-issue, all vehicles have been inspected for leaks at the air supply None was found.

With best regards

[redacted]

Betreff: Performance drop AU716 98017 with shavings in the HPP

Hi All

We've taken a few photos of the fuel filter, the diesel samples and the housing of the filter.
We are a bit speechless due to the discoloration of the sample directly from the filter (dark vial sample in the middle)
Samples from the tank and a filtered sample look OK, in contrast.
The shavings, or whatever it is, are not metallic (magnetic test) and therefore seem to indicate soiling
Something is disintegrating.
You can also clearly see the soiling on the floor of the filter housing interior.
The filter has the same mileage as the HPP

We will send you the complete filter housing, with filter, diesel samples (if they should go to IN[redacted]nd HPP, lines, etc

Crucial question: where should we have the diesel fuel analyzed? USA or IN? [redacted]

With best wishes [redacted]

Subject: 3rd HPP failure USA BIn5

Hello Mr.

I'm afraid there's bad news from the U.S.:

After 2 failures in the field (1x Q7, 1x Touareg) the 3rd HPP failure has now occurred in the EC endurance run:

Q7 AU716 90229 (Q7 BIN5 MJ10)

The vehicle comes from the first batch Bin5 MY09 and is already supposed to have an HPP with anti-wear package.
the vehicle was driven in mixed driving conditions, then converted to MY10 and used in the USA for cold tests
and hot tests.

Mileage of vehicle/HPP: 144,075km (last change of fuel filter at 116,842 km, filter water separation at 131,631km)

Further action:
- HPP will be sent to Non-responsive content remove for analysis
- Fuel filter will be sealed and sent to for analysis
- Fuel sample from the tank

Pictures of the MU and type label of the HPP

Based on the HPP data, can you make an initial statement as to the date of manufacture (did the HPP receive all AWP measures already)?

Non-responsive content removed do you have the data for the other two failures?

With best wishes

Dear Sir/Madam,
Please find enclosed the minutes from the technical meeting in [redacted] on 06/09/2008 (without attachments due to size restrictions of the mail systems).

Ms. [redacted]
I will send you the full minutes on Monday and ask that you please distribute it to the AUDI participants.

BOSCH participants can download the full minutes until 06/17/08 at the following link.
