Compliance with Bosch TCD Requirements for high-pressure fuel pump

November 10, 2010

INFORMATION Redacted PURSUANT TO THE FREEDOM OF INFORMATION ACT (FOIA), 5 U.S.C. 552(B)(6)

ENTIRE PAGE CONFIDENTIAL

Compliance with Bosch CP4 TCD

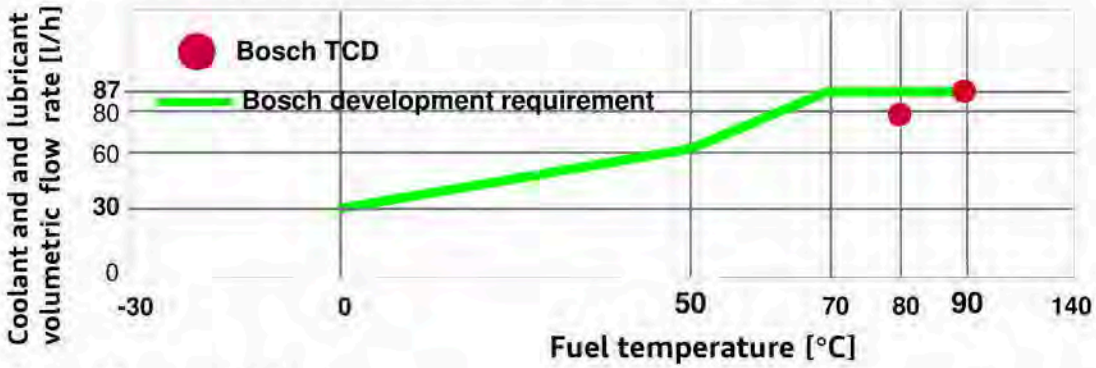

Cooling and lubricating volumes for high-pressure fuel pump

"2bar" tank system (all V-Diesel vehicle starts from 2008)

- Tank EFP (2bar) and inline EFP (6bar) connected in series
  - No on-demand delivery; EFPs always on full delivery
- **Bosch TCD requirement** for return volume (cooling and lubricating volume)
  - >= 80l/h at 80°C fuel temp. in HPP supply; >= 87l/h at 90°C
  - → **The TCD is complied with in operation under all conditions; this also applies to the damaged vehicles (checked on 10 vehicles with drivetrain damage)**

"6bar" tank system (all V-Diesel vehicle starts from 2010, e.g., Touareg NF)

- Only tank EFP (6bar), on-demand delivery tank EFP
- **Bosch development requirement** for return volume (cooling and lubricating volume) for use of a controlled EFP

- → **The TCD is complied with under all conditions**

ENTIRE PAGE CONFIDENTIAL

Compliance with Bosch CP4 TCD

Fuel temperature in high-pressure fuel pump supply

Bosch TCD requirement:

- Maximum fuel temperature in high-pressure fuel pump supply
  - In operation to 70°C permanent
    to 80°C 100h of service life
    to 90°C 100h of service life (max. 1h continuous)
- Ambient temperature of high-pressure fuel pump with engine at operating warmth
  - To 120°C operation allowed
  - To 140°C residual heat from standing engine
  - >140°C not allowed

The TCD is complied with in operation under all boundary conditions

In the residual heat phase, temperatures of up to 120°C are reached in the fuel inlet.

ENTIRE PAGE CONFIDENTIAL

Measures to increase robustness of high-pressure fuel pump

Optimized cooling and lubricating volume during engine start

Problem:

Bosch CP4 has proven to be particularly sensitive during engine start due to the roller-roller support concept:

→ Mixed friction between roller and roller support with poor quality fuel results in a delay in starting the roller (braking flats)

→ This can result in failure of the HPP as a consequence.

To avoid the problems of the CP4 principle, additional measures beyond the TCD specifications will be checked and implemented as necessary.

Measure:

- Optimization of cooling and lubrication of high-pressure fuel pump when starting the engine.
  - Control of the EFP with terminal 15
  - EFP control in afterrun with hot fuel temperatures for cooling the CP4
  - EFP control through door contact (additionally for 6 bar tank system)

Dates:

- SW specification 2 bar tank system by the end of WK 45

  Objective: To attain field action in [redacted] (beginning of 2011)
- SW specification 6 bar tank system by the end of WK 47

ENTIRE PAGE CONFIDENTIAL

BMW 330d	

Pressure before high-pressure fuel pump

Volume flow before high-pressure fuel pump

ENTIRE PAGE CONFIDENTIAL

Measures to increase robustness of high-pressure fuel pump

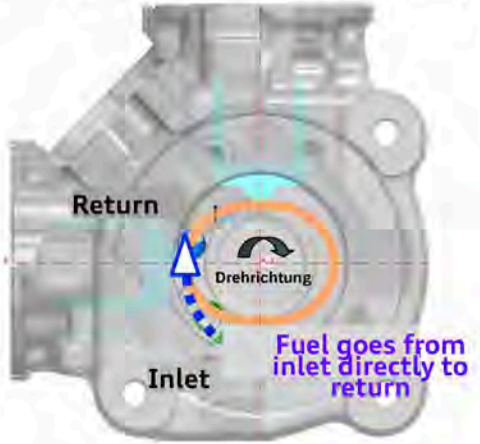

Anti-wear package 2 (RP2)

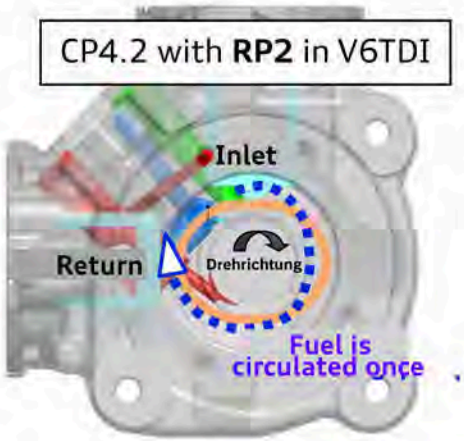

Task

- Reduction of local temperature in right roller support
  (Bosch planning error with right rotation of high-pressure fuel pump)

Measures

- Optimize arrangement of
  inlet and return position
  (exchange inlet / outlet connections)

Result

- Reduction of temp. in lubrication gap by ~25°C (from 136°C to 111°C @ 80l/h @ 70°C supply)
- Now same temp. level as CP4.1 (single piston pump) and competition
- Avoid mixed friction between roller and roller support (especially during hot start)
- Avoids fuel decomposition → Much less deposit formation on the roller support, thus avoiding braking flatsg due to stuck roller

Dates

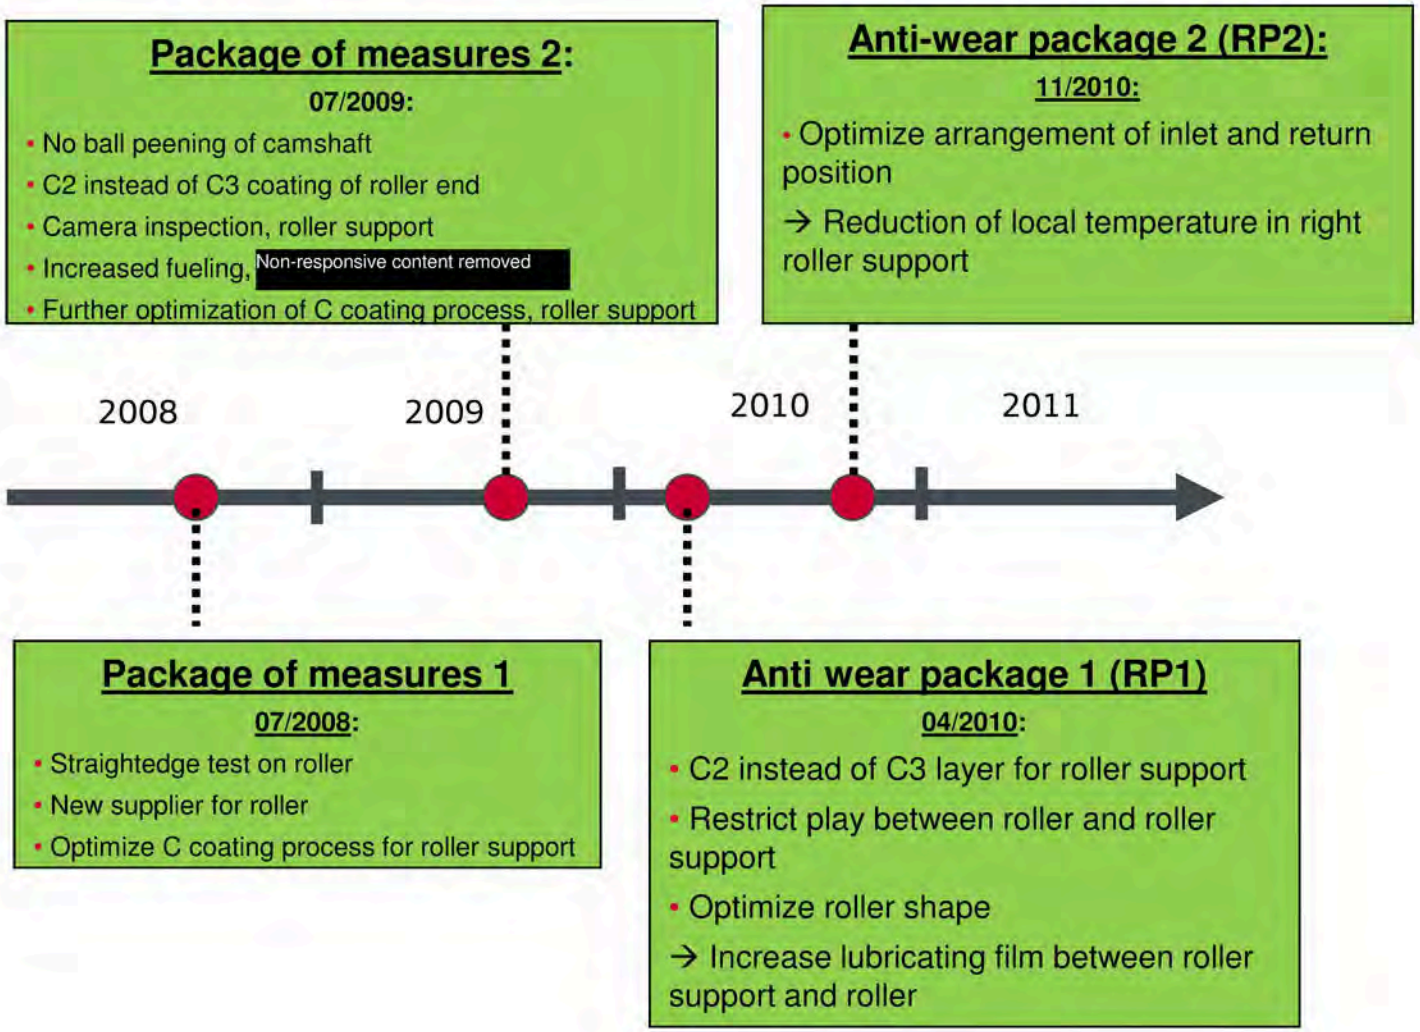

- Used for all V6 TDI from Wk45/10

Diesel high-pressure fuel pump CP-4.2 | Anti-wear package

Non-responsive content removed

Q problems with the diesel high-pressure fuel pump CP4.2 – Bosch

- Complaints: V6/V8/V12 TDI
  - Field failures: 1,199 since introduction in 2008 (in [redacted] due to drivetrain damage in the CP-4.2)
- Cause for the failure of the high-pressure fuel pump:
  - Stiffness of the roller due to fuel influences
- Resolution of the anti-wear package (RP) 1.1 on 02/12/10 in the top Q meeting
  - Efficiency of the RP1.1 currently in the test bench tests at Bosch
  - Supply to current series as of WK 12/2010
  - No approvals of the CP4.2 for new projects in countries with poor fuel [redacted]
    - Blocked: B8 without all-road, Q5
    - Endangered: Q7 V6 TDI Gen. 2 with SOP 22/10
- Objective of Audi:
  - Bosch to ensure the robustness of the CP4.2 in acc. with the predecessor pump CP1H
  - Results of the endurance runs RP1.1 up to WK 14/2010 -> Decision concerning approval of RP1.1
  - 100% remedy of the problem by introducing the RP 1.1 & 2 (Efficiency of both measures still unknown)
- Problem:
  - Bosch requires 8 weeks to define the content of the RP2
- Request:
  - Definition of RP2 by WK 14/2010
  - Assumption of warranty for all markets by Bosch

EA11003EN-01609[2]

Audi
Vorsprung durch Technik

Backup

Drivetrain damage to the high pressure diesel fuel pump CP4.2

- Content of anti-wear package 1.1
  - Reduce play between the roller support and the roller
  - Change the roller support to C2 layer

- Extra costs for RP 1.1: [redacted] € reported
  (offer to be defined)

- Schedule:
  - Resolution top Q meeting WK 06/2010
  - Order placed WK 07/2010
  - Supply WK 12/2010

ENTIRE PAGE CONFIDENTIAL

Status of CP4 anti-wear package

Measures for increasing robustness from the Task Force:

- Roller support changeover of coating C2 instead of C3
  - reduced roughness
  - Avoid fusing

2. Reduce tolerance play roller / roller support
   - even lubricating film thickness

3. Optimize roller texture

4. Optimize roller flexibility
   - Avoid embedding in the roller support

Hello Non-responsive content removed

Please inform your sales department too regarding the agreed scope of RP2 so that we do not receive any additional demands.

