Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	Dealer Information	Root Cause	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Gear Build Date	ECU Build Date	EPP Build Date	Eng. Type	Date of Repair	Motor Build Date	Date	Part ETA
UR0021	U3000-49 U3000-96	BAA,BAB,B9B,BAD	EPP	in eval Melexis	8/15- Geoff to review Melexis 8D and check for further information to finalize. Poly shorted to substrate from random gate oxide defectivity from the wafer fab. Continuous inprovements plans in 2010 has decreased the defectivity throughout the year, no specific date listed	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level3 5/24- Faults raised each cycle. R227 discarded as a root cause. Vsw circuitry working fine.PCB software found that Bridge enable line is disabled periodically. Ship to UK for further testing 6/29- found faulty Aux. ASIC in the ECU, Anting to contact Melexis so UK and ship out for analysis. 7/4- Aux ASIC arrived in Melexis		Aux ASIC	03073 Mullinax Ford	3735	1FMHK8B88BG[redacted]	1/18/2011	1/7/2011	10/30/2010		3.5L wo/APA	4/28/2011			
UR0025	U3000-49	B25	EPP	In eval 26 Mile	9/12- tri-temp ignition cycling at 26mile NTF	5/26- pulled stored & EFF data shipped to MAO for further testing 6/10- this is not a shorted FET issue according to the EFF data. Cannot duplicate the issue at this time. 7/18- Sergio to send Geoff PFR for next steps.			20609 Orange Motor Co	8	1FMHK7D89BG[redacted]	3/29/2011	2/28/2011	1/4/2011	1/8/2011	3.5L wo/APA	4/21/2011			
UR0030 RUA#4878	C200D-49	B9A	EPP	In eval UK	8/8- teardown and inspection of PCB had NTF, next step is to check the flux density of the permanet magnet in the motor. 8/15- UK motors grp did full teardown and did not find any flux density fault. Will put on hold until the other warranty returns are examined and tested.shipping other parts out to suppliers for testing	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle 6/23-B9A -- FNR at ambient. Fault raised at 43 Celsius. To be shipped to UK 6/24- Sergio to send PFR to		NTF	05559 Villa Ford	7839	1FMHK8F82BG[redacted]	1/19/2011	1/3/2011	9/26/2010	10/15/2010	3.5L w/APA	5/13/2011	9/17/2010		
UR0032 RUA #4978	U3000-49	BFF,BFC,B1C	EPP	In Eval UK	7/20- ship ECU back to Shirley attention Mike Molloy for further NVM analysis. 8/1- check with Mike on updates 8/8-part has arrived to the UK.	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/11- Sergio to get testing instructions from Geoff on this return.			07590 Van Bortel Ford	3003	1FMHK8F85BG[redacted]	3/4/2011	2/28/2011	12/5/2010	12/8/2010	3.5L w/APA	6/9/2011			
UR0035 RUA# 4979	U2011-49 U3000-49 U3000-96	B7D,BB8	EPP	In Eval UK	8/8- part has not arrived yet in the UK for further testing check with Anting for update	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/25-MAO reproduced B23- found a a low impedance between pin96 and pin97 on main micro IC3. It seems a problem on the soldering.		Main Micro IC3 pin 96	04161 Eddie Yaklin Ford	4625	1FMHK7D8XBG[redacted]	12/8/2010	12/6/2010	10/1/2010	10/21/2010	3.5L wo/APA	5/31/2011			
UR0040	U3000-49	BAE,BAB,BAD	EPP	In eval 26mile	8/10- MAO to hold onto EPP until UK is done testing the three gears with similar codes. 9/12- 26mile done tri-temp testing was able to get to reset once. Benched tested was able to get to fail possible aux. ASIC testing still ongoing.	8/1- raise RUA and ship to UK for further analysis. faults not replicating even when in hot testing. Fault not replicating in lab after hot test over ASIC and IC17. During analysis part failing with BA4 , B3A rep B7E. Power module swapped with a reference on.			08811 Sentry Ford	2050	1FMHK8D83BG[redacted]	2/14/2011	2/7/2011	12/13/2010	12/19/2010	3.5L wo/APA	6/16/2011			

UR0042	C200C-2F	BD3	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1-passed EOL & bench testing 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		NTF	01273 Fred Beans Ford	4301	1FMHK8D84 BG[redacted]	3/14/2011	3/7/2011	1/20/2011	1/29/2011	3.5L wo/APA	6/20/2011			
UR0043 RUA #4981	U3000-49	BAE,BAB,BAD,BAA	EPP	In Eval UK	8/8- UK received the part today for further testing. 8/22- comfirmed IC17, get reply from Anting and ship to Maxium. 11/7- IC17 damaged removing device from the PCB cannot be tested.	8/1- raise RUA and ship to UK for further analysis.AA I sense working fine and Isense IC17 output incorrect. Signal coming from AA is OK but IC17 output is not good. IC17 temperature sensitive. did not swap Component Same failure mode as CR0030 in which after swapping Pin 5 is found broken.		IC17	05319 Rusty Eck Ford	5191	1FMHK8F84 BG[redacted]	2/22/2011	2/17/2011	12/11/2010	12/16/2010	3.5L w/APA	6/27/2011			
UR0045	C200D-49	B9A	EPP	In Eval UK	8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders are re-synchronised, ran overnight with ign permanently on NFF, test repeated with ign. cycling for two hrs, NFF. 10/7- cannot locate EPP for any further testing	8/1- hot and ambient testing done NTF. cold testing next step 8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders		NTF	05928 Premier Ford	1695	1FMHK7D8X BG[redacted]	3/28/2011	3/23/2011	1/24/2010	1/29/2010	3.5L wo/APA	7/1/2011	12/27/2010		
UR0046	C200B-62	BD4	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1- NTF on bench testing, or EOL testing. 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		NTF	04927 J.C. Lewis Ford	1410	1FMHK7F87 BG[redacted]	5/10/2011	5/1/2011	3/24/2011	3/26/2011	3.5L wo/APA	6/16/2011			
UR0047	C200D-49	B9A	EPP	In Eval 26mile	8/22- are finding issues with seperation between the hall effects and encoder, more testing needed to define cause. 11/3- motor PCB at Allegro Simon Malsbury overlooking the analysis. 11/18- cannot locate ribbon cable to check for conformal coat or misalignment	8/2- pulled stored & EFF data shipped to 26 mile for further information. 8/12- Chris bench tested with NTF with start the tri-temp testing to see if B9A resets 8/15- now able to duplicate the B9A will send Geoff the information on the scope and test set-up.		NTF	06700 Majic City Ford	3447	1FMHK8F87 BG[redacted]	3/29/2011	3/24/2011	10/26/2010	2/13/2011	3.5L w/APA	7/14/2011	12/28/2010		
UR0048	C200D-49	B9A	EPP	In eval 26mile	9/12- performed tri-temp ignition cycling and could not reproduce code NTF 9/21-been uploaded with SW and gone through various test on the dynamometer, the unit has not failed at this time, more testing ongoing. 12/2- found conformal coat in motor relay ribbon cable connector	8/2- pulled stored & EFF data shipped to MAO for further information 8/31- Not reproducable Cold		conformal coat	08211 Robinson Brothers Ford	3163	1FMHK7D84 BG[redacted]	4/5/2011	3/30/2011	12/25/2010	12/26/2010	3.5L wo/APA	6/23/2011	12/4/2010		

UR0050 RUA# 5048	U3000-49	B6C	EPP	In Eval Freescale	10/26- found micro failure in analysis with Freescale 12/14- RAM failure comfirmed by Freescale, failed ATE fault , have 8D to close off claim. Randon via defectivity	8/2- pulled stored & EFF data shipped to MAO for further information. Tech used heat to remove bolt and melted the bushing materail and black is covering EPP		main micro	03334 Charles Gabus Ford	4666	1FMHK8F85BG[redacted]	5/2/2011	4/19/2011	2/17/2011	2/24/2011	3.5L w/APA	7/11/2011			
UR0051	U3000-49	B25	EPP	In eval MAO	9/12- ambient testing complete with NTF, next step cold testing. 10/26- cold testing complete with NTF, next step to ship to 26 mile for tri-temp testing.	8/2- pulled stored & EFF data shipped to MAO for further information 8/29-Ambient testing did not duplicate. Will Cold test next 8/31-Cold testing raised BAA, BAB intermittent. Raised twice and did not repeat.			04921 Bozard Ford	2124	1FMHK7D89BG[redacted]	2/25/2011	2/21/2011	1/4/2011	1/7/2011	3.5L wo/APA	6/23/2011			
UR0054	No Com	No codes		at WPAC will ship out to MAO for analysis	9/12- gear not at MAO at this time I will check WPAC tomorrow. 10/26- still cannot locate the gear will check WPAC	8/19- tech was not able to get the tc lamp on or get the vehicle to act up but states he could not communicate with the PSCM using his IDS. Unknow if this was an IDS issue because there would be lamps on and no steering if he was not able to commincate with the PSCM. I had no trouble pulling data when gear arrived.			03776 Legacy Ford	16	1FMHK8B82BG[redacted]	5/22/2011	5/18/2011	4/7/2011	4/8/2011	3.5L wo/APA	6/29/2011

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Issue	Status Open/Closed	current status
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	Open	2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date.
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	Open	2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.
FR-0377	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	Open	1/19- has signature's of a regulator issue need to scope regulator to check for double start-up
FR-0390	C200B-2F	BD0,BD2, BD4	TS	In Eval (QAO)	Open	1/14- pulled EFF & stored data shipped to QAO for analysis. No damage to TS harness
FR-0411	C200C-2F C200B-62	BD1,BD3, BD4	TS	In Eval (QAO)	Open	4/6- Pepe to put pressure on input shaft in different directions while appling torque to the sensor to see if a code will trip from a bent finger.
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0431	C200B-2F U3000-49 U3000-96	BD0,BD2, B31	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0435	C200C-2F	BD1,BD4	TS	in process (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector

Case Number	Ford DTCs	Symptom	Component	Issue	status	Engine
FR-0014	C200B-C200C-2F U3000-96		TS	TS harness damage	Closed	2.5L Hybrid
FR-0018	C200B-62 U3000-96	BD0-BD4	TS	8D Complete (Hella)	Pending	
FR-0020	U200B-2F U200C-2F	BD0-BD3	TS	TS solder joint	Closed	
FR-0031	C200B-62 U3000-96	BD4	TS	Bent TS finger	Closed	
FR-0036	U2011-61 U3000-96	B95	TS	TS ASIC	Closed	
FR-0042	U3000-96	BD3	TS	TS harness damage	Closed	2.5L Hybrid
FR-0043	C200C-2F U3000-96	BD3	TS	TS burrs leadframe	Closed	
FR-0045	C200B-61 U3000-96	B90	TS	TS burrs leadframe	Closed	

DR-0046	C200C-2F U3000-96	BD3	TS	overwound clockspring	pending	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.
UR0003	C200B-2F C200B-62	BD2,BD4	TS	At WPAC	Open	4/6- need to discuss next week the poke yokes designed at station 50 to check for bent veins/fingers on the torgue sensor. Andrew Bradley will join in the discussion to assist Marion to find a reasonable PCA. QAO will also be involved with the discussions.

Attachments: U502 Paynter 04 11.xls

Matt my manager does keep a paynter chart in this format for CD3, U502 & we will do the same for C346 the only difference is they are not tracked by each VIN in this chart. Let me know if you like this chart and I can start sending this out when you need it.

We are still waiting on Europe to send their C1 pareto charts over so we can see what format they use.

Eric

Subject: Updated B9A Warranty Return Ribbon Cable Analysis

Laura here is the updated warranty analysis on most of the ribbon cable inspections. (see attachment)

I show 42 conformal coats and 16 misalignments from all the warranty returns at this time.

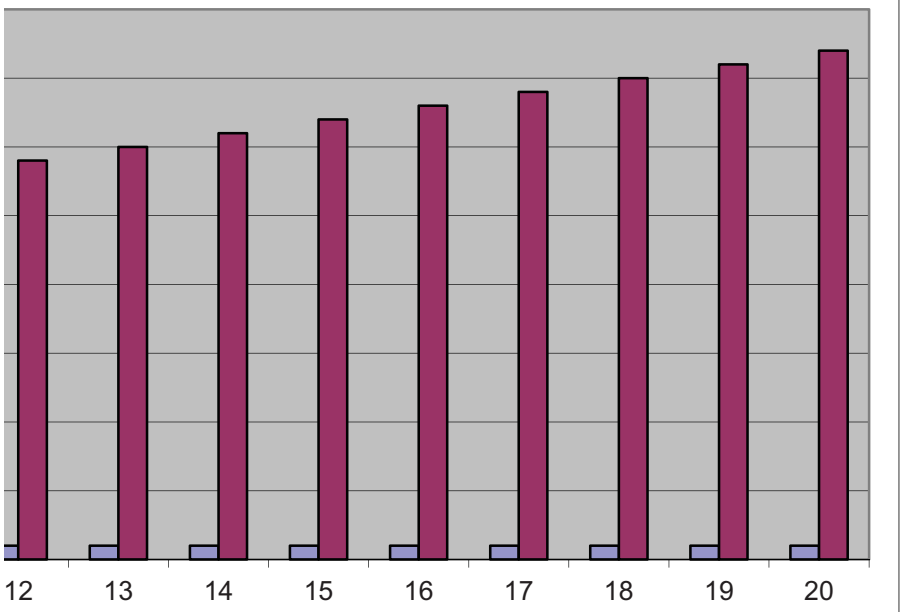
o



Actions taken	PCA date	PCA @ QAO	PCA @ Ford	Recurrence
- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. - Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	
- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	

- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	
- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	
- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	
- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	
- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	

- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	
- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	
- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	
- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	
- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		

- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010

REDACTED FOR RELEVANCE

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Issue	Status Open/Closed	current status
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	Open	2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date.
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	Open	2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.
FR-0377	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	Open	1/19- has signature's of a regulator issue need to scope regulator to check for double start-up
FR-0390	C200B-2F	BD0,BD2, BD4	TS	In Eval (QAO)	Open	1/14- pulled EFF & stored data shipped to QAO for analysis. No damage to TS harness
FR-0411	C200C-2F C200B-62	BD1,BD3, BD4	TS	In Eval (QAO)	Open	4/6- Pepe to put pressure on input shaft in different directions while appling torque to the sensor to see if a code will trip from a bent finger.
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0431	C200B-2F U3000-49 U3000-96	BD0,BD2, B31	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0435	C200C-2F	BD1,BD4	TS	in process (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector

Case Number	Ford DTCs	Symptom	Component	Issue	status	Engine

To: Estes, Eric (E.E.)
Subject: Warranty tracker

Eric,

Can you send me the latest warranty tracker? Jan 26 is the latest I have.

Regards,

Laura Napoli

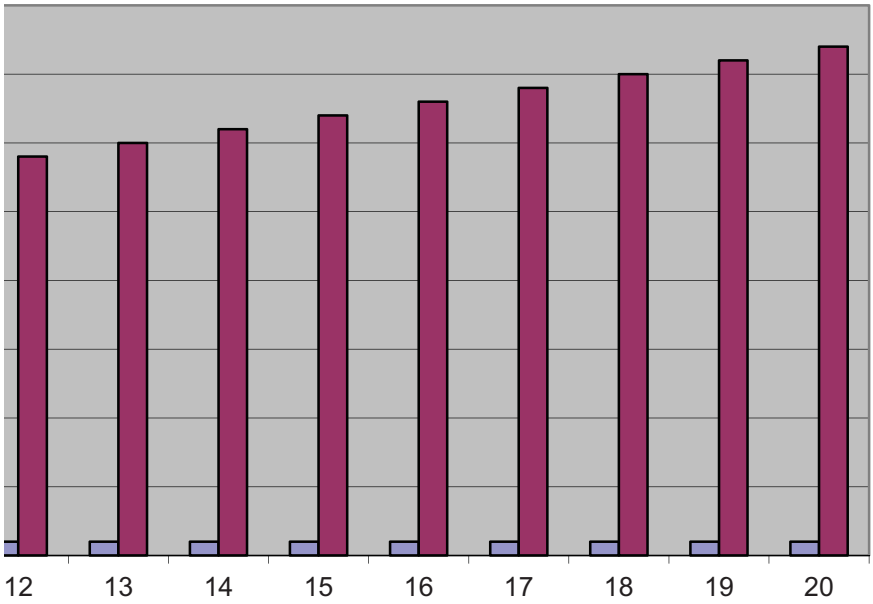
o



Actions taken	PCA date	PCA @ QAO	PCA @ Ford	Recurrence
- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. - Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	
- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	

- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	
- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	
- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	
- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	
- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	

- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	
- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	
- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	
- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	
- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		

- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010

Geographical Look at Warranty Returns

Conclusion: All of returns in northern states were repaired in Aug and Sept so there appears to be a trend for hot ambient conditions.

To: Levergood, Rich (R.); Nutt, David (D.L.)
Subject: RE: C200D (B9A EPAS Claims

Attachments: U502 [redacted] B9A Warranty Tracker 10-12.xls

Here are the 48 U502 claims and 19 [redacted] claims we are specifically interested in. There may be more in the warranty system with C200D since these are only the list of gears we've gotten back.

U502 [redacted] B9A Warranty Tracker ...

Subject: RE: C200D (B9A EPAS Claims

Laura, Can you send me an excel file with all the VINs you'd like this run on. I looked at the attached files and I'm not sure which ones to include.

Subject: FW: C200D (B9A EPAS Claims

When you guys break up the U502 claims for B9A, can you break each of the 48 claims out by the following…?

- Engine (3.5L or 2.0L)
- Driveline (AWD or FWD)
- Trim Level (Base, XLT, or Limited)
- Media (My Ford Touch?)

Thanks!

Subject: C200D (B9A EPAS Claims

Rich, Srini,

Sandy told me you guys were helping me out by running some data on warranty gears with the C200D Ford DTC (=B9A TRW Fault Code). Thanks for all your help on this! To help in your search, I have a spreadsheet that TRW continually

updates for each program for all returned gears. It does not include warranty claims on gears we did not get back. We don't get gears back from Canada or Fleet Sales, and it takes time for each gear to get back to us. So recent claims won't be on our list.

So here are the lists for U502 and [redacted] for all gear returns. It has VINs, build dates, and repair dates. You can sort for B9A to capture those specific claims. Let me know if you have any questions.

Slide 7&9:

What is timing for brake pad slots?

What is issue with bent brake tube?

What is issue with steering gear replacements?

Thanks

Hari / Matt,

Can you guys help? You guys have pulled it before. European guys have their complete and I need to get ours in the deck for an upcoming B. fowler meeting. I've attached the U502 but I need all the product.

Thanks,

Salim

Salim, I didn't run this file last time and when I tried, I and Mickey had trouble. Have you contacted Harri to assist again like last time?

Thanks,

Jonathan

Subject: Re: FW: ConcernList_T210R.xlsb

Jonathan,

This is not the file I'm looking for. Please see attached for U502 that PD got me. I need complete list with actions / status. The attached file. There files just like the attached for each program. Harri helped me with the complete files last year but we need an update list for an upcoming pretty (high level) Ford meeting.

Many Thanks,

Salim

>>> "Harris, Jonathan (J.E.)" <jharr176@ford.com> 2/8/2012 10:16 AM >>>
Salim,

Here is the summary that is in the system. You should be aware of all of these.

Thanks,

Jonathan Harris

Attachments: U502 V87, H22, H21 Warranty Claims, 113011.xlsx

Matt,

See attached. There were an additional 8 C200D's since the Oct 25th data load charts under H22 and H21 claims. I am still working on N58. I have gone through the claims and see 1 additional C200D. So to answer your question, there have been 9 total additional C200D claims over the previous month.

Tom,
It's been a month since you've sent these. Can you get a new run from Albert Hsu (all time in service) and update the pie charts with the latest? You or Albert should be able to highlight any new claims since your last analysis by sorting on warranty load date. We're trying to see if B9A for U502 is increasing, decreasing or staying the same so please let me know on this by using C200D in the verbatim like you did before. Hopefully it's not too much work to just update what you had from before. Thanks.

Matt,

See attached U502 charts. Let me know if this helps.

Thanks,

Tom Flanagan

Laura/Rob,
Mark and I are trying to get TRW in line with what is being done on B-car, Nexteer programs, and HPAS programs in terms of providing a pareto and a paynter chart. I also want to make sure they're consistent globally on . We found that Tim was doing a lot of the work himself on that TRW was apparently doing separately and not sharing.

Eric,
Mark and I think this will work well. The only thing missing is the pareto set up to show number of claims per root cause but this is easy to do with the data presented in this file. Can you send us the and files so we can see them? Can these files be cut by model year?

is similar to this and is already consistent globally. Please let us know what Europe is doing. The request from this end would be to do it the same as you have presented here. needs to be consistent globally so we can compare Europe and NA. Thanks.

Subject: FW: U502 Paynter 04 11.xls

Matt my manager does keep a paynter chart in this format for [redacted], U502 & we will do the same for [redacted] the only difference is they are not tracked by each VIN in this chart. Let me know if you like this chart and I can start sending this out when you need it.

We are still waiting on Europe to send their [redacted] pareto charts over so we can see what format they use.

Eric

Laura/Rob,
Mark and I are trying to get TRW in line with what is being done on [redacted], Nexteer programs, and HPAS programs in terms of providing a pareto and a paynter chart. I also want to make sure they're consistent globally on [redacted]. We found that Tim was doing a lot of the work himself on [redacted] that TRW was apparently doing separately and not sharing.

I202814	Housing's slot over spec	TRW	Sensus							1						1	- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
I241503	Cricket noise	TRW	Rogersville					84								84	- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
J034027	Containment bolt on bushing	TRW	QAO									1				1	- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	

I240225	Noisy gear due to input shat loose on IPA	TRW	Rogersville												0	- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
No QR	Lost of Asistance. Part recirculated that didn't passed through testing stations	TRW	QAO									1				1	- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		
J240232	Belt sliding while teeth are not well formed	TRW	Gates										1			1	- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
J200776-C	Damaged ribbon cable / Tear down	TRW	QAO										1			1	- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
J240482	Bent finger on IPA	TRW	QAO											1		1	- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010		
No QR	ECU R227 open circuit. C17 damaged or missing	TRW	Anting												1	1	TBD				
J240339, J240482	Lost of assistance. TBD	TRW	TBD										2	2	3	7	TBD				

Chicago QR's / If Number-C it means that rejections stayed at QC

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Issue	Status Open/Closed	current status
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	Open	2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date.
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	Open	2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.
FR-0377	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	Open	1/19- has signature's of a regulator issue need to scope regulator to check for double start-up
FR-0390	C200B-2F	BD0,BD2, BD4	TS	In Eval (QAO)	Open	1/14- pulled EFF & stored data shipped to QAO for analysis. No damage to TS harness
FR-0411	C200C-2F C200B-62	BD1,BD3, BD4	TS	In Eval (QAO)	Open	4/6- Pepe to put pressure on input shaft in different directions while appling torque to the sensor to see if a code will trip from a bent finger.
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0431	C200B-2F U3000-49 U3000-96	BD0,BD2, B31	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness

Case Number	Ford DTCs	Symptom	Component	Issue	status	Engine
FR-0014	C200B-C200C-2F U3000-96		TS	TS harness damage	Closed	2.5L Hybrid

Case Number	Ford DTCs	TRW Code (Sympto	Compone nt	Gear Location	Current Updates	Issue Status	Gear location	Report State	Verbatim	Assigned To	Root Cause	P&A Code/ Dealer Name/ Dealer State	Miles
0KM BR188663	U3000-61	B97	EPP	In Eval (Anting)	**12/13- waiting on Raymond Qiu to send out 8D. Preliminary report states it was a bushing from the conveyer, now trying to figure out how that got into the EPP.**	11/11- once gear arrives to QAO ship to UK for analysis. 11/29- bushing found in EPP discussions with Anting, shipped to Anting for Analysis.							
0KM BR190049 RUA# 4235	U3000-49 U2011-61 U3000-96	B25, B95	EPP	In Eval (Fairchild)	**1/31- compare other B25 failure with this return.**	11/5- also has a battery voltage code event U3003-68 HSAP will send gear back to QAO for analysis. 11/11- change the Power Module and see if the replaced Module is being damaged by another condition at ECU. 11/29- PM failure ship to Anting then send to Fairchild for analysis. EOS on the PM 12/10- shipped the ECU to the UK for analysis.							
0KM BR195438 RUA# 4234	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**1/10- IC11 Aux ASIC failure sent to Melexis and confirmed an ASIC failure analysis ongoing. 2/7- EOS in ASIC happened when PM failed.**	**11/23- PM damaged short circuit 12/10- shipped ECU to UK for analysis.**							
0KM BR206427		BB8, B7D	EPP	In Eval (QAO)	**1/14- Pepe will check the PM connections to see if that is causing the B6B's & B32's after PM replacement. Geoff will check the information**	**12/21- Analysis results showed another PM damaged (TOP FET2). replaced PM and ECU is giving now B32. Geoff to look over results. 1/14- Pepe will check the PM connections to see if that is causing the B6B's & B32's after PM replacement. Geoff will check the information**							
0KM BR218836 RUA# 4297	U3000-49 U3000-96	B25	EPP	In Eval (UK)	**1/31- shipped to UK for further testing will use this PM return to compare against the other B25 0KM PM failure 2/7- arrived in the UK today, will start testing.**	**1/5- set B25 three times then set C69, to ship to QAO for analysis 1/17- Short circuit confirmed at PM. This time Both FETS from phase 2 were found under this condition.**							

0KM BR243453 RUA# 4402		B25		In Eval (UK)	**2/11- shipped EPP to UK for analysis, no testing done at this time.**	**2/11- shipped EPP to UK for analysis, no testing done at this time.**							
0KM BR244911 RUA#4401	U3000-49 U3000-97	B25	EPP	in process (UK)	**2/28- PM fitted on the ECU assembly testing just started at this time.**	**2/1- EPP shipped to UK for analysis**							
0KM BR247974 RUA# 4403	U3000-49 U3000-98	B25	EPP	in Eval (UK)	**3/8- QAO has incorporated in the PUMA test a car battery in parallel with the power supply for low current supply at start-up same as Marion.**	**2/1- EPP shipped to UK for analysis** **2/11- arrived in UK no testing done to this EPP assembly**							
0KM BR310758	reject at prerolls no codes		EPP	In Eval (QAO)	**6/20- Anting performing testing and cannot duplicate the fault, testing ongoing.**	**5/5- Unit remains in power-up status everytime the ignition is turned on.** **IC3 micro Voltage observed by IoHwAb.Scaled BatteryVoltage variable read from PSCM system is 0.14V** **5/17- ship ECU back to Anting for analysis**							
0KM BR332227	C200B-62	BD4	TS	In process (Hella)	**6/7- Pepe confirmed IPA, to ship assembly to Hella for further testing.**	**6/2 -gear arrived at QAO late afternoon, will check status 6/3. QAO started 200% inspection on May 12th.** **6/6- IPA removed from the gear and confirmed not a bent finger, channel one issue. Need more help from Don Blandino & Jim Loria on the channel one signal and next steps. Ship to Hella for further analysis?**							
0KM BR342036	U2011-49	B3A	EPP	in process QAO	**6/9- relay arrived at QAO late afternoon, testing indicates motor relay. To raise RUA and overnight to Tyco for relay workshop.**								

FR-0184	U3000-49	BC5	EPP	In Eval (UK)	**4/6- Pepe found EPP assembly will ship to Geoff for more testing**	**1/31- ECU just arrived in the UK Andy will start testing. 3/21- Geoff looking for EPP assembly to be sent to the UK.**						04570 Bluebonnet Motors	13170
FR-0205	No Com	No Com	EPP	In Eval (QAO)	**5/9- need to put EPP back through temp cycling to see if they can get the no com to fail again. QAO did see a shorted issue with C15 because had 0 volts between input and ign. But once pin 2 was lifted & soldered back on the IC14 the ECU has been working properly with no problems.**	**5/6- could not communicate with test box no visual issues with 2 or 3-pin connector terminals shipped to QAO for testing 6/14- passed leak test, ambient ign. Cycling with no faults. Bully ambient & cold with performace testing. 6/15- gear bully tested with no faults. Cold testing next. 10/11- next steps to tri-temp EPP assembly 10/15- right before installing into tri-temp chamber was no able to communicate with ECU. Next to check regulator output**			NO COMMUNICATION TO MODULE VERIFIED CONCERN PARKING LOT ROAD TEST DIAGNOSE EPAS SYSTEM NO COMMUNICATION TO POWER STEERING CONTROL MODULE PERFORMED PINPOINT TEST D. REPLACED POWER STEERING CONTROL MODULE. This is the only warranty claim listed at this time. vehicle returned a week after sale			04024 Bob Hurley Ford	195
FR-0234	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	**5/9- still need to put the regulator on for further testing to confirm this was not an ECU or motor clearance issue.**	**5/28- pulled EFF data, shipped gear to QAO for testing. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 7/7- passed all QAO B9A testing, bully,hot puma, ign cycling cannot reproduce code. Shipped gear to UK for further testing 8/3- Voltage regulator damaged during cooling down exercise, need to find out what the next step is. 9/9- with damaged regulator cannot find out if this is a regulator issue. To perform**						09357 Jersey City Ford	25321
FR-0235	P07AE-09	AF1	NVH	In Eval (26mile)	**2/4- Jose performed the housing measurements and gauging. Need to go over final results and report out.**	**5/28- pulled EFF buffer data, shipped gear to QAO. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 8/2- Unit is FNR and it has been disassembled. No unusual condition found. Next step will be to send the Pinion Housing and Rack and Ball nut to Metrology laboratory in order to discard any bent condition at those components**			C S STEERING HARD TO TURN IDS RETRIVE 2 DTC C200B AND P07AE FIND OPEN AT SJB FUSE #42 FIND HARNESS 14290 RUBBING UNDER FRONT OF VEHICLE REPAIR WIRE AND REROUTE WIRE GREEN CIRCUIT #CBP42 REPAIR WIRE AND RE ROUTE WIRE CLEAR CODES RETEST FIND STEERING STILL HARD WITH 1 DTC P07AE FOLLOW PP TEST TO F4 ANSWER YES THAT DTC PO7AE IS STILL PRESENT ORDER EPAS STEERING GEAR REPL STEERING GEAR,TECH 3			10288 Valley Stream L/M	19157
FR-0239	P07AE-09	AF1	NVH	In Eval (26mile)	**2/4- Jose performed the housing measurements and gauging. Need to go over final results and report out.**	**6/14- Pulled EFF fault data, shipped gear to 26mile. 6/16- Friction gear is in the lab to be leak tested and measure yoke set. 6/21- pinion housing bend, need to perform teardown & lay-out to determine if rack is bent also. 6/28- Jason to check 32 Mile to get FR0239 laid out. I have to find the CMM holding fixture and a print, and get the parts up there. Working on the print and fixture now**						11068 Findlay L/M	21233
FR-0241	U3000-49 U2011-49	B43, BB9	EPP	In Eval (QAO)	**1/31- tri-temp ign. Cycling is the next steps to reproduce any codes**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started 11/8- ambient ign cycling cannot reproduce. Next to cold ign. Cycle**						01237 Kindle Ford	2604

