Dear Mr [REDACTED]

This will further acknowledge contact to Chrysler Motors Corporation, regarding your 2003 Jeep Liberty.

Naturally, we were sorry to learn of the incident described to us during the initial contact. However, we have had the opportunity to review the inspection report and must inform you that we are not led to believe that the incident was due to a manufacturing responsibility. Therefore, we must respectfully decline any assistance associated with this incident.

Based on this information, we can only suggest that you refer this matter to your insurance carrier. Should they feel a manufacturing responsibility exists, they have full subrogation rights under the terms of your policy.

Thank you for allowing us the opportunity in reviewing this matter with you.

Sincerely,

J. S. Susalla

1. DRIVER'S DESCRIPTION OF EVENT: **Weather conditions were dry and clear [REDACTED] was driving by himself on Linebaugh Ave. in Tampa, FL at approximately 35 MPH. The airbag warning light came on and about two seconds later the driver airbag deployed. He alleges that there was no collision with another vehicle or any other object so the airbag should not have deployed. He was wearing his seatbelt and suffered cuts and bruises on both hands and arms.**

### PART B - EXTERIOR/INTERIOR VEHICLE DAMAGE

---

- REQUIRED PHOTOGRAPHS:** >Inspection of the vehicle revealed that no evidence of collision damage was found anywhere on or under the vehicle. >The driver airbag had deployed and was rolled up and placed back into the cavity of the steering wheel hub. It was examined and no witness marks were found on the material. No stains were observed on the steering wheel or anywhere else on the interior. The driver seatbelt pretensioner had deployed in the buckled position. >The center console has been disassembled and the airbag module disconnected by dealership personnel. >The driver suffered cuts and bruises on both hands and arms. He was treated at Town and Country Hospital in Tampa, FL.

**PART J - ADDITIONAL COMMENTS (DO NOT DRAW ANY CONCLUSIONS)**

>The airbag module was reconnected to the vehicle, however, DRB readings could not be taken in the Passive Restraint System. While the DRB would communicate with the vehicle it would not communicate with the airbag module. DRB message received was "UNABLE TO ID MODULE FOR ORC". The inspection plate was removed from the airbag module and the circuit board inspected. It was found shorted and blackened in an area approximately .50 inch in diameter. >The passenger seatbelt was inspected by jerking the shoulder belt, which locked up every time it was pulled. The driver seatbelt pretensioner had deployed in the buckled position and would not retract. Both front seatbelts were buckled and found to fasten securely.