Non-responsive content removed is only offering the changed inlets and returns.

However, the agreed content of RP2

is:

Optimized inlets and returns
Robust flange
C layer on the HP pistons
Optimized OV

With best wishes

Subject: Sample offer Audi CP4 with anti-wear package 2

Hello,

For the structure of test pumps **CP4 with anti-wear package 2** We can make you the following offer:

Offer of sample pumps with a deviation from the standard pumps.

Category: like standard pumps, however with a change to just one component for the Audi development.

1-9 units : [redacted] €/unit.

10-39 units [redacted] €/unit.

The pump you have queried below complies with the following content:

- Basic, like the standard, however housing has new inlets and outlets according to differing features for housing processing for RP2
As already presented in the Audi CP4 - Task Force.

- However, the prerequisite for the procedure as described is of course that the respective basic type is already just about to be put into production or is already there.
- The revision and assembly of the above-mentioned design will continue to be carried out in the sample construction and requires a respective processing and handling expenditure that corresponds to that of prototype construction.

Best regards / mit freundlichen Grüßen

Hello [redacted]

VW has decided not to introduce RP1 worldwide (yet) as we have with the V-engines. However, there is a change application from [redacted] o introduce EU4/BIN RP1 as of WK 22/10. However, Bosch has not confirmed this deadline.

RP2 does not have to be introduced for CP4.1 because RP2, as with CP4.2, signifies a CP4.1 temperature level.

Hello [redacted]

what is the status?

Development of CP4 - anti-wear packages and acoustic measures

Overview, technical content, implementation, deadlines, costs

Non-responsive content removed, status WK 32

ENTIRE PAGE CONFIDENTIAL

Anti-wear packages and acoustic measures for the CP4.2 RP0

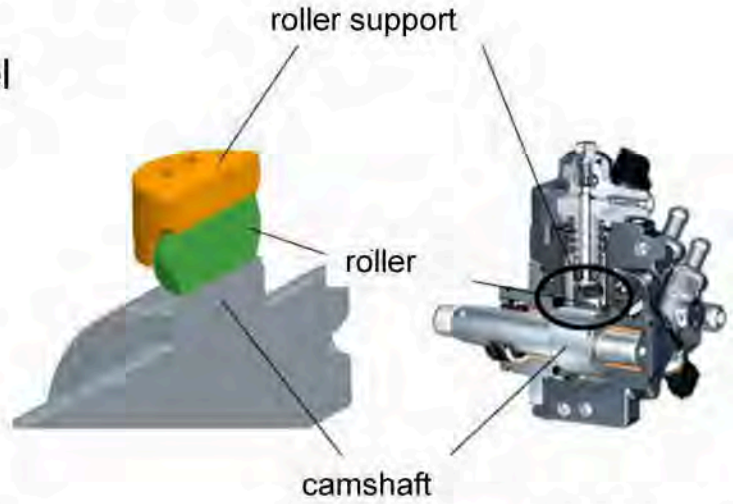

- Technical content
  - C coating of high-pressure pistons
- Effect
  - Wear reduction on the high-pressure pistons in the case of poorly lubricating fuels
  - Corrosion protection
- Implementation
  - CP4.2 and CP4.1; only in selected markets
- Deadlines
  - As AWP (Anti-Wear Package) in production since implementation of V6TDI Gen. 1 Clean diesel in WK 45/09 (BIN5 and EUVI)
  - As RP0, implementation in V6TDI Gen.2 NAR in WK 22/12
  - CP4.1: Implementation NAR and RoW as of HFRR 450

ENTIRE PAGE CONFIDENTIAL

Anti-wear packages and acoustic measures for the CP4.2 RP1

- Technical content
  - Narrowing the tolerance between the roller and the roller support
  - Changing roller support layer from C3 to C2
    - Optimizing the surface and avoiding metal spatter
  - Reducing roughness of the roller surface
  - Optimizing the roller end
- Effect
  - Increase in quality (also in the case of EN590 fuels)
  - Increasing the lubricating film thickness between the roller and the support by x 2
  - Increasing the robustness in the case of low-viscosity fuel
- Implementation
  - CP4.2: comprehensively since WK 15/10
  - CP4.1: planned comprehensively
- Deadlines
  - Implementation with CP4.2 already taken place
  - Changeover for CP4.1 in implementation as of 32/2010

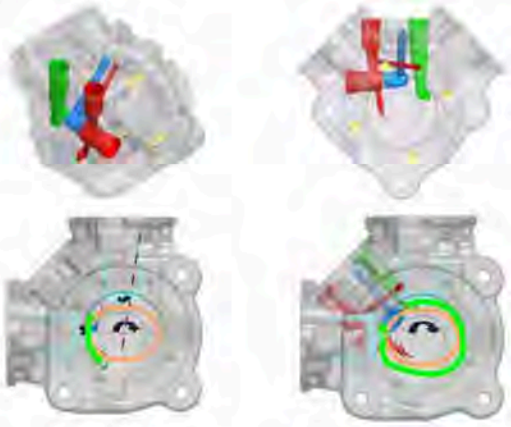

Audi
Vorsprung durch Technik

ENTIRE PAGE CONFIDENTIAL

Anti-wear packages and acoustic measures for the CP4.2 RP2

- Technical content
  - Repositioning the inlet and return runs to optimize the flow through the drivetrain compartment
  - No change required to the cast housing of the CP4.2!
  - "More robust flange" with thrust washer
- Effect
  - Remedy a design fault in the case of clockwise rotating HPP
  - Significant temperature reduction on the right tappet by > 15°C
  - Increase in robustness in the case of fuels containing a high proportion of additives by reducing the thermally-related build up in the roller support
- Implementation
  - Only CP4.2
- Deadlines
  - Audi as of WK 45/10
  - VW R4 Biturbo planned

Small circuit

Flow through the housing

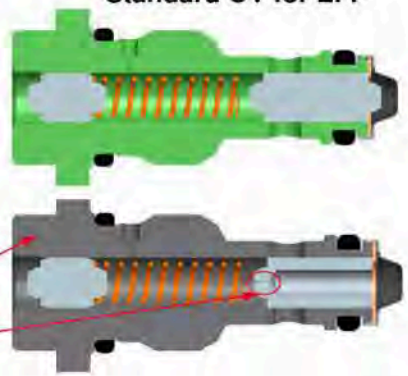

ENTIRE PAGE CONFIDENTIAL

Anti-wear packages and acoustic measures for the CP4.2
Acoustically-optimized overflow valve (OV)

- Technical content
  - Axial boring of the pistons for a forced ventilation after a cold start
  - Progressive spring
- Effect
  - Remedy the cold-start noise in 6-bar LP systems
- Implementation
  - CP4.2:
    - 6-bar LP system: comprehensive with the introduction of the RP2
    - 2-bar LP system: Implementation undecided
  - CP4.1: comprehensive as of start-up of Q5 (with 6-bar LP systems)
- Deadlines
  - CP4.2 as of WK 45/10
  - CP4.1 since WK 22/10

OV for **6-bar LP circuit (EFP):**
- Valve support identical with EFP version (Identification required!)

- New valve piston with axial hole

Audi
Vorsprung durch Technik

EA11003EN-01619[5]

Anti-wear packages and acoustic measures for the CP4.2
Costs

- **In principle, development costs can only be negotiated as a whole and simultaneously with the direct costs!**
- No acceptance of development costs by Audi and VW for error-remedy measures on he CP4.x.
- Direct costs
  - RP0:
    - AWP for Clean diesel V6TDI Gen.1 (approx. 30,000 unit/ a):

      + [redacted] € extra price
    - RP0 for NAR implementation V6TI Gen.2 (approx. 10,000 unit/a):

      + [redacted] € extra price, RP0 for CP4.1: + [redacted] € extra price

      Price reduction by optimizing the coating / reducing the layer thickness
  - RP1:
    - Quality and process optimization by BOSCH
    - VW is aiming for a cost-neutral implementation

    -> Implementation at AUDI is cost-neutral

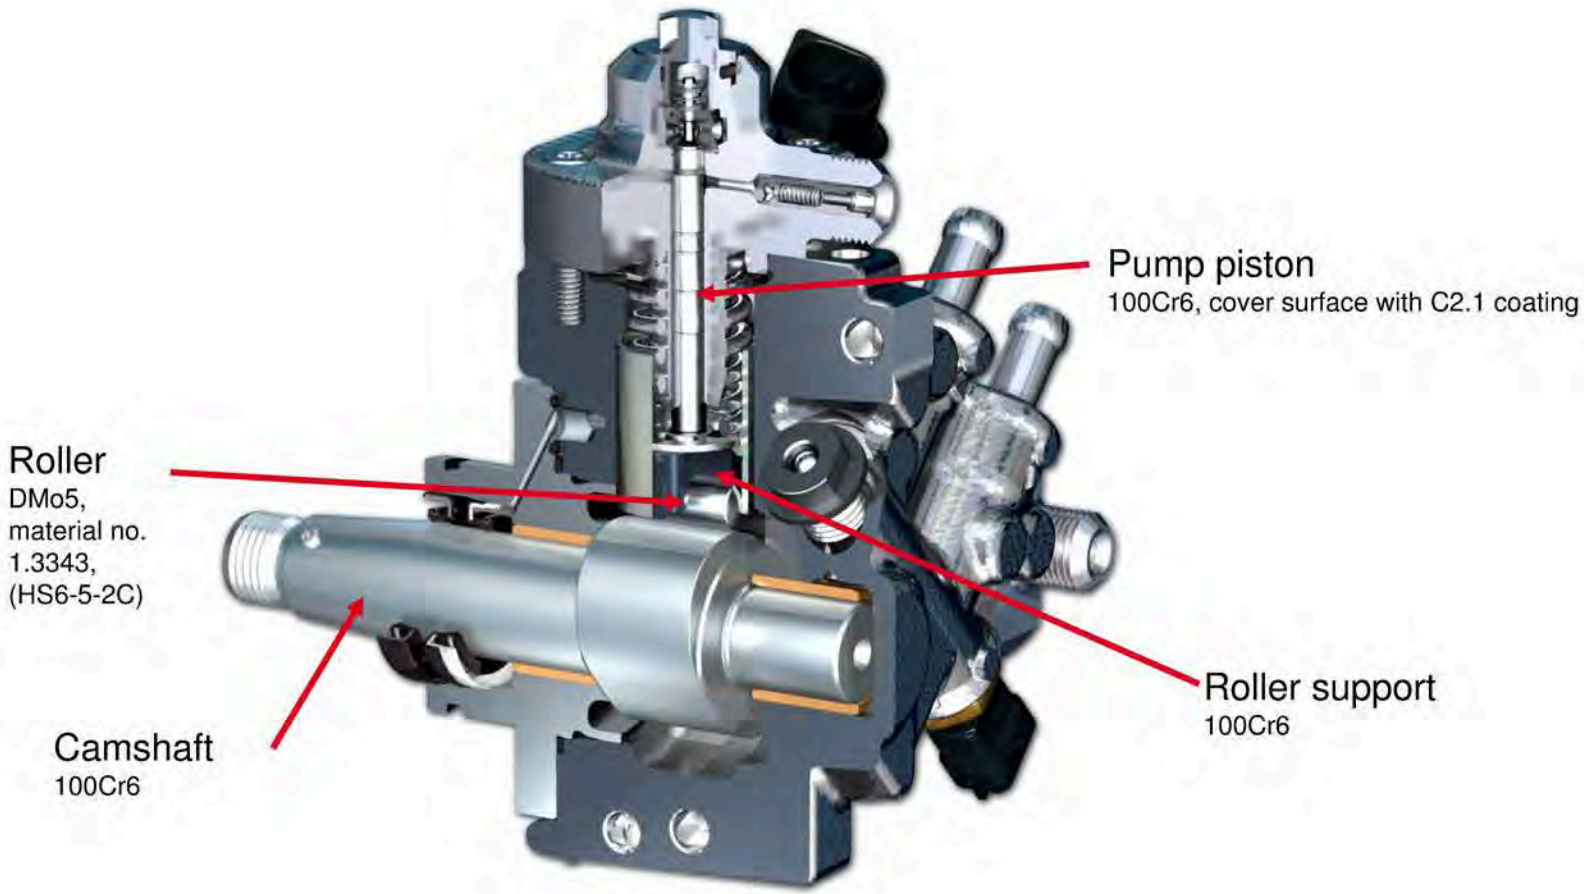

Anti-wear packages and acoustic measures for the CP4.2 Costs

- RP2:
  - Concept problem in the case of clockwise rotating pump assembly (Direction of rotation has not been established by the TCD)
  - Special solution for Audi V6TDI (approx. 200,000 unit/a) and VW R4 Biturbo (approx. 230,000 unit/a)
  - Audi proposal:
    - Compensation for housing change using a robust flange (approx. [redacted]€ cost reduction at Bosch)
- Acoustically-optimized OV
  - Concept problem in connection with 6-bar LP systems
  - Acoustic problems with various vehicles with 4-cylinder TDI and with V6 TDI
  - VW planning this to be cost-neutral