FR-0242	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**11/8- ambient ign cycling cannot reproduce. Next to cold ign. cycle**	**6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started 11/8- ambient ign cycling cannot reproduce. Next to cold ign. Cycle**					10302 Crest Ford	885
FR-0244	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- tri-temp testing done, performance with not trouble found. To perform the high pot testing then strip back plastic to check for PCB motor clearance issue.**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started**					09675 Borgman Ford	9087
FR-0259	U3000-49	B60	EPP	In Eval (FSL)	**11/12- target test date was pushed back to 12/15 for the first test. 1/10- test delayed till 12/26, validation testing still on the production line, waiting on details of clean product. 3/24- ship 8D to Ford 6/30/2010 is the continous improvement for particles SACVD clean receipe & 11/5/2010 ADC channels to converter test at freescale.**	**6/30- Intermittent B60 code resets in message center. pulled EFF data and ship to QAO 7/7- QAO to ship EPP to UK for analysis. 7/28- Micro ADC fault, need to remove micro put on development board for further testing before sending to FSL. 7/30- Micro still intact on the ECU, now tri-temp testing with ignition cycling to get see if failure will occur 8/2- able to duplicate code, indicating micro**					04984 Key Scales Ford	7
FR-0265	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	**5/29- was pulling B93 & B9A continue testing**	**6/30- OBH screws removed, cannot leak test. Pulled EFF data and shipped to QAO**					02975 North Bros. Ford	21788
FR-0282	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- NFF after passing all the tri-temp ign. Cycling next step to high pot testing then check for PCB motor clearance issue**	**7/16- pulled EFF data shipped to QAO for analysis**					04865 Desoto Ford	5659
FR-0299	C200D-49	B9A	EPP	In Eval (QAO)	**10/18- tri-temp testing passed no faults found.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**					20659 Breakey Motors	17922
FR-0308	steering noisey	No Codes	NVH	In Eval (INA)	**10/25- Pavel to write the QCCARS to ship out to INA**	**9/13- can hear ballnut noise while turning input shaft, did not notice any damage & no stored codes. 9/27- Test results out of specification. Frequency amplitude at 600Hz is around 1.9 en CCW.With this condition on 600hz band RBNA swapped with a good known referente RBNA.Noise testing passed after RBNA swaping with no issues to report. Checking RBNA performance it is being detected too much looseness at Ballnut**					04587 Helfman Ford	2187

FR-0317	P07AE-09	AF1	NVH	In Eval (INA)	**1/3- parts sent to Germany for inspection, Chris Brown will request results on the analysis.**	**9/27- pulled EFF & stored data, shipped gear to QAO for analysis. 10/15- missing large clamp on boot, no grease on ITR and missing soft stop. ITR**			REPLACED LEFT SIDE HALFSHAFT, SEAL & BUSHING. RETEST,			07313 Washington Ford	24340
FR-0319*	rubbing noise in frt. End	No Codes	NVH	In Eval (INA)	**2/4- Ballnut loose and making noise, ship to INA for final analysis.**	**10/5- slight resistance while turning input shaft, TS harness conduit crushed near EPP. No codes in fault store shipped to QAO for testing. 11/29- failed the NVH test in line for teardown to check the rack & ballnut**						02710 Huntington Ford	4550
FR-0324	No Com	No Com	EPP	In process (UK)	**2/4-IC14 circuit needs more testing ship PFR out, possible C154 issue Sam to ship EPP back to UK for x-ray and analysis.**	**10/5- could not get any data using my CANape at WPAC, re-tried 3 times. The 3-pin & 2-pin clean with no corrosion. No physical damage to gear. Ship to QAO 10/18- leak test passed sent to lab to start analysis. 11/8- Pepe testing resistor & capacitor in the regulator circuit.**						09358 Lawrenceville Ford	3796
FR-0328	U3000-49	B31	EPP	In Eval (QAO)	**2/4- Sam to perform fault insertion testing.**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. No visual damage to gear 10/18- leak test passed sent to lab to start analysis. 11/12- sent email to QAO to send Geoff/Andy the EFF data for next steps. Pepe put EPP through all the tri-temp testing & ign. Cycling NTF. Next to do fault insertion testing.**						04927 J.C. Lewis Ford	1995

DR-0018	U3000-49 U3000-96	BBB	EPP	In Eval (UK)	2/7- Kimball needs to get with KOA find cause of R96 resistor internal failure.	3/17- submit hot process request, dealer borrowed a gear from a vehicle on a lot to get the customer into the vehicle. Called dealer to make sure two repairs were not sent out under 3504. found out there are two repair orders in CQIS for this repair both have 3504 causal repairs and two labor ops. one should be charged back to the dealer. 4/9- shipped gear to QAO 4/21- in QAO leak check ok, has not tested in lab. 5/4- no leaks will start testing next week 5/24- in fridge ready for testing 6/7- passed ambient bully & performance testing cold bully testing nex 6/15- Unit has been ignition cycled over 12 hours. after that fault repeated 2 times and then no more. Unit was warmed and ignition cycles in progress. 7/12- Geoff to send Tim Diez info on BBB fault description., Geoff sent out 7/14. 10/20- BBB set every ign. Cycle now- Geoff thinks this is a micro issue, to ship the ECU to the UK. 11/29- further testing to be done either solder joint or R96 resistor is the cause at this time. 12/16 ECU is back at Kimball and			CAR HAS NO POWER STEERING POWER STEERING FAILURE NOTED 3504 ROAD TEST VERIFIED CK STEERING FAILURE ON DASH NO STEERING ASSIST. IDS TEST SYSTEM CODE U3000 49 48 INTERNAL ELECTRICAL FAILURE PERFORMED PINPOINT TEST CK HOTS AND GROUNDS OK PERFORMED IDS PTS PINPOINT TESTING B 1 CK ALL CONNECTION FOR DAMAGE OR LOOSE OK TEST B 2 TEST DRIVE DIAG REPLACE RACK AND MODULE FAILURE REPLACED RACK CK ALIGNMENT SET TOE ROAD TEST VEHICLE TOWED IN 75 MILES LATER WITH NO START DEAD BATTERY & THEFT LAMP FLASHING HAD TO JUMP START. BATTERY FAILED NEEDED TO REPLACE THE BATTERY, CHARGING SYSTEM OK.		
DR-0025	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/13- passed hot puma and high pot test, ship to UK for further analysis.	6/15- submit hot process request 7/9- pulled EFF data, need to ship to 26mile for testing 8/25- set for xray tomorrow 8/26- x-ray clean, next ignition cycling with the application SW 9/7- tri temp ignition cycle did not reproduce any codes, next to hot puma. 9/13- passed hot puma and high pot test, ship to UK for further analysis.			POWER STEERING INOP STEERING GEAR FAULT LIGHT. DTC U2011-49 U3000-96. PPT. P S RACK FAILURE. REPLACE RACK.		
DR-0027 RUA# 3940	No Com	No Com	EPP	In Eval (UK)	10/15- OnSemi came back and states the diode was overcurrent, suggesting this is a one off failure. 11/1- sent questions back to the manufacture about this diode failure waiting on response UK. 1/10- Kimball looking for continous improvement plan for this defectivity on the diode, will work with OnSemi.	6/22- dealer to call back with hot process information to return gear. 7/28- Pulled EFF data, technician could not communicate using his IDS. I could not communicate using my CANape at WPAC. 8/20- Pepe found defective voltage regulator, need to confirm regulator issue after Geoff checks the data. 8/30- Geoff to look over the final data from QAO to decide if the regulator should be sent direct to Infineon or to the UK for additional testing. 9/1- QAO to send Geoff ECU assembly so they can remove the regulator. 9/6- ECU sent to Geoff tracking # 9373 7350 8684 by Fedex 9/8- arrived in the UK today 9/17- not regulator issue found diode on circuit that is leaky more testing need to check other parts of the circuit. 9/27- diode sent out to supplier from the UK for testing. 10/8- Geoff at Kimball next week to follow-up any diode updates.			CUST STATES POWER STEERING HARD TURN NO COMMUNICATION WITH PSCM,PINPOINT TEST D TO D4,LOAD TEST ALL POWER AND GROUNDS,REPL PSCM RACK AND STEERING ASSEMBLEY,RESET TOE, REPROGRAM PSCM,RD TEST PASSED		

DR-0028	noise turning steering wheel	No codes	NVH	In Eval (INA)	10/25- Pavel to set-up QCCARS to ship to INA	6/28- submit hot process request 7/28- pulled EFF data, no codes, did not notice any abnormal noise while turning input shaft back & forth, ship gear to QAO for analysis. 8/17- gear failed the EDF test but no noise was notice during testing. Waiting on next steps, could put on-vehicle or could teardown gear? 8/23- failed NVH test, did not notice any audible noise while testing. Check with Dan Ulep & Sylvain Nadeau for the next steps before teardown. 8/24-Sylvain- EDF results would suggest RBNA damage; I'd suspect field misuse damage. The bolts that were so tight that had to be tapped to be removed is a red flag for me that work may have been done by an unqualified mechanic. I would suggest sending the RBNA to INA if workshop misuse confirmation is required. 9/8- rack & ballnut ready to be sent to INA, needs Gabreil to write QCCAR. 10/6- Waiting for QCCAR and contact from INA to receive the part. 10/11- Guillermo working with Pavel to find out who will be writing QCCARS now to ship to INA			CONCERN: NOISE IN STEERING TURNING WHEEL BACK AND FORTH DIAGNOSTICS: VISUAL INSPECTION, PINPOINT TEST KC1 ANY KNOWN CONCERNS-NO. USED CHASSIS EARS TO TRY AND ISOLATE. PARTS REPLACED:: NONE TECH QUESTION: WITH THE CHASSIS EARS IT SOUNDS LIKE THE NOISE IS COMING FROM THE RACK AND PINION. THE SHOP MANUAL STATES THAT THE MOTOR DRIVES A BELT, SO I DONT THINK IT COULD BE THAT. I USED A PAIR OF VISE GRIPS AND GRABBED THE LOWER STEERING SHAFT AT THE RACK WHILE ANOTHER TECH ROCKED THE STEERING WHEEL, NO NOISE. I THINK IT COULD BE THE RACK. RECOMMEND YOU DISCONNECT STEERING SHAFT FROM STEERING RACK AND TURN WHEEL. IF NOISE IS NOT PRESENT WITH STEERING SHAFT DISCONNECTED, RECONNECT STEERING SHAFT AND REMOVE OUTER TIE ROD ENDS FROM STEERING KNUCKLES. IF NOISE IS STILL PRESENT WITH OUTER TIE ROD ENDS DISCONNECTED, SUSPECT EPAS STEERING GEAR IS THE CAUSE OF THIS CONCERN. RECOMMEND YOU REPLACE EPAS STEERING GEAR, AND THEN RE-EVALUATE THIS CONCERN. IF NOISE IS COMPARABLE TO A SIMILAR VEHICLE, NO REPAIRS ARE RECOMMENDED		
DR-0029	U3000-61	B97	EPP	In Eval (QAO)	10/6- ambient ignition cycling, NTF at this time.	7/7- Submit hot process request 7/28- pulled EFF data, customer states gear loses assist intermittently backing out of the driveway, dealer could not duplicate the problem but had a stored U3000-61,performed interactive diagnosis code returned on road test.			CHECK INTERACTIVE DIAGNOSTICS CODE CLEARED AND RESET DIAGNOSTICS LEAD TO EPAS GEAR REPLACEMENT		
DR-0033	C200D-49 B9A		EPP	In Eval (QAO)	8/18- gear passed leak test & ambient ignition cycling, next step to cold testing. 11/1- QAO exhausted all testing of this unit, Pepe looking for next step or should it be sent to UK? 11/2- perform wiggle test on the ribbon cable, then PCB motor clearance check.	7/28- pulled EFF data, shipped get to QAO for analysis.					
DR-0038	C200D-49 B9A		EPP	In Eval (QAO)	1/24- could not duplicate the double start-up cooling down the regulator using the scope	9/3- pulled EPP & stored data shipped to QAO for analysis					
DR-0039	U2011-49 U3000-96	BD0-BD3	EPP	In Eval (QAO)	1/24- could not duplicate the double start-up cooling down the regulator using the scope	9/27- interactive diagnosis leads to u2011-49 code then set u3000-96					
DR-0041	steering noisey	No codes No Com	NVH	In Eval (26mile)	11/8- Pepe to ship the parts of the rack back to 26mile for engineering evaluation. Inspected seals at QAO and checked with operators. 1/4- found out PIP seal will go to a dual lip seal design in April 2011 with the Wontae OBH. CD3 changes in Jan 2011 with new Rane OBH. 1/10- measure groove depth on the OBH. Jason to follow up.	10/5- could not turn input shaft, could feel rust squeezing the IBH boot to the rack, was able to pull Ford codes no codes stored then I was not able to communicate with the ECU 10/18- Pepe to check leak test results, pictures taken of rusted ITR & rack. 10/25- leak test passed, advised to reassemble boots and recheck IPA & boots for leaks 10/27 still not confirmed location of ingression, cannot duplicate leak 11/5- gear torn down indications water ingress from the press in seal in the OBH was pinched or not molded properly. Need to send pictures and decide what to do with the parts. No history known of this vehicle being in a flood, but this area the customer was in did have flooding conditions around the Nashville,TN area are May 2010.					
DR-0045	P07AE-09	AF1	NVH	In Eval (QAO)	6/10- Rack and Ballnut damaged (Ball nut clip deformed, no damage to housing or other parts on teardown.	5/13-found input shaft very hard to turn, checked history to see if vehicle was in an accident, none in dealer reports. Shipped gear to QAO for further analysis					

DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.	12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness. 1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions 1/26- TS rework broke containment need to see what happened on the line during rework.8/2/2010 is the proper rework date so this is a post containment gear.					
DR-0047	C200C-2F U3000-96	BD1,BD3	TS	In Eval (QAO)	6/8-Confirmed losing channel 2 in the TS of the IPA. Ship IPA to Hella for further analysis.	5/13- pulled stored and EFF data, no damage to gear or TS harness, shipped to QAO for further analysis 6/8-Confirmed losing channel 2 in the TS of the IPA. Ship IPA to Hella for further analysis.					
DR-0048	C200D-49 B9A		EPP	in process (QAO)	6/6- pulled stored & EFF data, B9A code set erratic 13 & 22 min's into the Journey. possible PCB motor clearance issue.						
DR-0049	U3000-49 U3000-96	B43	EPP	in process (QAO)	6/17- pulled stored and EFF data to ship to QAO for further analysis

0KM AR378362		B92	EPP	In Eval (QAO)	**1/14- cut back the plastic and did not find any PCB motor clearance issue. Check with Geoff if there is any further testing to be done** **1/21- this is a one off return and could not find any issue at this time. Can keep in pending just in case we get another one**	**5/24- hot & ambient, next step is to cold test with ignition cycling and motor movement. Then bully test.** **6/21- ign. Cycling, bully, & puma passed next cold ign. Cycling** **8/20- NTF with all the ign. Cycling & hot puma, advised to finish cold testing to complete test.** **10/4- all testing has been done ign. Cycling with no problem found. Next step tri-temp testing.** **12/6- to use the new tri-temp tester to check for any codes.** **12/10- tri-temp complete with no trouble found. Check with Ford to see if we can start to cutaway red plastic to check pins for PCB motor clearance.** **12/15- Ford agreed to cut back red plastic and check for PCB motor clearance.**		
0KM BR111887		BAA, BAB,BAE, B9B, C69	EPP	In Eval (QAO)	**8/19- HSAP sending gear back to QAO for U3000-96, failed in prerolls station.**	**8/19- HSAP sending gear back to QAO for U3000-96, failed in prerolls station.**		
A Non-warranty return RUA# 4108	U2011-49 U3000-96	B6B	EPP	In Eval (Tyco)	**11/10- relay tore down and contacts shown, next to check SEM of the relay contacts.**	**8/27- shipped out of Rogersville on Friday's truck.** **8/26- xray is clear not shorts or offset. Next to see if code resets. Then can do some other tests before relay is removed for inspection.** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.** **10/8- performed hot puma & high pot test with no faults found.** **10/20- shipped to Tyco for relay & contact analysis.**		
DR-0013	U2011-49 U3000-49 U3000-96	BB8, B23	EPP	In Eval (ATE)	9/2- bond wire not well centered into groove due to improper tool setting. Update bond tool installation by dedicated person & provide installation instructions on 9-3-2010 at Fairchild. Geoff sent 8D email to Ford.	2/16- submit hot process request 2/25- dealer did not use the hot process form to return gear it will come back normal part return process 4/12- pulled EFF buffer data and shipped to QAO 4/20- arrived in QAO, to leak check then start testing in lab. 4/23- Samuel able to reproduce B23 the motor PH FET is not closing, the gate signals are working. To check FET with microscope then will use surrogate FET and retest. 4/26- Geoff looked at PFR and advised Samuel to ship power module to Fairchild 5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out		
FR-0056a	U3000-49 U3000-96	B31	EPP	In Eval (26mile)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/24- this is the service gear the tech installed from fr0056 and had a U3000-96 and had to replace again. analysis done at 26-mile.** **9/29- 26-mile with further testing to check B31 code. Check with Simon on progress.** **9/30- make sure this was a service part, testing ongoing, no problems found at this time** **10/1- xrayed ribbon cable and welds no problems found, still will not reproduce fault. Advised to look at circuit diagram** **10/2- Thiha to check with Geoff on pin layout diagram. Fault insertion testing** **10/15- 26mile manual cycling on the bench to check for faults, has not failed at this time.** **10/23- Geoff to check FTA to help with next step testing for B31's at this stage of the analysis.** **11/2- Internal B31 workshop planned after B9A is resolved by electrical teams.** **11/18 On hold, B9A investigation first**		
FR-0060	U3000-49 U3000-96	B31	EPP	In Eval (QAO)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/8- Submit hot process request form** **9/18- pulled EFF & Buffer Data code B31 set before C69 latched out. Jason to ship gear to QAO for testing.** **9/24- gear arrived in QAO for testing** **9/30- take ECU cover off take pictures of the seal, Simon/Geoff to email next steps to inspect and xray.** **10/2- next steps sent to QAO for additional testing at this time cannot reproduce code or find any fault**		
FR-0066	U3000-49	B31	EPP	In Eval (26mile)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/21- Submit hot process form, Have no information on the EPAS gear replacement, CQIS claim only lists vehicle would not move due to a transmission issue.** **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile** **9/25- gear at 26-mile to ship to QAO** **9/29-estimate gears to QAO late this Thursday** **10/2- cannot reproduce fault code at this time. Next steps from 26-mile** **10/15- ke sure part is x-rayed before Sergio goes back, 26mile manual cycling on the bench to check for faults.** **10/23- Sergio left EPP at 26-mile for testing, x-rayed PFS could not see any faults with ribbon cable & connections. Geoff to get FTA to decide next steps for other B31 testing.** **11/12- PFS at 26-mile waiting on B31 workshop after B9A's are tested**		

FR-0081	U2011-49	B6B	EPP	In Eval (UK)	9/7- passed all tri temp ign. Cycling, next hot puma then high pot testing. 9/13- passed hot puma & high pot testing, ship to the UK	10/27- Submit hot process request form 11/5- Pulled EFF/Buffer fault data at WPAC 11/6- gear dropped off at 26-mile and shipped to Rogersville to QAO 11/9- when gear arrives at QAO do shake test for cold weld, x-ray, Geoff to send instructions to Sergio. 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found, next step xray motor relay. 11/24- Puma testing & resistance testing passed 11/30- xray of motor relay ok & passed hot ignition cycling. Next step testing voltage reading on PCB. Hot ign. Cycling 12/14- next step hot ignition cycling		
FR-0107	No Com	BC2	EPP	In Eval (UK)	9/28- got final report out of Anting & Kimball no areas on the line where contact can be made with R281 using the strain gage test at all stations. I have final report will put in pending to see if we have any more damaged R281 resistors.	12/4- Submit hot process request form 12/10- pulled EFF & Buffer data and shipped gear to 26-mile 12/17- gear should be sent to the UK to check the monitor micro & related circuits. 1/4- gear now in process to QAO should be there 1/6. 1/13- is fault repeatable, cold test the unit. check the reset line and supply line for the monitor micro.Once this is done, then we can decide the best place to continue analysis. 1/19- photograph the part so that we can read the datecode from it. Could be a C154 issue we have seen before. Sergio & Geoff discussing details. 1/20- RUA raised will ship to UK for further level 3 testing. Fault relates to PCB or solder joint issue. 1/28- further PCB testing is indicating a resistor R281 issue. Further testing to confirm. 3/3- R281 resistor has short on end cap will ship to KOA for analysis by next week.		
FR-0109	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	7/16- confirmed this as a double start up added to B9A list for reg./micro issue. Fulfills parameters to close as regulator issue by meeting criteria established for regulators.	12/4- Submit hot process request form 12/21- pulled EFF & Buffer data and ship to QAO 1/13- to leak test and start the standard testing 1/20- could not reproduce the codes, next step to do vibration test on the bully machine. Jose waiting for line to switch back to CD3 to test. 1/25- passed bully testing, next step to discuss with Jim Loria 1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-temp testing can be done. set back to Rog. Att: Andy-truck V08385 SKID# 22 2/22- all four channels tripped codes at -2.9degC EFF data collected. Testing on going in the chamber. 3/1- Visnu to set-up software to measure voltages when gear trips fault code to find area of fault at TS,		
FR-0128	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	9/7- passed all tri temp ign. Cycling, next hot puma then high pot testing. 9/13- passed hot puma & high pot testing.	1/21- pulled EFF & buffer data, ship to QAO 2/2- In QAO today will start leak testing 2/3- EFF data shows PH1 & PH2 at link voltage when it should be Vlink/2. This points to the motor relay. Not able to reproduce the fault, working with the special B6B sw version. 2/5- using B6B software and ignition cycling overnight cannot reproduce any codes. 2/26-still cannot duplicate the code using the B6B software no faults or LIC's. 3/8- send to 26mile for cold testing 3/10-Checking the west building today to put in for cold testing 4/9- gear never sent back to 26mile still at QAO. 6/29- bully test done ambient, ign. Cycling done ambient & hot. Not fault found, to perform iso(1000v) test and then cold testing.		
FR-0164	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/13- passed hot puma and high pot testing shipped to UK for more testing.	3/22- Pulled EFF/Buffer data shipped gear to QAO 4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform 4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform 6/29- relay measurements performed. Iso(1000v) test done. Ambient/cold ignition cycle done. Cold puma done next step hot puma. 8/25- set for xray tomorrow 8/26- x-ray clean, next tri-temp with the application SW		
FR-0181	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling	4/12- pulled EFF buffer data, shipped out to QAO 4/19- arrived at QAO today 5/3- leak tested, now at the lab ready for testing 6/15- Unit leak tested, no leaks to report. Unit was Measured on the Phases terminals before first ignition. No unexpected conditions found. Unit bully tested No faults found.Unit is into the freezer to be cold tested 6/29- RELAY MEASURED. AMBIENT BULLY TEST DONE. TO PERFORM ISOLATION TEST, THEN AMBIENT IGNITION CYCLING 8/25- set for xray tomorrow 8/26- x-ray clean, next tri-temp with the application SW		

FR-0199	U2011-49	B6B	EPP	In Eval (26mile)	7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week	4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis 5/12- gears should arrive in QAO on Wednesday 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray clean, next hot Puma 6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test. Perform 1000v isolation test. Send Ford fishbone chart on B6B 6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.		
FR-0200	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/7- during high pot testing to relay low side unit failed, motor PCB tear down now in process. 10/8- motor PCB teardown at UK NTF	4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis 5/12- gears should arrive in QAO on Wednesday 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray clean, next Hot Puma 6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test & 1000v isolation test. 6/25- now ready for tri-temp ign. Cycling 6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.		
FR-0212	tc lamp on ABS code C1278	A28		At WPAC	5/7- pulled Ford codes & EFF data no codes list only A28 code	5/7- pulled Ford codes & EFF data no codes list only A28 code		
FR-0213	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/7- during high pot testing to relay low side unit failed, motor PCB tear down confirmed motor PCB clearance issue. 10/1- sent to UK stripped down could not find any area for pin contact to PCB. not a PCB clearance issue. More testing.	5/7- pulled EFF buffer data & shipped to QAO 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week		
FR-0214	U2011-49 U3000-96	B3A, B6B	EPP	In Eval (UK)	1/24- tore down relay, NFF. contacts inspected EDX has evidence of weld.	5/7- also has code B6B listed in fault store, had to ship back from Rogersville to 26mile for xray. 5/25- xray clean & passed the resistance test. Check with Geoff on next steps. 6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling 6/10- put into tri-temp chamber with ign. Cycling 6/14- passed 5 days of tri-temp ign. Cycling with no faults. 7/12- solder phases back and recheck with B6B SW in the tri-temp chamber. This B3A also set B6B three times before C69 set in the fault store. 9/7- passed all the testing on the B6B chart, next Ship to UK		
FR-0215	TC lamp on C1278	A28		At WPAC	5/20- pulled EFF & Buffer data, kept gear at WPAC could install on vehicle	5/20- pulled EFF & Buffer data, kept gear at WPAC could install on vehicle		
FR-0218	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling	5/20- pulled EFF & Buffer data, shipped to 26mile for xray 6/2- xray slightly looks like raised rivet, resistance measurement passes, checking with Geoff on next step 6/7- to perform standard tri-temp ignition cycling first then if that passes to get application code to remain in diagnostic mode from Michele. 6/10- took out of tri-temp after 3 days no B level faults at this time. Next to reflash with B6B intro SW. hot puma done? 6/21- in thermo chamber from 6/7-6/9 ign. Cycling with no faults with B6B test SW, hot puma passed. 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week		

FR-0228	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**5/27- pulled EFF buffer data, ship gear to 26mile for analysis. Next to leak test an xray relay. 6/9- xray tomorrow 6/10- xray clean, next hot Puma 7/12- flashed new B6B SW, now ready for tri-temp ign. Cycling 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0237	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**5/28- pulled EFF buffer data, shipped gear to 26mile for leak test and xray. 6/10- xray clean , hot puma next 6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test. 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0261	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/22- going to install on the PU/PD unit for 48hrs.**	**6/30- pulled EFF data and ship to 26mile for xray. 8/26- x-ray clean, next tri-temp with the application SW 9/1- tri-temp testing able to duplicate B6B 15 ign. Cycles in at 90deg. C, both phase 1 & 2 failed. testing ongoing trying to get gear to fail again. 9/13- scoping the 3 phases on relay low side cannot duplicate code. passed hot puma & high pot testing, ship to UK for testing**		
FR-0264	U3000-49 U3000-96	B60	EPP	In Eval (UK)	**2/7- UK possible stressing diode fitting to board. Part recovered during analysis at Vishay. Cannot prove what the cause was. One off with this diode issue, like to put in pending just in case another similar issue comes up.**	**6/30- Also has codes BA4 & B7A, B60 stored in EFF data, shipped to QAO for analysis. 7/7- QAO to ship EPP to UK for analysis. 7/28- hardware issue on PCB, testing still ongoing to isolate the area. 8/2- something pulling phase 1 low, need to check several components to find drain or short. 8/4- found out this is not an ASIC issue further testing needs to be done to pinpoint the circuit problem on phase one 9/8- diode failed in the circuit, sent back to the supplier for analysis. 9/20-To send back to the diode manufacture. 10/6- UK still testing diode, next to xray before sending diode to manufacture. 10/27 Diode has been sent Vishay. X-ray was clear. 12/6- manufacture confirmed diode issue but when they decapsulated the diode the fault went away. Now**		
FR-0271	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/13- passed hot puma and high pot testing shipped to UK for more testing.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/26- x-ray clean, next tri-temp with the application SW 9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**		
FR-0273	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/26- x-ray clean, next tri-temp with the application SW**		

FR-0278	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then xray relay. Then perform high pot test on the motor relay low side.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **9/1- performing ignition cycling at this time still needs to be xrayed.**		
FR-0284	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/22- 24hr ign. Temp cycling to see if offset bridge shows up.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.** **9/13- passed hot puma & high pot testing, ship to UK**		
FR-0288	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/26- x-ray clean, next tri-temp with the application SW**		
FR-0290	U2011-49	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/26- x-ray clean, next tri-temp with the application SW**		
FR-0304	C200B-2F C200B-61	BD2, BD4	TS	In Eval (Farmington)	**3/7- all resources to test has been exhausted at this time with NTF. Will keep in pending and check for other TS returns with similar faults**	**9/2- pulled EFF & stored data and shipped to QAO for analysis. Intermittent PS loses assist.** **9/22- passed leak test, started to bench test wiggle test harness could not duplicate code. Start ambient ignition cycling** **9/27-ambient ignition cycled over 12hrs still cannot produce any codes.** **10/4- still at gear level to put into tri-temp chamber and recheck for codes.** **10/6- next step to tri-temp test at QAO** **removed IPA cover no visual issues internally or on the TS PCB. Next to do wiggle testing during bench testing.** **10/12- next step to performance test hot.** **11/17- use higher temps for tri-temp at 120 deg C instead of 90 deg C. for profile also discuss turning the TS 2 turns CW & CCW while testing** **12/3-Awaiting next steps before disassy**		

FR-0307	TC lamp on C1277	No Codes		At WPAC	**9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).**	**9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).**		
FR-0309	TC lamp on C1278	E1E		At WPAC	**9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on C1278.**	9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on.		
FR-0314 RUA# 4149	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis. 9/29- received gear today and passed leak test ready for xray. 10/8- xray clear not fault found, follow standard test procedure. 10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop 11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**		
FR-0316	TC lamp on C1278	No Codes		At WPAC	**9/27- pull EFF & stored data no codes stored, checking CQIS & AWS for any history information.**			
FR-0327	C200C-2F U3000-96	BD1, BD3	TS	In Eval (Farmington)	**3/7- all resources to test has been exhausted at this time with NTF. Will keep in pending and check for other TS returns with similar faults**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. No damage to TS harness 10/18- leak test passed sent to lab to start analysis. 11/8- ign cycled need to check with Sam on other testing performed on this gear. 11/15- all the ignition cycling & tri-temp testing has been performed with no trouble found. Bench testing with wiggle testing no trouble found. 11/17- found metallic burr on one of the rotor teeth, advised to ship IPA assembly direct to Hella for analysis. Pepe to contact Angie for information & QCCAR data. 11/18- hella received TS will start function testing 12/1- rotor burr did not cause the codes, Hella function tested sensor assembly with no trouble found. Need to discuss further testing. 12/8- Hella to check PCB below the burr make sure no contact has been made to the board. Measure**		
FR-0331	U3000-49 U3000-96	BA4,BA5,BC2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld. Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were**	**10/18- pulled EFF & stored data shipped to QAO. Found couple small dents in ECU cover & 2-pin plastic housing broken. 2/3- confirmed C154 issue, need to ship Kemit in the US for analysis. 2/5- capacitor arrived at Kemet in US 2/14- confirmed cold weld issue at US facility**		

FR-0356	U3000-49	BA4,BA5,BC2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld. Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis 2/3- confirmed C154 issue, need to ship Kemit in the US for analysis. 2/5- capacitor arrived at Kemet in US 2/14- confirmed cold weld issue at US facility**		
FR-0365	C200B-2F C200C-2F C200B-61	BD2, BD3,B90	TS	In Eval (26mile)	**3/7- Ford agreed due to the vehicle issues listed in the customer & vehicle comments to move to pending and if resources allow later and more testing needed to install on vehicle.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. TS harness conduit pinched near EPP but no wire damage. 1/25- did TRI TEMP and ignition cycling and Hot testing as well and no faults observed. turn input shaft stop to stop while testing NTF. Next step to put on bully tester 5 times with NTF. 2/3-Jim Loria/Don Blandino thinks this vehicle had other vehicle problems that caused the TS codes. 2/11- Sam to put gear through bully testing 5X, if that passes to remove the IPA & ECU cover and visual inspect for poor wiring connections or moisture. If that is Ok to ship back to 26mile for further testing. 2/22- gear arrived at 26mile for testing. 3/4- performed bench testing at 26mile with NTF, advised to put the IPA cover & ECU covers back on and see if we can find a hybrid for on-vehicle testing. Will discuss with Ford engineering.**

