Subject: Rotor flatness

Sergio-

Based on the discussions with Brembo today, Chassis PD in Dearborn believes Brembo may be shipping rear rotors (9E51 2C026 AB) that do not meet print specifications for flatness and parallelism of the wheel mounting face. Some possible effects of this may include brake noise and decreased brake pad life. Because of this risk, Chassis PD recommends that a stop ship be issued until the quality of the brake rotors can be established. We will work with you and your team on potential inspection methods at the component and vehicle level.

Subject: SS Lug Nut cost.

Chris/Dave, again, thanks for the support and help during this stop shipment.
We are almost done….

Now, we need to talk about the cost of this stop shipment, at this point we have used over time for the screening, expedite parts from supplier, and hubs replacement (around 1000 vehicles will need hub replacement, when parts availability allow us to start)

HSAP team conclusion is that the stud is the root cause, so far 200 vehicles with the new stud have pass the workstation with zero defects.

We want to know if you concur with the cost associated with this SS,
If so, please let me know who is your financial support from Dearborn.

Ps: Total cost will be estimated this week

Please advise.

Understand the reluctance of the PD team to accept responsibility. I´m sure you likewise understand the reluctance of the plant to absorb the financial responsibility for an issue it did not create.

We all agree that we need to continue to work together to identify the root cause and resolve the issue.

Additionally, we need to come to an agreement on the financial implications.

Need you to reflect on the changes and work with Sergio in finding a compromise. The end point should not be that the plant absorbs all the cost.

Thanks,

Chris, this is exactly the point, since the team implement the MCR, the issue start. We had the japan stud in front and rear wheel, with the change the issue show up
2.- Front wheel has never exhibit the issues, since we keep Japan supplier.
True, but the front joint is a different joint and is not expected to perform identically in the presence of all noise factors

Subject: RE: SS Lug Nut cost.
Importance: High

Chris, I am surprise about your answer, is not close from what we talked last week.

Factual data is:

1.- Issue was exhibit only in rear wheels, where the stud was changed from Japan to USA, including stud property change
The stud property class was not changed. The Japan specification and US specification overlap.
2.- Front wheel has never exhibit the issues, since we keep Japan supplier.
True, but the front joint is a different joint and is not expected to perform identically in the presence of all noise factors
3.- The same tool is used for front and rear wheels at the same workstation
Agree. We do not suspect the guns
4.- No contamination was identified.
No contaminant was found. Does not mean none existed.
5.- Failure was present on the vehicles, even after the team apply a cleaning process to the stud, wheels, etc.
The cleaning process used (to my understanding) would not have been effective to remove all of the possible contaminants (nickel anti-seize, wheel hub bore grease, tire soap, etc.)

For our team is clear that the new design is not robust enough like the front stud. This MCR change cause the issue, therefore, the charge should apply to Design, as stated in the Stop Shipment binning.
The design was not changed.

There is no data that support manufacturing or supplier issue.
Agree. There is also no proof it is a design issue. Building 4 test data support the conclusion that the design is OK.

Please advise

Sergio-

I don't know the financial/budgetary implications of this. From a technical perspective, I do not agree that this is a design responsible issue. The fastener testing conducted in building 4 at DV and PV show that the design is robust. I do agree however to lead writing the PAC paper and follow up actions since this issue does not fit well in any of our traditional responsibility bins.

We are almost done….

Now, we need to talk about the cost of this stop shipment, at this point we have used over time for the screening, expedite parts from supplier, and hubs replacement (around 1000 vehicles will need hub replacement, when parts availability allow us to start)

HSAP team conclusion is that the stud is the root cause, so far 200 vehicles with the new stud have pass the workstation with zero defects.

We want to know if you concur with the cost associated with this SS,
If so, please let me know who is your financial support from Dearborn.

Ps: Total cost will be estimated this week

Please advise.

Thanks Mickey. From what I have heard so far, the new stud will be color coated green to avoid the mix-up. I am going up to NTN for the U502 Ph. 3 run, I will verify the new change during the same. Please let me know if you want me to look at anything specific while I am up the there. Thanks.

Sincerely,

Taran Dhaliwal

Hi Sandy! Here's the story on the stud breakage issue at HSAP!

Long story short, it appears that there was a miscommunication within PD when the part was resourced from the supplier in Japan (PC 10.9 stud) to Cold Heading (PC 9.8 stud).

Cold Heading is a pretty good house (I dealt with them when I was in PD), but since PD is rushing to get this change in, in probably wouldn't hurt to make sure they've got things covered and we don't get sloppy.