  -> Implementation at AUDI will be cost-neutral

ENTIRE PAGE CONFIDENTIAL

Bosch robustness measures for the CP4.1 for 2.0l TDI BIN5

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch robustness measures for the CP4.1 for 2.0l TDI BIN5

Development objectives C coating:

- C2 coating: smooth, homogeneous surface, soft particles (Rp value as small as possible for a good start-up behavior, Rv value low for good hydrodynamic properties)
- C3 coating: especially hard and wear-proof
- C3.1 coating: Combination of advantages of C2 and C3 layers

RP1 implementation dates:

- In production at Audi since 03/2010 with CP4.2
- Planned introduction as early as possible with C2.1 layer in AWP markets with VW with CP4.1 in WK 45/10
- Planned comprehensive introduction as early as possible with C3.1 layer with CP4.1 in 03/2011

Non-responsive content removed

Overview of measures US07-HPP 2.01 CR

Komponente Qualitätssicherung

Non-responsive content removed

Implemented measures at Bosch

WK

45/07 Introduction of AWP (anti-wear package) C coating on high-pressure pistons (C2.1)

Increase in robustness against poor fuel [part number 03L130755A]

50/07 Improved visual inspection of roller support

05/08 Tappet position query in assembly

14/08 Straightedge test, visual inspection of roller support

↳ Sound check to detect spatter/warping on the roller which has occurred after grinding (during the C coating of the roller end)

18/08 Optimization of the C coating (C3 coating by "sputtering" on the roller support)

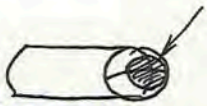

↳ Avoid metal spatter during C coating by means of improved covering of the metal holders from which metal has melted off.

44/08 New wash/transport frames for roller to avoid particles

19/09 Modified RS acceptance tool for when pressing in the tappet body

Camera system for detecting metal spatter on roller support

22/09 Introduction of C2.1 coating instead of C3 coating on roller front surface

→ Reduces the wear between the roller end and the tappet body, as C3 is too hard. C2.1 has a greater graphite content and lubricates better.

Future measures

34/10

Plasma coating does not have this rough surface as with C3 sputtering

C2.1 on roller support with improved surface roughness

04/11 Introduction of anti-wear package 1 (RP1) [implemented part number 03L130755AB]

Increased lifting capacity of hydrodynamic sliding bearing

Drivetrain damage, high-pressure diesel fuel pump CP4.2

Status of measures 09/10/2010

ENTIRE PAGE CONFIDENTIAL

Drivetrain damage high-pressure diesel fuel pump CP4.2

Summary of measures:

- Package of measures 1:
  - Process improvements (C layer optimizations; straightedge test, …)
  - Introduction appro x. MY09
  - Improvement appro x. 50% (worldwide and [redacted]
- Package of measures 2:
  - Process improvements (C coating optimization; camera check, C2 coating instead of C3 on roller end,...)
  - Introduction approx. MY10
  - Improvement approx. 30% (worldwide) and approx 40% [redacted]
- Anti-wear package 1 (RP1.1):
  - C2 instead of C3 coating, roller support (depth of roughness, spatter); geometry of roller; reduced play roller / RS; omission of ball peening of camshaft.
  - Effect: thicker film of lubricant aimed at fuels with lower viscosity and lubrication
  - Introduction middle April 2010 (veh. plants)
  - Efficiency in the field: works; extent not yet established
- Anti-wear package 2 (RP2):
  - Effect: Balancing of concept-related differences between CP4.2 (twin piston pumps) and CP4.1 (single piston pump) → Temperature + flushing of pump interior
  - Introduction WK 45/2010 planned.

Status problems/measures CP 4
Drivetrain damage CP4.2

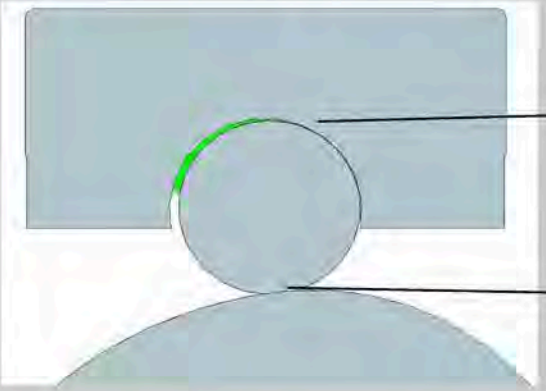

ENTIRE PAGE CONFIDENTIAL

Status problems/measures CP 4 Drivetrain damage CP4.2: Summary

Problem	Drive train damage of CP4.2 in countries with poor quality fuel and high temperatures
Cause	Friction between roller and roller support too high and/or - fuel with low viscosity and/or - deficient lubrication through deposits and/or - poor filling of pump at start and/or - fuel temperature too high
Status	Failures in [redacted] since date of manufacture pump 6/2009 are declining sharply Failures in [Non-responsive content removed] are not in decline
Corrective measures	Implementation of measure packages 1/2 RB in production to improve friction values 7/2008 ; 6/2009 Introduction of anti-wear packages 1/2 to increase the thickness of the lubrication film in the lubrication gap and to reduce the temperature at the roller support 4/2010, 11/2010 Test the robustness of the low-pressure circuit in response to the start behavior and running empty of the pump. Measure package software for earlier start inline EFP in preparation. Inspection of the pumps after installation in the vehicle plant as pre-damage has been found in [Non-responsive content removed] (1 in 5 pumps per line was inspected) latest On-site team in [redacted] for inspecting the pump assembly in service latest

ENTIRE PAGE CONFIDENTIAL

Status problems/measures CP 4
Drive train damage CP4.2: Function

Rolling function of the roller on the cam satisfied when the friction value roller/cam is higher than the friction value roller/roller support.

Condition: μ_roller cam > μ_roller/roller support

Typical values: μ_roller/cam: 0.11

μ_roller/roller support: 0.035

From which the result is:

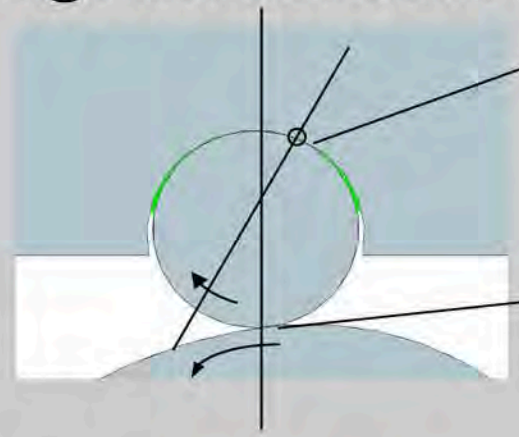

Surface of the roller support very smooth under any condition

Camshaft rough under any condition

ENTIRE PAGE CONFIDENTIAL

Status problems/measures CP 4
Drivetrain damage CP4.2: **Failure hypothesis**

Formation of braking flats at start as the hydrodynamic lubricating wedge cannot build up when the roller is released to roll

Deposits and/or vapor mix prevent the build-up of a hydrodynamic pressure, as a result no hydrodynamics and a stationary roller

Slip/wear

Boundary conditions for the non-generation of the hydrodyn. pressure:

- **Deposits** replace the fuel in the gap
- **Lack of lubricant**, too little fuel in the gap

--> without any fuel in the bearing gap, no build up of the hydrodynamics and thus the rollers do not start

ENTIRE PAGE CONFIDENTIAL

Status problems/measures CP 4
Drivetrain damage CP4.2: **Development of damage**

Deposits on the roller support prevent the roller from swaying in the roller support

-> no build up of hydrodynamics-> stationary / stiff roller -> roller slides to cam-> preliminary damage (braking flat on roller).

Coatings are formed as a result of deposits from bio-fuels/additives at temperatures > 140°C.

Fuel with low viscosity with low boiling temperature leads to evaporation of the fuel in the gap at high temperatures in the roller support (~ 200°C)

-> no build up of hydrodynamics-> stationary / stiff roller -> roller slides to cam-> preliminary damage (braking flat on roller).

A pump which has not been filled correctly generates the same effect

High-additive fuel with low viscosity and boiling temperature (e.g. kerosene) combine both variants.

Anti-wear package 2

Issue

Reduction of the local temperature in the right-hand roller support to the level of CP4.1 and CP4.2 WK

Measures

- Opt. arrangement feed and return position (swap feed/return connections)
- Introduction of robust flange (increase overflow cross-sections)

Result

Reduction of the temperature in the lubrication gap by 24°C (from 136°C to 111°C @ 80l/h @ 70°C feed) in Qalt