0KM BGA22399	U3000-61	B91		In Eval (UK)	2/25- EPP has been tested on the PU/PD rig with ignition cycling and tri-temp testing with NTF	1/27- vehicle passed all static & dynamic tests but lost assist on the final road test. Gear could be pulled and sent to 26mile for analysis. Cannot duplicate the concern in the vehicle at this time. 1/28- Mike Fontana will go to CAP record all in vehicle data and try to duplicate the code, if not will remove gear take back to 26mile for further analysis. 2/2- performed electrical endurance, code check, spring stand test at various voltages and vehicle test we can't reproduce this fault, checking with Geoff on next steps		
0KM BR247653	rattle under dash		TS	In Eval (Rogersville)	**2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.**	**1/31- plant found movement in the input shaft. QAO will ship to Rogersville for analysis. Possible missing bushing in the IPA assembly.**		
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	**2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date. 5/10- have modification on line 2 for a vision system at station 50 to elimination the visual inspection will need to get timing when that will be implemeted on line 2.**	**11/29- found one bent finger on the rotor, impact mark on top of the finger. QAO investigating cause. 12/6- QAO still looking for causes but also looking for new ways of testing for bend finger after station handling at the grenade pin removal station. 12/15- looking to install laser that detects bent fingers on the rotor, and should be installed in the granade pin detection fixture. We still need to continue analyzing, meanwhile, Third party sorting at Rogerville & 100% sorting for this condition in QAO. 1/5- unsure if laser system can be done at grande pin detection station, still discussing and checking othe options. Sorting still continuing at Rogersville & QAO. Couple of the bent rotors found in sorting sent bac to Rogersville look for any witness marks on the rotors. 1/10- plan for containment at Rogersville: > 100% visual check for bent rotors added to operator's control sheet**		
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	**4/6- just have confirmation that the new target date for the new camera's on line 2 & 3 is 6/7/2011.**	**11/29- movement of the input shaft causing the rattle noise QAO removed IPA and shipped, arrived in Rogersville today for analysis. 12/1- found no pin stamp on the shaft indicating this failed the deflection test bench still trying to understand how this made it into the gear. Machine logic to recognize bushing & input shaft will change today. Looking at installing a timer to install delay & tell the difference between the input shaft and bushing installation. should have 8D finished by COB Friday. 12/6- Jonathon Harris from Ford at Rogersville to inspect the operation & mistake proofing operation to be set-up on the line & handling issue for failed parts. They will use a green dot to identify a pin stamp on input shaft at EOL. 1/5- implement a camera system on the Prodel line to insure part will have a pin stamp, get quote & timing at the end of the week.**		
0KM BR753424		BAA,BAB, B9B, BAC,BB8	EPP	In Eval (UK)	**2/7- exhausted all testing cannot duplicate the code, like to close off as NTF. Can submit all the testing results that has been done.**	**9/14-bully tested 5 times, ignition cycling cannot reproduce the codes, ECU cover removed and R227 inspected did notice any damage no measurements taken. Cover reinstalled and ignition cycling ongoing. 9/20- next step 1) Run the attached configuration while drawing some current. 2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes. 9/24- instructions to test from Geoff We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as follows: 1) a) Measure the 2.5V Ref with CANape (I sent you a configuration for doing this which included 'ADC.Pseudobuffer[12] to [15]'**

FR-0001	U3000-49 U3000-96	BA4	EPP	Monitor Micro	**9/14- dates approved by Bill in TRW/Ford warranty meeting to close out**	**4/20** EPP tested at Shirley lgn. cycled cooling to -20C can duplicate code. **5/8** sent to FSL mult. testing of monitor micro unable to duplicate failure. **5/21** micro sent back to Shirley to replicate failure for FSL **5/25** Shirley able to replicate the fault trying to isolate it with a standalone micro test for FSL **6/1** confirm with FSL testing does indicate a micro failure & using micro standalone test stand agree to the proper testing procedures to find micro flash root cause. **6/4**- FSL engineering to witness micro code using the modified standalone test and agree to go forward with there micro testing. **6/5** - Part returned to FSL for further anlaysis, FSL confirmed their agreement that failure is wihtin their device.. **6/12** - FSL continue to characterise the failure at room and extremes of temperature. TRW escalated FSL performance in FSL and now we have improved design support. **6/15** - Micro testing action plan sent to FSL, testing complete on 6/18 **6/22** - Proven not a flash fault standard ATE. Reviewed clears shows an issue in the core miro bits of mathmatics. Mico test for containment. Will need to Identify which process is effective as containemt. Freescale is working on **6/30** - Summary the containment at Freescale will be July 30, 2009 **7/6**- Summary the containment at Freescale will be July 30, 2009 Containment at Kimball about 1 week later, Nee **7/7** - Kimball has QCCAR and will monitor Freescale. Report as closed with 7/30 containment **7/8** - Theo to revise 8D (latest date was June 11) **7/13** -Paul will have 8d updated for Tuesday 7/14 **7/14** - 8D sent to Theo Brockmann at Shalka for review will send to Ford 7/15. **7/15** - Theo send 8D to Eric and Martha to be sent to customer. **7/20** - Jeff Jacks to get information to Ford on latest timelime of action items from Freescal and to also provide inf **7/21** - Jeff to have to get the timing information from Freescale on dates of Containment. Also will need D3 firmed **7/27** - Augest 11th target for start of testing parts. Clean point to Kimball estamated Augest 18, 2009. **7/28** - 8D submitted to Paul for update 8d for customer	4/15 WPAC parts review 4/20 EPP in UK for further testing 5/8 micro sent to FSL 5/21micro sent back to Shirley 6/5- sent back to FSL acknowledge testing failure 6/15 - Freescale in Malaysia now testing after initial evaluation in Germany	8D in process - 346199
FR-0002	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**7/21 -** 8D updated need Ford Closure	**5/27** gear taken to Washington checked resistance reading of relay at room temp and passed before shipping out to UK **6/1** Shirley found erratic high resistance resistance reading on phase 3 contact pair. x-ray shows evidence of raised baseplate contact #5. **6/4** send out relay to Tyco to confirm causal issue with relay contacts **6/12** still awaiting failure analysis response from Tyco, will chase 6/15. **6/15** - Tyco in Portugal **6/19** - Confirm raised rivet raise but not confirment if it is the fault. **6/24** - Built week 29 **6/30** - Confirmation on raised rivit **7/2** - Tyco are still working on the failure analysis as the device is marginal on their tests and pass the 4-point terminal to contact test. During Tyco visual inspection they identified a possible substance on suspect contact and sent the part for EDX/SEM analysis. The analysis shows the suspect anomaly to not be an issue Cross-cut currently being performed - Next update expected Monday 6nd July **7/6-** X-ray equipment and personnel in Mexico today **7/7** - 1) Tyco confirmed raised rivet with cross-cut 2) X-ray will not be allowed to go to QAO. Parts to be sent to	5/27 parts review part taken to Washington to ship out to the UK 6/1 in UK for testing 6/4- relay sent to Tyco 6/15 - Tyco in Portugal	8D in process - 346200
FR-0003	U3000-49 U3000-96	B32	**EPP**	Rev. Cap	**9/17- Kevin agreed to sign off the electrical testing. Kimball will start this new tesing this Monday morning Sept. 21st. Approx clean date to QAO 12/7 & HSAP 12/11. Martha update 8D dates and send to Bill Bouse.**	**5/20** - Testing at 26-mile to duplicate B32 code. **5/21-22** no contamination found removing lid. unable to duplicate code at room temp. further heat cycling at this time found current leakage more pronounced with the PFS isolated at 85Deg. C. **5/27**- EPP shipped out to the UK for further testing. **5/28**- EPP arrived at Shirley late. **6/1**-Testing confirmed issue with PFS. **6/4**- Testing set-up to identify faulty component **6/10** - Electrolyte found under ribbon cable connector on the ECU. Capacitor sent to Epcos for analysis. **6/15**- Supplier confirm that the device was not subjected to over voltage. Electrolytes leaking from capacitor. **6/16** - Ongoing. Testing on going at Epcos **6/22** - Capacitor is installed backward in circuit board. Kimball has 8D report to be distributed to team and QAO. vision system effectiveness was verified (17.06) - informing operators about issue and perform robust operators' retraining on each production shift (target 18.06) - implement additional 100% visual inspection on heatsink assembly and packing stations (target 18.06) - quarantine and visual inspection of finished products on Kimball stock – no C2 polarization failures were found s **7/2** - 8D copied with sent to QAO **7/6** updated and sent from Kimball with latest dates. Need to finalize 8d for closure	5/20 WPAC parts review 5/20 EPP in Washington for testing. 5/27 EPP shipped to UK 5/28 EPP arrived at UK 6/10- Capacitor sent to Epcos	8D in process - 346201

FR-0004	C1B00-62 C200D-49 U3000-96	B9A	EPP	Ribbon Cable Connector	**9/21- change in Anting 46-47 that would see the change in HSAP week 2 2010.**	**6/8** - pulled code B9A caused C69 lockout code. B93 set once in between B9A faults set. Torque sensor swapped no change with B9A setting, must turn input shaft slightly to set code **6/12** - Intermittent Open Circuit seen on Hall inputs to ECU at the Ribbon cable connector. X-ray shows a potential anomalie **6/15** - Discussions started with Schalke on next steps. Intermittent connection of ribbon cable **6/18** - Part Shipped to Tyco **6/22** - Presentation provided to Group will need to be distrubited. Found issue in connector installation. Currently TRW installed a rework procedure and working on a solution for proper installation of connector. **6/23** - Confirmation Anting performing updated procedure **7/6-** Schalke working with Anting and PE/ME to inverstigate potential process tool or design change. Mtg 7/9 **7/7-** Schalke/Anting have asked ATS to design a guide tool for pressing in connetor. ATS will have a draft proposal 7/9 **7/9** Presentation received. Need to evaluate and implement if acceptable. **7/10** - Have ideas for guide tool from ATS. Will review again next Wed. Would like to discuss possibility for design change if tool does not work. Will discuss next week with engineering. **7/13** - Seen presentations on the improvement in the possible process. Long term goal is to have an engineering **7/14** - Will forward latest 8D to Ford 7/15. **7/15** - Sent to Ford	6/8 WPAC No Parts Review 6/8 taken to Washington for analysis 6/9 sent to UK 6/18 sent at Tyco	8D in process - 346202
FR-0005	U2011-49	B3A	EPP	loose screw	**7/10 -** Recommending that we contact STA to review and close 8d	**6/12-** gear in process to Washington **6/15-** tear down gear and check U.K for next relay test steps. **6/16 -** Epp will be sent to Europe for Analysis **6/22** - Waiting for anaylsis **7/2** - 8D sent to B. Bouse on update **7/6** - Verfied carryover actions from Scalke to Anting with photographs of assy line controls. Need to finalize 8d for closure. **7/9** - Need to arrange a mtg with Ford STA (Jonathon Harris) to review and close 8D. **7/10** - Recommending that we contact STA to review and close 8d	5/25 ordered gear for customer on back order 6/4 dealer received gear waiting for dealer to send back 6/9 part sent out will be here for tomorrow 6/11 part arrived at WPAC 6/12- gear at Wasington to pull Level 1 codes & testing 6/17- EPP ship to Europe	8D in process
FR0006	U2011-49	B3A	**EPP**	Raised Rivet	**9/10- confirmed two raised rivets in the relay after xray**	6/3 tech performed parking lot road test, hiway road test and restarted after cold start and B3A code did not reset at this time. 6/5 Called dealer back they road tested the vehicle for two days with no codes returned to customer yesterday. Vehicle fixed at this time. 8/26- customer returned with same code replaced the EPAS gear 8/31- submit hot process form to ship part back to WPAC 9/2- pulled level 1 data second time back for same code. Code did clear and did not reset on return. Need to get EPP xrayed in Livonia 9/10- confirmed two raised rivets in the relay after xray	1814	
FR-0007	U2011-49 U3000-96	B3A	EPP	**Raised Rivet**	Same Case updates as FR002	**6/12** - confirmed B3A pulling data on-vehicle. Waiting on dealer to swap in new part **6/15** - Will pick-up part today and deliver gear to Washington. Part not ready **6/16** - Eric to Pick -up Part to send to Washington. 26 mile to perform anayslsis **6/17-** Pin 1 & 2 at 50m ohms but pin 3 and any pin has 8k ohms resistance. **6/18** - Confirm raised rivet raise. Part shipped to Tyco **6/23** - Tyco Request QCCAR, QAO Providing documentation to Tyco. Tyco received part and undergoing anaylsis **6/26** - QCCAR written **6/29** - Tyco Reported Raised Rivit as Root cause. **7/2** - Tyco confirm Raised contact as per TRW analysis Device fails Tyco EOLT. Cross cut confirms bad contact riveting **7/6-** X-ray equipment and personnel in Mexico today **7/7** - X-ray will not be allowed to go to QAO. Parts to be sent to Laredo for X-ray from QAO **7/9** - Loose Rivet same as FR002 **7/10** - X-ray machine not working in Laredo so containment only being done with woodpecker test. Simon and Mark to review parts flagged as raised rivet to validate the screening process to use parts in pipeline. If we can prove those found during woodpecker have the condition, may be able to stop x-ray	6/9- dealer ordered gear on back order. Waiting on FSE to meet TRW at dealer so TRW can pull data and exchange warranty service gear. 6/12 dropped replacement gear at dealer waiting for tech to replace. Will pick-up and deliver to Washington 6/16 dropped gear off at Washington late afternoon 6/18 - Sent to TYCO for anyalsis. Tracking number:918881479187	8D in process

FR-0008	U2011-61 C200D-49 U3000-49 U3000-96	B95	EPP	Aux ASIC	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**	**6/16 -** Dealer waiting on backorder gear **7/6 -** Dealer still waiting on backorder- stock unit **7/13** - Need Dealership verbatium **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention. **7/27** - Start Level 2 anaylsis PFR Started. Talked to UK will start additional testing on FR008. Clear codes and power up and test the repability. **7/29** - UK and 26 Mile software working on the diagnostics of the compents for testing the fault. When faults were	**6/15**- dealer waiting on backorder service gear **8/20** - Part to be shipped to UK for further anaylsis.	
FR-0010	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**8/6-** Closed confirmed raised rivet issue.	**6/10 -** waiting on service gear **6/23 -** 700 tag issued after gear replaced and sending the gear back normal part return, no hot process return. should see the gear week of 7/13 **7/13** - Need Dealership verbatium	**7/20 -** Part at Ford **7/22** - Part at 26 Mile Washington **7/24** - Part shipped to	
FR-0011	U3000-96	B25	EPP	Rev. Cap	**9/2- same as case FR-0003**	**6/17**- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/6** - dealer waiting on backorder **7/13** - Need Dealership verbatium **8/3** - WPAC possibly sent gear to Indy with other hydralic steering gears on accident. Email sent to locate gear. **8/10**- gear was found and will be sent back this week to WPAC 8/27- dropped gear off at 26-mile 8/31- need more information from UK. Remove power filter stage check capacitor. 9/2- pulled power filter stage enough to find rev. capacitor. To get serial number to check vision system test.	**6/17**- dealer ordered part	
FR-0012	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	**6/17**- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/3** - service gear sent out to dealer **7/13** - Need Dealership verbatium **7/30**-Called and resent hot process form **8/7**- gear being sent normal parts return process, gear shipped 2 weeks ago 8/27- Mike Taylor disasemble EPP and bring to Livonia for X-Ray	**6/17**- dealer ordered part	
FR-0013	U3000-61	B97	EPP	loose screw	**8/6-** 8D sent out pending closure. (rework part)	**6/18-** dealer ordered gear for resetting code **7/3** - service gear sent out to dealer **7/29** - Part Arrival at Ford. **7/30 -** Sounds like screw under ECU. Will take apart today in 26mi to verify if rework or not. Simon/Paul to verify. Just verified as prior to containment date. Part was reworked verified screw location covered under the 8D containment for screw assembly. Martha provoided 8D numbers SPC09FO013 and RFW2009F01 8/6- 8D sent out pending closure	**6/18**- dealer ordered gear	
FR-0014	C200B- C200C-2F U3000-96		TS	TS harness damage (HSAP)	**7/14 -** Discussion with Ford can be closed out a non TRW issue.	**6/22-** tech found cut torque sensor harness, tried to repair wires but U3000-96 would not clear. **7/10** - Wire harness damage is in same location as the Hermosillo issue. Discuss action with Bouse **7/13** - Need Discussion With Ford to remove off list **7/14** - Discussion with Ford can be closed out a non TRW issue.

Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.	**6/24** - confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/3** - service gear sent out to dealer **7/20** - Part at Ford undergoing Level 1 Anaylsis. Please note this vehicle was involved in a traing exceise. ETA to Washington 7/21. Dealer training vehicle. **7/21** - Sent buffer data to team. Will transport to Washington. Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.	**7/20 -** Part at Ford	
FR-0016	U3000-49 U3000-96	BAD	EPP	FET(TRU6) Epoxy splash	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**	**6/30**- dealer waiting on backorder-customer vehicles **7/15**- dealer received gear this morning. Need Dealer Verbatium **7/20** - Part at Ford undergoing Level 1 Anaylsis. ETA to Washington 7/21 **7/21** - Sent buffer data to team. Will transport to Washington. Need PFR **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Geoff Jacks and T. Than working on testing parmaters for gear anaylsis. **7/24** - Currently code is repetable still working with UK on anaylsis. **7/27** - TRW 26 mile working with UK on anaylsis for diagnostics. Level 2 Anaylsis **7/30** - Need to take EPP lid off to verify cause. Need to verify the outputs and inputs to the ASIC compair good vs. bad. Also, evaluate solder joints and mico.	**7/20 -** Part at Ford **7/22** - Part at 26 Mile Washington 8/20 - Part to be shipped to UK for further anaylsis.	
FR-0017	U3000-49 U3000-96	B32	EPP	In Eval (Schalke)	**8/6- sent Salim information and history on this return because he will visit Schalke. He will check the 2-pin for possible area of water intrusion because 2-pin had some corrosion noted**	7/1 - Dealer received part **7/7**- hot process submitted **8/6**- gear returned to WPAC, data pulled **8/10**- take gear this Tuesday to 26-mile for testing **8/11**- gear still at WPAC, will transport to 26-mile once other gears are Xrayed in Livonia **8/12**- gear taken to 26-mile for testing 8/27- broken ribbon cable between coil on relay, either between track & relay or track and connector. 9/2- open track, white residue on track, need to remove PFS out to get to the PCB. Will send out pictures today. Will do pressure test today.		
FR-0018	C200B-62 U3000-96	BD0-BD4	TS	In Eval (Hella)	**3/9- Ecu terminals & IDE connector is clean from any strands or debris.**	6/4 - Dealer waiting on back order- customer vehicles **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/21**- Part received at Ford performed buffer data. Washington waiting for Part arrival **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Code has not reproduced Sensor enginnering evaluated part no issue performed visuale inspection on the top of solder with microscope seen no issues (Can't see back side unless destry part not at that level of anaylsis). Currently on still on root cause anaylsis will set up gear and test for Hot and Cold chamber cycling to reporduce failure.	**Hella**	
FR-0019	N/A	N/A	NVH	**RBN Ball**	**8/6-** Rob K will talk with Bill about 8D closure	7/27 - Currently part on heat test at 26 Mile no issues reported **7/6** - service gear sent to dealer today **7/9** - Gear is in transit to WPAC **7/13** - Gear at 26 Mile and is undergoing anaylsis. Currently Thia Than is pulling codes and will have a discussion of next steps in process. Possible next steps are EDF testing. **7/15** - EDF testing **7/20** - No codes reported in the Level 1 Anaylsis. **7/24** - Issue with RNBA ball bearing in on gear assembly. **7/27** - QAO identified two areas of concern assembly and teardown. Currently imporved handling and will	**7/13** - Part at 26 Mile for anaylsis	
FR-0020	U200B-2F U200C-2F	BD0-BD3	TS	Solder issue on Hella Sensor	**9/3- clean stock used in QAO on July 30th, clean stock at HSAP on July 31st.**	**7/9** - Torque Sensor Assembly missed a solder joint. Contact Angie at Rogersville about returning the unit **7/10** - Part to be in Rogersville today. Angie to review. Then likely on to Hella. Angie should send pictures to Hella today. **7/13** - Update from TRW on process. **7/14** - Part on way to Hella. 100% visual inspection, 100% visual inspection sort at Rogesville and Hella so far no suspect parts identified. Target for preliminary 8D 7/15/2009. - Confirm date with Mike Davies **7/17** - Containment - they have 100% visual inspection on the line after the Automatic optical Inspection (AOI) for the solder joints. 3668 checked, 2 suspect parts removed, but not failures against the IPC soldering requirements for class 3 joints (highest level). They are also changing the AOI pass criteria to 100% solder fillet (class 3 requires min 75%) as further containment.	**7/14** - Part on way to Hella for review	8D created
FR-0021	No Codes	No Codes	No gear installed	EPAS Gear was not installed. No fluid in gear was axle seal leak	**7/14 -** No fluid in EPAS was wrong diagnostic have closed out issue.	**7/6 -** service gear sent to dealer **7/7**- SF states no codes or messages in the dash but he found red fluid on the bottom of the EPAS gear, SF did not know gear does not have fluid internally. At this time customer is driving the vehicle and will return to get evaluated again to see where the transmission fluid is coming from. Dealer received EPAS service gear yesterday advised not to replace for this fluid leak. **7/13** - Need Dealership verbatium. Also need to eliminate from the list at no fluid in EPAS system **7/14** - No fluid in EPAS was wrong diagnostic have closed out issue.		

FR-0022	U2011-49	BB9	EPP	Rev. Cap	**8/17 -** same as case FR-0003	**7/3** - dealer replaced the gear **7/6 -** service gear sent to dealer, Gear in process to WPAC **7/9 -** Gear received and under investigation at 26 Mile. **7/10** - Room temp testing did not show anything. Will try hot/cold testing (Thia) **7/13** - Testing has proving NTF and will test Power Down sequence. **7/14** - PFR submitted **7/15** - Part ship to Shirley for anaylsis **7/20** - Part arrival at UK. Access to start testing on rig for anylsis 7/27. Currently test stand is used for the Ford software validation for release. **7/28** - Part is waiting for test rig currently is delayed for the U502 software release. Once software is completed part will go on test. **7/30 -** Started on test this morning on the power up and power down rig. **8/6**- removed off rig cannot repeat failure. Install in temp. chamber to recheck. Discuss Monday on next steps with Geoff Jacks **8/10**- will try to test under load same as FR0025 to duplicate concern. **8/17** - closed to issue case FR-0003	**7/15** - Part ship to Shirley for anaylsis	
FR-0023	U3000-96	B3A	EPP	Raised Rivet	**8/27- UK confirmed raised rivet in phase 3. sent to Tyco today**	**7/6** - service gear sent to dealer **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/21**- Part received at Ford performed buffer data. Washington waiting for Part arrival **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Send PN to Geoff Jacks to verify relay build date. No high resistance. Woodpecker show no issues.	**7/20 -** Part at Ford **7/22** - Part at 26 Mile Washington **7/29** - Part shipped to UK **8/3**- part arrived in UK	
FR-0024	U3000-96	B3A	EPP	Raised Rivet	**8/10-** confirmed raised rivet	**7/6** - Dealer ordered part on backorder- customer vehicle **8/3** - Came into Ford today, data pulled **8/4**- delivered to 26 mile **8/6**- X-ray's confirm raised rivet contact, confirm relay date code & Thiha to check contact resistances.	8/4- delivered to 26 mile	
FR-0025	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**8/17 - same as** case FR-0003	**7/6** - Dealer waiting on back order- customer vehicles **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. Remaval EPP from gear. **7/30** - Paul will give information to Simon on how to proceed		
FR-0026	U2011-49 U3000-96	B3A	EPP	no weld vstar pin	**11/9- Martha has 8D from Angie Caudell will update and send out to Ford. Clean date into QAO week 1 of 2010.**	**7/7**- Dealer ordered part. - customer vehicle. Email request Canadian gear to be sent back to WPAC **7/15** - Part arrival at Ford will anaylsis at TRW Need PFR. **7/16** - Part arrival at TRW 26 Mile will perform standard B3A test procedures. **7/17** - Confirmed the B3A found not high resistance and going to X-Ray **7/20** - Part in Liviona for anaylsis currently X-ray machine down. If not able to X-ray will ship part to UK for anaylsis. **7/21** - X-ray confirmed no raised rivit and need confirmation from UK on either to woodpecker test or ship to UK. Woodpecker the part at 26 Mile. **7/22** - Will start testing process on oscillascope to evaluate EPP and relay. Currently part set a A3A with the start of woodpeckering based on the scope test will evaluate the next steps **7/27** - Run all test then remove the relay X-ray and shipment of part. **7/28** - A3A has occured once again part needs to be shipped to UK for deeper evaluation and testing	**7/16** - Part arrival at TRW 26 Mile **7/29** - Part Shipped to UK. **8/3**-part arrived in UK 8/20 - Part at Anting	
FR-0027	No Com	No Com	EPP	In Eval (UK)	**12/14- Geoff checking with Murata that 11/30 was confirmed data for blade change.**	**6/30**- NO P/S ASSIST, NO COMM /W PSCM **7/1** - dealer ordered part **7/14** -gear sent to dealer **8/3** - Came into Ford today, data pulled **8/4**- delivered to 26 mile **8/10**- level 1 testing able to pull data using gas tune, retested HEV tune and could not pull data, verified with 26-mile. Testing started in 26-mile. **8/11**- Instrument setup the micro to check for micro or CAN Bus issues. **8/12**- Martha to start QCCAR, Geoff & Thiha continue to test the micro circuits **8/20** - Part is intermittent are testing all joints and ciruits for intermitten occurances. **8/24** - Checking voltages. Not starting up properly 9/2- crystal not operating properly faulty all the time now, needs further testing to find cause. 9/8- Thiha to send Geoff crystal/micro information to follow up on the testing 9/11- Thiha sent traces to Geoff to discuss next steps, part will likely be sent to UK for additional analysis. 9/14- Thiha to check one more scope trace and send out to UK this afternoon for addition testing. 9/21- ignition cycling if still does not fail thermo chamber testing. Thiha sent Geoff traces today	8/4- delivered to 26-mile	

PE12-017 007770

FR-0029	U3003-68	No Com	EPP		**9/17- pulled EFF & Buffer data only found battery voltage code event U3003-68(E10). tech replaced the gear and the same no communication returned. Dealer error assistant manager advised to replace gear tech found poor ign. terminal connection in EPAS 3-pin conn. tighten reinstalled vehicle fixed**	**7/17**- emailed Canadian contact to send gear back to the WPAC **8/12**- resent email to Canadian contact to check if dealer shipped gear 8/31- talked to Trevor in parts sent EPAS gear back Friday. Should see gear end of this week. 9/8- talked to Vic Mackers at Canadian hotline he will ship part to WPAC today.		
FR-0030	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**7/17**- Dealer replacing gear for intermittent loss of assist, submit not process. No codes listed **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. **7/28** - UK and TRW software working on the anaylsis test at 26 mile for evaluation of part. **7/30 -** Not repeatable. Waiting to get on EDF stand. Only know it failed at 50°c. Code never latched out. Need to get EFF data to Shirley.		
FR-0031	C200B-62 U3000-96	BD4	TS	Bent TS finger	**9/11- meeting today at 11am and agreed on containment actions & dates from Rogersville & QAO to close 8D.**	**7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. **7/28** - Jim L. has part for deeper dive anaylsis. **7/29** - Failure has been reproduced next steps are testing the area of the failure. **7/30** - Need to rule out harness. J. Loria to take off tq sensor cover for further evaluation of sensor. Loria should communicate with UK team during evaluation for recommended steps.. **8/3-** Found reluctor ring contact bend down on CB. Rogersville & QAO to construct fishbone for possible causes **8/4-** Rogersville implemented a quality alert on the process line and QAO has 100% inspection for a bent pin. Need to get 8D out. **8/6-** Rogersville to investigate mark on tooth for possible causes. Hella to update 8D late next week. **8/10**- Martha updated QAO control plan- IPA teeth inspected before installed in gear. 200% IPA inspection at QAO & Rogersville for containment Rogersville testing part on line to see if it will be kicked out & check possible causes of marks on teeth. **8/11-** Todd Williams to put IPA through mechanical displacement test. Then take to lab to check mark on tooth and

FR-0038		B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	**7/29**- no EPAS codes listed in AWS report. Gear will come back normal part return routing to WPAC 8/24- Pulled EFF & Buffer Data 8/27- Mike Taylor to bring EPP to Livonia for X-Ray		
FR-0039	U3000-49 U2011-49 U3000-96	BBA	EPP	In Eval (UK)	**3/25- put on the PUPD rig for a couple days still cannot reproduce code.** **8/11- have exhausted all the testing on this return looking for NFF.** **8/30- possible check wire bond, PCB & solder issues**	**8/5**- submitted dealer hot process form to return gear **8/12**- Pulled EFF & Buffer data, does not match interactive diagnosis(see FR0048). Found out dealer had 2 warranty gears and sent wrong EPAS gear with RO. This gear replaced today should be back next week. 8/25- Pulled Eff & Buffer data code BBA 8/27- dropped gear off at 26-mile 8/31- Geoff Jacks requested part to be sent to UK for testing 9/2- part has not been shipped Geoff wants 26-mile to perform testing. 9/10- cannot duplicate code put in thermo chamber for hot test. 9/11- still cannot duplicate any codes at this time		
FR-0040	P07AE-09	AF1	NVH	Customer damage gear impact	**8/17 -** Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes	**8/4**- customer backed into a curb, then set P07AE-09 this should be rejected **8/5**- submitted dealer hot process form to return gear **8/12**- Pulled EFF & Buffer data sent out for evaluation. Check date when can install on EDF stand. Will take to 26-mile Thursday. **8/17** - Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes 8/20 - email from Ford I am OK with letting this go. Hard to have the dealer go back to the owner for payment. Agree with you Wes that		
FR-0041	U3000-96	B3A	EPP	Raised Rivet	**8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile	**8/5**- submitted dealer hot process form to return gear **8/6-** gear returned to WPAC, data pulled **8/10**- take gear this Tuesday to 26-mile for testing **8/11**- take gear to Livonia Tech 3 for Xray. **8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile		
FR-0042	U3000-96	BD3	TS	TS harness damage (HSAP)	**8/25-** TS harness cut & damaged near second retainer to the IPA- HSAP issue. I have gear here at hotline for inspection.	8/5- Dealer sent gear back normal parts return with 700 tag 8/25- TS harness cut & damaged near second retainer to the IPA- HSAP issue		
FR-0043	C200C-2F U3000-96	BD3	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send Hella 8D to Ford(12/9)**	8/7- Dealer sent gear back normal part return, no codes listed in the AWS report. 8/27- dropped gear off at 26-mile 8/31- Jim Loria found issue with TS, needs additional analysis before sending to Rogersville 9/1- Jim found one channel of the TS dropping low indicating a shorted circuit, will continue to test circuits 9/2- Jim found 50 ohm short between channel 2 & ground. Further testing to find cause. 9/4- path of moisture through the TS harness this is old version harness. To finish up testing on TS at 26-mile and ship TS to Hella for level 3 analysis. Include Ian Ingram on all the sensor testing information. 9/9- arrived at Hella emails sent to Ian Ingram to give a status update on testing. 9/14- testing results from Hella will be done Tuesday morning and sent out. 9/16- TS testing still on-going at Hella will Markus will report back complete testing results when finished		
FR-0044	U2011-49	BB9	EPP	Rev. Cap	**9/14- same as case FR-0003**	8/24- Pulled EFF & Buffer Data 8/27- dropped gear off at 26-mile 8/31- Geoff Jacks requested part to be sent to UK for testing 9/2- part has not been shipped Geoff wants 26-mile to perform testing. 9/10- cannot duplicate code put in thermo chamber for hot test. 9/14- confirmed Rev fitted capacitor		
FR-0045	C200B-61 U3000-96	B90	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send Hella 8D to Ford(12/9)**	8/25- Pulled Eff & Buffer data code BD0,BD2,BD4 an B90 final code set 8/31- Jim Loria testing, no updates at this time. 9/1- Jim cannot get the code to reproduce, further testing needed 9/9- part sent back to Simon/Thiha for further intermittent testing. 9/10- Simon could not duplicate any codes will talk to Jim Loria on further testing 9/11- part has been run over the weekend still cannot duplicate any codes at this time, compare 9/14- cannot reproduce any faults, testing will start this week to check for intermittents. 9/14- Insert square wave and cycle ignition 5 sec on & off. Check back with results 9/30- gear is queue for ignition cycling testing 10/5- currently ignition cycling, going to do wiggle testing of the ribbon cable while cycling		
FR-0046	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	8/27- Tomorrow Mike Taylor to bring EPP to Livonia for X-Ray		