My biggest worry is that 9.8 and 10.9 studs will get mixed at either Cold Heading or NTN, and we wind up with hub/bearing ass'ys with a combination of the two.

Subject: Stop Shipment 2654 - Hermosillo Stamping and Assembly Plant (HSAP) - Rear Wheel Hub & Bearing Assembly - 08/27/2010

Vehicle Issue Description: Hermosillo Stamping and Assembly Plant has identified vehicles with damaged rear wheel

studs on 4 x 2 units.

Supplier/Location: NTN Bearing Corporation of America (N006F), Elgin, Illinois

Root Cause: TBD - rear wheel studs are being damaged during wheel nut torque installation. Rear wheel studs were resourced in February 2010 and are Property Class 9.8 (*Note: front wheel studs and rear wheel studs on 4x4 units are Property Class 10.9*)

Containment: In addition to torque control, wheel nut rotation (angle) criteria has been established to ensure proper joint tension and control.

Lead Organization: Ford PD

Next Steps:

- Rear wheel torque/angle traces for vehicles being held at HSAP are being reviewed to determine which vehicles can be released, and which require rear wheel stud replacement.
- Rear wheel stud supplier (Cold Heading) and NTN are working to accelerate implementation of Property Class 10.9 rear studs in rear wheel hub & bearing assemblies

Follow Up Flag: Follow up
Flag Status: Red

Guys -

As I understand this issue - both stop ships are impacted by the Brembo issue - from a PAC standpoint we've moved 2654 to untracked and are authoring only one paper to close this out. The paper is being lead by STA and we have a discussion scheduled today with OGC at 12:30 - you are more than welcome to call in to that 15 min. discussion if you'd like - just pull it off my calendar.

Please either bin this stop ship to sta or other as there will not be a specific PAC paper written for this issue.

Also, there is no way to figure out who made the change to FRO in the database - as I have updated the database with the untracked information and it shows my name as the last person to update it (at least that was the status yesterday).

This is clear from a PAC standpoint but we need to make sure from a Stop Ship reporting standpoint it's cleared up as well. Thank you.

BRYCE, HAD THIS CAR TOWED IN ON SATURDAY. ONLY HAS 3,000 MILES ON IT AND OBVIOUSLY BECAUSE OF MILEAGE HAS NOT NEEDED TO TAKE IT ANYWHERE FOR SERVICE. STUDS BROKE OFF CLEAN AND TIRE FELL OFF. WHEN YOU LOOK AT THE WHEEL THERE IS VIRTUALLY NO DAMEAGE LIKE SOMETHING LOSENED UP. CHIC PIERMAN IS HERE FOR SERVICE AND SAID THAT THEY DID HAVE AN ISSUE WITH A FOCUS LINE THEN SAID HE COULD NOT REMEMBER WHETHER IT WAS FOCUS OR FUSION.....I THINK THIS IS A WARRANTY ISSUE. WHAT DO YOU THINK?

Michael,

These are the answers to questions sent yesrterday:

Does your plant hand start or prestart the wheel lugs or fasteners?
We at HSAP have hand prestart, we put it handly helped by neumatic tool.

What type of sockets are used on the wheel multiple secure?
Lug Nut Assembly socket has nylon coating

How much line spacing do you have for prestarting fasteners?
About 2.5 Mts between prestart process and multiple.

Best Regards

Fernán Soto

Subject: Verfy Process - Wheel Multiple

FSE's,
Please verify your process.

Does your plant hand start or prestart the wheel lugs or fasteners?

What type of sockets are used on the wheel multiple secure?

How much line spacing do you have for prestarting fasteners?

Please answer these 3 questions by COB Friday 7/16.

Subject: Video and Pictures of broken stud.

Follow Up Flag: Follow up

Flag Status: Red

Attachments: 5 broken studs.ppt

Guys, I am attaching a couple of videos and a sequence of pictures of the car with 5 broken studs, the studs WERE NOT broken but they were elongated when the technician was trying to put the tire back and at the moment when he was tighten the stud nuts, he felt that the stud was yielding, he started to apply torque to the next one and he felt it again and so on until he did it in the five studs.

I will explain the whole thing in our meeting.

Thanks.

Hello All,

Thanks for your continuing support on this topic.

I was asking Chris about the Fusion rotor concern earlier today, and I understand that the requested parts have been retrieved from some vehicles, and not from others. These parts are important to our investigation, so any help you can provide (gathering or inspecting the parts) will be appreciated… I will schedule a telecon to discuss each vin: what was learned if the parts were retrieved, or what needs to be done to get the parts.