Produces same level as CP4.1

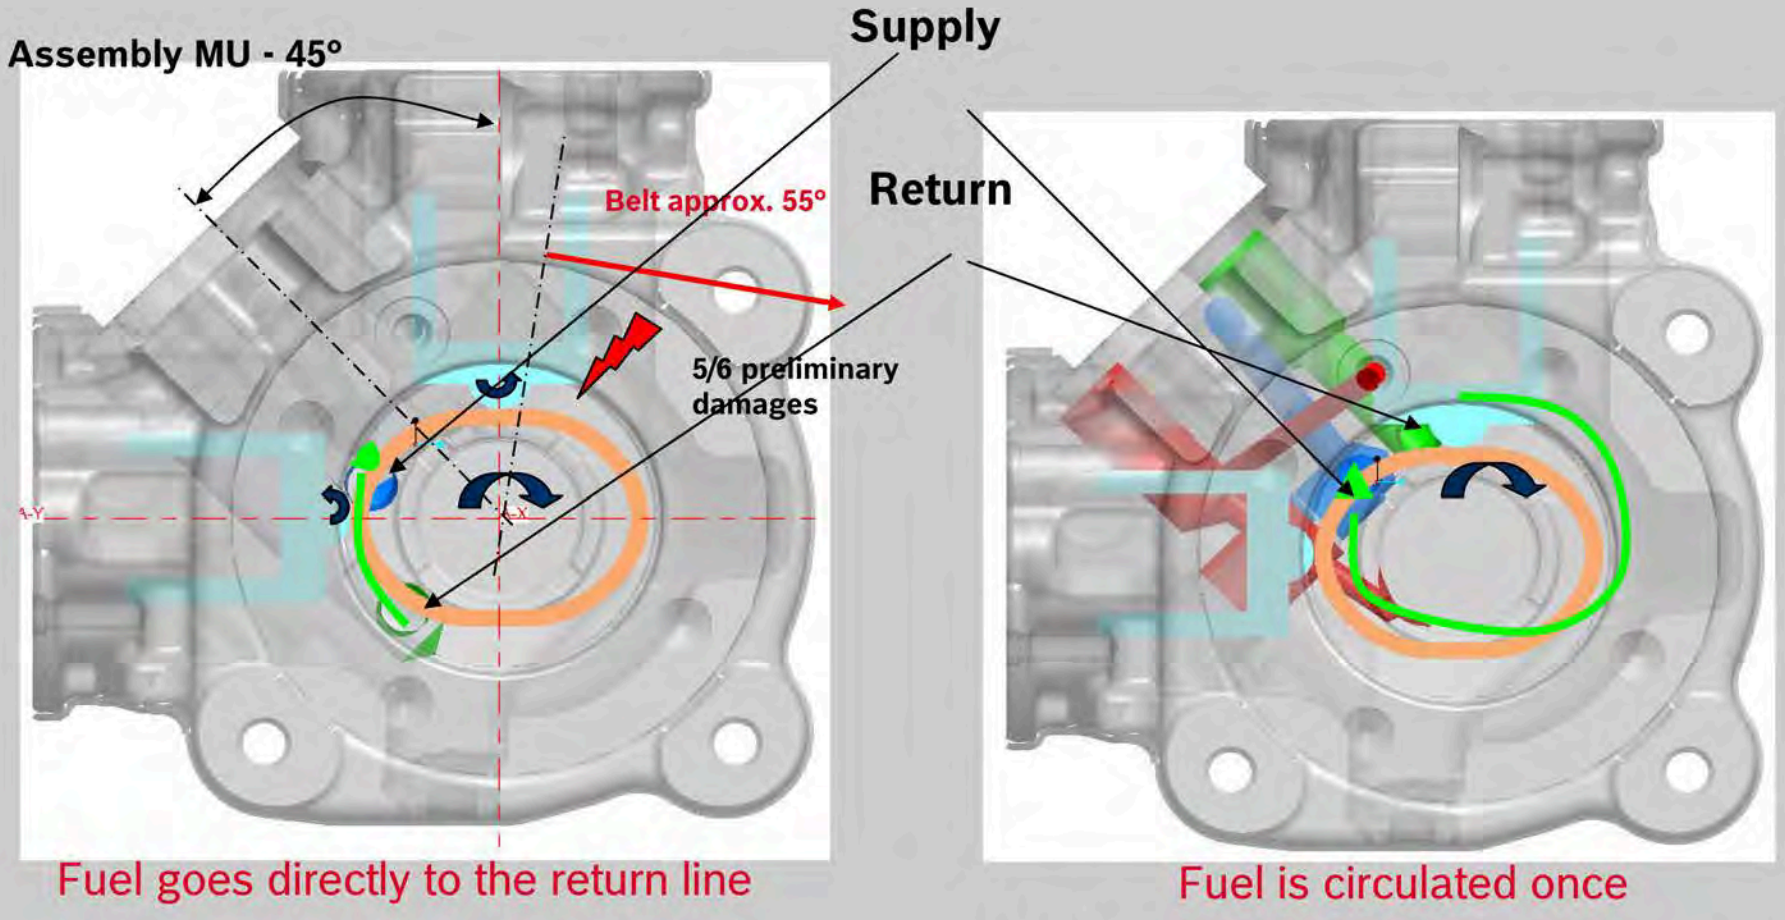

Test Qalt2 endurance runs passed at R.B.

Subject: ANS: V6 TDI blocking HP fuel pumps

Hello Non-responsive content removed

The old pumps were valid for Audi and VW, but these were replaced by pumps and Audi and VW would have received different ones.
Also, when replacing the old pumps, we understand it to be that the respective fuel lines were also used.
However, these lines are released specific to models. This would make it impossible to install a country-specific control.
Please get back to me in this regard. I was not able to reach you by telephone.

With best wishes

Subject: ANS: V6 TDI block

Hello, Non-responsive content removed

The situation is always rather complicated with the high-pressure fuel pump CP4 from Bosch. We are having the same problem with RP2 as we did when the RP1 was introduced.
I personally think that there is a cost-effective, but predominantly quick solution to this problem - which I propose to you and our Non-responsive content removed
* Quick correction to the RP2 pump in the genuine parts program / catalog (has commenced: Mr. [redacted] and Non-responsive content removed => [redacted]
* Clear the warehouse of RP1 pumps in the markets of Non-responsive content removed and fast

replacement delivery with RP2 pumps and the associated fuel lines [redacted]?
* Use the RP1 pumps only in [redacted] etc. by means of special controls or changing the genuine parts program [redacted]
* I.e. critical markets to have just RP2 in their range; non-critical markets restricted to RP1 and RP2 depending on VIN; after RP1 used up --> all markets to have just RP2 --> Reference: in the case of vehicles pre-production implementation RP2 then always RP2 pump + lines to be fitted, in the case of vehicles with RP2 only the RP2 pump. => [redacted]

Is that ok?
Is that feasible?

With best wishes

Hello Non-responsive content removed
The blocking memo shown above does not include any parts numbers.
When I asked Sales about the originally affected engines for Non-responsive conten removed, I received the following response.
However, the question regarding the sale of original parts as individual parts for high-pressure pumps remains unanswered.
Here is a list of the possibly affected high-pressure fuel pumps.
My question is: Do the high-pressure fuel pumps listed in row RP1 also have to be blocked (only in some cases there are already stocks of successor parts, row RP2!)?
Could you please get back to me as soon as possible?

With best wishes

Status of Bosch CP4.1 anti-wear packages

Recommendations for the use of diesel injection systems:

- **EU4 market and worse:**
  Use of injection systems with respective anti-wear packages as per required validation

- **EU5 market and better:**
  Use of the respective basic injection system for EN590 applications

The minimum required emission standard of the respective country is critical for the evaluation of a country, as there are no control features with regard to the fuel quality.

The scope of the required validation and anti-wear measures must be coordinated with Non-responsive content removed

Non-responsive content removed

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.1 anti-wear packages

Recommended application for Bosch CP4.1 in [redacted] coordinated between [redacted] and [redacted]

- **RPU (piezo system):**
  Complete conversion of EU4 and EU5 to AWP (determined by high share of EU4 - no differentiation) ⇒ 03L.130.755.A
- **RPU solenoid valve injector:**
  See above ⇒ 03L.130.755.AB as of SOP
- **Crafter (solenoid valve system):**
  Complete conversion of EU4 and EU5 to AWP ⇒ 03L.130.755.AB as of SOP
- **T5 (piezo system):**
  EU4 variants with AWP ⇒ 03L.130.755.R
  EU5 variants with basic pump for EN590 ⇒ 03L.130.755.J
- **Caddy 2.0l:**
  EU4 variants with AWP
  EU5 variants with basic pump for EN590

Determined by validation findings, the use of RP 0 and 1 is recommended for the implementation of Bosch CP4.1 high-pressure fuel pumps in all EU4 markets. The commercial negotiations for the anti-wear packages with Bosch have not been concluded.

Status of Bosch CP4.1 anti-wear packages

Anti-wear packages (RPx)

RP0

Task: - Reduce wear (mainly avoid piston seizures)

Contents: - red. C layer on the pump piston
- One-piece carbide coupling (pumps with mechanical gear pump)

Price: - not price-neutral

RP1

Task: - Increase load-bearing capacity of the hydrodynamic lubricating film between the roller/roller support with reduced viscosity and poor lubricity
- Robustness reserve for temporary transgression of specifications

Contents: - Reduce the roughness of the roller support, opt. surface
- Reduce the play between the roller and roller support
- Secure prevention of metal spatter (process C2)

Price: - not price-neutral

RPx*

Task: - increase in wear resistance between roller/ roller support fur fuels with low viscosity and poor lubricity (higher share of mixed friction when number of engine start-stops <=350 thousand)

Content: - like RP1, but C3.1 coating on roller support (under development)
- ...

SOP: planned by 03/2011

Price: not price-neutral

Status of Bosch high-pressure fuel pump CP4.2

WK50/10

Non-responsive content removed 12.15.10

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.2 high-pressure fuel pump

General

- SOP CP4.2 at Audi in Wk22/2008
- Initial series pumps resulted in high failure rates, caused by production faults at Bosch -> Eliminated with **M**easure **P**ackage 1 (MP1) in 2008 and MP2 in 2009. (also see attachment 1)
- Since the use of MP1 and MP2, the pumps are OK in countries with fuel compliant with EN590
- In countries with critical fuels significantly outside the standard, there continue to be pump failures ([redacted]):

[redacted] In 2008/2009, poor fuel quality due to aged/spoiled RME proportion; fuel is largely OK since 6/2009; since then, no further pump failures in [redacted], aside from approx. 3 HPP, but still pumps with preliminary damage in the field (approx. 25%).

[redacted] Poor fuel quality with high kerosene content and poor lubricity.

[redacted] Similar to [redacted], with addition of occasional high particle and water content

Audi
Vorsprung durch Technik

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.2 high-pressure fuel pump WK50

Measures

- To avoid pump damage in countries with poor fuel quality, additional measures were introduced to increase robustness:
  - Anti-wear package 1 (RP1) attachment 1: SOP Wk 18/10 =>Effectiveness proven
  - Anti-wear package 2 (RP2) attachment 1 and 2: SOP Wk 45/10, effectiveness confirmed in trial, open in field due to low runtime.
- Other important findings: The pump suffers preliminary damage during the start process, in particular. Therefore, to improve fuel supply in the pump and avoid mixed friction, an optimized EFP control (attachment 1) was introduced - SOP from Wk6-9 / 2011

Summary: With the MP1, MP2, RP1 and RP2 measures described above and optimized EFP control, measures have been assigned to all known problems.

Recommendation [redacted]

- After implementation of all measures, approve CP4.2 for countries with poor fuel quality as well
- Prerequisite is proper initial commissioning at the vehicle assembly plant and initial fill with standard fuel, to avoid preliminary damage to pumps.

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.2 high-pressure fuel pump WK50

Additional measures to increase quality further in countries with extremely critical fuel (flowing in):

- Installation of pressure sensor before high-pressure fuel pump detects filter blockage through RME deposits, in particular, and ensures that the pump is filled with fuel
- Installation of a water separator with display in the instrument cluster

  Objective: These two measures enable identification of incorrect operation of the pump --> Introduce appropriate measures to protect the pumps (to be developed)

Use of old CP1.H high-pressure fuel pump for [redacted] (request from [redacted])

- From a construction standpoint, the CP1.H will require major modification effort to enable installation in V6TDI Gen1 (see attachments 3 ,4). From a construction standpoint, the CP1.H does not fit in the V6 Gen2 engine.
- The CP1.H pump can handle a maximum of 1650bar injection pressure, which means only an EU4 variant can be presented; the development time would be approx. 9-12 months, depending on the vehicle (application: cold / hot / altitude / emissions / performance / registration / etc).

  In addition, availability of the parts is currently being clarified.
- The V6 Gen 1 engine has been discontinued in the Audi Q7; a back-conversion would be necessary here. For the VW Touareg and Audi A6, the V6 Gen 1 engine would have to continue beyond the planned EOP.

  The current EOP is Wk 22/12; a potential continuation in [redacted] is being clarified.
- For legal reasons, this interim variant can only be used until the EU5 is deployed in [redacted] in 11/2012. ->Term only approx. 1 year

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.2 high-pressure fuel pump WK50

Further action

- Urgent decision needed on how to proceed with CP4.2, particularly with regard to the additional quality improvement measures.