PE12-017 007772

FR-0047	U3000-49 U3000-96	BA9	EPP	In Eval (FSL)	**3/15- send 8D to Ford. This fix was using the new pod design fixed on 12/31/2008 at FSL, But the new burn-in program screen test, 12/30/2010 at FSL which estimates 4/25/2011 into QAO.**	Deflection testing has been re established at QAO due to this concern. 10/8- development test target date set for 11/30/2010. 12/20- part now on physical analysis for root cause. Geoff to get the date code to see when the new test arrives into Anting.		
FR-0048	No Com	No Com	EPP	In Eval (Anting)	**3/3- Ford has been sent the update 8D Mike Bahena, Tim Snider & Tim Dietz all concluded to close this case**	**8/12**- Retreived the EFF & Buffer data, tech states he could not communicate with the PSCM **8/17** -Part received at 26 Mile **8/20** - testing all joints and ciruits for intermitten occurances. 8/27- Still no communication. Geoff Jacks has next step testing for Simon to try. 9/21- Still cannot reproduce, to put through ignition cycling if that passes then thermo chamber to get the part to fail 9/30- to get a timeline of failed part when first tested at 26-mile. Geoff coming to 26-mile next week will help with diagnosis 10/6- had communication when first received, checked regulator passed voltage tests. Heated EPP still passes. Next step is to ignition cycle. 10/8- going into hot ignition cycling tomorrow 10/15-ECU cover taken off, water ingress in EPP, residue on back of PFS. If built at Schalke to ship for leak		
FR-0049	U3000-96	BB7	EPP	Rev. Cap	**9/11- same as case FR-0003**	**8/14-** Submit Hot Process request form 9/2- Pull EFF & buffer data at WPAC 9/4- Dropped gear off at 26-mile		
FR-0050		No Com	EPP	dry solder joint (Kimball)	**11/9- Martha to send Geoff & Mike Davies Kimball 8D & TRW 8D to review, then send out to Ford by Wednesday. Get clean date into QAO**	**8/14-** Submit Hot Process request form **8/25**- Cannot pull Eff & Buffer Data from EPAS module 8/27- dropped gear off at 26-mile 8/31- Not tested yet will be tested with FR0027 & 48 9/16- Thiha to send Geoff scope traces. ECU now reset and working at this time. 9/21- Simon found resistor failure in the ignition circuit.		
FR-0051		No Com	EPP	Damaged regulator (over voltage)	**10/23- specific testing on diode protection on-going with Ford electrical team**	**8/14-** Submit Hot Process request form 9/18- dealer shipped part today should be at WPAC on Monday 9/25- could not pull any EFF/Buffer data from gear, No Communication.	UK	
FR-0052	U0121-00	A8D	Non TRW issue	Int CAN BUS fault, tech replaced the ABS module to fix vehicle at this time.	**8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.**	**8/25-** vehicle returned with the same codes after EPAS gear replaced, tech replaced the ABS module vehicle fixed at this time. Geares not need to be tested, Pulled A8D code CAN BUS Lat Accel Absent fault 8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.		
FR-0053		binding	NVH	Customer damage gear impact	**8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter & Bill agreed.**	**8/25-** earlier dealer states vehicle hit curb. FSE visited dealer and approved EPAS gear for binding while steering with no codes, steering wheel off center & frt tires badly cupped 8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter agreed.		
FR-0054	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**9/2- Pulled EFF & Buffer data** **9/4- dropped gear off at 26-mile** **9/11- testing to start next week on B9A faults**		
FR-0055	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**12/9- Via connections exposed one Via Onsemi that is going too deep. It went through the metal 2.5 layer and touched the nitride layer, this finding confirmed the measured short. corrective action Onsemi refer to continuous defect reduction program.**	**8/31- submit hot process form to ship part back to WPAC** **9/11- dealer shipped back park normal parts return to the WPAC, couple weeks for return.** **9/18- pulled EFF & Buffer Data code BD2 I set before C69 latched out. Jason to ship gear to QAO for testing.** **9/24- gear arrived in QAO for testing** **9/30- TS PCB problem- QAO to send to Rogersville for inspection/test then send to Hella.** **10/1- Martha to send out tracking number to Rogerville for arrival**		

PE12-017 007773

FR-0056		AF1	NVH	On-vehicle test(Ford)	**9/29 - Bill installed on vehicle and could not duplicate any friction code or notice any steering issues. Dealer did not follow Interactive diagnostic's on the first gear or call the hotline for assistance. Friction code only set once and cleared that's why it came into the dealer with C1277 code only in the ABS & the PSCM code cleared. Dealer Error at this time**	**8/31- submit hot process form** **9/4- gear returned to 26-mile for testing** **9/8- NTF at 26-mile, passed leak test & EDF test stand. Called dealer tech or service writer cannot remember if vehicle was driven straight in with no assist that set AF1 code then when tech pulled codes and road tested had B6A. He states the only set code was C1277 with the no PS assist fault in the message center.** **9/14- cannot find any friction issues with this gear, passed leak testing no visible corrosion at the ITR, IPA areas. Passed EDF stand info sent to Bill. See if Ford would like to test on vehicle.** **9/17- will pick-up gear today from 26-mile and return to Ford for on-vehicle testing** **9/18- sent Bill B email that this friction code cleared will not reset, passed all 26-mile testing. Gear is here**		
FR-0057	No Codes	No codes	EPP	In Eval (26mile)	**2/5- been a month now and still cannot find gear at 26mile. Considered lost at this time exhausted all areas gear could be located.**	8/28- tech states vehicle has no codes or lamps on and has communication, load tested battery and ignition feeds pass and never has PS assist. Tech will double check ignition feed for terminal tension or pin push out. Tech already ordered gear assembly per symptom chart. 8/31- Submit hot process form to ship part back to WPAC 9/18- pulled EFF & Buffer Data- only code listed A28(angle offset invalid fault) will give gear to Bill Bouse for on vehicle testing. 10/16- next step to put on EDF stand if passes to teardown., talk to Bill on location of gear 10/23 10/30- vehicle at 26-mile vehicle did fail with no assist and the TC lamp on to remove gear, leak test and remove ECU cover for voltage testing.		
FR-0058	U3000-96		No gear returned	Gear will not be returned	**9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.**	**9/3- Submit hot process request form** **9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.**		
FR-0059	U3000-49 U3000-96	BAB	EPP	PCB copper slivers in lamination	**3/8- Merix, Kimball & TRW in discussion on dates and final summary.** **5/18- Geoff sent out final 8D to Guillermo**	**9/3- Submit hot process request form** **9/8- Delivered to WPAC today** **9/9- pulled EFF & Buffer data at WPAC** **9/10- shipped gear from WPAC to 26-mile** **9/11- gear received at 26-mile** **9/18- pulled codes and cannot duplicate addition testing needed** **9/30- Simon to perform standard test on EPP**	Merix	
FR-0061	No Codes	Constant Assist	NVH	In Eval	**10/8 Angel states there is a potential risk to hit the rack with the IPA tower if the operation is not performed with care. He needs to get Ford approval to take pictures**	**9/10- gear still in vehicle at the dealer, tech pulling all codes, pull batt feed see if vehicle has hard pull.** **9/11- Tech will take snapshot data and email back. Dealer ordered EPAS gear and I submitted hot process request.** **9/18- pulled EFF & Buffer data, no codes found cracked gear housing below the IPA. Impact on TS housing looks like it caused crack. Wes Porter to inspect damage Monday morning and be there for disassembly.** **9/21- confirmed broken t-bar, checking impact study to brake t-bar. Also check possiblity where impact could have happened inside TRW.**		
FR-0062	No Codes	A28	TS	missing pinion shaft nut	**11/6- pinion nut torque station in QAO updated and in operation on 10/29. Martha to update and send 8D to Ford. Close out**	**9/11- Submit hot process form** **9/24- pulled EFF & Buffer Data, only stored code is A28(angle offset invalid fault). no visible damage to the gear, get gear to 26-mile for testing** **9/25- gear in analysis at 26-mile** **9/29- found missing pinion nut on TS, QAO working containment actions and to start 8D.** **9/30- quality alert in that assembly station in QAO. Checking containment actions on mistake proofing pinion nut installation & torque.** **10/1-Increase the initial torque to monitor the angle in the torque gun, this in order to avoid double torque over one same component, complete.** **In process to develop a new torque socket for the station, this socket will include a position sensor to verify what socket is use in each torque (Pinion nut or pinion plug) in case the sensor detect an incorrect socket even the torque was correct the part will be rejected.**		
FR-0063	P07AE-09	AF1	NVH	distorded gear housing	**10/6- 8D submitted to Ford, continue investigation at Benteler & HSAP for possible areas of damage**	**9/11- Submit hot process form** **9/18- pulled Eff & Buffer data does have B6A twice left at 26-mile for Costas to analyze.** **9/23- friction gear is similar to earlier 0 KM part with damaged datum on Pinion Housing, Pavel wants gear sent back to QAO for analysis. Shipped out from 26-mile.** **9/29- layout gear and compare with 0km part with same symptoms & friction code. Martha to add information to the 8D** **10/2- Angel Salazar to investigate gear handling on subframes at Benteler & HSAP to find possible area of**		
FR-0064	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**3/3- Tyco has concluded with all the relay testing that NTF with the relay testing.**	**9/21- Submit hot process form** **10/5- pulled EFF/buffer fault data.** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **10/28- code repeatable and link relay will not close. To send to the UK for level 3 testing.** **11/9- in Uk testing cannot reproduce at this time.**	Tyco	

PE12-017 007774

FR-0065	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**9/21- Submit hot process form** **9/25- pulled EFF & Buffer data, B9A code shipped to QAO for Analysis.** **9/29-estimate gears to QAO late this Thursday** **10/2- xray ribbon cable area, cannot duplicate fault or find any visual faults with the ribbon cable at this time.** **10/12- sergio in-process to deliver to 26mile for testing**		
FR-0067	No Codes	A28	Unknown Issue	NTF	**10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**	**9/21- Submit hot process form, little information on the repair. Tech was trying to fix the ABS steering angle sensor reading for a couple of days and looks like he replaced the gear for an erratic swa sensor reading. no PSCM code listed in interactive diagnosis so unsure why tech replaced the gear. could be a chargeback gear.** **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile, steering angle sensor changes position turning full Left and right** **9/29-estimate gears to QAO late this Thursday** **10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**		
FR-0068	U3000-49	B32	EPP	In Eval (QAO)	**8/27- Pepe to locate EPP and report out the latest testing.** **9/24- still cannot find EPP part, need to close cannot continue with the analysis.**	**9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.** **10/5- pull EFF/buffer fault data.** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis.** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **11/9- passed leak test, not rev. cap. Testing on-going at QAO. Get update from Sergio does code repeat & next step testing.** **11/18 - SA:Fault no reproduced. Leak test done OK. Ambient cycling ignition done**		
FR-0069	NVH	growling noise gear/ park. Turn wheel noise goes away	TS	TS ASIC	**11/9- confirmed TS jitter same as FR0036, confirmed TS ASIC was built in 2/10/09 before July 09 clean date. Martha to update 8D send out to Ford.**	**9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.** **10/5- pulled EFF/buffer fault data** **10/12- dropped gear off at 26-mile, verified knocking noise, Jim Ioria to verify noise.** **10/21- TS sent to Rogersville** **10/23- part received at Rogersville today Update on Monday.** **10/26- Comfirmed TS ASIC is prior build to FR0036 which same TS ASIC concern. Apr.09 is the build date and FR0036 was in June. Clean date week 31.** **10/28- part arrived at Hella today for testing, lab testing to start Monday**		
FR-0070	P07AE-09	AF1	NVH	In Eval (QAO)	**11/02- Costas looking to close this & FR0056 for false detection.**	**9/28- Submit hot process request back to WPAC** **10/5- pulled EFF/buffer fault data** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis** **10/23- gear passed pressure test bellows removed no signs of contamination. Put on EDF stand today and passed all checks. Costas checking next steps for testing. Possible false detection.**		
FR-0071	C200C-2F U3000-96	BD1, BD3	TS	In Eval (26mile)	**6/30- TS cover removed have pictures, not sure if pinion plug and other parts were removed at QAO. QAO did have TS removed and scoped the channels with no failures, now that TS has been inspected this is consided NTF.**	**9/29- Submit hot process request form** **10/5- pulled EFF/Buffer fault data has** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis,** **10/23- gear arrived yesterday, next step to pressure check for leaks, then normal TS testing procedure.** **11/9- Sergio cannot duplicate code looking to engineering group on next step analysis before removal of any parts. Advised Jim Loria to send next step testing to Sergio.** **11/18 - SA:Fault no reproduced. Leak test done OK. Ambient ignition done OK.** **11/24- need to confirm with Jim Loria next step testing.** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-**		
FR-0072	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**8/11- exhausted all testing criteria, at NTF.**	**10/2- Submit hot process request form** **10/16- EFF/Buffer fault data collected shipped to 26mile. B9A code filled stored data.** **10/23- need to leak check gear and take upstairs for testing.** **10/30- passed leak check, install gear on vehicle check for resetting B9A code. Sent fault data for review o**		
FR0073	C200D-49	B9A	EPP	In Eval (Nidec)	**7/2-encoder failure due to ESD damage, the surge or ESD destroyed because the punchthrough occurs on output Tr of OUT-B. Allegro saying that the part was ESD damaged somewhere in the supply chain.**	**10/2- Submit hot process request form** **10/12- Pulled EFF/Buffer fault data, pulled B9A code, dropped off at 26-mile for analysis.** **10/23- pass leak test, get update from Simon.** **11/18 On hold pending outcome of other B9A investigations** **10/30- hold for evaluation of B9A workshop this Tuesday.** **1/18- still at 26-mile holding for next step testing.** **4/19- send fr0072, fr0096 & this one to the UK for testing, raise one RHA for all three**		

FR-0074	U3000-49 U3000-96	B25	EPP	motor terminal ground plane short	**4/19- CD3/D3 formal Kickoff is planned for week of April 19th.Assuming approval week of April 19th Nidec can start shipping to Anting on May 18th.* For CD3/D3 Change will be incorporated in August/Sept timeframe based on depleting existing inventories. JC to provide updated incorporation plan in Tuesday Engineering Change meeting and Thursday**	**10/6- Submit hot process request form 10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile, then ship to QAO for testing. 10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis 10/27- a low resistance(25 Ohms) between Vlink and 0volts, measuring resistance between pin10 (Motor_relay_HS) and pin9 (hall_supply_0volts) of the ribbon cable the 25 Ohms are found. To send to UK for testing. 11/4- x-ray has not shown any anomalies removed the motor PCB, cut away some of the connector plastic of the motor to allow inspection of the solder joints. 11/16 Analysis continuing with Nidec 11/23- Nidec to check pin resistance measurement for shorts ICA. Mike Davies advised Ford of changes**	UK	
FR-0075	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/2- confirmed plastic contamination is from the relay cover. Martha to get the information in the old 8D to close out.**	**10/5- Submit hot process request form 10/12- pulled EFF/Buffer fault data has B3A code, dropped off at 26-mile for analysis. 10/14- x-ray parts did not show cold weld, raised rivet or offset bridge. Next to check resistances 10/16- thiha to check resistance, if fail will ship to Tyco. if pass resistance test will put on puma cycle. 10/29- failed resistance test at 26mile, shipped to Tyco. Tyco did receive the relay today 11/9- checking with Tyco on relay testing from last week. Mike Davies to follow up 11/19- still working with Tyco to check proper contact resistances. 11/23- confirm plastic contamination, need to confirm where plastic came from coil base or cover. RUA# 2961**		
FR-0076	C200B-2F U3000-96	BD0 TS		at DSC1 (ford hotline)	**10/16- found TS harness conduit crushed on gear flange near IPA and cut the one wire. HSAP plant issue. I have gear here in Dearborn for inspection.**	**10/6- Submit hot process request form**		
FR-0077*	U3000-96	BB7	EPP	In Eval (UK)	**9/9- NTF in UK for B6B testing at this time. No weld marks on the relay for the motor relay tear down. 10/8- no evidence of any relay weld, motors grp. to check motor windings. six weeks to teardown. 11/29- motor teardown with NTF, no other tests can be performed, check with Ford to close out.**	**10/12- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile 11/4- shipped to Rogersville 11/6- arrived at Rogersville put on truck to QAO 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found 11/24- passed hot ignition cycling, in normal operation B3A set. Advised to send Simon the EFF data for Michelle to decode Monday. 11/30- EFF data decoded Geoff to look at and make decision on analysis. 12/14- Next step testing 1/7- EFF shows that the link voltage (drive stage supply voltage) is very low at less than 3V. This has led**		
FR-0078 RUA#3250	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/7- confirmed NFF with all testing performed at Tyco.**	**10/12-Submit hot process request form 10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile for analysis. 10/23- pass leak test, get update from Simon. 10/28- mike to x-ray part in Livonia this week. 10/29- did not find anything in the xray this morning. Resistance test then hot Puma testing. 11/02- passed the resistance, hot puma & resistance test. Ambient tested over the weekend no problems found at this time 11/6- hot & cold ignition cycling testing next, x-ray ribbon cable. 11/17 passed bench testing. Hot / cold next**		
FR-0079	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**	**10/16- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile to ship to QAO 11/6- x-ray leading to offset bridge suspected, to hot puma test next. 11/23- passed hot puma test. Check resistance before sending to Tyco should fail resistance test if this is an offset bridge. 11/24- after testing found high resistance. 12/14- raise RUA- 03161 & PFR. ship relay out to Tyco today**		

FR-0080 RUA#4016	U3000-49	B43	EPP	In Eval (QAO)	**8/20- believe PFS is still in QAO, Pepe check for the latest status. 8/27- Pepe found PFS to raise RUA and send to Tyco for final testing. 10/6- NFF at Tyco.**	**10/16- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile 11/4- shipped to Rogersville 11/6- arrived at Rogersville put on truck to QAO 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found 11/19- hot ignition cycling, 11/20- high resistance found contact 4 recheck with amp load across contact. Martha to follow up. 11/24- passed load test across contacts. Sergio to send Simon EFF fault data for Michelle to decode on**		
FR-0082	N/A		No gear returned	Gear will not be returned	**11/11- called dealer back to find out what happened to gear and PM states he returned it back to the RCRC and no 700 tag was on this part so the part is scraped, will not get this gear back.**	**10/27- Submit hot process request form**		
FR-0083	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**11/20- reverse capacitor found.**	**10/27- Submit hot process request form 11/5- Pulled EFF/Buffer fault data at WPAC 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found, 11/19- next to hot woodpecker test**		
FR-0084	N/A	BD0-BD3	TS		**11/6- dropped gear off at 26-mile, TS harness damaged, heat tape rubbed through. With the mileage good chance this is customer related damage. No other warranty claims**	**10/27- Submit hot process request form 11/5- Pulled EFF/Buffer fault data at WPAC**		
FR-0085	N/A	No Com	EPP	IC14 power supply (Infineon)	**1/13- have updated 8D sent out, Geoff has a couple slides to update. new process, dummy leadframe is used then scraped first production lead frame marked and additional visual inspected.**	**10/27- Submit hot process request form 11/5- Could not pull EFF/Buffer fault data from module no communication. 11/16 Shipped to UK 11/17 Under Analysis 11/17 under analysis in UK, still ignition cycling trying to reproduce no com 11/19- swapped parts IC14 power supply for the monitor micro, part in thermo chamber part failed again. 11/23- Geoff to send power supply chip for the monitor micro to Infineon tomorrow for analysis. 11/30- Infineon received chip and will send update when their testing is completed. 12/3- Infineon has confirmed IC14 has identified irregularities on the leadframe.**		
FR-0086	No Codes	Cricket noise	NVH	squeeling noise turning wheel	**2/8- confirmed finger ring trapped under IPA cover**	**10/27- Submit hot process request form 11/5- did not notice any abnormal noise turning the input shaft back & forth, no codes in the fault data. 11/9- dropped off at 26-mile for Costas testing leak test then EDF test stand. 11/12- all the testing at 26-mile could not duplicate the noise from the gear. NTF at this time. Unknown if we should put on-vehicle for testing.**		
FR-0087	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/2- confirmed rev. capacitor**	**10/27- Submit hot process request form 11/13- pulled EFF/Buffer data shipped to 26-mile 11/20- ship part to QAO, should be in QAO Nov. 25th, date range fits rev. cap remove PFS after leak check.**		

FR-0088	U2011-49	B3A	EPP	Raised Rivet	**11/19- confirmed a raised rivet, to send to Tyco(Evora)**	**10/27- Submit hot process request form** **11/5- pulled EFF/Buffer fault data at WPAC** **11/6- dropped gear off at 26-mile for analysis** **11/9- EPP sent out for x-ray in Livonia** **11/18 - Mike to X Ray again zoomed in today, potential raised rivet**		
FR-0089	No Codes	No codes	NVH	grinding noise turning the wheel	**3/9- after further investigation it was determinded that misuse was the cause of failure**	**11/3- Submit hot process request form** **11/12- Pulled EFF/Buffer fault data and verify noise in gear while turning** **11/19- failed EDF stand results, possible bent rack, gear sent to Harold for teardown** **11/30- Costas states The RBNA is in material lab where they will do further investigation on surface**		
FR-0090	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**	**11/4- Submit hot process request form** **11/13- Pulled EFF/Buffer fault data, shipped to 26-mile** **12/1- passed leak test, brough upstairs to start testing.** **12/7- x-ray looks like an offset bridge, passed Puma test then found 4 ohms on phase 2 that went away after rechecking the other phases. Need to capture scope traces after hot puma test.** **12/14- raise RUA# 03160, get additional testing information and send to Tyco.**		
FR-0091	U3000-49 U3000-96	B97	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**	**11/11- Submit hot process request form** **11/20- pull EFF/Buffer fault data, ship to QAO** **12/3- fault repeats suspect B-FET-3, damaged on the power FET Pack. Sergio to cut the wirebond on MOSFET_G6 and measure voltage to isolate power module. Short stays on the power module.** **12/7- confirmed power module QAO sent direct to supplier(Fairchild) for analysis.** **12/14- shipped to Fairchild stuck in customs, QAO to send paperwork.** **1/7- Kimball/TRW in discussions with Fairchild on testing & analysis. EOS is Fairchilds claim, TRW working with Fairchild on this analysis.** **1/25- get build dates from each power module and compare dates. Sergio to send Geoff information. Line**		
FR-0092	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**	**11/11- Submit hot process request form** **12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO** **12/15- B25 fault repetitive. PH3&VLINK found shorted to 0 volts. Short traveled with ECU. Isolate by cutting bond wires and then perform power module swap. Wait for Sergio to return this week.** **1/12- confirmed FET power pack, ship to Fairchild for B-FET-3.** **1/18- part stuck in customs waiting on paper work from QAO. Guillermo to check status and get update by next Monday** **2/2- part has been examined by Fairchild, needs further testing. Failure is electrical short and maybe an EOS event or device related and suggests to further analyze in fab site. Checked plant LoglQ status no EPAS codes set at all test stations. Happened 22 days after build and did not leave dealer after dropped**		
FR-0093	NVH	Cricket noise	NVH	In Eval (26mile)	**1/26- Cal Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**	**11/30- Submit hot process request form** **12/15- found out PM left dealership so will not be hot processed. will get the gear sent through normal parts returns to the WPAC.** **1/7- Pulled EFF & Buffer Data, did not notice any noise turning the input shaft back & forth**		
FR-0094	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/3- in evaluation QAO found rev. cap**	**11/12- Submit hot process request form** **11/20- pull EFF/Buffer fault data, ship to 26mile**		
FR-0095	U3000-49 U3000-96	BA4	EPP	In Eval (UK)	**4/21- 8D sent to Ford with the corrective action dates, sent 8D to Ford on 4/19.**	**12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO** **12/15- B7E fault repetitive. Measures taken with ECU functional sw. leakage on motor phase 3. cut the bond wire for the gate of Phase 3 bottom** **1/5- Jose to perform power module swap, wait for Sergio to return this week** **1/13- short followed the ECU, Geoff to review report from QAO.** **1/22- work being completed further testing needed,results leading to diode fault.** **1/25- diode 21 ok, EPP needs level 3 testing to ship to UK, tracking # 8674 8338 0093** **1/27- just arrived in the UK for testing.**		

FR-0096	C200D-49	B9A	EPP	In Eval (UK)	7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix	11/20-Submit hot process request form 12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak test and sent upstairs remove EPP and perform ignition cycling. 3/26- has been tri-temo tested for two days and no failures at this time. 3/31- in cold chamber now, no failures at this time. 4/20- has been shipped out to the UK today		
FR-0097	C200D-49	B9A	EPP	In Eval (UK)	8/11- exhausted all testing criteria, at NTF.	11/12- Submit hot process request form 11/20- pull EFF/Buffer fault data, ship to 26mile 12/1- passed leak test, brough upstairs to start testing. 12/7- able to get this B9A to reset sent to UK 12/14- RUA 03162- need PFR sent, additional bench testing in UK.		
FR-0099	U2011-49 U3000-96	BB9	EPP	Rev. Cap	12/15- gears arrived in QAO in analysis found rev. capacitor.	11/24- Submit hot process request form 12/2- pulled Eff & Buffer data, ship gear to QAO 12/7- In process to QAO		
FR-0100	U2011-49	B3A	EPP	In Eval (Tyco)	2/12- Tyco has confirmed offset bridge	11/30- Submit hot process request form 12/10- pulled EFF & Buffer data and shipped gear to 26-mile 12/17- Mike to xray and Michelle to hot puma test before the break. 12/21- offset bridge - Re-Puma (3 or 4 times) - Perform resistance test while hot. - I think x-ray is then sufficient evidence to send part to Tyco. - Remove relay - Photograph top of relay (ensure bar code is clear of glue residue) - Raise RUA - Send to Tyco		
FR-0101	U3000-96	B7F	EPP	In Eval QAO	1/13- arrived in QAO testing will start after FR0103 is complete. Found out gear is a non-warranty repair. SM states after alarm company worked on vehicle EPAS gear failed so the dealers sales department covered the repair.	11/30- Submit hot process request form 12/21- pulled EFF & Buffer data, ship to QAO		
FR-0102	P07AE-09	AF1	NVH	distorded gear housing	2/1- found damaged datum pic's show impact marks at the datum & mounting ring and the materials lab confirmed the housing was out of specs. Unknown where the inpact occurred.	11/30- Submit hot process request form 12/21- pulled EFF & Buffer data, ship to QAO 1/13- Jose to start the friction testing today.		
FR-0103	U3000-96	B25	EPP	In Eval (UK)	8/3- exhausted all testing in the UK could not duplicate any codes NTF. 8/30- possible check wire bond, PCB & solder issues.	11/30- Submit hot process request form 12/21-pulled EFF & Buffer data, sent to QAO 1/13- fault code is not reproducing, to analyze data to find potential cause and lead toward next step testing. 1/15-ambient cycling latched code BC5 found scratches on the PCB, QAO to ship to UK for further testing. 1/20- arrived in UK today. 1/29- Geoff still able to repeat B25, other testing being done unable to analyze further. Make sure this is not a rev. cap 2/2- FR0103 only fails intermittently, suggesting a problem with the link relay high side drive.		