Thanks again
Joe W

Joe-

This is the initial list we sent him (shotgun approach). I believe two or three VIN's came off when we verified we already had the parts.

Chris I can't start the contact process at this time because we have issues with rear rotors service parts stock, the part are in backorder and is important have parts in hand before contact customer.

We are working with PS&L to solve this issue as soon as possible, as today information the promises date to fill the system is first week of February.

However at this time we are working with two FSE in two units, they all ready were instructed to replace the rear rotors, identify the parts and send us the rotors as soon as possible, also we are trying to provide rotors to avoid have the units in the dealers for long time (Vins AR424212 and AR417567).

Subject: Wheel Stud Fractures - CLS 101913

Chris,
I looked at the wheel stud fractures that you previously submitted on 101839 today.
Each of the fractures is by bending fatigue, with multiple origins in the thread root. On studs 2 - 5, the fatigue is >90% of the cross section. On #1, the fatigue is less, probably ~75%. This one also has more of a reverse bending look as well. I will not be in tomorrow, but if you want to look at the photos, Lindsay can show them to you. - Lindsay, they are in paxit.

brembo 50 YEARS 1961-2011

Ciao Bob,

I had Homer measure the parts on the CMM for WMF flatness, Hub Flatness and MF thickness (3 locations); listed below is a summary of the results:

Left Rear Disc

Wheel Mounting Face Flatness = 0.447mm *(Ford Measurement 0.349mm)*
Hub mounting Surface Flatness = 0.044mm
Mounting Flange Thickness

1. **Measured at Outer Diameter = 6.383mm**
2. **Measured at Bolt Circle Diameter = 6.448mm**
3. **Measured at Inner Diameter = 6.715mm**

Right Rear Disc

Wheel Mounting Face Flatness = 0.418mm *(Ford Measurement 0.396mm)*
Hub mounting Surface Flatness = 0.015mm
Mounting Flange Thickness

1. **Measured at Outer Diameter = 6.352mm**
2. **Measured at Bolt Circle Diameter = 6.436mm**
3. **Measured at Inner Diameter = 6.694mm**

I will confirm the manufacturing date code when the parts are returned to me on Wednesday 2/9/2011. Please contact me if you have any questions.

Regards,

Chris

Gentlemen,

Here are the rotor plots from the Ford lab. The LR rotor is number 3. It has a wheel mounting face flatness of 0.354 mm.

Bothe right and left rotors were made on day 163..

Subject: RE: Stop Shipment #2654 - HSAP - Rear Wheel Hub Stud - 08/28/10

Follow Up Flag: Follow up
Flag Status: Red

Vehicle Issue Description: Rear Wheel Hub Stud Damaged

Supplier / Location: NTN BEARING CORP AMERICA (N006F) / (Elgin, IL, US)

Root Cause: TBD

Containment: Team was able to establish a torque to angle range/threshold, therefore the team can segregate good vehicles by using the DC Runner data base to resume shipment of the vehicles. Suspect vehicles less than 1%.

Lead Organization: Ford PD

Next Steps: A robustness action on the stud will be implemented during September 7th (increase to 10.9 stud property)

STA Contact: Patrice White, 313-8058510

On-Site STA: Ron Chen, 313-8052355

Buyer Contact: Raymond Jurecki, 313-5947355

Vehicles impacted: CD3 FWD only

Current Vehicles Held: 5,200

Days Open: 2

Projected Release Date: TBD

Next meeting on 08/29/10 9:00 am HSAP time

Bharat/Chris, according to QLS, that vehicle pass the workstation ok, you can see row # 136, tuerca de rin (wheel lug nut) pass fine

There are no inline repairs.

Subject: 2010 Fusion Wheel Studs

Hi Bharat, here is the report I told you about in my phone call. I sent this to Chris Allard and spoke to him.

He contacted the dealer and they are holding the customers car. He wants the parts back. I don't know if you are
working these throught the PVT or what.

Rick

Attachments: A08 35 RET.xls

Acordé con Welio Collado, Juan Solórzano y Gerardo Durand volver a revisar elongación de pernos en 35 unidades aprobadas de la campaña GF8.
Las unidades se enviarán al edificio LSB y los VINes están en la lista adjunta.

Juan Solórzano,
Por favor avísanos que resultados se obtienen.

Sergio Bejarano, Ford Motor Co., PD Mexico, Chassis Modules Engineer, Tel 52-662-259-8386, FordNet 456-8386, Mobile 52-1-6621831427