  Meeting with Non-responsive content removed and [redacted]
- Clarify availability of "old" parts
- Clarify further production of V6 Gen 1 for Non-responsive content removed
- Field examination of V6 Gen 2 CP4.2 with all measures in Non-responsive content removed

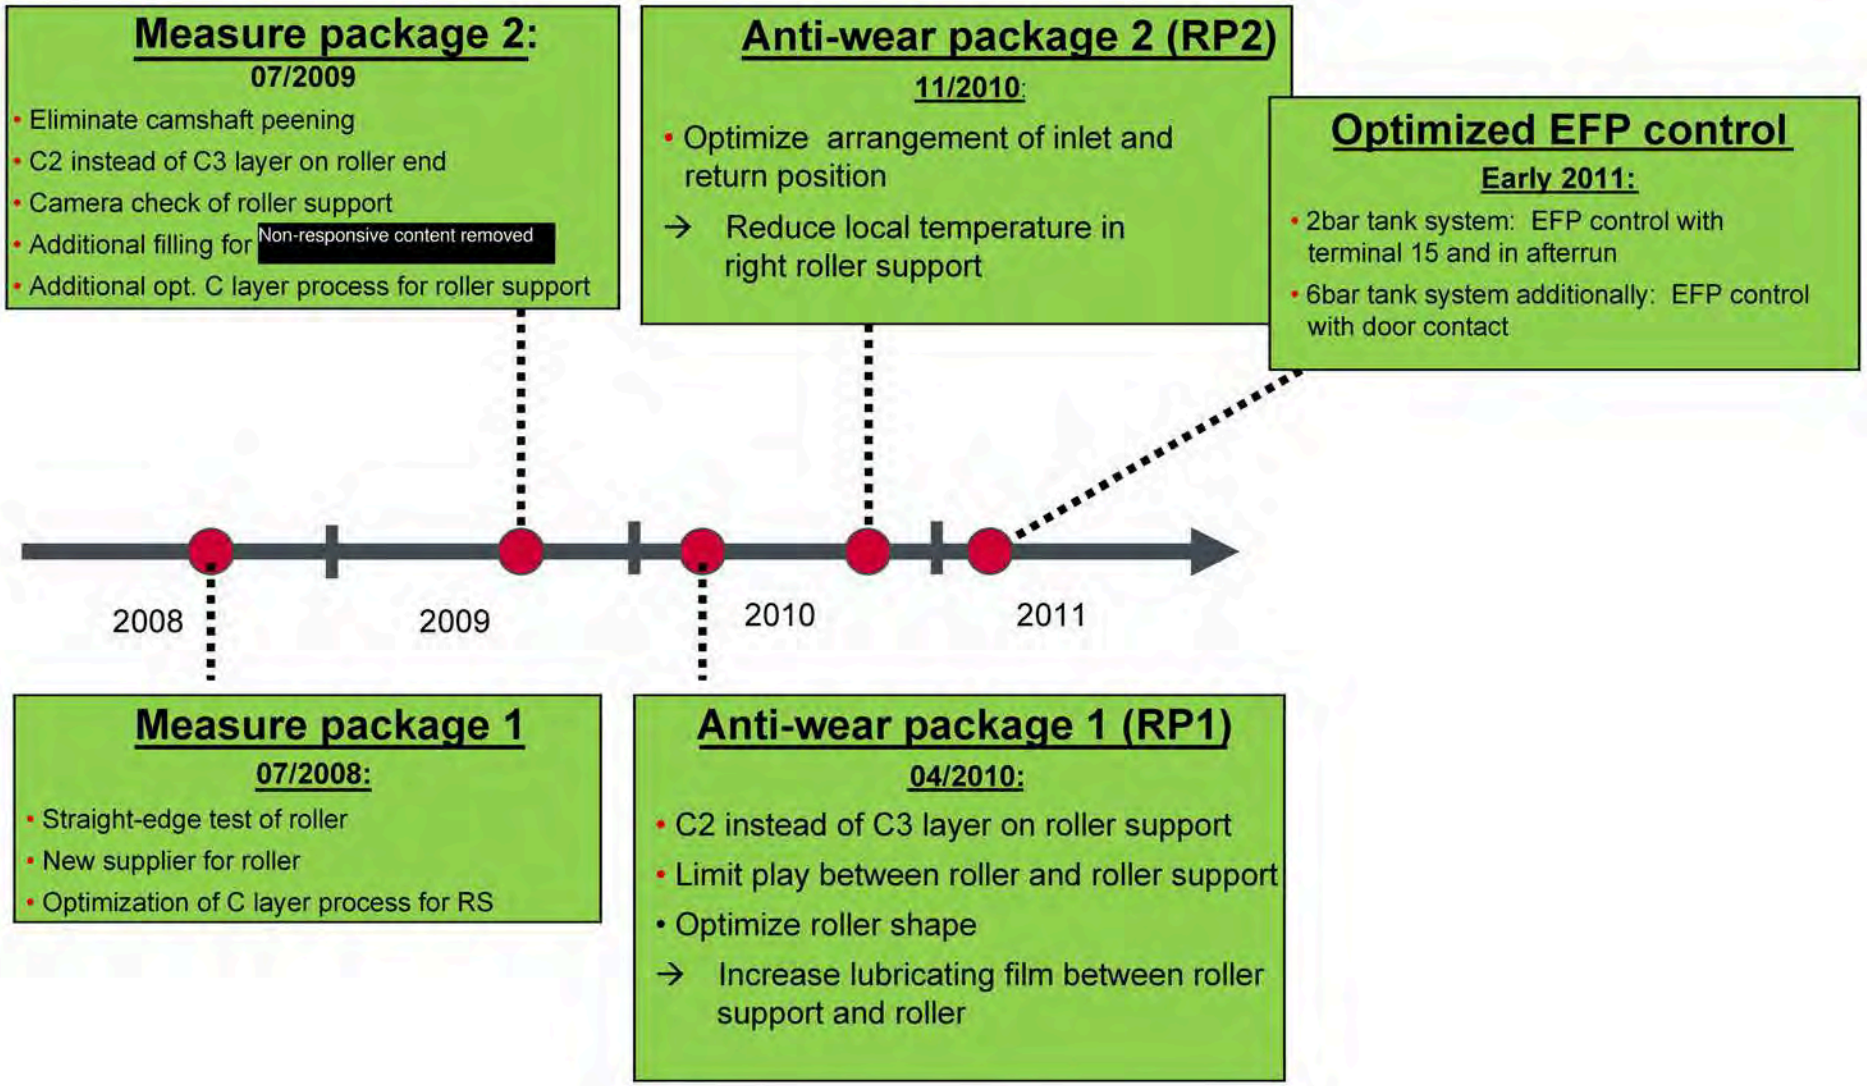

Non-responsive content removed

Optimized EFP activation

ENTIRE PAGE CONFIDENTIAL

Optimized EFP activation 2-bar tank system

Overview of the improvements

- Activation of the electric fuel pump with terminal 15 (dependent on fuel temperature)
  - First as of 3°C due to coagulation
  - **See slide 3**
- Activation of EFP in afterrun (dependent on fuel temperature)
  - First as of 70°C due to fuel temperature
  - **See slide 4**
- Activation of EFP while running-down of the engine
  - Max. 100 ms
- Activation of EFP with start bit – **as in today´s standard 6-bar tank system**
  - Also without terminal 15 on the earlier activation compared with standard 2-bar tank system, as in series the activation of EFP starts first as of ~100 rpm
- Affects:
  - C6PA, Q5, B8 with V6 TDI Gen1 – i.e. vehicles with 2-bar tank system (inline EFP)
  - Q7 already on Gen2 engine
  - V6TDI Gen 1 Bin5 already equipped with 6-bar tank system

Audi
Vorsprung durch Technik

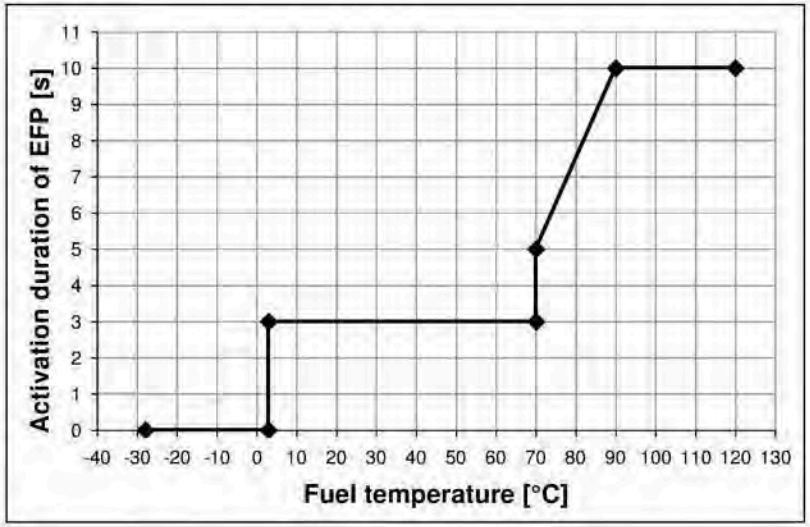

ENTIRE PAGE CONFIDENTIAL

Optimized EFP activation 2-bar tank system

Control of the EFP with terminal 15

Activation of the EFP with terminal 15 (dependent on fuel temperature)

- Objective is to protect high-pressure fuel pump
  - Ensure the optimum start-up conditions of the HPP
  - Early pressure development for reducing volume of residual air
  - Flushing the high-pressure fuel pump with cold fuel from the tank before start with warm engine compartment / warm fuel in the flow of the HPP.
- First as of 3°C due to coagulation Between 3°C and 70°C: 3s
- As of approx. 70°C fuel temperature engine output reduction
- Between 70°C and 90°C linear increase to 10s activation
- **With open engine compartment - no function**
- **In the case of a crash - always deactivated**

Critical:

- It can take up to 500 ms for the engine compartment contact to be read in by the ECU
- Activation of EFP with terminal 15 despite errors detected by diagnostics
  - General switch-off of EFP in the case of certain errors
  - E.g. rail pressure error – can also be caused by a high-pressure leak.
  - In the case of terminal 15, there was no fault after the ECU afterrun. Fault was first logged again when the engine was operated. -> Activation of EFP possible with terminal 15 despite errors.

Audi
Vorsprung durch Technik

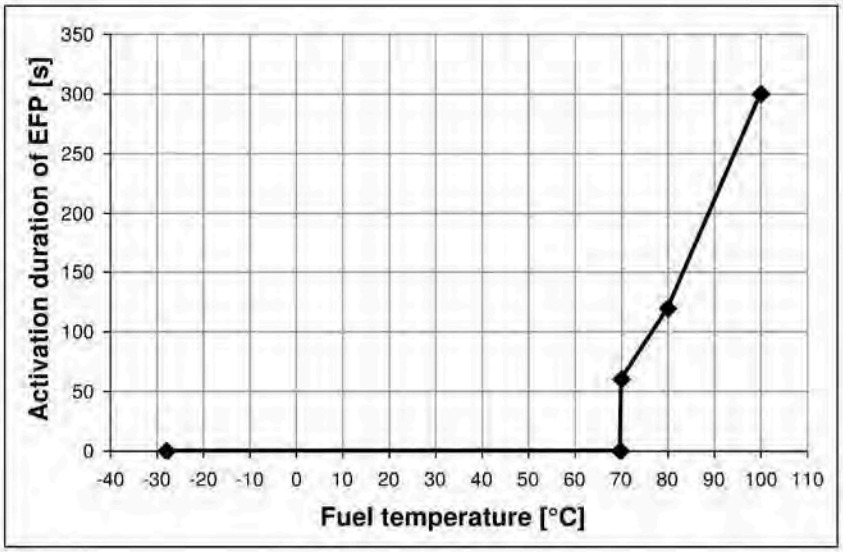

ENTIRE PAGE CONFIDENTIAL

Optimized EFP activation 2-bar tank system

Activation of EFP in afterrun

Activation of EFP in afterrun (dependent on fuel temperature)

- Objective is to protect high-pressure fuel pump
  - Flush the high-pressure fuel pump with cold fuel from the tank with a hot engine compartment.
  - Active cooling of the high-pressure fuel pump to avoid build up on the roller.
  - Build-up is a trigger for failures with the high-pressure fuel pump
- As of approx. 70°C fuel temperature engine output reduction
- Function first active as of 70°C, activation for 60 s
- With temperature reduction, the activation duration reduces accordingly
- **In the case of a crash - always deactivated**

Critical:

- Engine compartment contact is monitored only by terminal 15
  - EFP is activated in afterrun also with an open engine compartment
- The afterrun can be interrupted only by terminal 15 or an engine start, then it returns to afterrun. If the fuel temperature does not reduce during this period, the activation starts again.
  - Run-up can be entirely disabled by the main relay

V6TDI Gen1 – status of HPFP failures in the Bin5 MY11

ENTIRE PAGE CONFIDENTIAL

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

WK 40/10

- Problem
  - 2 failures of the Touareg NF Bin5 in Q-AL, 1 vehicle with previously damaged high-pressure fuel pump
- Analysis
  - Both failures after 10,000 km with Master 04 (since 09/01/2010)
    (Q7 with same data as Master 05 and all Touaregs with Master 03 no striking features)
  - Fuel temperature in inlet upstream of high-pressure fuel pump:
    Average driving temperature approx. 50°C
    Subsequent to max. temperature peaks up to approx. 100°C
  - Presupply volume of intank EFP at engine start:
    - Master 03: Full pumping from start (200 l/h) until non-critical temperatures are reached
    - Master 04: requirement-based pumping (130 l/h) due to CO2 reduction and coagulation
  - Hypothesis: High-pressure fuel pump is not sufficiently washed with fresh fuel when performing a ho start from the post heating with poor quality fuel (low boiling point, poor viscosity).
- Measures
  - **Master 05** (without SW change) with full pumping when engine started and at fuel temperature >70°C (same as Q7)
- Recommendation
  - Reflash the already assembled vehicles Touareg NF Bin5 to Master 05
  - 3 verification vehicles with Master 05 conversion to new HPP with RP1
  - 3 verification vehicles with Master 05 conversion to HPP with RP2
- Deadline
  - [redacted] release of Master 05 on 10/05/2010
  - [redacted] release of Master 05 under consideration

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

WK 40/10

- Back-up

ENTIRE PAGE CONFIDENTIAL

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

WK 40/10

Quantities of coolant / lubricant for HPP for needs-based presupply

Audi
Vorsprung durch Technik

ENTIRE PAGE CONFIDENTIAL

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

Anti-wear package 1

Assignment

Increase lubricating film between roller support and roller for fuels with lower viscosity (reduction of mixed friction percentage & Temperatures)

Measures

- Reduction in roughness of roller support by switching to C2 layer
- Prevention of metal splatter (process-related no metal splatter occurs with C2)
- Reduction in play between roller and roller support (smaller roller support hole)
- Reduction in roughness of the roller
- Optimization of the edge slope on roller (slender taper)

Result

RP1 raises the lubricating film by 2 x (derived from findings)

RP1 for all CP4.2 since WK 15/2010 in production on all V6TDI.