PE12-017 007779

FR-0104	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**1/25- Tyco confirmed raised rivet**	**11/30- submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- raised rivet** **- Did it fail hot or room temp?** **- Next step - perform resistance check immediately after failing Puma.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **- Send to Tyco**		
FR-0105 RUA#3628	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- could not see any issues with xray** **- Perform resistance test at room temp.** **-Re-Puma (3 or 4 times - if not already done)** **- Perform resistance test while hot** **1/15- tri- temp ign. Cycling, try to get in chamber next week.** **1/18- set aside for FR0096(B9A) testing.**		
FR-0106	U2011-49	B3A	EPP	In process (Tyco)	**1/25- Tyco confirmed offset bridge**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- offset bridge** **Re-Puma (3 or 4 times)** **- Perform resistance test while hot.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA**		
FR-0108		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak tested** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **1/22- Thiha was able to get the code to set one time while tri-temp testing. Testing still ongoing** **1/28- thiha to send geoff decoded information when the one code set on the tri temp tester** **2/3- Thiha was able to duplicate the B9A again once while tri-temp testing sent results to Geoff Jacks.** **2/10- Geoff sent 26mile the canopy configuration to use while tri-temp testing to capture this data. Waiting for the** **2/19- one temp chamber broken and waiting for DR0004 in the other chamber to finish. Data logging is ready for operation.**		
FR-0109	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	**7/16- confirmed this as a double start-up added to B9A list for reg./micro issue. Fulfills parameters to close as regulator issue by meeting criteria established for regulators.**	**12/4- Submit hot process request form** **12/21- pulled EFF & Buffer data and ship to QAO** **1/13- to leak test and start the standard testing** **1/20- could not reproduce the codes, next step to do vibration test on the bully machine. Jose waiting for line to switch back to CD3 to test.** **1/25- passed bully testing, next step to discuss with Jim Loria** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-temp testing can be done. set back to Rog. Att: Andy-truck V08385 SKID# 22** **2/22- all four channels tripped codes at** **-2.9degC EFF data collected. Testing on going in the chamber.** **3/1- Visnu to set-up software to measure voltages when gear trips fault code to find area of fault at TS,**		
FR-0110	N/A	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**12/4- Submit hot process request form** **1/7- pulled EFF & Buffer Data, ship to 26mile** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **2/3- cannot reproduce any codes at this time with hot & cold ignition cycling** **3/22- to move into the cold chamber for testing** **4/16- in the west building now thermo testing** **4/21- thermo testing since 4/15 in chamber still cannot reproduce code. To Hot Puma test next** **4/23- Tri-temp and ignition cycling in the W. building. CANape running to capture fault if trips.** **4/26- has not failed for over one week.** **5/7- to hot puma test if that passes to ship to the UK for complete B9A testing.**		

FR-0111 RUA#3212	U3000-49 U3000-96	B3A	EPP	In Eval (UK)	9/24- UK did SEM test and the results lead to NTF.	12/4- Submit hot process request form 12/10- pulled EFF & Buffer data and shipped gear to 26-mile 12/17- Mike to xray and Michelle to hot puma test before the break. 12/21-Re-Puma recheck resistance - Photograph top of relay (ensure bar code is clear of glue residue) - Raise RUA 1/11- could not confirm issue with xray, have not duplicated the code, perform the standard test and conf. with Geoff to find next step testing. 1/18- hot woodpecker couple of times and check resistances. Geoff & Thiha to follow up on the details. 1/25- attach relay back on board or into a KG unit for additional Puma testing. 2/3- several attemps to put relay back on a known good PCB with no luck, possible relay damage from		
FR-0112	U3000-96	BB7	EPP	In Eval (QAO)	2/3- found Rev. C2 Cap in the PFS	1/11- Pulled EFF & buffer data also pulled BB9 & BB5 with the BB7 code. Ship to QAO. 2/1- leak tested no leaks, benched tested cannot duplicate code.		
FR-0113	C200B-61 C200B-62	B90	TS	In Eval (Hella)	9/22- talked about vstress testing at On-Semi that was implemented 4-3-2010 to catch this issue and also Hella implemented their Vstress test at Hella ICT on 9-14-2010. so PCA dates into QAO would be OnSemi's ASIC's took one week to arrive into Hella for this Vstress testing so PCA dates are 5-22-2010 for OnSemi change into QAO & for Hella's change	1/11- Pulled EFF & buffer data also pulled BD4 & B95 with the B90 code. Shipped to QAO. 2/1- leak tested no leaks, benched tested cannot duplicate code 2/3- EFF data shows a problem with the channel 1 torque. Check for any potential damage on the harness. Nothing obvious found. EFF data shows data original fault occurred at low temperature, at 4° C. Need to test at cold temperatures. 2/5- ambient ignition cycling did not reproduce any code, bully testing next. Data shows code reset at 4degC. 3/8- in process to 26mile for cold testing 3/10-Checking the west building today to put in for cold testing 3/19- will go into the cold chamber after DR0004 is done testing. 3/26- will be hooked after DR0004 is done testing In the east building		
FR-0114		No B Codes-A65	EPP	In Eval (QAO)	4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.	1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC 2/2- tech should not have replaced gear with no lamps or symptoms after clearing code and road testing, did not record any interactive diagnosis so tech did not follow interactive diagnosis for this repair. 3/8- shipped to QAO for standard no com testing 4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time 4/19- pass through bully test several times to confirm an intermittent		
FR-0115		A16	EPP	In Eval (QAO)	4/19- pass through bully test several times to confirm a NTF.	1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC 3/8- shipped to QAO for standard no com testing 4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time		
FR-0116		BB7	EPP	In Eval (QAO)	2/3- found Rev. C2 Cap in the PFS	1/11- Pulled EFF & buffer data also had BD0-BD3 codes with BB7. shipped out to QAO 2/1- leak tested no leaks, benched tested cannot duplicate code		

FR-0117	Chirp noise turning wheel	Cricket noise	NVH	In Eval (26mile)	**1/13- leak test, verified the cricket noise no further action.**	**1/11- pulled EFF & buffer data, I did notice the cricket noise turning the input shaft back & forth. Shipped to 26mile**		
FR-0118	squeak noise coming from	Cricket noise	NVH	In Eval (26miles)	**1/26- Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**	**1/14- Pulled EFF data, did not notice any squeak noise turning input shaft. Ship to 26mile 1/15**		
FR-0119	U2011-49	B3A	EPP	In Eval (Tyco)	**2/25- Tyco confirmed offset bridge**	**1/14- code cleared and did not reset, unknown why dealer replaced gear, need to pull CQIS report. 1/18- Found out dealers FSE advised to replace the steering gear for one time code set. 1/25- passed leak test, check on xray results and testing 1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week. 2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco. 2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps 2/11- RUA raised shipped to Tyco today est. date to Tyco 2/17**		
FR-0120		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth. Shipped to 26mile 1/15**			
FR-0121	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**2/25- Tyco confirmed offset bridge**	**1/14- pulled eff & buffer data, ship to 26 mile for analysis. Shipped to 26mile 1/15 1/25- passed leak test. check on xray results and testing, 1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week. 2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco. 2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps 2/11- RUA raised shipped to Tyco today, est. date to Tyco 2/17.**		
FR-0122		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth.**			
FR-0123		TS harness was repaired by dealer or customer	TS	At WPAC	**2/10- cannot locate the area the TS harness was damaged because dealer cutout a big section of the harness to repair. Will make service manual changes to prevent repair of the harness. Changes will be made to the 2011 m/y and changes will be made to the 2010 also.**	**1/14- Pulled eff & buffer data need to check repair order, could be charged back to dealer, torques sensor harness is taped from IPA to EPP. Will check CQIS & aws reports. 1/22- talked to dealer harness was damaged when customer brought vehicle to dealer, no accidents or previous known work done. Dealer tried to repair harness dealer could not remember location of repair, need to find area of damage, most likely customer damage. 1/28- took pictures of the harness unable to deterime where & how the damage occurred on the TS harness. Not sure any further testing can be done. Will discuss with Ford on next steps.**		
FR-0124	C1278 (ABS)	N/A	EPP	In Eval (Tim Snider)	**5/3- No faults occurred. I've been running for a couple of weeks with unseated connector - also no issue 7/6- unseated connector C1010 and able to duplicate TC lamp & code, unknown if this was the fault on this vehicle.**	**1/15- pulled EFF & Buffer Data, sent to Ford make decision what to do with gear. 1/20- Ford/TRW team talked with tech to get specific information, tech did not think the TC lamp was on during his road test with stored code C1278 that the tech could remember but followed advice of hotline, testing all wiring and connectors if good to replace the EPAS gear. 3/8- in process to QAO for standard no com testing 3/10 - intercepted gear at Rogersville Andy E will ship gear directly to Tim Snider. FedEx tracking #037996760000241. It should arrive there by Friday. Gear to be installed on vehicle and tested for C1277 codes. 4/19- cannot get the gear to fail at this time, further road testing needed to confirm NPF.**		

FR-0125	U3000-49 U3000-96	B31	EPP	cold weld	**3/8- confirmed cold weld, final report need from Tyco.**	**1/21- Pulled EFF & Buffer Data, ship gear to QAO** **2/2- In QAO today will start leak testing** **2/3 - Rattle comes from inside EPP. Confirmed comes from link relay. Cold weld issue** **2/5 - Need to take relay out & remove PFS to confirm cold weld or loose screw.** **2/12- Suspected cold weld. Traceability suggests failure is from same time period as 4 x 0km failures . Shipped to Tyco**	Tyco	
FR-0126	C200D-49	B4E	EPP	In Eval (UK)	**2/24- corrective actions have been put in place by Nidec and Anting to catch this issue of weak hall effect signals with new EOL equipment at anting. Nidec has not clearly confirmed the root cause of the issue but we do have new automation equipment tests to contain the issue at Anting starting 4/20/2010.**	**1/21- Pulled EFF & Buffer Data, Pulled B9A & B38 with B4E, ship gear to QAO** **2/2- In QAO today will start leak testing** **2/3- Able to duplicate the faults. Unit only fails at the beginning of the journey. Probably the problem is on the 5V_Hall_supply. Next step: Scope signals from halls.** **2/5- Sergio suggest this is similar to the QAO B4E end of line failures, scope signals from hall effects** **3/2- Able to get B4E and B38 faults. Halls issue. Hall C toggling the output during power up. Motors group in UK looking at QAO end of line failures for similar issues, update soon. In discussions with Nidec** **3/19- next steps to do flux density testing next week.** **3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100% containment operation run some bad units through to see if they fail** **4/20- has been root caused as target magnet flux density issue**		
FR-0127	C1B00-64 (ABS)	A5D	EPP	In Eval (QAO)	**3/17- after reading CQIS verbatims advised the 2 EPAS gears & ABS module installed on this vehicle did not fix. Performing FSA# 10B13 that to address DTC C0048-64. Vehicles are reflashed with brake sw that makes system less sensitive to noise on the MTS.**	**1/21- pulled EFF & Buffer Data, did not pull any B codes only A5D. Check CQIS report found dealer replaced epas gear & ABS module same symptom. After going through owner relations for buy back they replaced another EPAS gear and they said they drove over 700 miles and code did not reset?? have the first EPAS gear at WPAC.** **2/22- this gear would be a good option to install on vehicle and check for any codes. This was installed on hybrid that is why code is C1B00-64 instead of a C1277 on a non-hybrid.** **3/8- shipped to QAO today** **3/17- arrived in QAO ready for testing**		
FR-0129	C200D-2F U3000-96	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**1/21- pulled EFF & buffer data, ship to QAO** **2/2- In QAO today will start leak testing** **2/2- In QAO today will start leak testing** **2/5- ambient ignition cycling did not reproduce any code, bully testing next.** **3/2- Not able to reproduce the fault. Hot and ambient testing.** **3/12-Both failures reproduced at lab after some time without powering up EPP. PLUGs visully inspected with microscope and no contamination found between terminals. 5V outputs of the regulator scoped. Noisy signals but normal, as in good known EPPs. Not possible to reproduce again faults. Cold testing in planned.** **3/19- possible issue with the regulator 5v rails do not come on during first start-up. Ship to UK for analysis** **4/20-The unit has been temperature and ignition cycled over a number of days**		
FR-0130	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/21- Notice cricket noise while turning input shaft, shipped to 26-mile**			
FR-0131	C1277 (ABS)	A65	EPP	In Eval (QAO)	**4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.**	**1/22- pulled EFF & buffer data, did not notice any codes to cause no assist. Check CQIS why gear was replaced** **3/2- shipped gear to QAO for testing** **4/12-hot, ambient, & cold testing done with no faults.** **4/19- pass through bully test several times to confirm an intermittent**		

FR-0132	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/22- Notice cricket noise while turning input shaft, shipped to 26-mile.**			
FR-0133	C200B-2F C200C-2F U3000-96	BD0-BD4	TS	In Eval (QAO)	**3/31- quality alert has been done changes made moving vclip dispensor & handling of vclips. 8D in process.** **4/19- Rob Mrozek approved process on his visit to QAO last week.**	**1/22-pulled EFF & buffer data, shipped to QAO** **2/8- Jim Loria looked at the EFF data and is confirming the sensor is defective, probably either bent vane or water ingress. channel 1 is not working properly. Need to hook it up to Canopy next week and try rocking the input shaft and see if that affects the problem.** **3/3- with lack of resources at 26-mile suggest to send to QAO to continue testing since channel 1 was failing from the decoded EFF data. Find gear at 26mile** **3/8- shipped to QAO for testing failed at ambient temp.** **3/18- shipped out of Rogersville to QAO** **3/26- Found an extra V clip on the gear between housing and IPA (rotor side). Hella torque sensor windings are damaged due to this. QAO handling** **3/29- get 8D started and put in quality line alert with pictures with the handling of v clips.**		
FR-0134	C200D-49	B9A	EPP	In Process (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**1/22-pulled EFF & buffer data, B9A only set once, shipped to QAO for standard testing** **2/15- shipped out from 26mile to QAO** **2/26- to leak test and start lab work** **3/2- Not able to reproduce faults. Hot and ambient testing. EFF data 4°C** **3/30- cold testing done no faults, bully test next.** **4/21- double check cold testing history, bully tested 10x no failures- hot puma check next.** **5/3- still cold testing for a week, puma testing next** **5/17- cold puma test completed no faults now hot puma testing, then hot/cold bully** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**		
FR-0135	U3000-49 U3000-96	BC5	EPP	In Eval (QAO)	**4/12- send to Anting to analyze seal in PFS for the 2-pin to see if that was water contamination entry.** **5/4- PFS lost at QAO, been looking for the last 2 weeks. Cannot continue with analysis. I would suspect 2-pin conn fault of water intrusion from pictures.**	**1/29- pulled EFF & Buffer data shipped to QAO. Found 2-pin connector corroded** **2/26- Sergio will take photo's of the ECU water contamination in the ECU & 2-pin that could have set codes. EPP leak check was ok no leaks.** **3/20- looks like water contamination entered the 2-pin battery connector harness. Have updated photo's.**		
FR-0136	C200C-2F	BD1, BD3	TS	metallic particle found between terminals on ECU connector for PFS ribbon cable	**3/10- part still at QAO- additional information sent to Ford for would like the pictures & conn. dates from this claim copied to a new 8D.**	**1/29- pulled EFF & Buffer data shipped to QAO. Visual inspection of harness ok** **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/25- found 2 ECU terminals shorted from straind of wire causing code. Geoff will write cars report so QAO can ship to Kimball for analysis.** **3/3- have containment 8D on this wire strand shorting ECU terminals, sent Ford 8D with latest PFR, also send IDE connector dates. VCARs written to ship board to Kimball to update 8D.**		
FR-0137		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal.**			

FR-0138	C200B-2F	BD2	TS	In Eval (Hella)	**5/19- Rob Mrozek & Tim Snider agreed to close**	**2/4- Pulled EFF & Buffer data shipped gear to QAO. Dealer noticed damage to the RF hub cap rear and RF tire damage** **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/26- cannot duplicate the code ambient testing & bully testing. decoded EFF data does not show any faults in the data when BD2 code set. Advised to send Jim Loria the information and discuss details** **3/5- still cannot duplicate code during hot test at EPP level.** **3/10- continue ambient end of line testing.** **3/24- found intermittent open in channel 1 while scoping the signals, used test box & known good cable still has int. open. Send to Rogersville for testing, remove TS & write QCCARS then send to Hella.** **3/29- in Rogersville for line testing then will ship out to Hella.**		
FR-0139	U3000-49 U3000-96	BA4	EPP	In Eval (FSL)	**12/3-Freescale believes defect in silicon/piece of foreign material.** **12/20- 8D due this week from FSL** **1/14- 8D sent from Freescale the clean date is 12/30/08** **2/7- estimated date into QAO is 4/25/2009.**	**2/4- Pulled EFF & Buffer data shipped gear to QAO.** **2/26- Sergio states fault set at 0degC in the fault data. To email Geoff the information to see if EPP can be sent to UK for testing** **3/1- cold testing needs to be done, ambient completed with no faults & bully testing done with no faults. Compare FR0001 & FR0095 with this BA4 failure to compare similar data. Gear sent to UK for cold testing.** **3/10- arrived in UK today RUA sent today.** **3/29- can reproduce fault cold testing appears monitor micro fault, in process to ship to FSL in Munich for analysis.** **4/16- writing test code so they can capture failure data from the micro, will update next week.** **4/19- Geoff to discuss with FSL in teleconferece tomorrow** **4/21- the written canape testing works in a KG micro but not into this micro, it could be a CPU issue**		
FR-0140		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer**	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer**		
FR-0141	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**4/28- discussions with Nidec & Peter Sinkunas to complete 8D.Mike Davies will send out by end of week.**	**2/4- Pulled EFF & Buffer data, shipped gear to QAO** **2/26- need to leak test and start lab testing** **3/2- Fault is reproduced at ambient after motor is slightly rotated. Motor elec. position does not change its value. Encoders fault. Need to define next steps? EFF data 21° C.** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Despite encoders have correct supply, both are not reading. Send to UK tracking # 9373 7349 8749** **3/19- xray shows poor solder joint on pin 2 of the 5v supply pin. Get Nidec involved with teardown**		
FR-0142	No Codes	Cricket Noise	NVH	In process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile. To store at 26mile**			
FR-0143	No Codes	Cricket Noise	NVH	In Process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile.**			

FR-0144 RUA#3617	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic contaimination on contact 4**	**2/5- Pulled EFF & Buffer data shipped gear to QAO** **2/12- failed leak test, no evidence of moisture dealer could have damaged boot. Gear being tested upstairs.** **2/26- Decode EFF send to Geoff on next step testing.** **3/8- resistance measurement ambient & cold** **3/19- ship down to QAO now that they have cold testing available. This is only the EPP assembly in small box.** **3/30- link relay is not closing fully on startup, second key up it works normal. Failed with 1 amp load. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault.** **4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday.**		
FR-0145	U2011-49	BB7	EPP	In Eval (QAO)	**2/26- Sergio found Rev. Cap**	**2/5- Pulled EFF & Buffer data shipped gear to QAO. Also had BB9 & BB5. Could hear something rattling in EPP. Could be relay cold weld**		
FR-0146	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**3/26- keep part in pending closed position waiting on PCA same as FR0074, testing & approval process still in progress.**	**2/5- Pulled EFF & Buffer data shipped to QAO.** **2/26- gear at QAO inline for testing** **3/2- B9A reproduced. Static motor electrical position while EPP is being turned. Encoders failure. Need to define next steps? EFF data -11°C** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Short between V5_EXT2 and 0VOLTS only present when ribbon is plugged. Current on V5_EXT2 has been measured with an special harness. Found that short is on the motor. Unlikely to be clearance on motor PCB. Send to UK tracking # 9373 7349 8749** **3/19- confirmed int. low impedence on pin 3, 5v supply touching ground plane similar to FR0074.**		
FR-0147	No Com	A5D	EPP	In Eval (QAO)	**8/13- ECU cover removed wiggle testing done NTF. Exhausted all testing never duplicated a No Com issue. This is NTF. Looking at the fault store looks like the battery was disconnected serveral times unsure if this was a connection problem or low battery voltage.**	**2/11- Inspected 2-pin & 3-pin conn. Did not see any problems or contaminates on the terminals pulled EFF/Buffer data, was able to communicate with no problems. Unit still at WPAC, was checking all reporting data for potential chargeback, did not find anything. will ship out next week** **2/25-gear should arrive in QAO 3/1** **3/5- leak tested no leaks, initial bench testing cannot reproduce no com** **3/29- passed cold ambient & hot testing with no faults & CAN Bus ok. Next steps to bully test if that passes to remove cover check ribbon cable for intermittent connections** **4/12- bully testing passed.** **4/21- removing ECU cover and do visual & wiggle testing.**		
FR-0148	C200B-2F C200C-2F	BD0-BD3	TS	At 26mile	**2/15- sent pictures of harness damage to the Ford group, hard to say where damage occurred with 3778 mile on the vehicle. Either HSAP or field. HSAP did not have any EPAS problems on this vehicle going through the plant.**	**2/11- found damaged TS harness with cut wires at first retainer near EPP. Pulled EFF & buffer data. Shipped to 26mile have pictures.**		
FR-0149	U2011-49	B3A	EPP	In Eval (Tyco)	**3/24- Tyco confirmed this is an offset bridge. Pre- containment relay**	**2/11- pulled EFF/buffer data, shipped to 26-mile** **2/19- relay x-rayed potential offset bridge, measure resistance, hot puma & measure resistance again. Raise RUA and ship to Tyco** **2/26- puma testing needs to be done then RUA will be raised and relay shipped to Tyco on Monday** **3/8- RUA# 3404 ready to ship out to Tyco. Check that the proper RUA was sent to Tyco. Simon to check with Mike.**		

FR-0150	No codes	Cricket Noise	NVH	In Process (26mile)	**2/16- shipped to 26mile for storage**	**2/12- turned input shaft notice cricket noise while turning input shaft back & forth from center.**		
FR-0151 RUA#3627	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**2/19- pulled EFF data shipped to 26mile for standard testing. 2/26- need to leak test and xray 3/1- leak tested had damage to boot & ITR, looks like damage happened after OTR was remove so unknow if damage occurred removing gear from vehicle or in shipping. Mike will xray EPP this week. 3/8- mike to xray this Wednesday 3/15- xray looks clean, next step is resistance testing. 3/29- xray clean to resistance check & test with surrogate relay. 4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling. 4/9- inline for thermo cycling after FR0165. 4/21- perform resistance check will discuss relay in this Friday's teleconference**		
FR-0152	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**4/19- hella lost the short desoldering the ASIC and sent to ONSemi with no problem found. Lessons learned from this return is to use diamond cutter to remove ASIC from PCB**	**2/19- pulled EFF data and shipped gear to 26mile check EFF data make sure it is not a cold latched concern before sending to QAO 2/25-gear should arrive in QAO 3/1 3/3- Sergio found failed channel 1 in Torque sensor, used known good cable & hella test box to confirm. To send torque sensor to Rogersville for quality testing before shipping to Hella. 3/8- TS arrived in Rogersville today for testing after testing is complete will ship off to Hella. 3/15- TS arrived in Hella this morning. 3/18- Hella found TS ASIC failure sent to OnSemi for analysis. 3/31- Device failed on ATE (bin 12) at room temperature. X-ray and Sam analysis showed no anomalies. Further analysis to be done at ONSEMI Analysis Center Oudenaarde**		
FR-0153 RUA#3618	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic contaimination on contact 4**	**2/19- pulled EFF data and shipped to 26mile. Need to rattle test gear at 26mile, also will pull EFF data. 2/26-keep gear at 26mile. gear failed at 3.8degC send decoded EFF to Geoff find out what testing should be done next. 3/19- ship down to QAO now that they have cold testing available. 3/30- link relay is not closing fully on startup, second key up it works normal. Failed 1 amp load test. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault. 4/9- Signals scoped at EPP level . Link relay failing. Ship relay to Tyco 4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday. RUA-3618 5/5- week 22-09 relay, at Tyco will report out next week.**		
FR-0154	U2011-49 U3000-96	BB7	EPP	In Eval (QAO)	**3/3- QAO confirmed Rev. Cap**	**2/19- pulled EFF data and shipped gear to QAO. 2/25-gear should arrive in QAO 3/1**		
FR-0155	P07AE-09	AF1	NVH	In Eval (QAO)	**3/15- checked gear for high friction testing lead to low friction with the test results. Code did clear for dealer but dealer was concerned with SWA reading, hotline advised to replace the gear because of the reading.**	**2/19- pulled EFF data and shipped to QAO, include tech comments friction code cleared and did not reset on road test. 2/25-gear should arrive in QAO 3/1 3/3- In lab ready for testing**	QAO	

FR-0156	U200B-2F U200C-2F	BD0-BD3	TS	In Eval (QAO)	**3/17- appears a sharp object cut the convolute and cut the TS wires inside. Vehicle did not have any other warranty claims done. No failures at the assembly plant.**	**3/1- pulled EFF/buffer data shipped gear to QAO decoded temp 50degC** **3/10- damaged TS harness about 2" from the overmold at IPA. Red wire open Sergio to ship harness back to Englebert & Joel for analysis.**		
FR-0157 RUA#3626	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**3/15- pulled EFF & Buffer data, shipped to 26mile for analysis** **3/22- need to leak test gear today** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- inline for thermo cycling after FR0151** **4/21- perform resistance check will discuss relay in this Friday's teleconference** **4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps.** **4/26- discussed with Ford will send to Tyco for further testing** **5/5- week 37-08 relay, in process to tyco** **5/12- Tyco to perform Fritt test to 5A.**		
FR-0158	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/15- Pulled EFF & Buffer data, shipped to QAO for analysis** **4/9- been delayed in transit, now on its way to QAO** **4/19- need to leak test then bully test & hot,cold, ambient testing** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**		
FR-0159	squeek noise turning	cricket noise	NVH	In process (26mile)	**3/15- verified cricket noise while turning input shaft, shipped to 26mile put in storage bin**			
FR-0160	C200B-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	**3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile. Sent out pictures**	**3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile.**		
FR-0161	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**			

FR-0162	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**			
FR-0163	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**5/19- Fairchild analyzed power module confirmed EOS at the end of their testing.**	**3/22- Pulled EFF/Buffer data shipped gear to QAO** **4/9- Faulty FET POWER pack. PH3/PH2/0_volts/LINK_voltage shorted, Geoff to approve shipment to Fairchild for level 3 analysis.** **4/16- Geoff advised to ship FET power pack to Fairchild for analysis.** **4/21- looking for anti-static bags to ship power module FET.** **4/23- Rogersville sent out couple static bags to QAO should arrive Monday to ship out Power module FET to Fairchild.** **5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out.** **5/4- part shipped out today to Fairchild(China)**		
FR-0165 RUA#3625	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**3/22- Pulled EFF/Buffer data shipped gear to 26mile for xray** **3/26- leak test gear today so Mike can xray all three B3A's next week** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- surrogate relay on EPP is thermo cycling with ignition cycling.** **4/12- did not fail over the weekend** **4/16- remove surrogate relay this afternoon and thermo test over the weekend. Geoff to get relay batch numbers from Nidec on this one FR0151 & FR0157 all have similar motor build dates around 10/2008.** **4/21- need to do relay resistance check before Friday's teleconference** **4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps.**		
FR-0166	High pitch Squeek while turning wheel quarter turn from center	cricket noise while turning steering	NVH	In Process (26mile)	**3/21- did not notice cricket noise while turing input shaft. Checked the CQIS report and they state the were turning the wheel back & forth from center to get the chirp noise. Will have 26mile double check noise.**			
FR-0167	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (26mile)	**3/21- damaged TS harness, same area as previous harness with hybrid engine**			
FR-0168	P07AE-09	AF1	NVH	In Eval (26mile)	**3/30- gears held in the containment area that failed the QAO line have been scrapped. QAO will assemble couple of gears for 26mile testing.**	**3/21- found cracked gear housing near outside housing large boot clamp. Have pictures** **3/23- 26mile test plan:** **1- Leak test** **2- EDF (power off)** **3- Tear down and inspect components.** **3/25- Friday meeting to update 8D and find root cause at QAO.** **3/29- loose RNB balls failed QAO NVH 5/26/09 then gear teardown 6/29-7/15 before 7/29- revised teardown procedure. teardown done before revised teardown process could have caused the loose balls.** **Gear assembled 10/30/2009 and passed.**		

FR-0169	high pitch squeak while turning	cricket noise	NVH		**3/29- did not notice any cricket noise in the gear while turning the input shaft especially while turning to the right. Check gear for cricket noise.**			
FR-0170	U3000-49	B43	EPP	In Eval (QAO)	**8/25- Tyco confirmed offset bridge**	**3/29- Pulled eff & buffer data ship to QAO for analysis.** **4/6- sent gears out to Rogersville to ship to QAO for testing** **4/15- gear in QAO ready for testing** **5/17- QAO has not started testing** **8/13- has performed ambient ignition cycling. Next to perform hot puma & then hot & cold ignition cycling.** **8/16- found link relay opening with light tapping, sending PFS to 26mile for xray.** **8/17- date code from the relay strongly suggests an offset bridge along with relay opening with light tapping. To raise RUA and send to Tyco for xray.** **8/18- Filipe carrying link relay back to Tyco**		
FR-0171	Squeak noise while turning	cricket noise	NVH		**3/29-noticed cricket noise while turning input shaft. Prior to containment actions**			
FR-0172	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (Wuppetal)	**6/29- have all the pictures from Delphi & QAO and only area of molex connector impact damage would be in shipment(box damage) or QAO assembly line.**	**3/29- Pulled eff & buffer data ship to QAO for analysis. Did not notice any damage to the TS harness.** **4/6- sent gears out to Rogersville to ship to QAO for testing** **4/15- gear in QAO ready for testing** **4/19- Broken wire at Molex connector, get information from harness and ship to Delphi.** **4/26- Delphi rep. picked up harness at QAO sending harness to Turkey for further analysis.follow-up from Dave Kerska, QCCAR # 378973.** **5/17- Delphi verified damaged molex connector & broken red wire, sent Delphi presentation to Ford, harness sent to Wuppetal for further analysis.** **6/2- Wuppertal plant states the copper strands are not damaged by a mechanical impact. The terminal is broken inside the connector. It is caused by a mechanical impact to the connector which is not caused by Delphi.**		
FR-0173	high pitched squeek from steering	cricket noise	NVH	In Eval (26mile)	**3/30- verified cricket noise from gear pre-containment build at QAO. Put gear in storage**			
FR-0174	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/31- pulled eff buffer data and shipped gear to QAO** **4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday** **4/19- need to leak test then bully test & hot,cold, ambient testing** **5/17- JL- cold bully test raised E98 LIC's on every ignition cycle** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**		

FR-0175 RUA# 3923	U2011-49	B6B	EPP	In Eval (QAO)	9/9- to locate ECU & cables to do high pot test then teardown to check motor PCB clearance issue. 10/30- relay sent to Tyco woth NTF, PCB clearance NTF. Close as NTF	3/31- pulled eff buffer data and shipped gear to QAO 4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 8/18- Filipe carrying motor relay back to Tyco 9/1- Tyco torn down relay no small hot spot but no evidence of welding. NTF 9/7- perform high pot testing then check motor relay PCB cleareance.		
FR-0176	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	4/30- T2 signal missing appling stress to clockspring ribbon cable. parts broken cable bent part reworked 2/6/2009, check centering tool use	3/31- pulled eff buffer data and shipped gear to QAO 4/6- sent gears out to Rogersville to ship to QAO for testing 4/16- leak test passed also passed bully test 10X. Has been in the cold chamber 13hrs with no failure. Will hot & ambient test next		
FR-0177	C200D-49	B9A	EPP	In Eval (QAO)	7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix	3/31- pulled eff buffer data and shipped gear to QAO 4/6- sent gears out to Rogersville to ship to QAO for testing 4/19- need to leak test then bully test & hot,cold, ambient testing 4/21- leak check passed taken to lab for testing 4/26- start the bully test tomorrow when line changes 5/3- bully test passed, now in fridge cold testing then will bully test cold and performance test 5/17- JL- cold bully test raised E98 LIC's on every ignition cycle		
FR-0178	P07AE-09	AF1	NVH	In Eval (26mile)	4/28- gear passed case and core harness test, 8D sent to Ford	3/31- pulled eff buffer data and shipped gear to 26mile for analysis. No visual damage to gear. Input shaft harder than normal to turn. 4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing. 4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next to teardown for analysis. 4/12- found bent rack near tooth to pinion area, no damage to ITR. Testing on going in materials lab. 4/16- Jason to find out from Nick T what are the next steps in testing this gear 4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report 4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday		
FR-0179	steering feels very loose	N/A	NVH	In Eval (26mile)	4/6- 26mile found missing pinion nut same as FR0062. both gears built on same day 3/29/2009. pre-containment date for corrective actions.	3/31- noticed up & down input shaft movement, 26mile to analyze.		
FR-0180	P07AE-09	AF1	NVH	In Eval (26mile)	4/28- gear passed case and core harness test, 8D sent to Ford	3/31- pulled eff buffer data and shipped gear to 26mile. No visual damage to gear. Input shaft harder than normal to turn in both directions. 4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing. 4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next inline after FR0178 for teardown analysis. 4/12- bent rack near ball screw threaded area, on going testing in the materials lab 4/16- Jason to find out from Nick T what are the next steps in testing this gear 4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report 4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday		

FR-0182 RUA# 3589	U2011-49	B3A	EPP	In Eval (Tyco)	**5/7- Tyco comfirmed this was an offset bridge.**	**4/12- pulled EFF buffer data, shipped out to QAO** **4/21- xray indicates offset bridge- ship to Tyco** **5/5- week 24 relay, just arrived will send out report to verify offset bridge**		
FR-0183 RUA#3590	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**5/28- Tyco confirmed plastic contamination on contact 5, 3mm of plastic.**	**4/12- pulled EFF buffer data, shipped to 26mile** **4/21- xray clean had high resistance on PH3, next to load test and check resistance.** **4/26- perform constant voltage test fixed 100ma/5amp current test today.** **5/3- failed the voltage test with fixed current.** **5/5- relay ready to ship to Tyco, Mike Fontana to send out report analysis to Ford team & Tyco.** **5/6- Geoff sent out information to Ford, 26mile to ship to Tyco for level 3 diagnosis. RUA# 3590**		
FR-0185	U2011-61 C200B-62 U3000-96	B95, BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim**	**4/19- Pulled EFF buffer data, shipped gear to QAO** **4/26- gear arrived today** **5/17- failed leak test around one of the TS cover screws, performed cold & ambient testing with no failure at this time.** **5/21- Unit will be frozen and bully tested. Also Performance test will be performed at cold temperature. Planned to be done tomorrow morning** **6/2- passed all bully testing & cold/ambient ign. Cycling.** **6/7-in lab for cold Performance & Puma testing. SAM testing** **6/15- confirmed moisture intrusion, EPP failed leak test** **6/25- EPP sent to Anting for analysis.** **7/26- same 2-pin PFS leak as FR0208. investigation ongoing at Kimball & Anting.**		
FR-0186	no codes	HEARS NOISE FROM L.S. FRONT OF VEHICLE WHEN AT SLOW SPEEDS AND	NVH	In Eval (QAO)	**6/20-gears passed all NVH & EDF testing at QAO. NTF**	**4/19- did not notice any gear damage or noise turning input shaft. Shipped gear to QAO.** **4/26- gear arrived today** **5/3- EDF test stand passed with no noise or friction issues, I will check AWS & CQIS reports to make sure vehicle did not return.** **5/4- primarily checking for belt slip, QAO EDF test stand needs to be updated to perform all four tests w/dynamic assists. Talk with Chris Manjos to help set-up SW** **5/17- talked to Pepe the SW was updated for the full EDF testing, the gear still needs to go back through to verify the full test.**		
FR-0187	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**6/2- broken ferrite core at the small segment of the PCB is the cause why Vcc -line is not given. Design change of the small segment eliminates this part on 8/14/2009 at Hella.**	**4/19- Pulled EFF buffer data, shipped gear to QAO** **4/26- gear arrived today** **4/30- TS swapping exercise lead to defective torque sensor, no visual torque sensor issues need to discuss next steps with engineering. Before sending to Hella.** **5/3- check with Jim Loria next steps before shipping TS out to hella** **5/13- TS failed with four codes BD0-BD3 shipped from Rogersville to Hella, QCCAR #379423** **5/21- Vcc- signal is open against ground. Could be broken cable or weld issue on the FFC cable to pin 1, open when there should be 5v. Hella will send out report this Tuesday 5/25.**		
FR-0188	no codes	gear leaking fluid		gear returned to dealer	**4/19- chargeback to dealer**			

FR-0189	No Com	A28	EPP	In Eval (QAO)	8/5- NTF with all the standard testing in QAO, to send PFR, close claim as NTF	4/19- was able to communicate with EPAS gear, gear not failing at this time. No codes in gear 4/26- gear arrived today 8/5- NTF with all the standard testing in QAO, to send PFR		
FR-0190	C200B-61 C200B-2F	BD2,B90	TS	In Eval (QAO)	5/5- overwound TS, rework part 2/6/2009 same date as FR0176. missing plastic clockspring tape guide bent clockspring tape. Channel one missing at times.	4/19- Pulled EFF buffer data, shipped gear to QAO 4/26- gear arrived today 5/3- leak tested, now at the lab ready for testing		
FR-0191 RUA# 3768	C2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF	4/26- pulled EFF Buffer data, shipped to 26mile for testing 5/5- xray clean, next to perform standard resistance testing 5/7- resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest. 5/17- passed tri-temp ignition cycling at this time 6/7- 5amp hot test then check hot puma test. 6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases. 6/21- passed 1000v isolation test, ship to Tyco for testing. Raise RUA. 6/28- RUA raised sent to Tyco 7/9- NFF with all of Tyco's testing, next to open relay and visual inspection. 7/12- Tyco opened relay did not find any debris on contacts, motor relay is NFF.		
FR-0192	C200D-49	B9A	EPP	In Eval (UK)	7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix	4/26- pulled EFF Buffer data, shipped to QAO for testing 6/14- bully & performance test completed no faults, ambient/cold ign. Cycling, puma testing next. 6/15- QAO completed all the B9A testing they could with no failures, sent to UK for further testing. 6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.		
FR-0193	U3000-61 C200B-62	B90,BD4	TS	In Eval (QAO)	6/23- found on the QAO assembly line possible cause of bent TS finger is christmas tree installer laid on IPA rack when not in use and when TS drops down to operator could cause the bent finger. A new tray was installed to install the tool on 5/25/2010. proper work instruction printed for operator to use this tray for the tool at all times.	4/26- pulled EFF Buffer data, shipped to QAO for testing 5/24 performance test,bully test, hot/ambient/cold/audit rig ignition cycling all passed, next to puma test then ribbon cable test. JM 6/7- found one finger of the torque sensor bend down towards the PCB. Put in 8D need to find root cause, Guillermo sent Ford 8D on 0Km bent finger. 6/14- The damage to the warranty return is due to a handling issue. We cannot determine where the damage occurred - Rogersville or QAO, but we did take the following proactive measures: We attempted to assemble a known bent rotor in order to verify that the Prodel line would reject rotor fingers bent in the upward direction. Part was rejected at the rotor weld station for B1 fault: bent rotor vane. We created a monthly electrician PM to verify correct axis alignment on station B2/B3 - weld stations. This will ensure that the part is being loaded/unloaded correctly and that no tooling is contacting the rotor fingers. We		
FR-0194	TC lamp on ABS code C1963-20	A28		At WPAC	6/15- vehicle returned with same symptom and code c1963 found poor connection at ABS module C135.	4/26- pulled EFF Buffer data, kept at WPAC deciding if dealer should be charged back for diagnosis. Code C1963 does not lead to EPAS gear with not stored epas codes & did not perform interactive diagnosis. 4/30- decided by all dealer chargeback did not follow PPT "F" properly for ABS code C1963. the gear will be returned to the dealer. 5/5- checking to see if gear can be tested on-vehicle checking with Russ Biyashev.		