ENTIRE PAGE CONFIDENTIAL

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

Anti-wear package 2

Assignment

Reduction in local temperature in the right-hand roller support to a level of the CP4.1

-> Avoid fuel decomposition, coating build-up

Measures

- Opt. arrangement of inlet & outlet position (exchange the inlet / outlet connections)

Result

Reduction in temperature in the lubrication gap by 24°C (from 136°C to 111°C @ 80l/h @ 70°C inlet)

-> with that, same temp. level as the CP4.1 (single plunger pump)

-> avoid fuel decomposition **->** considerably lower coating build-up on the roller support

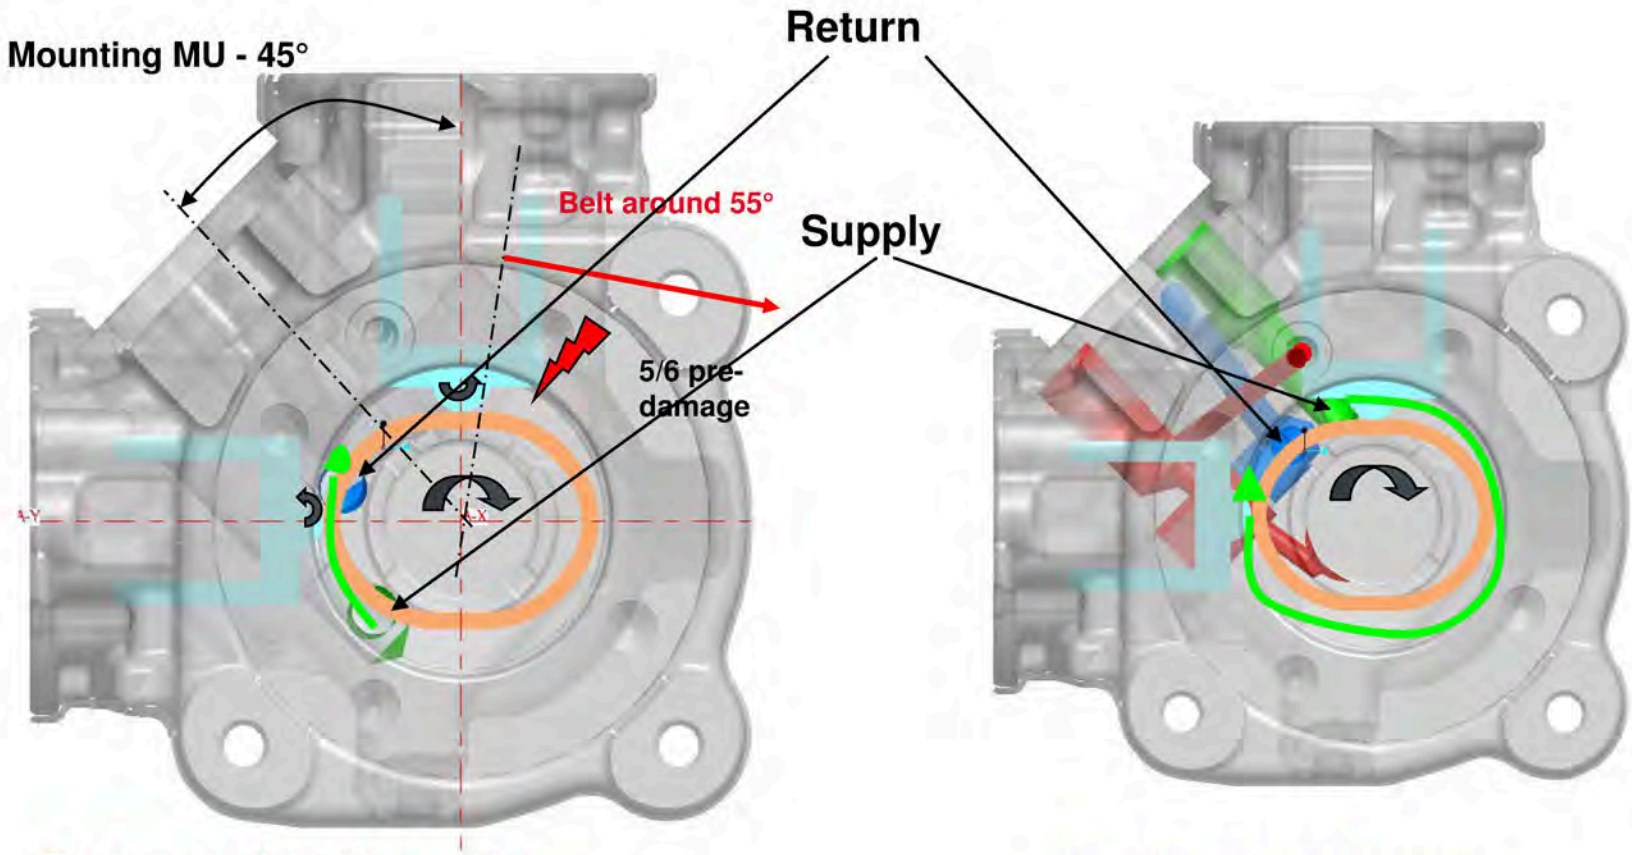

Testing with R.B. passed; Testing / verification at Audi ongoing

Series launch of all V6-TDI (due to amended flow and return lines) WK 45/2010

ENTIRE PAGE CONFIDENTIAL

V6-TDI Gen1 – TouNF Bin5 MY11 HPP failures

WK 40/10

Fuel goes directly to outlet

CP4.2 / V6 TDI

Fuel is recycled once

Hello Mr [redacted] Mr. [redacted]

here is the temperature measurement W37

By the way, we have tried here to install the RP2 measurement pump(which you provided us with at Christmas) in a Porsche Panamera. However, the boreholes had threads, like GEN1!
The type designation was 059 130 755 BG! This was intended for GEN2, wasn't it?

I told the fitter that he should bore out the thread!

Regards, [redacted]

Yours sincerely,

[redacted]

Subject: Temperatures in high-pressure fuel pump V6 3.0 BiTDI

Hello [redacted]

late, but will come. Here are the results for the above-mentioned scope.

Compared with the V6 184 kW, the temperatures with regard to the distributor-type injection pump are roughly at the same level. Due to the differing pre-conditioning there are some offsets (see diagrams) here and there which do not show this expression with the same starting point.

<<A7 3.0 BiTDI_AL551-8Q_12709_ERG VEP 8Z6.pdf>> <<A7 3.0 BiTDI_AL551-8Q_12709_ERG VEP 8Z5.pdf>> <<AU57312709 comparison V6 BiTDI vs. V6 .xls>>

Yours sincerely,

Temperature measurement

[redacted]

►4◄AU57312709
M06: FP, AC=1, engine reheating off ( )
-Structure : V6 TDI styling capsule, double e-fan 600 W fan parameters C7 V6 TDI.
Active sound exhaust system

►5◄SE-703
M08: FP Engine reheating off (..)
structure : Tank contents 33l; start at 47°C; additional shielding of right fixing dome on styling cover

ENTIRE PAGE CONFIDENTIAL

Temperature measurement

[redacted]

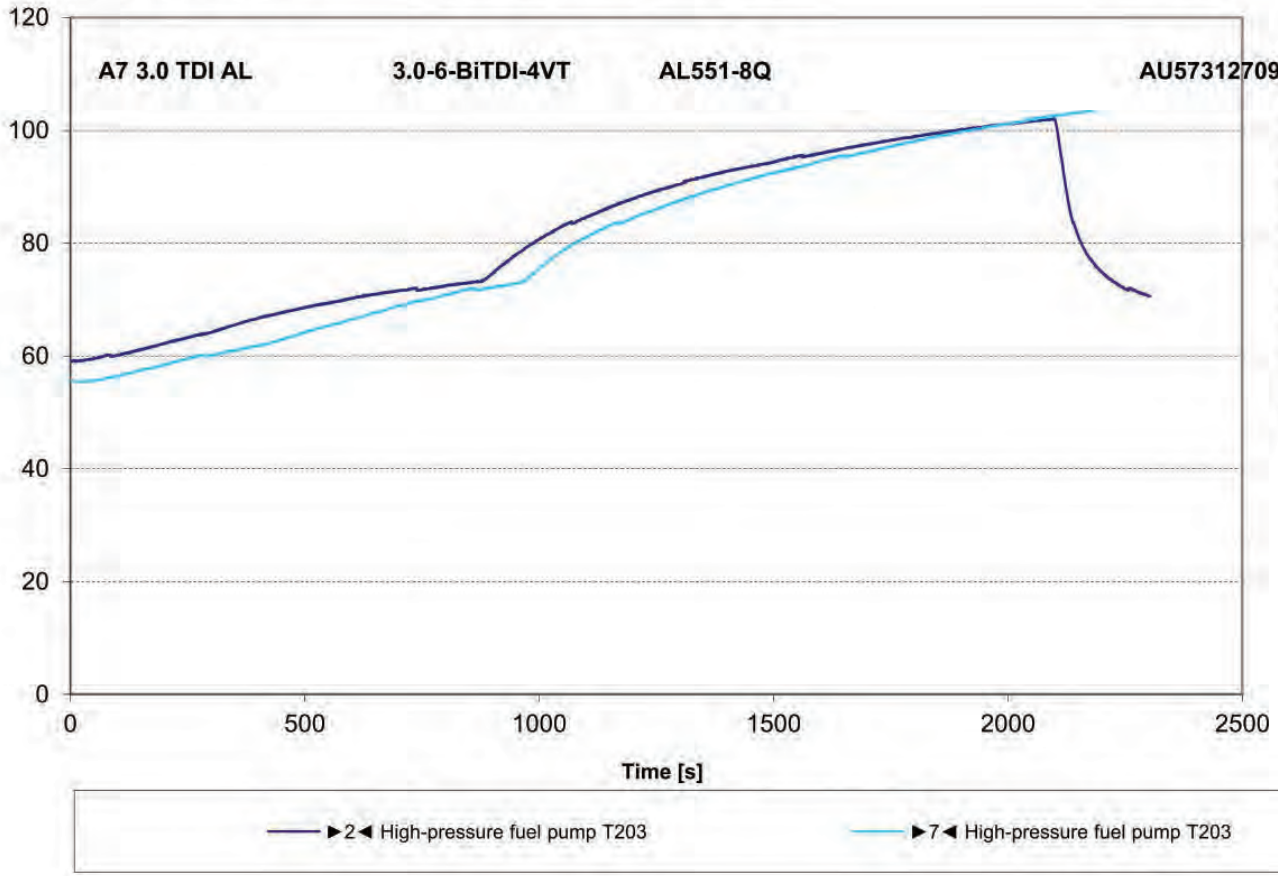

►3◄AU57312709
M04: Vmax pendulum journey (60 km), AC=1, engine reheating a structure: V6 TDI styling capsule, double e-fan 600 W
Fan parameters C7 V6 TDI,
Active sound exhaust system, LNL due to greater exhaust gas temperatures

►8◄SE-703
M10: Vmax pendulum(60 km) 180 kW, air-con on, ET=35°C engine reheating off ( )
structure : with insulation BB line (88, 89)
Additional shielding of right fixing dome on styling cover
LNL 600-W module

Status of Bosch CP4.1

Summary status for the quality situation of the BOSCH high-pressure fuel pump CP4.1:

After introducing the 2 packages of measures (34 individual measures) to remedy the quality fault by 06/2009 (Clean Date), the failure rate of the CP4.1 has reduced significantly by at least 50%. The efficiency of the packages of measures has been proven. Current failure pumps originate, among others, from the sales period 09/2007 (first SOP) up to 06/2009 or have failure causes which lie outside of these packages of measures. Volkswagen will arrange for further remedy measures for the CP4.1 for these particular cases.