FR-0195	steering squeaks	cricket noise	NVH	At 26mile	**4/26- noticed squeak noise in the IPA while turning the input shaft**			
FR-0196	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF**	**4/26- pulled EFF buffer data, shipped to 26mile for testing** **5/5- xray clean, next to perform standard resistance testing** **5/7-resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest.** **5/17- has been running all last week with no faults, been taken off and put to the side for now.** **5/24- perform hot 5amp high resistance test.** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases.** **6/28- check 1000v test by end of week.** **7/9- passed isolation test to raise RUA and ship to Tyco.**		
FR-0197	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis** **5/12- gears should arrive in QAO on Wednesday** **5/18- need to leak test then testing can start in lab** **6/2- passed all bully testing & Performance testing. Next temp ign. Cycling & puma. RG** **6/4- removed ECU cover has found debris in a couple of different areas the 5V. sliver looks like it is shorting across pins 10 & 11 on PL1. At this time it is not shorting.** **6/14- ECU arrived in Kimball today. Geoff will follow-up make sure lab gets part and starts analysis.** **6/22- Suspect fibers that were noted by customer are actually cracks in flux on solder joints. NFF with Kimball testing, Kimball to ship ECU back to UK for further testing.**		
FR-0198	all IP lamps blinking	A16, A2A		chargeback	**4/30- vehicle had same condition after PSCM was replaced, chargeback gear to dealer, the gear will be returned to the dealer**			
FR-0201 RUA#3685	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**6/7- Tyco confirmed raised rivet, week 45- 2008**	**5/6- pulled EFF data & shipped to 26mile for testing** **5/17- xray indicates raised rivet, further resistance testing before shipping to Tyco** **5/18- failed the 5A resistance measurement at Room Temp on the raised rivet shipped to Tyco**		
FR-0202	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- Tyco confirmed plastic contamination on contact 4.**	**5/6- pulled EFF data & shipped to 26mile for testing** **5/17- xray clean, perform 5amp test at ambient & hot.** **6/14- 5amp amp test passed, next tri-temp ign. Cycling.** **6/21- passed ign. Cycling, next to perform 1000v iso. Test.** **6/28- 1000v test to be done by the end of the week** **7/12- passed isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**		

FR-0203	U3000-49	B7E	EPP	In Eval (UK)	**6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane. Pre-containment have pictures of the pin 12 short.**	**5/6- pulled EFF data notice slight damage to ECU cover from shipping damage no return packing & shipped to QAO for testing 6/7- passed leak test, shipped to 26mile for xray of motor PCB ground plane issue. 6/10- Isolation test(1000v) arc is observed between pins PL2.9 (Hall_supply) and PL2.12 (V_Star). Remove ECU first then resistance measurement to ground to verify PCB pin clearance. 6/14- need to xray part to check motor PCB clearance issues. 6/21- PCB in the UK for testing- xray PCB 6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane. Pre-containment have pictures of the short**		
FR-0204	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**5/6- pulled EFF data and shipped to QAO for testing 6/11- leak testing, slight leak at OBH on interface 6/14- passed bully & performance testing, now down to EPP level to start ignition cycling ambient & cold 6/15- QAO completed all the B9A testing they could with no failures, shipped to UK for further testing. 6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.**		
FR-0206	U200B-2F C200B-61	BD2	EPP	In Eval (QAO)	**6/10- confirmed reworked TS that had missing plastic tape guide & twisted clockspring tape. Rework 6/17/09.**	**5/6- pulled EFF data shipped gear to QAO 6/8- Possible damage at clock spring on IPA. In process of visual inspection**		
FR-0207	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**	**5/7- pulled EFF data shipped to 26mile for xray & testing 5/17- needs to be leak tested today then ready for xray 5/25- xray clean & passed the resistance test. Check with Geoff on next steps. 6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling 6/10- put into tri-temp chamber with ign. Cycling 6/14- passed 5 days of tri-temp ign. Cycling with no faults. 1000v iso test next step 7/12- has performed all the relay testing and passed isolation(1000v) test. Next to take out relay send to Tyco.**		
FR-0208	C200B-62 U3000-96	BD1,BD3, BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim snider**	**5/7- pulled EFF data shipped to QAO for testing, 2-pin conn. Has some corrosion & gear covered in clay or mud.Also had codes BD1,BD3. 5/27- found internal moisture leak in the EPP, moisture traces in the 2-pin. QAO to assemble PFS & ECU cover then ship to Anting for leak evaluation. SAM 6/2- QAO shipped gear to Anting for leak testing around 2-pin. 6/7- shipment arrived in Shanghai today at 5:55pm. 6/14- check status of Anting testing, sent Raymond Qiu an email. 6/21- emailed Raymond Qui to take backside pictures of the PFS with the plastic removed to verify water path from 2-pin. Report out as soon as Raymond responds. 6/25- Anting will remove the molding to check conn. moulding area that it is in place at the 2-pin. Raymond Qiu will follow-up and get pictures.**		
FR-0209	no codes	no codes	chargeback	chargeback	**5/7- no codes, no visual gear issues & no binding while turning input shaft. Customer complaint at times trying to pass someone on highway vehicle rev's high then makes a bang noise. Transmission work fixed this issue**			

FR-0210	C200B-2F U3000-96	BD0,BD2	TS	In Eval (Hella)	**11/10- causal part is the clockspring assembly but lost the root cause sending parts to Tyco. Tyco's 8D NTF New improved failure analysis process at QAO & Hella. Case closed**	**5/7- pulled EFF data shipped to QAO for testing 6/2- leak test passed, next bully testing. Pepe 6/14- cold/ambient bully test passed, now cold ign. Cycling 6/15- Unit is going to be measured and visual inspection will be performed at component level 6/17- Pepe found twisting clockspring in the lock position he losses channel one. Some marking noted on the clockspring. High resistances notice on channel one. 6/28- send PFR to Todd Williams & Angie Caudill. Discuss if TS should be sent to Rogersville for high resistance on channel one 6/30- We agreed with clockspring torn down at QAO to ship TS to 26mile for Hella's inspection to see if problem is located directly to torque sensor ribbon cable of solder joints. 7/7- Pepe shipping TS assembly to Rogers ville for analysis.**		
FR-0211	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/3- confirmed double start-up during analysis and confirmed a regulator issue**	**5/7- pulled EFF data shipped to QAO for testing 6/2- passed bully & ambient performance testing & ignition cycling. Gear in fridge next cold ignition cycling & performance test. 6/14- cold ignition cycling at this time**		
FR-0213	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- during high pot testing to relay low side unit failed, motor PCB tear down confirmed motor PCB clearance issue.**	**5/7- pulled EFF buffer data & shipped to QAO 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0216	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/4- confirmed a double start-up at QAO, indicates a regulator issue and confirmed a regulator issue.**	**5/20- pulled EFF & buffer data, shipped to QAO for analysis. 6/11- Pepe found damaged TS harness on Pinion side 6/15- passed leak test, ambient & cold ign. Cycling**		
FR-0217 RUA# 3720	U2011-49 U3000-96	B6B	EPP	In Eval (Tyco)	**7/12- Tyco confirmed offset bridge**	**5/20- pulled EFF & Buffer data, shipped to 26mile for xray 6/2- xray indicates offset bridge, resistance measurement passes, checking with Geoff on next step 6/7- agreed for 26mile to raise RUA and send to tyco. 6/14- check shipping status to Tyco. 6/22- Tyco just received relay today**		
FR-0219	high pitch squeal noise steering	cricket noise	NVH		**5/20- turned input shaft to verify cricket noise turning back & forth from center.**			
FR-0220 RUA# 3777	U3000-49	B32	EPP	In Eval (Tyco)	**7/9- has code B31 & B32, Tyco has confirmed failure of link relay as cold weld. Next to open relay to inspect weld. Confirmed bridge weld failure at Tyco.**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 6/25- indication cold weld of the link relay, relay build date 2/10/2009 PFS rattles & has open to send link relay to Tyco today**		

FR-0221	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (QAO)	**6/17- over wound TS clockspring, IPA rework 6/17/2009**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today**		
FR-0222	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**	**5/24- pulled EFF & fault store shipped gear to 26mile for analysis. 6/7- inline for leak testing then xray 6/9- xray tomorrow 6/10- xray clean, next 5amp test 6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps 6/14- passed 5amp & puma testing with no faults. 1000v isolation test next. 7/12- passed tri-temp ignition cycling & isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**		
FR-0223	P07AE-09	AF1	NVH	In Eval (QAO)	**7/30- passed all criteria on the EDF stand, NTF at this time.**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today**		
FR-0224 RUA#4045	U2011-49	B3A	EPP	In Eval (Tyco)	**10/15- NTF with the testing at Tyco, next will open the relay and perform visual analysis. 10/27-Tyco found a black plastic particle 11/1- follow-up once 8D is sent.**	**5/21- dealer sent back a sunvisor instead of the EPAS gear back to WPAC, dealer charged back for the part. 7/7- dealer sent the proper EPAS gear back to the WPAC, part ready for xray at 26mile. 9/9- clear xray, next to follow standard testing procedure. 9/13- ign. Cycled over the weekend no problem found. 9/17- to perform 5amp resistance test & hot puma 9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco. 10/5- ship to Tyco should arrive on 10/8.**		
FR-0225	TC lamp on C1278			chargeback	**5/21- dealer sent back a hydraulic gear instead of the EPAS gear back to WPAC, dealer charged back for the part.**			
FR-0226	C200B-2F C200C-2F U3000-96	BD2,BD3	TS	In Eval (QAO)	**5/27- pulled EFF buffer data, found pinched TS harness. Have pictures of damage.**			

FR-0227 RUA#4056	U2011-49 U3000-49	B43	EPP	In Eval (Tyco)	**10/8- QAO exhausted all their testing, shipped to Tyco 10/27- confirmed Offset Bridge, precontaiment. Geoff waiting to get update on the 8D.**	**5/27- pulled EFF buffer data, ship gear to QAO for analysis. Also pulled BB7 & BB9 codes from fault store 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today**		
FR-0229*	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**11/12- UK received the part testing has not started. 12/17- PCB motor clearance was confirmed in the UK**	**5/27- pulled EFF buffer data, shipped gear to QAO for analysis. Also pulled codes B38 & B4E from the fault store. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 9/9- passed all the EOL & standard testing. Ship to UK for further analysis. 10/6- tri temp test before shipping to UK. 10/27 Tri-temp complete, generated BB5,BB7 and BB9 faults but no B9A fault. So ship to Uk for further analysis**		
FR-0230	C200B-2F	BD0,BD2	TS	In Eval (Kimball)	**9/2- Ford asking if the PFS was to print, mainly inside diameters of the 2/3 pin conn.. Sent email to Anting & Kimball to check. Confirmed 2-pin water entry sent Kimball report to Ford.**	**5/28- pulled EFF data, shipped gear to QAO for testing. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 6/30- At lab but has not started, will start to testing sometime this week. 7/7- Water ingress due 3 PIN connector of PFS causing malfunction of the system. Also sent email to Anting to see if this PFS needs to be sent to Kimball to have the PFS head molding removed to check access of the moisture into the EPP. 8/27- shipped to Kimball today. DHL#: 357 3958 054**		
FR-0231	Noise in frt-end while turning	N/A	NVH	In Eval (26mile)	**8/16- gear when through the NVH & EDF test and passed all tests. NTF**	**5/28- did not notice any gear damage or noise while turning input shaft. 26mile to leak test then put on EDF & then check cricket noise. 6/7- check gear on NVH first then put on EDF tester. 6/14- just a note on these returns, what I have notice with problems with the left trans axle seal leaking on the EPAS gear making the gear look like it leaks fluid then on turns the trans pump will whine & the steering gear gets replaced. This dealer added 1 quart of trans fluid on this repair. 6/21- EPP was accidently removed from the gear, not sure if EPP should be reinstalled? Check with Ford 7/7- reinstall EPP on gear, NVH test & EDF test to verify any noise concerns. Mark Bugosh is going to put the EPP back on and get the belt tension as good as he can, then give it to the lab downstairs. ETR# U2010-00605 for the lab to do EDF and NVH.**		
FR-0232 RUA# 4110	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**5/28- pulled EFF data, shipped gear to QAO for testing. Also pulled BB7 from the fault store similar to FR0227 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 7/2- passed ign. Cycling, bully, hot/ambient puma testing with no failures 7/7- shipped PFS to 26mile for xray of the link relay. 9/1- PFS xray clean, next step to resistance testing ambient & hot. 10/8- need to do hot resistance test 10/20- hot resistance check was performed in QAO. To ship PFS to Tyco. 11/1- waiting on Tyco relay workshop Nov.22-24 11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results**		
FR-0233	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/6- confirmed double start-up, indicates regulator issue. Confirmed regulator issue.**	**5/28- pulled EFF data, shipped gear to 26mile. No gear or harness damage 6/17- gear ready for leak testing at 26mile should be done by tomorrow 6/21- Jason to check latest status. 6/28- shipped to QAO 7/20-Test in progress. Ignition cycling, IPA movement movement from stop to stop, functional test. Fault not reproducible. 7/26- testing now for a double start-up, has the E22 code in fault store. 7/28- QAO to get freezer spray and test for the double start-up**		

PE12-017 007798

FR-0236	TC LAMP ON TURNING	N/A		In storage (QAO)	**5/28- pulled codes only had A8E in the fault store. Found out dealer had same TC lamp on after replacement. Found rear ABS wheel speed sensors mis-wired. Cannot chargeback EPAS since hotline advised to replace. EPAS gear was not the causual part# in AWS.**			
FR-0238	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At 26mile	**6/14- found TS harness conduit near the EPP contacted in three spots, broken black wire in harness. shipped gear to 26mile. Have pictures.**			
FR-0240	light squeal noise while turning	cricket noise	NVH	At 26mile	**6/14- verified cricket noise while turning the input shaft. Close and store at 26mile**	**6/14- verified cricket noise while turning the input shaft. Close and store at 26mile**		
FR-0243	C200D-49	B9A	EPP	In Eval (QAO)	**11/8- double start-up , send Geoff the info to confirm regulator issue.**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started**		
FR-0245	C200D-49	B4E	EPP	In process (UK)	**1/31- ship motor assem. to UK to check for possible PCB motor cleareance issue. 2/1- QAO found PCB motor clearance issue at PL2 at 500v, ship to Andy in UK to physically check short.**	**6/14- pulled EFF data shipped to QAO. B4E only code set intermittently .313 secs into the journey. Found cut on OBH boot. 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 7/27- ign cycling, bully, hot puma passed. Next to start the cold testing. 10/6- cold perf. & 5x cold bully done with NTF. Next step tri-temp testing**		
FR-0246 RUA# 4342	U3000-49	B43	EPP	In Eval (UK)	**3/23- confirmed that this was human sweat on the relay contacts and the only area that this can happen is right after the laser clean station and they install new plexi glass doors to prevent this issues. The new doors at Tyco were installed on 3/12/2010 that would be june 18, 2010 into QAO.**	**6/14- pulled EFF data shipped to QAO. 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 9/10- EOL & ambient ign. Cycling done, next step cold testing. 10/8- cold performance, bully & puma all passed, next to tri-temp test. 10/11-now testing in tri-temp chamber 10/27 Tri temp complete and fault not reproducible Next step will be to Xray 11/8- Remove the PFS and send to 26mile for link relay xray. 1/31- 26mile shipped link relay to UK for Andy to take to the workshop 2/9- NTF with relay SEM has some strange burn/ contamination on the contacts, Andy to bring relay back**		

FR-0247 RUA# 3807	TC lamp on C1277 No Assist	No Com	EPP	In Eval (FSL)	1/31- UK still trying to recreate the failure, NTF at this time. 2/4- go back and put micro on the original ECU for testing to recreate the no com symptom. 4/19- UK has reinstalled the micro on the original ECU and has exhausted their testing and cannot get the ECU to fail after freescale performed their testing. closing as NTF	6/14- dealer states they have no assist and only the TC lamp on with code c1277. no PS message and they could communicate with the PSCM. When I hooked up CANape could not communicate or pulled Ford codes or fault store. 6/22- shipped from Rogersville to QAO 7/2- No Com confirmed at QAO sent EPP to UK for further analysis. 7/9- confirmed micro fault, Monday take off board to confirm micro, if it is to ship to FSL for analysis. 7/16- confirmed micro fault sent micro to FSL in Munich. 7/19- Acknowledged receipt today. 7/30- device now having a hard time failing, now in tri temp chamber at 125C to see if they can get to fail, will report out next week 8/16- micro under analysis at FSL in Malaysia, Geoff will follow-up in tomorrows call with FSL		
FR-0248	steering type noise & leaking oil	No codes		WPAC	6/14- trans axle fluid down 2 qts from lf axle seal leak getting on EPAS gear. Chargeback, dealer repaired left axle seal & bushing and then added 9qts of trans fluid			
FR-0249	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	10/18- next step to tri-temp testing 5/3- close as regulator S/W issue	6/14- pulled EFF data shipped to QAO for analysis 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 8/3- confirmed double start-up during		
FR-0250	C200B-2F	BD0,BD2	TS	In Storage (26mile)	6/14- dealer attempt to repair the TS harness so we lost the exact location of damage, looks like the repair was under the heat tape. Have pictures.			
FR-0251	P07AE-09	AF1	NVH	In Eval (QAO)	10/6- check with QAO if we have 8D or CA for this issue at station 70. will check with Guillermo. 10/20- Guillermo to get poke yoke dates for the station. 10/22- send pictures to understand process. 4/10- PCA it's a poke yoke that works by preventing the screw in tool to work in reverse (pinion nut and plug tool), the implementation date was	6/14- friction code cleared for the dealer and did not reset but the steering still hard to turn. I did verify input shaft hard to turn, B6A set twice intermittent. 6/30- shipped to QAO 7/9- there is some suspect of water ingress, I will wait for your opinion and tear down the unit and confirm this contamination by visual inspection. Wanted Pepe to reassemble boots & do a leak test to possible area's of moisture. 8/11-reassembled did not show any leaks during leak test. 8/13-pinion nut was being assembled twice. This condition occurred when operator did not complete full sequence and did not torque the pinion nut properly. Operator needs to turn back the pinion nut tool in order to re-torque it. But due to the rack and pinion assembly this action makes the rack travel to end position and make the rack and pinion crash.		
FR-0252	TC lamp on C1963	No codes		In Storage (26mile)	6/14- check CQIS report and after EPAS gear was install vehicle returned 165 miles later with the same TC lamp on with C1963 tech found poor connection at the ABS module, repaired and fixed the vehicle. Cannot chargeback hotline advised to replace the EPAS gear.			

FR-0253	U3000-49 U3000-96	B7E	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**	**6/14- pulled EFF data and shipped to QAO for analysis** **6/22- shipped from Rogersville to QAO** **7/20 - PFR Complete. Waiting Warranty team decision. Leaks at bellows. Discuss** **7/21- X-ray? Failed at orange connector at 750 and 1000V.** **7/21- symptoms appear to be another PCB motor clearance issue. Follow same process as FR0258** **9/9- advised to teardown and check PCB motor clearance**		
FR-0254	C200B-61 C200C-2F U3000-96	BD3,B90	TS	In Eval (QAO)	**7/26- QAO confirmed overwound clockspring, rework was done 5/21/2009. pre-containment**	**6/14- pulled EFF data and shipped to QAO for analysis** **6/22- shipped from Rogersville to QAO** **6/30- leak tested found leak at pinion plug, will start testing sometime this week.**		
FR-0255	No Com	No Com	EPP	In Eval (Infinion)	**10/18- Geoff has presentation to talk about the EOS issue** **10/18- Tim Diez looking for number after the ISO2 pulse.** **10/27 Geoff now has number and will include in presentation.** **11/1- Geoff presented a couple of slides to Ford and Tim Diez & Tim Snider agreed to close this issue as EOS.**	**6/30- pulled EFF data, No Com with my Equipment at WPAC. shipped to QAO** **7/7- leak tested passed, testing now starting.** **7/16-Low Impedance at Pin 2 of integrated can circuit. Have disconnected ribbon cable. Next step send to UK for Level 3 on Tues?** **7/28- somehow EPP shipped to the wrong location UK now trying to get EPP back from New Castle.** **7/30- EPP should arrive in UK on Monday, this is when the testing will start.** **8/2- UK has received the EPP today after testing something with the CAN IC circuit. Analysis still ongoing.** **8/4- confirmed a defective CAN IC chip needs to send to Infinion for further analysis.** **9/8- CAN IC chip EOS, excessive voltage on the CAN circuit. The ABS module was also replaced no ABS module return from Conti-Teves.** **9/28- A flashover in a PN-junction is an indicator for a short huge over-current event, caused by an**		
FR-0256	C200B-2F C200B-61 U3000-96	BD0, B90	TS	In Eval (QAO)	**8/13- Delphi advised this cracked shrink tube caused by rough handling. Advised the torque sensor bolts were missing when received at WPAC, harness was unplugged from EPP & no bolts in IPA. Unknown why dealer would remove bolts. Unknown damage to harness.**	**6/30- pulled EFF data, BD0,BD4,B90 codes set, unknown why dealer removed both bolts for TS harness at IPA cannot be leak checked** **7/7- leak test could not be performed missing bolts at the TS harness at the IPA, unknown why dealer removed bolts.** **testing now starting.** **7/20 - Functionals, bully, ignition cycling stop to stop. Still not reproducible** **7/26- put bolts back into the TS harness at the IPA and leak check to verify no leak paths. Then continue to test.** **7/30- signs of moisture inside IPA unknown when bolts were removed from the TS harness, when reassembled TS failed leak test** **8/5- Dave Kerska finding out what plant to send the TS harness to in Turkey or Germany.**		
FR-0257	C200B-2F U3000-96	BD0,BD2	TS	In Eval (Hella)	**10/7- There are nearly 70 chambers (tools) and chamber A was the oldest. By the results at the automatic test equipment the semiconductor supplier is able find out which process step losses robustness (Yield) and canremove/stop production.** **Close out claims as of 10/13/2010 by Tim Snider**	**6/30- pulled EFF data BD0 & BD2 with c69 lock out code, no visible damage to TS harness. shipped to QAO for analysis** **7/7- leak tested passed, testing now starting.** **7/20- One channel for IPA no signal. No visual damage. IPA T1 signal absent. Known TS issue by using the TS swapping exercise. Ship TS to Rogersville.** **8/5- gear shipped out of Rogersville to Hella** **8/11- Hella just received warranty return today and has confirmed no channel 1. will report out when they find root cause.** **8/26- ASIC failed on Automatic testequipment at room temperature. X-ray and Sam analysis showed no anomalies. Further investigations were started and we expect update of the analysis (with root cause) latest on 3th of september from the sub-supplier.**		
FR-0258	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**	**6/30- pulled EFF data and ship to QAO** **7/7- leak tested passed, testing now starting.** **7/16-Low Impedance between terminals 9 and 10 on PL2 connector (Motor PCB clearance? symptoms same as FR0074).** **7/19-Compare to clean date and check how many line rejects Nidec has had (Jacks/Davies). Check xray next.** **9/9- advised to teardown and check PCB motor clearance**		

FR-0259	U3000-49	B60	EPP	In Eval (FSL)	**11/12- target test date was pushed back to 12/15 for the first test. 1/10- test delayed till 12/26, validation testing still on the production line, waiting on details of clean product. 3/24- ship 8D to Ford 6/30/2010 is the continous improvement for particles SACVD clean receipe & 11/5/2010 ADC channels to converter test at freescale.**	**6/30- Intermittent B60 code resets in message center. pulled EFF data and ship to QAO 7/7- QAO to ship EPP to UK for analysis. 7/28- Micro ADC fault, need to remove micro put on development board for further testing before sending to FSL. 7/30- Micro still intact on the ECU, now tri-temp testing with ignition cycling to get see if failure will occur 8/2- able to duplicate code, indicating micro ADC fault. Will remove micro put on development board will wait for Geoff to test SW before shipping to FSL 8/11- did confirm this is a micro fault will send to FSL. 8/16- geoff will follow-up with FSL tomorrow with latest update. 10/6- FSL developed test to be completed 11/2 to capture ADC micro failure.**		
FR-0260	TC lamp on C1B00-64	A65		shipped to QAO	**6/30- only had tc lamp with ABS code C1B00-64, no PSCM codes or symptoms. Vehicle had several stored communication code errors. Tech did follow the diagnostic's properly but hotline to not guide tech and suggested to replace epas gear if wiring to gear was ok.**			
FR-0262 RUA# 4046	U2011-49	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco says NTF**	**6/30- pulled EFF data and ship to 26mile for xray. 8/26- x-ray clean, next tri temp ignition cycling 9/13- tri temp ign. Cycled over weekend cannot reproduce code. 9/17- to perform 5amp resistance test & hot puma 9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**		
FR-0263 RUA# 4047	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco found glass contamination 11/1- Tyco to send out 8D for approval.**	**6/30- pulled EFF data and ship to 26mile for xray. 8/26- x-ray clean, next tri temp ignition cycling 9/13- tri temp ign. Cycled over weekend cannot reproduce code. 9/17- to perform 5amp resistance test & hot puma 9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**		
FR-0266	C200D-49	B9A	EPP	In Eval (QAO)	**8/4- confirmed a double start-up at QAO, indicates a regulator issue and confirmed a regulator issue.**	**6/30- B9A set once in the fault store, pulled EFF data and shipped gear to QAO. 7/7- leak tested passed, testing now starting.**		
FR-0267	C200B-2F U3000-96	BD0,BD2	TS	In process (Delphi)	**8/13- Delphi stating this is a assembly issue blue wire has most strain compared to other wires in harness. Tim advised we can closed no other Delphi harnesses used in our future gears.**	**6/30- pulled EFF data shipped to QAO for analysis. 7/7- leak tested passed, testing now starting. 7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position 7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position. 7/22- harness shipped from QAO to Delphi**		

FR-0268	C200D-49	B9A	EPP	In Eval (QAO)	**8/3- confirmed double start-up during analysis and confirmed a regulator issue.**	**6/30- pulled EFF data shipped to QAO for analysis. 7/7- Fault is not possible to reproduce. Testing is ongoing. Bully test passed, Performance testing passed. I will tear down to EPP level to perform ignition cycling (HOT and COLD).**		
FR-0269	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/6- A DVM resistance measurement confirmed that this was the case Motor PCB teardown showed that this failure was caused by Motor PCB Clearance issue.**	**6/30- pulled EFF data and shipped to 26mile for xray 8/26- x-ray clean, next tri-temp with the application SW 9/1- during anbient bench testing on power up able to get B6B to set right away. Vlink short circuit low side drive. Next to cut away red plastic to verify PCB motor pin clearance on PL2.**		
FR-0270	U3000-49	BAA,BAB, B9B	EPP	In Eval (QAO)	**7/23-Guillermo sent revised 8d out but still waiting some information. Confirmed r227 impact and high resistance.**	**7/13- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor. 7/19 3 0km failures same R227 resistance failures. Also found some at hot Puma QAO. 7/19-Component location drawing sent to Ford.**		
FR-0272	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/9- no testing needed after xray, this falls outside the 6 months in service range. Xray suspect offset bridge, to remove the relay**		
FR-0274 RUA#3939	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**9/24- Tyco ran relay through their analysis and lead to NTF.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/27- passed leak test, failed the 5amp load test cycled the ignition now passes load test. Advised to let it sit over the weekend and recheck 5amp load test see if it fails again. 9/1- has recheck the 5amp load test and the resistance are a little over what a normal reading would be. Raise RUA and ship relay to Tyco. 9/13- shipped relay to Tyco**		
FR-0275	Fluid leak			chargeback shipped to Columbus Warehouse	**10/7- shipped to Columbus Warehouse from WPAC**	**7/16/2010- dealer states fluid leaking out of the boots, chargeback gear to dealer#2776. gear covered in oil, most likely trans fluid.**		