To increase the robustness of the CP4 pumps further, BOSCH has developed the RP1(+) package. This represents a logical continuation of the previous quality measures. The package will be introduced to production 100% by 03/2011. The direct costs increase of € [redacted] requested by BOSCH will not be accepted by Volkswagen. The negotiations are therefore still open.

If the CP4.1 is being used in countries with poor fuel, analogous to the first implementation in the USA, an RP0 package (piston coating) will be used for the individual projects. The requested [redacted] € for the RP0 package has already been agreed since 2007.

BOSCH is requested [redacted] € for the remedy measures regarding the overflow valve of the CP4.x which is incompatible with the LP circuit (acoustic: howling). Volkswagen does not accept this extra charge and does not consider itself to be the causer.

BOSCH is currently developing further increases in robustness for the CP4.1 within the framework of world wide usage (WWU). A validation and verification process has been agreed between Volkswagen and BOSCH.

Status of Bosch CP4.1

- **General cause for CP4 drivetrain damage:**

- Unacceptably high mixed friction between the roller and the roller support leads to local contacting during operation.
- The C coating of the roller support is destroyed (wear and abrasion of the C coating), the friction coefficient between the roller and roller support increases.
- Sluggish roller ⇒Wear ⇒Particle formation ⇒Drivetrain damage
- Amplifying factors: Fuel with low viscosity; raised spots on the roller (e.g. fusing) and in the roller support (e.g. metal spatter); surface of roller/roller support

- **Consequences of HPP drivetrain damage:**

- Shavings created in high-pressure fuel pump drivetrain
- Shavings distributed through entire fuel system
- Malfunctions of HPP, PCV, RPS, injectors, PRV

⇒ Breakdowns

Non-responsive content removed

Status of Bosch CP4.1

- **Repair work:**

- Replace the entire injection system due to build-up of particles:

  Fuel filter
  High-pressure pump
  High-pressure lines
  Rail, incl. rail pressure sensor and pressure control valve
  Injectors
  Leakage line
  Fuel lines
  Clean the fuel tank and flush out the LP lines

Costs: In excess of Non-responsive content removed / CoD

Status of Bosch CP4.1

Introduction of the robustness measures - CP4.1

- Introduction of anti-wear package RP1 as well as strainer in front of the intake valve in all AWP-CP4.1 pump variants concluded WK 45/2010.
- Comprehensive introduction of anti-wear package RP1(+) for all Bosch CP4.1 types planned 03/2011.

The commercial negotiations for the anti-wear packages with Bosch have not been concluded.

Status of Bosch CP4.1

Anti-wear packages (RPx)

RP0

Task: - Reduce wear (mainly avoid piston seizures)

Contents: - red. C layer on the pump piston

- Single-piece carbide coupling (pumps with mechanical gear feed pump)

Price: - not price-neutral

RP1

Task: - Increase load-bearing capacity of the hydrodynamic lubricating film between the roller/roller support with reduced viscosity and poor lubricity
- Robustness reserve for temporary transgression of specifications

Contents: - Reduce the roughness of the roller support, opt. surface
- Reduce the play between the roller and roller support
- Secure prevention of metal spatter (process C2)

Price: - not price-neutral

RPx*

Task: - increase in wear resistance between roller/ roller support fur fuels with low viscosity and poor lubricity (higher share of mixed friction when number of engine start-stops <=350 thousand)

Content: - like RP1, but C3.1 coating on roller support (under development)
- ...

SOP: planned by 03/2011

Price: not price-neutral

Non-responsive content removed

Status of Bosch CP4.1

CP4 performance

Status: 7/6/2010

Anti-wear package 0

Task/impact

→Wear reduction, avoid piston seizure

Measures

→C layer on the pump piston

Result

→Improved wear resistance, wear reduction

Affected drive unit/ Component

Diesel Systems

CP4 performance

Status: 7/6/2010

Anti-wear package 1

Task/impact

- Increase the lubricating film between the roller support and roller for low-viscous fuels in order to reduce the mixed friction and therefore the temperature

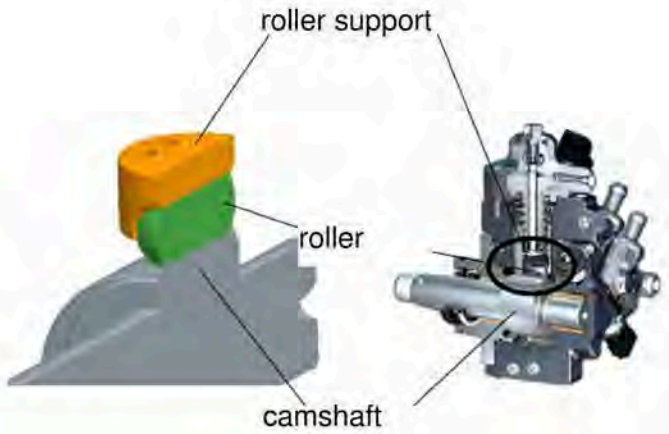

Measures

- C2 coating to reduce friction on the roller support support and avoid metal spraying
- Low distance/tolerance between roller and roller support due to reduced roller support hole
- Reduced roughness of the roller surface
- Optimized roller end

Result

- Increase lubricating film thickness (approx. x 2), proven by test results

Affected drive unit/ components

Hello [redacted]
Here is an overview of our pumps CP4.1 and CP4.2 with an explanation of the PR Numbers - which I was able to get together quickly - both in original format as well as PDF (for distribution purposes)
as well as a slide which has been added by the Audi colleagues, which [redacted] has already seen ("Timeline for measures - CP4").
You will also find a set of slides from the last change meeting with the detailing of the RP1+.

Regards, ,

Bosch CP4 overview (VW and Audi)

Anti-wear package 0 (corresponds to AWP):

Task/impact

- Wear reduction
  avoid piston jamming

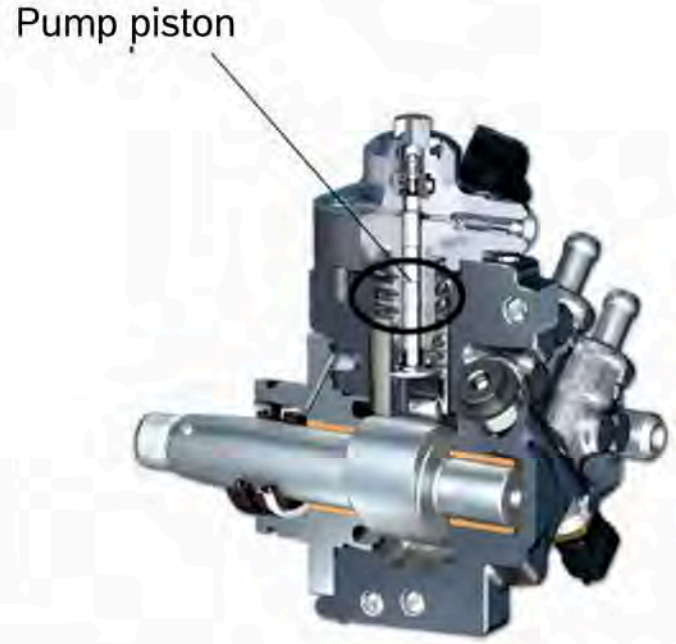

Measures

- C layer on the pump piston

Result

- Improved wear resistance
  Wear reduction

Affected drive unit/
components

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 1

Task/impact

- Increase the lubricating film between the roller support and roller for low-viscous fuels in order to reduce the mixed friction and therefore the Temperature

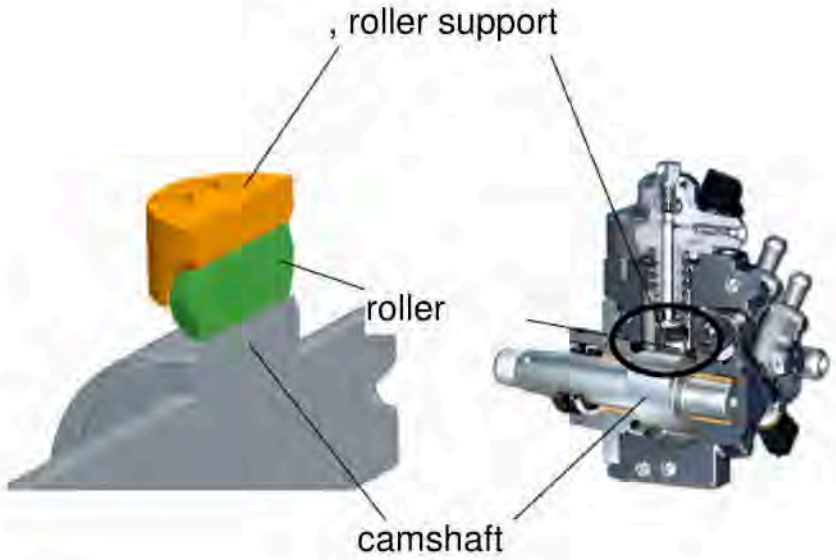

Measures

- C2 coating to reduce friction on the roller support support and avoid metal splashes
- Low distance/tolerance between roller and roller support due to reduced roller support hole
- Reduced roughness of the roller surface
- Optimized roller end

Result

- Increase lubricating film thickness (approx. x 2), proven by test results

Affected drive unit/ components

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 1+:

Task/impact:
- Improve the hydrodynamic properties of the roller / roller support,
- Optimize the start-up behavior

Measure:
- Roller play like RP1 however additional reduced shape tolerance (improved load-bearing capacity, reduced friction coefficient in the “sliding bearing”)
- C coating C3.1 on roller support (for start / stop applications)
- Reduced axial play on the piston foot (acoustic measure)
- Reduced play between the tappet body and housing (improved guidance, reduced tilting of the tappet, robust against wear, reduction in cavitation)

Planned implementation date:
- for all CP4.1 WK 13/2011

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 2

Task/impact

- Reduction of local temperatures in the area of the right tappet when rotating clockwise CP4-xx/2

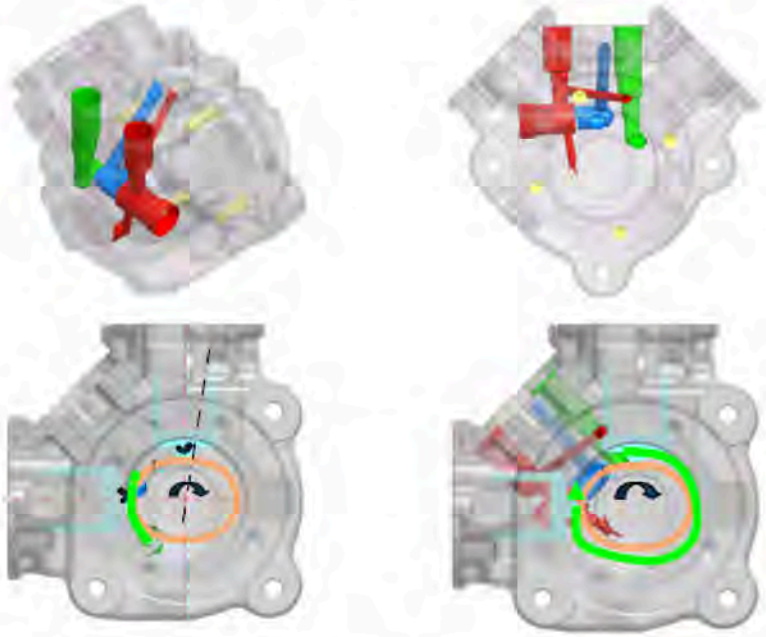

Measures

- Optimized lubricant flow in the pump housing by changing the lubricant supply and the return bore

Result

- Significant temperature reduction (>15°C)

Changing the supply flow and the return bore

Small circuit

Flow through the housing

Bosch CP4 overview (VW and Audi)

Anti-wear package 0 (corresponds to AWP):

Task/impact

- Wear reduction
  avoid piston jamming

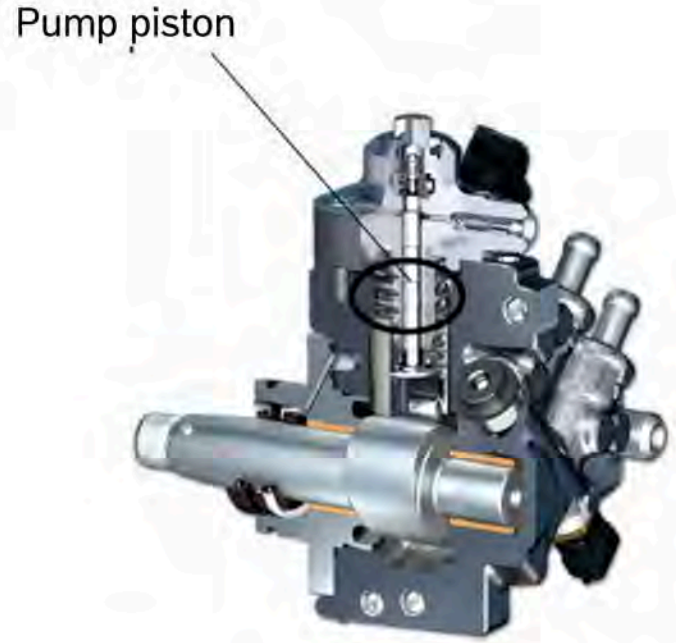

Measures

- C layer on the pump piston

Result

- Improved wear resistance
  Wear reduction

Affected drive unit/
components

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 1

Task/impact

- Increase the lubricating film between the roller support and roller for low-viscous fuels in order to reduce the mixed friction and therefore the Temperature

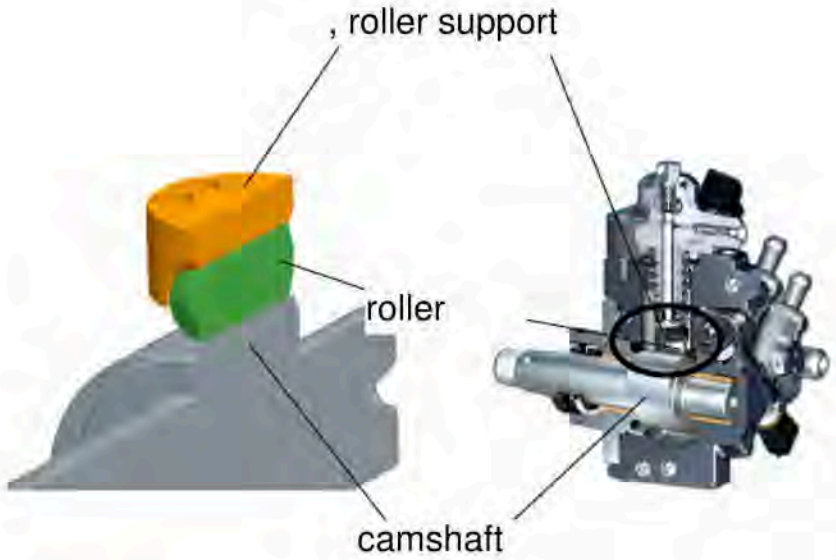

Measures

- C2 coating to reduce friction on the roller support support and avoid metal splashes
- Low distance/tolerance between roller and roller support due to reduced roller support hole
- Reduced roughness of the roller surface
- Optimized roller end

Result

- Increase lubricating film thickness (approx. x 2), proven by test results

Affected drive unit/ components

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 1+:

Task/impact:
- Improve the hydrodynamic properties of the roller / roller support,
- Optimize the start-up behavior

Measure:
- Roller play like RP1 however additional reduced shape tolerance (improved load-bearing capacity, reduced friction coefficient in the “sliding bearing”)
- C coating C3.1 on roller support (for start / stop applications)
- Reduced axial play on the piston foot (acoustic measure)
- Reduced play between the tappet body and housing (improved guidance, reduced tilting of the tappet, robust against wear, reduction in cavitation)

Planned implementation date:
- for all CP4.1 WK 13/2011

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Bosch CP4 overview (VW and Audi)

Anti-wear package 2

Task/impact

- Reduction of local temperatures in the area of the right tappet when rotating clockwise CP4-xx/2

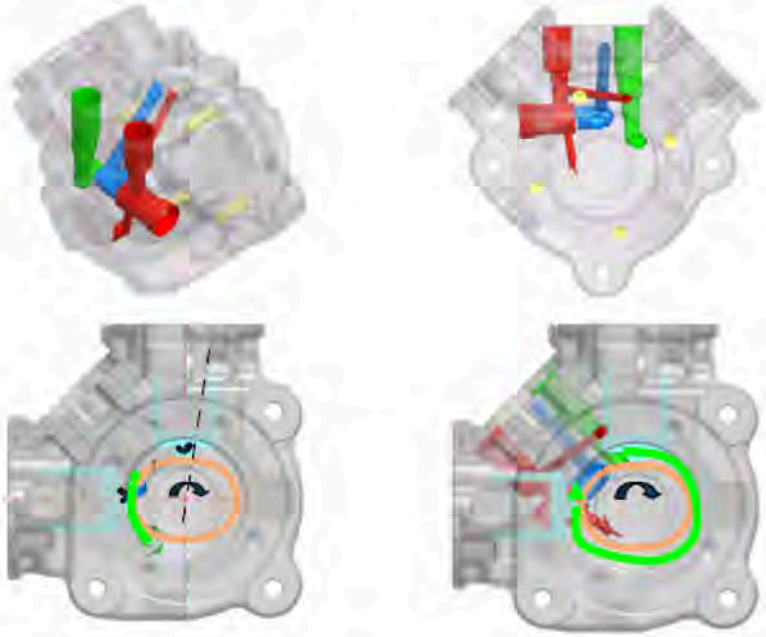

Measures

- Optimized lubricant flow in the pump housing by changing the lubricant supply and the return bore

Result

- Significant temperature reduction (>15°C)

Changing the supply flow and the return bore

Small circuit

Flow through the housing

Timeline for measures - CP4.2

Appendix 1

Defined measures for Bosch high-pressure fuel pump CP4.2

Package of measures 2:

07/2009

- No shot blasting of camshaft
- C2 instead of C3 layer on roller end
- Camera inspection, roller support
- More fuel, Non-responsive content removed
- Further opt. C coating process, roller support

Anti-wear package 2 (RP2)

11/2010:

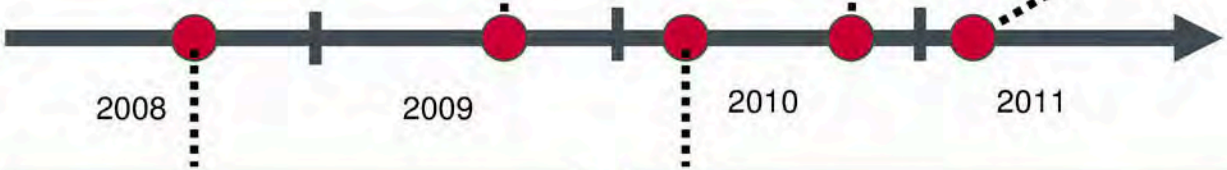

- Optimization of arrangement of inlet & outlet position

→ Reduction in the local temperature in the right roller support

Optimized EFP control

Start 2011:

- 2-bar tank system: EFP control with terminal 15 and when switching off engine
- 6-bar tank system in addition: EFP control with door contact

Package of measures 1

07/2008:

- Straightedge test on roller
- New supplier for roller
- Optimization of C layer process - roller support

Anti-wear package 1 (RP1)

04/2010:

- C2 instead of C3 layer - roller support
- Narrowing play between roller and roller support
- Optimization of roller shape

→ Increase lubricating film between the roller support and the roller

Now I also know why Bosch is having difficulty with the commercial negotiations for the AR1+. They actually want to introduce it throughout in WK 13/2011:

They don't even have the parts!!!

And RP0/ RP: We have also made it like this, that's why we continue tc do so, because we don't know any better ...
So now the costs are now just [redacted])

Just thought I'd let you know that little nugget of information.

With best wishes

Subject: Open questions
Hello Non-responsive content removed

Following questions / answers from this morning:

Introduction of RP1+
I can't give you a precise conversion date at the moment.
The main supplier for the AWP1+ parts is based in [redacted] ard we are not receiving sufficient quantities for a changeover of the tappet at present. We are currently coordinating a start-up with a second supplier (who actually supplied the CP4 tappets, but cannot yet implement the critical dimension changes to the RP1+) and I will be able to give you more information in a week or so. Based on today's situation. the RP1+ would be introduced in the third quarter.
Piston seizure evaluation
Here is the intermediate result for the evaluation. It has transpired that there are only minor field failures even without a C coated piston. However, please note that the uncoated pistons are being driven mainly in EN590 countries. The main figures in the USA and elsewhere have coatings. I.e. in my opinion, the failure figures would be higher if uncoated pistons were used with poor fuels.
Could I have some information on running times (running time increase per time unit) RPU PL6 b between probable ER end. Thank you.

Best regards / mit freundlichen Grüßen

Status of Bosch CP4.1

Summary status for the quality situation of the BOSCH high-pressure fuel pump CP4.1:

After introducing the 2 packages of measures (34 individual measures) to remedy the quality fault by 06/2009 (Clean Date), the failure rate of the CP4.1 has reduced significantly by at least 50%. The efficiency of the packages of measures has been proven. Current failure pumps originate, among others, from the sales period 09/2007 (first SOP) up to 06/2009 or have failure causes which lie outside of these packages of measures. Volkswagen will arrange for further remedy measures for the CP4.1 for these particular cases.

To increase the robustness of the CP4 pumps further, BOSCH has developed the RP1(+) package. This represents a logical continuation of the previous quality measures. The package will be introduced in all series projects and in the MDS as of WK 42/11.

If the CP4.1 is being used in countries with poor fuel, analogous to the first implementation in the USA, an RP0 package (piston coating) will be used for the individual projects.

The remedy measures regarding the overflow valve of the CP4.x which is incompatible with the LP circuit (acoustic: howling) will be implemented comprehensively in the MDS and in failed cases in series production.

BOSCH is currently developing further increases in robustness for the CP4.1 within the framework of world wide usage (WWU). A validation and verification process has been agreed between Volkswagen and BOSCH.

A world-market-capable high-pressure fuel pump lubricated with engine oil is currently being evaluated in a pre-development project to assess any risks from the system integration in the engine (drive via balance shaft), to ensure the separation of the fuel and engine oil circuits and to control future increasing pressures.

Backup

Non-responsive content removed

ENTIRE PAGE CONFIDENTIAL

Status of Bosch CP4.1

- **General cause for CP4 drivetrain damage:**

- Unacceptably high mixed friction between the roller and the roller support leads to local contacting during operation.
- The C coating of the roller support is destroyed (wear and abrasion of the C coating), the friction coefficient between the roller and roller support increases.
- Sluggish roller ⇒Wear ⇒Particle formation ⇒Drivetrain damage
- Amplifying factors: Fuel with low viscosity; raised spots on the roller (e.g. fusing) and in the roller support (e.g. metal spatter); surface of roller/roller support

- **Consequences of HPP drivetrain damage:**

- Shavings created in high-pressure fuel pump drivetrain
- Shavings distributed through entire fuel system
- Malfunctions of HPP, PCV, RPS, injectors, PRV

⇒ Breakdowns

Status of Bosch CP4.1

- **Repair work:**

  - Replace the entire injection system due to build-up of particles:

    Fuel filter
    High-pressure pump
    High-pressure lines
    Rail, incl. rail pressure sensor and pressure control valve
    Injectors
    Leakage line
    Fuel lines
    Clean the fuel tank and flush out the LP lines

Costs: In excess of [redacted] / CoD

Status of Bosch CP4.1

Anti-wear package 0 (RP0)

Wear reduction, Avoid piston seizure by means of C coating on high-pressure pistons

Anti-wear package 1 and 1+ (RP1; RP1+)

RP1 : Increase load-bearing capacity of the hydrodynamic lubricating film between the roller / roller support with reduced viscosity and poor lubricity by means of:

- Reducing the roughness of the roller support, opt. surface - C3 layer - reliable avoidance of metal spatters in the coating process
- Reducing the play between the roller and roller support

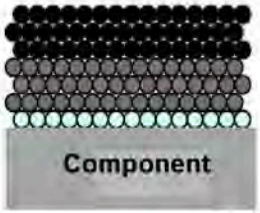

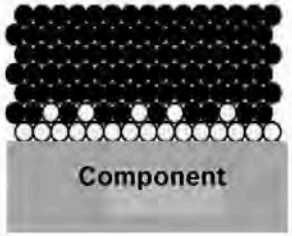

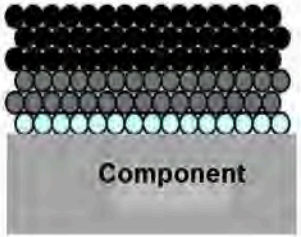

RP1+: Increase the wear resistance between the roller / roller support, like RP1 however with C3.1 layer on the roller support