FR-0276	TC lamp on C1277	A28, A65		In Eval (Ford)	**9/27- Tim states on-vehicle test did not produce any codes or lamps. Close with NTF**	**7/16- pulled EFF data, need to check CQIS report** **8/3- Tim Snider picked up gear from 26mile and will do on-vehicle testing at Ford.**		
FR-0277 RUA# 4048	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco says NTF**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**		
FR-0279	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**		
FR-0280	U3000-49	BAA,BAB, B9B	EPP	In process (QAO)	**7/23-Guillermo sent revised 8d out but still waiting some information. Confirmed r227 impact and high resistance.**	**7/16- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor** **7/23-Guillermo sent revised 8d out but still waiting some information.**		
FR-0281 RUA# 4337	U3000-49	B43	EPP	In Eval (UK)	**3/23- confirmed that this was human sweat on the relay contacts and the only area that this can happen is right after the laser clean station and they install new plexi glass doors to prevent this issues. The new doors at**	**7/16- pulled EFF data shipped to QAO for analysis** **9/2- did standard ambient,hot & cold ignition cycling no codes, performed rattle test no noise. nTF at this time** **1/10- tri-temp ignition cycling cannot reproduce any code** **1/31- ship link relay to Tyco for the relay workshop.** **2/9- NTF with relay SEM has some strange burn/ contamination on the contacts, Andy to bring relay back**		
FR-0283	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- to close as a confirmed double start-up**	**7/16- pulled EFF data shipped to QAO for analysis** **9/7- ambient,cold ignition cycle with no faults, next to hot puma**		

FR-0285	over sensitive steering	A28	NVH	In Eval (Ford)	**11/13- gear location at Ford PDC, Tim Snider's desk.**	**7/16- pulled EFF data, no visible gear damage. Rack turns smooth input shaft solid. Unknown issue sent to QAO for analysis.** **8/3- passed EDF test stand, next EOL testing, not sure EOL will detect any issue with this concern with no codes. Check with Ford if this should be sent back for on-vehicle testing.** **8/9- Gear passed EDF stand test.QAO to ship gear back to 26mile so Ford can put on-vehicle test.** **8/12- Jason received gear at WPAC, need to give to Tim Snider for on-vehicle testing.** **8/23- Jason to give gear to Mike Bahena to deliver to Tim Snider** **11/12- note from Tim Snider** **I have this gear next to my desk. There does not seem to be much desire from Dynamics to evaluate this gear as part of a TGW investigation since they believe this is a bump steer issue and there is a design change coming 2011 MY post Job 1 on the knuckle to fix it. Point 12, the outer tie rod ball center, will**		
FR-0286	P07AE-09	AF1	NVH	In Eval (QAO)	**1/3- Germany to report out to Chris Brown & advise Jason on any updates.**	**7/16- pulled Eff data, steering stiff turning the input shaft. Noticed a nick mark on the tip of the datum no other damage noticed.** **8/6- a friction rejection was confirmed as a bent pinion housing. Will send PFR out later today.** **11/16- to ship parts to 26mile for further analysis** **12/2-RBNA received at 26mile** **12/7- PH at QAO in process to 26mile will be sent to Burlington with FR0239 once it arrives and BNA will be sent back to QAO for storage hold.**		
FR-0287	C200D-49	B9A	EPP	In Eval (UK)	**2/10- QAO to send original EPP back to the UK for additional testing.** **3/21- Geoff still looking for the EPP assembly to be shipped to UK.** **4/6- cannot locate the EPP at QAO unknown if it was scrapped when ECU was shipped to UK for testing. No further testing can be done. NTF**	**7/16- pulled EFF data, shipped gear to QAO for analysis. Also has a B4E in the fault store.** **8/19- finish ignition cycling & hot puma testing if that passes to ship to UK for flux density test.** **8/26- the data shows that it is a supply fault, rather than a Hall effect or motor fault. Next step to repeat the test looking at 5V HALL on the motor PCB and on the ECU.** **If the output of the Aux ASIC (pin 40) is not ok then there's 2 options:** **1) Aux ASIC failure** **2) Low impedance between 5V HALL and 0V (potentially the motor PCB clearance issue?)** **10/6- ECU arrived in the UK today**		
FR-0289	C200B-2F C200C-2F	BD2, BD3	TS	In Eval (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis. Also has a stored B90 code**		
FR-0291	C200C-2F C200B-62	BD3, BD4	TS	In process (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**		
FR-0292	C200B-62	BD4, B90	TS	In process (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**		

FR-0293	C200B-2F	BD0, BD2	TS	In Eval (QAO)	**8/20- damaged TS harness, found blue wire in the harness cut near the IPA. Field issue**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**		
FR-0294	C200C-2F C200B-62	BD3, B90	TS	In Eval (QAO)	**8/27- found over wound torque sensor, plastic guide damaged clock spring part was reworked on 5/18/2009**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**		
FR-0295	U2011-49	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**		
FR-0296	U2011-49	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**		
FR-0297	Rubbing noise while turning	No Codes	NVH	In Eval (QAO)	**9/8- INA confirmed rack bent on the inboard side of the rack. Have measurements.**	**7/30- IBH boot has slight nick could be a hole, notice slight ticking noise while turning.** **8/19- passed leak test and EDF test stand** **8/24-gear failed NVH, suspect on Rack and Ballnut. We'll try some testing on the rack & ballnut.** **8/27- confirmed rack & ballnut to ship to INA for testing.**		
FR-0298	C200B-2F C200C-2F	BD2, BD3	TS	In process (QAO)	**found overwound torque sensor, rework done 5/21/2009.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**		

FR-0300	P07AE-09	AF1	NVH	In Eval (QAO)	1/3- Germany to report out to Chris Brown & advise Jason on any updates.	7/30- pulled EFF data and shipped gear to QAO for analysis. Very stiff turning input shaft. 8/27- this is confirmed bent rack, send Nick data for further information. 11/3- Jason Johnson to request rack & ballnut back for 26mile evaluation. 12/2-RBNA received at 26mile		
FR-0301	C200B-2F	BD0, B90	TS	In Eval (26mile)	10/12- confirmed knick in the shrink tube leak, close with known Delphi issue.	8/23- pulled EFF & stored data shipped to QAO for analysis. 8/27- shipped out of Rogersville on Friday's truck. 9/8- all ambient & cold ignition cycling & EOL testing performed with no faults. Next puma testing then remove TS cover. 9/9- removed TS cover found corrosion in the housing, on the sensor & shaft. Looking for next steps from the TS team. 9/10- shrink tube on harness is no damaged or cracked, green seal slightly swelled. Check with Joel what next steps should be. Send out current information and pictures. 9/21- harness failed the vacuum test install known good harness and that passed, put original harness on with pressure in dunk tank could not find any bubbles. Could only find small nick on the shrink tube. To contact Joel to see if more testing is needed or ship harness back to 26mile for testing.		
FR-0302	C200B-2F	BD0, BD2	TS	In Eval (QAO)	9/29- showed IPA cover pics to Ford, this is the first one seen with this drilled hole and looking at the fault store it look like this occurred early in mileage. OK to close claim according to Tim.	9/2- pulled EFF & stored data and shipped to QAO for analysis. 9/22- during leak teat at QAO notice hole in the TS cover, removed cover and some metal shaving in IPA and rust marks on the harness holder. Sam to remove the plastic cover to check PCB. Unknown who drilled hole in TS cover, no vehicle history.		
FR-0303	C200D-49	B9A	EPP	In Eval (QAO)	10/18- tri-temp testing lead to double start-up, indications point to a regulator issue. 10/19- Geoff confirmed to close this as a double start-up condition.	9/2- pulled EFF & stored data and shipped to QAO for analysis. 10/15- leak test passed, now testing in tri-temp chamber.		
FR-0305	U3000-49 U3000-96	B9B, BAA	EPP	In Eval (QAO)	10/4- screen test did not fail hot, with damage to R227 to close claim 10/11- now tri-temp testing	9/2- pulled EFF & stored data and shipped to QAO for analysis. To check high resistance at R227. 9/20- R227 has impact mark on the resistor but passes all the resistance measurements. 9/21- next step 1) Run the attached configuration while drawing some current. 2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes. 9/24- instructions to test from Geoff We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as follows: 1) a) Measure the 2.5V Ref with CANape (I sent you a configuration for doing this which included 'ADC.Pseudobuffer[12] to [15]'		
FR-0306	No Com	No Com	EPP	In Eval (Infineon)	12/16 on 11/29 presented to Ford and explained Inf found a scrap of material in mold regulator with c/a presented. Ford accepted? Closed	9/2- could not pull any data using my Canape at WPAC, tried 3 times no communication with ECU. 9/29- Andy Partridge gave Pepe instruction for testing this no comm gear for this regulator issue. Waiting on testing to be completed. 9/30- there is no low impedance path's to any of the suggested tests. Took more measurements on IC14. 10/4- passed all Andy's suggested testing at QAO next step to ship gear to UK for level 3 analysis. To ship ECU only. 10/6- ECU arrived in the UK today. 10/8- UK found regulator failure, to xray before shipping to Infineon. 10/25- regulator testing in progress. 10/27 Regulator now with Infineon. 11/8- Infineon detected a metal sliver between the pins of the regulator leadframe. Now checking for possible sources of the contamination.		

FR-0310	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**10/8- xray indicates offset bridge, close as offset, pre-contamination, get relay date code for Geoff's chart. This is outside Ford's testing range**	**9/20- shipped gear to 26mile for xray & analysis. Pulled EFF & stored data. 9/23- leak test passed sent upstairs for Mike Taylor to xray.**		
FR-0311	U3000-49	BAB,BAA, BB7, B9B	EPP	In Eval (QAO)	**9/29- analysis by SAM at QAO confirmed R227 was damaged.**	**9/20- shipped gear to Rogersville then to QAO for analysis. Pre-containment for the R227 resistor impact.**		
FR-0312	C200C-2F	BD1, BD3	TS	In Eval (QAO)	**10/12- confirmed leak in the shrink tube(Delphi harness) nick in harness to close with known issue.**	**9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. 9/28- TS harness failed leak test now in lab. 10/4- found internal IPA corrosion on the shaft, & board. To take pictures of the harness shrink tube for damage. Send pics to joel & Engelbert. 10/6- ship harness to 26mile for Joel to analyze.FEDEX : 9373 7350 9810 10/11- joel performed xray clear next step to pressure test TS harness.**		
FR-0313	U3000-49	BAA,BAB, B9B, BAE	EPP	In Eval (QAO)	**9/30- SAM confirmed R227 resistor open and has been impacted. Closed**	**9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. Precontainment for the R227 resistor impact.**		
FR-0314 RUA# 4149	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis. 9/29- received gear today and passed leak test ready for xray. 10/8- xray clear not fault found, follow standard test procedure. 10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop 11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**		
FR-0315	U3000-49	BAA,B9B, BAE	EPP	In Eval (QAO)	**10/25- the damage to R227 fits the dates, precontainment. Closed**	**9/27- pulled EFF & stored data, shipped to QAO for analysis. 10/20- visual inspection does show contact of R227. further testing ongoing. 10/22- R227 & C17 have damage but the gear will not fail at this time. Will continue to test.**		

FR-0318	U3000-49	BAA,BAB, B9B, BAE	EPP	In Eval (QAO)	**10/20- have verified that the R227 has been impacted. To close out**	**9/27- pulled EFF & stored data, shipped gear to QAO for analysis. Pre-containment for the R227 resistor impact**		
FR-0320	No Com	No Com	EPP	At WPAC	**10/8- Tim inspected gear the connector was fully inserted & appears from the corrosion the rubber gasket around the connector was in place. Indication leads to water wicking in from the wires.**	**10/5- took pictures of corrosion in the 2-pin, did not want to pull any data, going to measure how far 2-pin was installed in connector. Ford to visually inspect this Friday.**		
FR-0321	C200C-2F	BD1, BD3	TS	At WPAC	**10/5- TS harness damaged and cut wires near the EPP housing flange, took pictures and sent to Ford. To ship to columbus warehouse**			
FR-0322	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**10/20- found broken wire in TS, under middle of harness under the heat tape. Close as damaged TS harness. Take pictures and put in PFR.**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. 10/18- leak test passed sent to lab to start analysis.**		
FR-0323	TC lamp on C1B00-2F	A28		At WPAC	**11/22- ABS group made SW change to prevent this steering angle code from setting on starting or shut down. The ABS SW launch was completed on 8/20/2010**	**10/5- only have A28,A29, A65 codes stored in the fault store. No visual damage to gear. Have gear at wpac**		
FR-0325	TC lamp on C1B00-2F	A29		At WPAC	**10/5- tech states TC lamp on doing parking lot manuvers. 11/15- ABS software launch 8/20/2010 for TC lamp on, this vehicle is precontainment.**	**10/5- tech states TC lamp on doing parking lot manuvers.**		

FR-0326 RUA#4239	U3000-49	BA4,BA5,BC2	EPP	In Eval (UK)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire**	**10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **12/13- Pepe to ship EPP assembly to UK to accelerate testing for this issue.**		
FR-0330	No Com No start	No Com	EPP	In Eval (QAO)	**11/8- voltage regulator over current condition. Unknown source that caused the over voltage on the CAN BUS circuit. Also the abs module and PCM needed to be replaced for the vehicle to operate with no lamp.**	**10/18- could not comm with the PSCM using Canape. Found out both the ABS & PSCM causing short on CAN BUS high circuit.**		
FR-0332		BD1, BD3	TS	In Eval (QAO)	**11/10- Joel did confirm this is a shrink tube leak did not notice and damage to the shrink tube but the leak is coming from this sealed shrink tube.**	**10/18- pulled EFF & stored data shipped gear to QAO for analysis.** **11/4- TS harness leak at shrink tube area, no visual signs with microscope. To ship Joel the TS harness for pressure test.** **11/8- Joel has the harness and will PSI test tomorrow.**		
FR-0334	steering noisey & steering will not turn	No Codes	NVH	At WPAC	**12/7- next steps** **-Tim requested a copy of the data / calculations used to determine the ITR to Rack specification. Colleen, do you have this?** **-Have the Mat Lab take photos and measurements to try and evaluate if there was any stretching or damage, or any other visible information we can learn** **we will have the Material properties of the ITR and Rack verified to spec.**	**10/25- no stored codes in memory, boot damaged from ITR unscrewed from the rack, unknown how that happened. No Ford warranty noted.** **11/1- sent out torque specs to Ford engineering to prove ITR's were torqued properly from QAO plant before gear was sent to HSAP. Field Misuse**		
FR-0335	U3000-49	BAA, B9B	EPP	In Eval (QAO)	**12/20- found damaged R227 resistor and high resistance, close to R227 damage at Anting.**	**10/25- pullled EFF & stored data, IBH broken mount from shipping back to WPAC no shippign foam to protect gear.**		
FR-0337	C200B-2F C200C-2F	BD0-BD3	TS	At WPAC	**10/25- found cut TS harness wires near the EPP flange. Took pictures, hybrid eng.**			
FR-0338	U3000-49 U3000-96	BAA, B9B	EPP	In process (QAO)	**11/18- R227 damage and measurement out of spec to confirm R227 issue.**	**11/5- pulled EFF and stored data no damage shipped to QAO for analysis.**		

FR-0339	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At WPAC	**11/5- Found damaged Leoni harness, dealer tried to repair harness. Location of damaged near the IPA. Have pictures.**			
FR-0340	U3000-49	BAA,BAB, BAE	EPP	In Eval (QAO)	**12/20- found damaged R227 resistor and high resistance, close to R227 damage at Anting.**	**11/15- pulled EFF & stored data shipped to QAO for analysis**		
FR-0343	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (QAO)	**12/8- information sent to UK to confirm this is a regulator issue with a double start-up.**	**11/15- pulled EFF & stored data shipped to QAO for analysis. 11/22- check EFF for signature status for a regulator issue. Then check for double start-up. Otherwise normal gear level testing.**		
FR-0344	C200B-2F U3000-96	BD0,BD2	TS	At WPAC	**11/15- damaged TS harness cut blue wire near EPP first retainer, took pictures**			
FR-0345	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At WPAC	**11/15- damaged TS harness all wires cut off near the EPP flange, took pictures**			
FR-0348	No Assist PS message fault on	Wrong gear sent back		chargeback	**11/15- Dealer sent back a hydraulic gear instead of the EPAS gear. Dealer Chargeback**			
FR-0349	C200B-2F C200C-2F U3000-96		TS	At WPAC	**11/15- TS harness damaged, dealer tried to repair the Lenoni harness, but had U3000-96(C69). Took pic's**			
FR-0350	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**		
FR-0352	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**		
FR-0353	Rubbing noise while turning		NVH	In Eval (26mile)	**11/15- found torn boot, transmission removed and replaced at 20K miles, have pictures of the torn boot, Non-TRW issue.**			
FR-0354	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**		
FR-0355	Vehicle wonders while driving	No Codes	NVH	chargeback	**12/3- did not see any deterorated of mounting bushing on the gear. Tech replaced the gear performed a complete alignment. Tech should have performed full alignment before gear replacement. Chargeback due to no problems found with bushings. Gear was EDF tested at 26mile with NTF. WPAC could not chargeback because gear was sent out for more testing,**	**11/15- pulled EFF & stored data shipped to 26mile for analysis. Did not notice any issues with the bushings. Tech should have performed an alignment first before replacing the gear. 11/29- passed EDF testing and the bushings are not worn, Jason to ship gear back to WPAC for dealer chargeback. 12/3- did not see any deterorated of mounting bushing on the gear. Tech replaced the gear performed a complete alignment. Tech should have performed full alignment before gear replacement. Chargeback due to no problems found with bushings. Gear was EDF tested at 26mile with NTF. WPAC could not chargeback because gear was sent out for more testing,**		
FR-0359	C200C-2F U3000-96	BD0-BD3	TS	In storage (26mile)	**11/24- Found damaged TS harness near the EPP flange. Cut wires**			
FR-0360	C200D-49	B9A	EPP	In Eval (QAO)	**4/4- confirmed double start-up to close per signature of the regulator issue.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**		

FR-0362	P07AE-09	AF1	NVH	In Eval (26mile)	**12/20- found boot damaged, cause unknown but could have been damaged removing axles when they replaced the transmission prior to EPAS gear replacement.**	**12/7- pulled EFF & stored data, could not turn input shaft, found internal corrosion OBH ITR nut rusted. Advised to reinstall new boot clamps and leak check**		
FR-0363	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up**		
FR-0364	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up**		
FR-0366	U2011-49	BB5, BB7	EPP	In Eval (QAO)	**4/4- found damaged R227 similar in date of the other damaged resistors from Anting**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**		
FR-0367	C200D-49	B9A	EPP	In Eval (QAO)	**4/4- confirmed double start-up to close per signature of the regulator issue.**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis**		
FR-0368	U3000-49	BAA,BAB, BAE	EPP	In Eval (QAO)	**4/4- found damaged R227 similar in date of the other damaged resistors from Anting**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis**		
FR-0369	C200B-2F C200C-2F	BD2,BD3	TS	In Eval (QAO)	**1/19- found IPA rework on 5/21/2009 overwound clockspring and broken plastic guide. Precontainment, close**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis 1/18- found leak at pinion plug during leak test. Performed tri-temp ignition cycling & dynamic testing NTF Removed IPA cover oil film on the finger ring. Advised Pepe to complete the PFR and send out to decide on next steps.**		
FR-0370	U3000-49 U3000-61 U3000-96	B97	EPP	In process (QAO)	**1/4- nothing more can be done with this return. Field handling issue**	**12/20- have pictures of a hole drilled into the EPP, looks like hole was drill through the Rh floor board, unknown of any aftermarket accessory installed on this vehicle.**		
FR-0371	B200B-2F B200C-2F	BD0-BD3	TS	In process (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**12/20- pulled EFF & stored data shipped gear to QAO for analysis.**		
FR-0372	TC lamp on	A65		In storage (26mile)	**12/20- pulled EFF and buffer data no codes or EFF data. Will keep gear at 26mile for storage**			
FR-0374	C200D-49	B9A	EPP	In Eval (QAO)	**2/1- confirmed double start-up with scope and a regulator issue**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**		
FR-0378	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**3/14- confirmed this is a regulator issue, found double start-up**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis 1/19- has signature's of a regulator issue need to scope regulator to check for double start-up**		
FR-0379 RUA# 4324	U2011-49 U3000-96	B3A EPP		In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK. 2/14- no further testing can be done**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis 1/21- x-ray, puma test, & high pot test with NTF removed relay for Tyco.**		
FR-0380 RUA# 4325	U2011-49 U3000-97	B3A EPP		In Eval (UK)	**2/21- found Magnesium, sulfer & sodium contamination on the contacts same as the U502 B3A's but**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis. 2/9- contact contamination, appears to be possible oil fron the rivet machine, further analysis needed to confirm.**		
FR-0381	P07AE-09	AF1	NVH	In Eval (QAO)	**2/28- Mat Alder also inspected this return at QAO- Pieces of soft stop, and housing in the rack groove probably caused the friction issue. 3/21- Mat Alder talked about getting new softstop design in the CD3 products before end of year.**	**1/10- heavy mud all over the gear, turned IPA did not feel any binding stop to stop 1/26- rubber softstop in pieces on the IBH side, loose pieces of rubber on the rack. Teardown the rest of the rack and take pictures of any debris in the gear housing. 2/21- passed friction testing on the audit rig, damaged ITR 2/28- Mat Alder also inspected this return at QAO- Pieces of soft stop, and housing in the rack groove probably caused the friction issue. 3/21- Mat Alder talked about getting new softstop design in the CD3 products before end of year.**		
FR-0382	C200D-49	B9A	EPP	In Eval (QAO)	**1/26- confirmed double start-up with the scope. Close as a regulator issue.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**		

FR-0383	U3000-49	BAA, BAB, B9B	EPP	In Eval (QAO)	**2/2- confirmed damaged R227 resistor with high resistance.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**		
FR-0384	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**2/1- confirmed a double startup using the scope and cooling the regulator.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis** **1/19- has signature's of a regulator issue need to scope regulator to check for double start-up**		
FR-0385 RUA# 4326	U2011-49	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- raised rivet issue, shown on xray and relay teardown confirmed precontainment with the raised rivet**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis** **2/9- raised rivet issue, shown on xray and relay teardown confirmed raised rivet precontainment with the raised rivet issue.**		
FR-0386	stiff return to center after turn	No Codes	NVH	In Eval (QAO)	**2/28- from the pictures and gear analysis from Mat Alder it looks to be a single impact event that caused the bushing & housing damage.**	**1/10- no codes in stored data, felt binding while turning IPA.** **1/26- removing bellows found particles of aluminum on teardown found aluminum from the from the OBH bushing area, see pictures.**		
FR-0387 RUA# 4327	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK.** **2/14- no further testing can be done**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis** **1/21- x-ray, puma test, & high pot test with NTF removed relay for Tyco.**		
FR-0388	C200D-49	B9A	EPP	In Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**1/14- pulled EFF & stored data shipped to QAO for analysis**		
FR-0391	U3000-49 U3000-96	BAA,B9B, BAD	EPP	In Eval (QAO)	**2/2- confirmed damaged R227 resistor with high resistance.**	**1/14- pulled EFF & stored data shipped to QAO for analysis**		
FR-0394 RUA# 4506	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**1/21- pulled EFF & stored data shipped to 26mile for analysis** **1/31- relay to ship to UK for Andy to take to the Tyco workshop** **2/22- relay was kept at 26mile for more testing, x-ray clean no defects** **3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK** **3/31- Tyco will perform analysis, outside contamination batch range**		
FR-0395		BD0-BD3	TS	in Eval (QAO)	**4/6- confirmed double start-up close as a micro/regulator SW issue.**	**1/31- pulled EFF & stored data, ship to QAO for analysis. Did not get the proper data QAO to pull the proper codes. Has the latest software 41515711C(MFB2) need to get my software updated.**		
FR-0396 RUA# 4507	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**1/31- relay to ship to UK for Andy to take to the Tyco workshop** **2/22- relay was kept at 26mile for more testing, x-ray clean no defects** **3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK.** **3/31- Tyco will perform analysis, outside contamination batch range**		
FR-0397	C200D-49	B9A	EPP	in Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**1/31- pulled EFF & stored data, ship to QAO for analysis**		
FR-0398 RUA# 4382	U2011-49	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK.** **2/14- no further testing can be done with the EPP or relay at this time, to close case**	**1/28- high pot test NTF, removed relay for Tyco.** **1/31- relay to ship to UK for Andy to take to the Tyco workshop**		
FR-0400	C200D-49	B9A	EPP	in process (QAO)	**2/11- has signature's of a regulator issue and scope check does confirm a double start-up. Close**	**1/31- pulled EFF & stored data, ship to QAO for analysis**		
FR-0401	U2011-49	B3A	EPP	In Eval (26mile)	**4/6- have pic's of the PFS ribbon cable with heavy corrosion, closing claim due to water intrusion in the 2-pin. Tight terminals will fix this issue.**	**1/31- corrosion in the battery 2-pin connector, 26mile will perform testing to confirm PFS water intrusion issue or other relay circuit issues.** **2/22- x-ray at 26mile clean no defects** **3/14- looking at the corrosion inside the EPP and down by the motor relay** **believe the water caused the B3A, motor build date at 4/4/2010 is not around any build issues. Will send pic's to Geoff to comment.**		
FR-0402	fluid leak	fluid leaking from gear		chargeback	**1/31- no fluid in gear had WPAC chargeback gear to dealer.**			
FR-0407	U3000-49	BA4,BA5,BC2	EPP	in Eval (QAO)	**3/3- confirmed c227 Kemet internal weld issue**	**2/11- pulled stored and EFF data no codes, QAO to check C154**		
FR-0409	C200D-49	B9A	EPP	in Eval (QAO)	**5/16- confirmed double start-up regulator SW issue**	**2/11- pulled stored and EFF data shipped gear to QAO for analysis**		

FR-0413	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	**3/15- did have signature of regulator and does have double start-up to confirm a regulator issue.**	**2/28- Pulled stored & EFF data shipped gear to QAO for analysis**		
FR-0412 RUA# 4509	U2011-49 U3000-96	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**2/22- pulled stored & EFF data shipped gear to 26mile.** **3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK** **3/31- Tyco will perform analysis, outside contamination batch range.**		
FR-0414 RUA# 4510	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- confirmed Mg,S,Na contact contaimination at Tyco. new relay batch dates.**	**2/28- pulled stored & EFF data shipped gear to 26mile for xray and surrogate relay testing.** **3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK** **3/31- Tyco will perform analysis, outside contamination batch range**		
FR-0416 RUA# 4511	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- confirmed Mg,S,Na contact contaimination at Tyco. new relay batch dates.**	**2/28- pulled stored & EFF data shipped gear to 26mile for xray and surrogate relay testing.** **3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK** **3/31- Tyco will perform analysis, outside contamination batch range.**		
FR-0417	C200D-49	B9A	EPP	in Eval (QAO)	**5/16- confirmed double start-up regulator SW issue**	**2/28- Pulled stored & EFF data shipped gear to QAO for analysis**		
FR-0419	C200D-49	B9A	EPP	in Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**3/4- Pulled stored & EFF data shipped gear to QAO for analysis**		
FR-0420	C1B00	No Codes		At WPAC	**3/11- shipped gear to 26mile for storage at this time. ABS did update their SW 8/20/2010 to fix C1B00 codes setting on hybrids.**	**3/4- no stored codes or Ford codes listed. Called hotline stated the TC lamp comes on, tech could not verify, not sure if C1B00 reset for test to replace the steering gear.**		
FR-0424 RUA# 4559	U2011-50	B3A	EPP	in process (UK)	4/18- confirmed Mg,S,Na on the contacts during the relay workshop	**3/18- pulled stored & EFF data shipped to 26mile for testing** **3/24- surrogate relay testing at this time** **3/31- Tyco will perform analysis, outside contamination batch range** **4/6- shipped relay to UK this afternoon, Geoff should have it Friday**		
FR-0425 RUA# 4560	U2011-51	B3A	EPP	in process (UK)	4/18- confirmed Mg,S,Na on the contacts during the relay workshop	**3/18- pulled stored & EFF data shipped to 26mile for testing** **3/24- surrogate relay testing at this time** **3/31- Tyco will perform analysis, outside contamination batch range** **4/6- shipped relay to UK this afternoon, Geoff should have it Friday**		
FR-0426	C200D-49	B9A	EPP	in Eval (QAO)	**5/3- confirmed double start-up issue for the update SW micro/reg issue**	**3/25- pulled EFF & stored data, shipped to QAO for analysis**		
FR-0428	U2011-49 U3000-96	B6B	EPP	in Eval (QAO)	**4/1- found this gear was swapped at the plant or dealer since the vehicle was checked in at the static check at the plant.**	**3/25- pulled EFF & stored data, shipped to QAO for analysis**		
FR-0429	C200C-2F U3000-96	BD1,BD3 BC4	TS	in Eval (QAO)	**4/19- Pepe sent PFR to me and is evident that the moisture did come in from the 2-pin connector and caused both link relay code and the TS codes. This issue will be fixed by the tight terminal fix**	**3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness** **4/18- passed leak test, tri-temp ignition cycling, pulled cover off to do wiggle testing and found corrosion on the PFS PCB. To ship to Kimball to pull the plastic cover to verify how moisture got on the PCB.**		
FR-0433	IP erratic & CEL lamp on	No Codes		in storage (26mile)	**3/28- EPAS gear replaced and vehicle had the same issue. checked CQIS & AWS reports and found PSCM harness from C1010 to the 3-pin at the PSCM shorted causing the erratic CAN BUS issues. Hotline advised to replace the EPAS gear so cannot chargeback to dealer**			
FR-0435	C200C-2F	BD1,BD4	TS	in Eval (QAO)	**4/26- pulled the PFS and corrosion on the board and the ribbon cable that would cause the torque sensor codes to set.**	**3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector**		
FR-0437	C200D-49	B9A	EPP	in process (QAO)	4/26- confirmed double start-up regulator SW issue	**4/15- pulled EFF and stored data shipped to QAO for analysis**		
FR-0438	C200B-2F C200C-2F	B9A BD0-BD3	TS	in process (QAO)	4/26- confirmed double start-up regulator SW issue	4/15- pulled EFF and stored data shipped to QAO for analysis		
FR-0439	U3000-49	BA4,BA5,B C2	EPP	in Eval (QAO)	5/3- confirmed Kemet capacitor C154 issue	**4/15- pulled EFF and stored data shipped to QAO for analysis**		

FR-0441	TC lamp on	C1B00		At WPAC	4/20- found this a hybrid where the ABS SW was change to prevent a false SWA code.	4/15- pulled EFF and stored data, no codes set. Checked history no other parts installed		
FR-0442	C200D-49	B9A	EPP	in Eval (QAO)	**5/3- confirmed double start-up issue for the update SW micro/reg issue**	4/15- pulled EFF and stored data shipped to QAO for analysis		
FR-0443	U3000-96	cannot be tested	TS	At WPAC	4/15- found the plastic on the 3-pin connector completely broken and terminals bent, 2-pin conn also broken. Cannot get the connectors on to test.			
FR-0445	C200B-2F C200C-2F	BD0-BD3	TS	in Eval (QAO)	4/29- confirmed double start-up for regultator issue	**4/15- pulled EFF and stored data shipped to QAO for analysis. No damage to the TS harness**		
FR-0447	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- confirmed double start-up issue	4/21- pulled EFF and stored data shipped to QAO for analysis		
FR-0448	P07AE-09	AF1	NVH	in Eval (QAO)	5/10- passed all the EDF/NVH testing and performed teardown with no damage or out of spec dimensions on the internal parts. NPF with analysis.	**4/21- pulled EFF and stored data shipped to QAO for EDF/NVH testing slight stiffness turning input shaft stop to stop**		
FR-0449	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- water ingress EPP 2-pin connector, corrosion on the PFS board near the ribbon cable connection	4/21- pulled EFF and stored data shipped to QAO for analysis		
FR-0450	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- confirmed double start-up issue	4/21- pulled EFF and stored data shipped to QAO for analysis		
FR-0458	C200B-2F C200C-2F	BD0-BD3	TS	In process (QAO)	6/13- confirmed double start-up issue	5/9- pulled the EFF data ship to QAO for analysis.		
FR-0460	TC Lamp On	No Codes		will ship to Columbus warehouse	5/9- tech installed the EPAS gear same condition with the TC lamp on with yaw codes found defective RCM reading from the roll stability control module in the RCM			
FR-0461	TC Lamp On	No Codes		in storage at 26mile	5/9- will ship to 26mile for storage, advised if Ford would like to install on vehicle to verify TC lamp on, they can pick it up anytime for testing			
FR-0462	U3000-49	BA4,BA5,BC2		in process (QAO)	6/10- found Kemet Cap C154 cause code to set	5/9- pulled the EFF data ship to QAO for analysis.		
FR-0463	no assist at times	no codes		shipped to Columbus warehouse	5/9- wrong gear sent back not the original gear that was listed at the plant(ECU s/n# 102722001C3005D 9/29/ 2010 ECU build date) and the EPAS s/n# date codes are newer than the vehicle build dates so a newer gear was returned to the WPAC center. No codes or problems with this returned gear.			

0KM BR154043		BA4,BA5,BC2	EPP	In Eval (UK)	3/15- has confirmed that in May 2011 a new vision system will be installed as the PCA to check for proper weld. This is estimated to get into QAO in Sept. 3/21- Geoff jacks and Kinmball Rep will visit Kemet in early June to verify vision system operation.	10/25- next to measure the 2.5V ref using CANape. Run the unit without ignition cycling. Report back to Geoff on the results 11/10- Pepe to repeat the measurement while measuring these points: 1) 2.5V ref at Monitor Micro (as on previous traces) 2) 2.5V ref at Aux ASIC (the other side of R72) 3) The VSW supply to the ASIC 11/17- Pepe did perform tests and did notice some spikes in the 2.5v ref. voltage waiting for Geoff to respond. 12/13- Pepe to perform 2.5v testing on known good unit to compare results with this ECU. 1/10- Pepe will send Geoff the information on the testing so they can check against the EPP FR0326 in the UK. 1/14- testing is still on-going at UK for faults. 1/31- Pepe will check C154 Cap for internal opens		
0KM BR145302 RUA# 4240	TC lamp on C1277	E30	EPP	In Eval (UK)	relay tested and tear down with no trouble found, contacts clean after analysis.	9/22- When the ignition key is turned ON, the Gear assistance delays for around 2 to 3 seconds. There is a code set in the ABS module (C1277) related to the steering wheel sensor angle. Izaguirre thinks the faulty part could be the Gear. I checked this Gear and found E30 link relay open circuit or retry. 9/24- when gear arrives resistance test then use 5amp load and check resistance again. 10/4- gear still at plant, has not been shipped at this time. 11/8- has been ign. Cycled cold NTF, next to resistance test & 5a resistance test. 12/10- perform the resistance tests if ok ship to Tyco for next workshop. 12/13- resistance test passes testing, wait for UK to give the OK to ship to Tyco.		
0KM BR102838		BAA, BAB,BAE, B9B, C69	EPP	In process (QAO)	7/29- HSAP sending gear back to QAO for U3000-96, failed in prerolls station. Confirmed R227 high resistance.			
0KM AR406647		BAA, BAB,BAE, B9B	EPP	In process (QAO)	7/12- Anting to submit 8D this week on mechanical stop out of adjustment at vacuum station that was contacting the board damaging R227.	6/15- QAO to complete level 1 & 2 testing when gear arrives from HSAP 6/18- QAO found damaged open R227 resistor , ship to Kimball. 6/21- have presentation and suspect root cause from Anting.		
0KM AR430358		B9B,BAA, BAB	EPP	In process (QAO)	7/8- confirmed high resistance at the R227.	7/7- In process to QAO for evaluation, check R227 resistor for damage.		
0KM BR109457	No start	No Com	EPP	In Eval (UK)	10/15- decoded EFF data found excessive 33v on the battery term. . Unknown where the high voltage source came from. 11/1- Ford investigating anything in the plant that could cause this CAN spike. 12/6- had intial abs issue at pre-rools at plant but code cleared not parts installed. will keep in pending to	9/17- The VRT reported a vehicle found in the yard because it did not start the engine. There were noticed that when the Gear was disconnected the vehicle started without problems. So, the vehicle was taken to the repair area inside the building. I met the VRT analyst Izaguirre in the repair area. Izaguirre could not to get communication with the Gear. The conclusion was the problem is with the High Speed CAN in the Gear EPP circuit. As soon as another witness Gear was connected the vehicle worked fine. 9/24- indication of CAN HI & LOW shorted, check for something on the rails then check every IC to regulator. 9/27- testing on this shorted regulator IC12 leading to level 3 analysis to be performed in the UK. 10/4- just arrived in UK today 10/6- confirmed input to regulator has gone short circuit, more testing needed on that circuit.		
0KM BR218079		B9A	EPP	In Eval (QAO)	12/20- arrived in QAO for testing found double start-up & all criteria leads to regulator issue found out this unit has SW FB2AMFB2 and the new SW fix for the regulator is FB2AMFB3. emailed the SW group in the UK to get all the SW versions and dates so I can get dates going into QAO.	12/20- arrived in QAO for testing found double start-up & all criteria leads to regulator issue found out this unit has SW FB2AMFB2 and the new SW fix for the regulator is FB2AMFB3.		

0KM AR661730 RUA# 3682		B9A	EPP	In Eval (UK)	**5/24- motor PCB clearance issue, low resistance to ground between 5v encoder & grd. Plane**	**5/3- ambient, hot ,bully test pass, next cold bully test then performance test. Then hot/cold puma testing** **5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.**		
0KM BR167331		B9A	EPP	In Eval (QAO)	**10/25- This is a clear double start-up. this is pre corrective action SW. regulator issue.**			
0KM BR142333		B7E	EPP	In Eval (QAO)	**9/27- found PCB motor cleareance issue Pin 12 to pin 9 at motor PCB has varying resistance found pin 12 too close to the ground plane. Have picture.**			
0KM BR142333		B7E	EPP	In Eval (QAO)	**9/27- found PCB motor cleareance issue Pin 12 to pin 9 at motor PCB has varying resistance found pin 12 too close to the ground plane. Have picture. This is pre-containment gear buid date 9/3/2010. new PCB design change for CD3 is 9/15/2010.**			
0KM BR155342		BD0-BD3	EPP	In Eval (QAO)	**10/15- evidence points to double start up, close as regulator issue. Precontainment on the SW update.**			
0KM BR106781	U3000-49 U3000-96	BC5	EPP	In Eval (QAO)	8/27- confirmed water intrusion, water marks in the CAN and battery connectors; they were ran through the leak testing station, and both parts passed in good condition. Will check with UK for proper EPP leak testing using new 2 & 3 pin connectors to check the integrity of the connector wells.	**8/16 BC5 (repeated four times) and B69. This vehicle has not been verified for water presence yet.** **FR0135(BC5) confirmed 2-pin conn. Corrosion.** **8/23- did not arrived at QAO yet**		

0KM BR600577	U3000-49 U3000-96	B40	EPP	In Eval (QAO)	8/27- confirmed water intrusion, water marks in the CAN and battery connectors; they were ran through the leak testing station, and both parts passed in good condition. Will check with UK for proper EPP leak testing using new 2 & 3 pin connectors to check the integrity of the connector wells.	**8/16- It was found with water in the 2-pin and the CAN socket (please see picture attached). The Yazaki connectors were checked by the Yazaki supplier representative. He did not find anything wrong with them Currently the Gear and the Yazaki harness are in the quarantine crib. The VRT desicion (Fernando Ulloa) is to send both parts to Ford USA in order to continue the analysis over there about how the water got to ingress in the sockets.** **8/23- did not arrive at QAO yet**		
0KM BR109633	U3000-49 U3000-96	B40	EPP	In Eval (QAO)	**9/2- The result of this EPP was also a water immersion through the CAN connector. Confirmed also with Hermosillo that this vehicle was also parked in the lot that had the other damaged vehicles when all the flooding appear.**	**8/23- did not arrive at QAO yet** **8/5- The Gear without assistance was removed from the car and I have already shipped it to TRW QOA (FedEx track # 8699 4789 8215. The Gear will be delivered by this Monday 9th.** **8/30- testing still on going with no fault found at this time, will talk with Geoff to see if the cover can be remove to inspect for moisture.**		
0 KM (RUA 2878)	No Com	No assist & no communic ation	Ignition Pin Contaminate	No Com	**11/12- QAO still puma testing using pogo pins and regular connectors that would catch contaminate on ECU terminals**	9/17- TRW 26-mile received gear from Chicago plant and confirmed no communication 10/2- material check of the substance on the ignition pin is super glue. Unknown how substance got there. 10/15- checking areas in the process supply line for contaminate(super glue) to drip on ignition terminal. 10/26- Check QAO electrical checks would fail using there connections. find out if an EPP would fail with this	26-mile	
0KM AR427443	U3000-49 U3000-96	B7E	EPP	In Eval (QAO)	**8/18- confirmed PCB motor clearance issue closed**	**7/27- just arrived at QAO testing starting today** **8/3- failed the isolation(1000v) test indicating PCB motor clearance issue. Looking to xray before board to make sure no other concerns before motor PCB removal.** **8/9- agreed to remove motor PCB 99% sure motor PCB terminal clearance issue.**		
0KM AR355344 RUA# 3559		B43	EPP	In Eval (Tyco)	**5/28- Tyco confirmed plastic contamination on contact 4 of the link relay.**	**4/6- Link relay voltage is not reaching the working value due high value of resistance between contacts when is relay is closed, when this value should be close to 0. Part is disassembled in order to confirm the relay that is the root cause for B43. Relay that is not working properly is confirmed.** **5/5- week 45- 09 relay, no updates from Tyco.** **5/24- xray clean pass all resistance testing, switching marks on all contacts, slight plastic contaimination on contact 4 that may have caused the malfunction.**		
0KM AR244868 RUA#3030		B3A	EPP	In Eval (Tyco)	**6/7- confirmed motor relay plastic contamination, relay build date 7/6/2009.**	**5/5- week 28-09 relay, black plastic particles on base and bridge of contact# 3. material analysis to check coil base or cover.**		
0KM RUA#3317		B3A	EPP	In Eval (QAO)	**3/13- Tyco confirmed plastic contamination on contact. Close out**	**2/12- Voltage at phase1 never reaches the closed contact status. Further testing** **Confirmes motor relay failure has been declared. relay must be send to TYCO for further analysis.** **2/15- relay has been shipped to Tyco**		

0KM AR369007		BD0-BD3	TS	In Eval (QAO)	**6/23- found on the QAO assembly line possible cause of bent TS finger is christmas tree installer laid on IPA rack when not in use and when TS drops down to operator could cause the bent finger. A new tray was installed to install the tool on 5/25/2010. proper work instruction printed for operator to use this tray**	**4/30- found one bent tooth on the torque sensor ring, small impact mark on the base of the sensor, unknown root cause at this time.** **5/17- QAO working on root cause where tooth bent, checking Rogersville & Hella handling.**		
0KM AR407556	C200B-2F C200C-2F	BD0,BD2, BD3	TS	In Eval (QAO)	**7/8- Angel states this Gear was replaced and sent to the scrap. Unfortunately I could not find it at the scrap crib. For the future cases, if any, I will get an agreement with the Final assy repair area and the VRT in order to remove the damaged harness and to keep them for further detailed analysis**	**6/10- cut TS harness at EPP conn. get the harness under a microscope to understand the mechanism of the failure. talk to Angel to support the VTR team on getting the part to them for analysis** **6/21- Guillermo to check lastest status with Angel.**		
0KM AR390291		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**5/24- in process from QAO to UK** **6/21- checking for regulator issue on this return.**		
0KM AR657700 RUA# 3680		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/26- ignition cycled at cold, ambient and hot– The testing consisted of ignition on for 5 seconds, off for 5seconds** **– Torque simulator attached to cause the motor to rotate** **• Ambient 24 hours** **• -20°C 12 hours** **• 90°C 3 hours** **Unit has also been subjected to the following tests:** **– Bully test** **No faults or LICs generated**		
0KM AR354559 RUA# 3681		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**4/21- ambient & hot testing done. Next step to hot puma then bully test.** **5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.** **5/24- IC12 5v regulator not coming up at times similar to FR0110. testing ongoing to find root cause of fault.**		
0KM AR265204 RUA#3196	U2011-49	B3A	EPP	In Eval (UK)	**7/7- no updates will discuss in Friday's meeting with Tyco. NTF with testing at Tyco**	**12/9- no faults reproduced, ECU lid removed no optical abnormalies, passed cycling overnight. Next steps vibration testing, Measurements of integrity of relevant signals (Motor Relay Drive, VSTAR etc), Motor relay contact resistance measurements and tomorrow X ray of motor relay** **12/14- Int. code raised B6B on hot Puma test. x-ray clear & resistance test passed. Compare scope traces at point of failure.Hot Puma testing for the next two days until failure. Noise difference between known good relay and this relay.** **1/6- noisey relay stops with known good relay. Advised to ship EPP to Geoff for further testing before shipping relay to Tyco.**		

0KM AR375533 RUA# 3698		B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**5/8- (QAO) At PUMA unit was warmed until 100°C, but fault was not repeatable. Some axial movements were done in order to find out fault. - Unit is fault cleaned and turned back on. Fault is not present. - Ignition Cycling. Fault is not raised. - Unit was cold during 24 hours. Fault is not raised. 5/24--xray clean, tri-temp ignition cycling, bully test , 5amp load testing passed resistance measurement. 6/7- Tyco received relay testing ongoing 7/7- NFF with Tyco's testing, will discuss further with Tyco this Monday.**		
0KM AR401390	steering wheel sticking three times while driving at HSAP	No codes	NVH	In Eval (QAO)	**7/7- NTF with teardown, nick on ballnut not the caused from anything in the internal housing.**	**6/21- no codes in fault store, will edf test next. functional data sent out to Ford passed functional data. 6/22-Gear will be proceed to teardown and report published tomorrow. 6/25- has been torn down and everything looks normal, no unusual findings. Send pics & report to Ford.**		
0KM-HSAP		BD0-BD3	TS	In Eval (QAO)	3/31Unit has been ignition cycled at all temps. No fault found at this time. Questioned ts harness was disconnected testing gear.	3/9- Bully Test 5 times. No fault found after test repeatibility		
QAO line failure RUA#3616		B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed offset bridge**	**4/22- BBhighX Open circuit on contacts with coil energised --- Old PUMA failure. Shipped to Tyco 5/5- week 31-09 relay, testing started will report out next week. Suspect offset bridge.**		
QAO line failure RUA#3619		B43	EPP	In Eval (Tyco)	**6/7- Tyco has fishbone process, wire broke during machine term. tension during or after the stress relief while wrapping on the coil holder. Hella to reduce speed & movement of the winding machine.**	**4/22- E30/A30 & BBHighX ----- Open link relay coil --- Recent PUMA failure. New failure mode.I have not seen any open coil in this relays 4/27- should arrive at Tyco this Thursday 5/5- week 1- 2010 relay, testing started will report out next week. 5/12- Perform additional tests more specifically related to finding intermittent open coil.**		
DR-0001	No codes	Int. vehicle pulls left or right while driving feels like wheel wants to turn on its own	NVH	NTF	**10/26- EDF stand pass and tear down gear pictures sent out. To close out with NTF**	9/14- second time in customer feels pressure in the steering wheel and the vehicle will pull one way or another. No codes or message in the message center. Tech cannot duplicate customer concern. Vehicle returned third time. replaced EPAS gear per dealership customer still unhappy with steering on vehicle, customer bought 20 vehicles from dealer, so dealer bought customer out of this vehicle so now dealer owns vehicle drove vehicle over 100 miles with new EPAS gear cannot duplicate. dealer could not duplicate any steering concerns with original gear. tech did not attempt Interactive diagnosis on this vehicle to perform symptom tests. 9/15- submit hot process to dealer to get gear sent back to WPAC 9/18- pulled EFF & Buffer data only code listed A8E(CAN Veh Lat Accel Invalid Fault). Will give the gear to Mike Bahena for on vehicle testing. 9/28- Mike to install on vehicle sometime today for testing 10/1- Mike drove the vehicle and could not duplicate any steering issues, will drive again tomorrow. If nothing is found will pull the buffer data, take to 26-mile to install on EDF stand. 10/12- cannot find any problems on vehicle Mike Bahena to take to 26-mile to install on EDF stand for testing. 10/15- vehicle passed the EDF stand testing, next to teardown for inspection.	Dearborn	

PE12-017 007820

DR-0002	No codes known at this time	Noise from EPAS gear all the time turning the wheel	**NVH**	water contaimination	**10/26- gear tear down and water contamination in pictures sent out to Ford team. Close out due to cut bellow removing bubble wrap on pre-delivery gears.**	9/17- gear hot processed back to WPAC 9/24- gear arrived at WPAC yesterday pulled EFF & Buffer data, no codes, gear has visible cut boot damage, take gear to 26-mile, Mike Puleri wants to be present for teardown. **9/28-** preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation. 9/28- preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation. 9/30- bellows removed and some rust spotting noted need to get Harold to teardown entire gear and take pictures to send out.	26-mile	
DR-0003	No Com	No assist & no communication	EPP	In Eval (FSL)	**10/6- Geoff has received 8D just need to clear up some minor concerns to close this out.** **10/15- FSL sent new version 8D to Geoff he will look over the 8D to confirm it is good enough to send out.** **11/1- just need clean dates into Kimball to close out 12/16 need clean dates at Anting**	9/21- gear will not be returned, tech found poor ignition feed connection at the 3-pin. Unknown what the cause is 9/24- tech could dupicate the no com after 35 miles of driving, to return vehicle to customer. Advised the tech to replace the gear per harness testing passed. When backorder gear comes in tech will call to hot process gear back to WPAC 10/1- submittted the hot process request form. 10/12- pulled EFF & Buffer fault data, has communication 10/15- no com repeatable during ignition cycling, micro not starting up properly, going to UK for additional testing. 10/23 all voltages to the hardware of the micro working properly at this time. 10/26- get with the micro experts & FSL to proceed on next step testing. 11/3- need to consult the micro expert for next step testing, currently micro expert working on FR0027(No Com). Will get to this return next week. Work to ongoing. 12/14- Put original code back in and perform ignition cycling to duplicate failure 1/7- testing ongoing, still cannot duplicate no com. 1/11- Next step to modify application now starting to fail again, using Vector boot code to send out information. 1/29- with John micro expert leaving UK will need to find other option to contiue work. Outsourcing could be other c	UK	
DR-0004	C200B-2F C200C-2F	BD0-BD3	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	10/30- picked gear up from WHQ garage, pulled eff/buffer fault data and dropped off at 26-mile for testing. 11/11- Jim Loria to start testing this week. 12/14- Jason check with Jim Loria latest updates on analysis 1/11- ignition cycle for 24-48 hrs to try to duplicate, may need vibration test. Need information from Jim what has been tested up to this point. 2/10- add temp cycle-ignition test info when Jim gets back to 26 mile. The plan is to read the fault codes to see if a sensor code was logged during testing	26-mile	
DR-0006	U3000-96		Non-warranty	Customer Damage non-warranty	12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.	11/20- Submit hot process request 12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.		
DR-0007	C1B00-2F	No Com	EPP	In Eval (26mile)	3/22- Concluded CAN system wiring issue on vehicle based on testing found numerous CAN codes & EFF data. ABS module has ABS CAN code U0131(no com with PSCM). EPP tested with no problem found and mech. gear check for belt slip and no problems found.closed claim d	12/10- Submit hot process request 1/7- No communication with Canape, pulled bus data had 5 can bus codes. Ship to 26mile. 1/25- no faults on bench was able to get into ECU with no problems also looks like tech have cleared codes. next inline for ignition cycling. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. If all electrical testing is NTF do all mechanical testing check put on EDF stand, check belt slip check other parts for exceeding rack travel(A29) 2/8- CARS written and inline waiting for EDF stand for testing. 2/22- all EDF test stand data came back normal and no codes latched, send to teardown to check for any belt slip. Send information when testing done so we can close out		
DR-0008 RUA# 3697	No Com	BC2	EPP	In Eval (UK)	1/11- sent 8D to Ford for analysis will keep in pending until I get a response.	12/16- Submit hot process request 1/8- could not communication with ECU, shipped to 26mile 1/25- needed to unlock CCP, looks like dealer cleared codes serveral times. Ignition cycling over the weekend cannot reproduce any issues with no communication. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. check my equipment for communication, check compare date code with 85 & 27 epoxy & resonator issues. 2/8- Simon will decode EFF data to see if torque sensor code were all set at the same time, of if we need to list as torque sensor return. 2/22- This is a BC2 code looking for diagnostic help from Geoff on next steps. 3/8- Simon sent fishbone to start testing, discussing sending gear to QAO for Sergio to test. 3/19- send gear to QAO today for analysis. 4/9- sent EFF data to QAO & fishbone for testing. 4/19- has been bully tested 5 time and hot, ambient, & cold tested with no failures at this time. 4/21- Geoff advised to get xray of Epp at a certain angle, Samuel needs to consult Geoff on location of capacitor then QAO needs to find new xray supplier. 4/26- shipping EPP back to 26mile to xray internal capacitor 5/3-Andy shipped EPP to 26mile for xray 5/7- Geoff explained to Mike F how to xray EPP		

DR-0009	U3000-61 U3000-96	B99	EPP	In Eval (26mile)	3/18-waiting on Mike B to get the Magna test profile or detailed information that raised the B99 fault so Abe has a starting point.	1/4- Submit hot process request form 2/9- inadvertantly shipped to some supplier in the mid-west (somebody screwed up the shipping docs.). It is coming back to me, and will be rerouted to WPAC. 2/10- Vic has received the gear back today and will ship to WPAC 3/2- Pulled EFF/Buffer data Greg Bendzinski to pickup gear and return it to 26mile. Upstairs in lab		
DR-0011	C200B-61 C200C-2F U3000-96	BD3,B90	TS	In Eval (Hella)	**3/26- damaged clock spring due to improper IPA reworked, IPA was manual centered here at QAO without special tool. 8D in process** **4/19- Rob M. agreed needs poke yoke system to make sure tech is using the proper tool for tear down. PCA target date Aug/Sept. 2010**	2/3- submit hot process request 2/12- Pulled EFF/buffer data. Has codes B90 & BD3 then set C69. shipped gear to 26mile 2/19- should arrive in QAO on 2/22 2/23- confirm TS issue should arrive in QAO on 2/22 3/3- fault reproduced while turning the input had known good harness & hella test box to confirm TS was the cause. Rogersville received the TS today will test when line is converted to D3 before sending to Hella. 3/5- passed testing at Rogersville, they discussed this concern with Jim Loria and advised it is possible to pass with this type of short. Rogerville will ship to Hella 3/8-Rogersville shipped TS out to Hella. 3/15- gear arrived in Hella this morning, testing started 3/22- 8D submitted to Ford overwinded and bent FFC & Plate protection broken in clockspring. 3/24- discuss areas of potential losing center position. At Rogersville? QAO & during analysis. Need to incorporate test during analysis to check clockspring out of position.		
DR-0012	P07AE-09	AF1	NVH	customer misuse	3/3- teardown did find warped housing and bent rack, submitted pics to Ford to confirm curb impact.	2/5- Pulled Eff & Buffer data, gear binds when you turn input shaft to the right. Ship gear to QAO 2/8- vehicle impacted curb but Ford wants to see EDF test results and teardown at 26mile- 2/9- Jason will followup EDF testing & teardown. Inline waiting for EDF after DR0007 is tested. 2/22- failed EDF test stand right away with high torque reading, could see bowed pinion housing Jason to send ou EDF data to Ford. This is a warranty return checking to see if we chargeback the dealer. Need to teardown gear for complete details of impact.	26mile	
DR-0014 RUA#3540	U2011-49	B3A	EPP	In Eval (26mile)	5/5- confirmed offset bridge, week 24 relay	2/26- submit hot process request form to dealer 3/15- pulled EFF & fault data, ship to 26mile for analysis. 3/22- need to leak test today 4/6- xray looks like offset bridge, do hot puma testing then raise RUA and sent to Tyco. 4/9- xray indicates offset bridge also failed resistance check, sending relay to Tyco today.		
DR-0015		BD3,B90	TS	In Eval (Hella)	**4/6- confirmed overwound clockspring same as DR0011. have updated 8D using separate centering tool for D-car gears**	3/1- submit hot process request, to pickup gear at garage 3/5. 3/5- picked up gear and dropped off at 26mile pulled fault & EFF data. 3/15- able to duplicate code turning gear to the end of travel, testing does indicate torque sensor need to hook up test harness & hella test box to confirm. 3/16- Jim has confirmed there is an intermittent problem with the Torque Sensor on channel 2 while turning input shaft to end stop. Shipping to Rogersville tomorrow. 3/19- gear is at Rogersville, need to bench test then put on line when line changes next week. 3/23- QCCAR #374081 issued for TS shipping out to Hella. 3/29- arrived in Hella Friday should have results by TS meeting this Wednesday 3/31- we believe this is the same case as DR0011 damaged clock spring due to improper IPA reworked, IPA was manual centered at QAO without special tool. 8D in process. Hella has pictures		
DR-0016	P07AE-09	GRINDING NOISE FROM RACK	NVH	At Oakville	4/30- tech states he found boot had a slice like a razor blade causing the water intrusion similar to other early build gears that were shipped to plant in bubble wrap.	3/10- talked to tech found orange water in the drivers side ITR boot, did not notice any damage to boot will inspect boot better after gear is replaced. 3/18- talked to PM to hot process the part back, Vic Matckar will not return until mar.22 to request gear back from dealer. 4/21- still trying to get gear sent back from Oakville, confirmed bellows sliced, see tech comments on 3/19. 4/28- talked to Vic Matckars and they cannot locate the gear, they think the gear was scrapped at WEPEC. From the information this gear will not be returned. The new hot process request now in place will have the dealer send the gear directly back to the WPAC instead of sending the gear back to Oakville then to WPAC.		

DR-0017	C1B00-2F U0428-00	AD9		In Eval (26mile)	4/12- Mike Bahena states "this is an Active Park Assist vehicle meaning the relative SWA comes from the SASM in the steering column and not the steering gear. This explains why the A29 is raised and not the A19 (Invalid RSP). A29 is based on the offset signal from ABS inaddition to rsp, whereas A19 is only based on RSP. It also means that the dealer improperly diagnosed the problem and incorrectly replaced the steering gear. I fully expect this problem to come back if the SASM was not replaced. The AD9 code indicates that the gear detected Invalid data from the	3/22-submit hot process request gear back to WPAC 3/29- pulled eff fault data shipped gear to 26mile, vehicle has a separate SWA sensor with auto park. Unknown if tech found wiring issue after installing new gear. This would be good for on vehicle test. (check customer verbatims).		
DR-0019 RUA#3679	U2011-49	B3A	EPP	In process (Tyco)	6/7- confirmed offset bridge- week 24 precontainment. Will get bigger xray pic.	hot process gear back to WPAC after replacement 4/26- pulled EFF buffer data, shipped gear to 26mile for testing. 5/5- xray indicates offset bridge, check resistances, need to raise RUA then ship to Tyco. 5/12- sent out to Tyco for analysis.		
DR-0020	P07AE-09	AF1	NVH	In Eval (26mile)	7/12- sent Ford the teardown report wo/pics file was too big. Mike B looked over report and advised to close.	hot process gear back to WPAC after replacement 5/3- pulled EFF data, shipped gear to 26mile for testing 5/7- leak test today, then EDF test stand testing 5/17- Leak test passed, EDF failed terribly. Ron said the rack bar is extremely bent in the BNA area. Could not run power ON tests. Could not run power OFF free pinion torque because it was too high. Power OFF mechanical friction was ~3kN. Gear is upstairs now awaiting teardown. Will be a couple days due to current gears in cue already. ITR's looked perfect though, no signs of over travel or bending. 6/4- confirmed bent rack, Jason to sent out Harold's teardown report.		
DR-0021	C200D-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	4/19- Found damaged TS harness, cut wires. Have pics. Sent to Ford eng. with vehicle information.			
DR-0022	C200D-49	B9A	EPP	In Eval (UK)	1/11- Anting started to use the alignment fixture 12/10/2010 adds 43 seconds to the station. The EPP's should arrive into QAO approx 1/28/2011.	4/16- sent out hot process request 5/3- pulled EFF & Buffer data, shipped gear to 26mile for testing, 26mile will start the testing hot/cold ign. Cycling 5/7- leak test today, then will start tri-temp testing 5/11- Leak test passed. Was brought upstairs Friday I believe. Need to confirm w M. Taylor 5/17- undergone testing that indicates a ribbon cable failure- sending to UK for further testing. 6/28- motor ribbon cable insertion process, bent terminals in connector, new design insertion tool in testing phase at this time. 8/16- target date still set for the beginning of December 2010 for all plants to be online with alignment tool.		
DR-0023	clicking noise turning wheel	N/A	NVH	In Eval (QAO)	10/12- new power supply supplied by Mapro, now EDF machine back up & running. 11/29- passed entire EDF test with NTF, check to close claim. 2/8- Ford finding that the hub bearing replacement or torque the hub bearing bolt can fix the clicking noise, TSB is in process and should be complete soon.	5/24- did not notice any damage to the gear or boots. Turning input shaft is smooth with no noise that I noticed. 6/7- make sure after leak check to put on NVH test, QAO can use Audit rig for testing then put on the EDF tester 7/26- arrived at Rogersville in process to QAO 8/16- leak tested checking QAO for latest update. 10/6- has EDF test been completed? 10/11- power supply for the EDF machine damaged, supplier from Netherland found issue with internal component, specialty component not sure of repair at this time. QAO sent back-up PS to Marion, Marion sent their's in for repair. Pepe will check with Sergio to see the status of the one sent to Netherland for repair.		

DR-0024	Clunk snapping noise while turning wheel		NVH	In Eval (26mile)	8/16- passed all NVH & EDF testing. NTF 2/8- Ford finding that the hub bearing replacement or torque the hub bearing bolt can fix the clicking noise, TSB is in process and should be complete soon.	6/21- no codes pulling EFF or fault data, good chance tech mis-diagnosed vehicle returned 3k later with frt. Wheel bearing noise while turning & replaced RF bearing to fix. Can perform NVH & EDF test. Can chargeback steering gear if all tests pass. 7/12- Mike F to follow-up on lab doing NVH test & EDF testing. 7/27- Jason wrote the ETR and brought it to the lab this afternoon.		
DR-0026	noise turning steering wheel	metal to metal noise coming from gear	NVH	At WPAC	8/3- 2011vehicle. gear at WPAC took pictures and sent to Ford, hole in boot unknown how hole got in boot. Ask Ford if they want the gear for inspection.	6/21- checking inventory for new 2011 D3 gears, so I can hot process gear back. 2011 MKT w/APA. 6/22- still checking to see if QAO can send new 2011 D3 gear out to dealer. 7/12- talked to tech found out OBH boot had hole in it a water came out causing the scraping metal noise. Also dealer installed wrong M/Y steering gear on vehicle installed aa5z-3504-je and should be aa5z-3504-ke or ne. advised Ron SM of this issue to change gear when parts are available. gear hot processed back to WPAC		
DR-0030	pop squeal noise turning	No codes	NVH	In Eval (Gates)	9/15- TRW 8D sent to Ford, Tim snider had question about laser system to insure edge trim forward email to Randy Hazell. 9/23- Gates confirmed that the 8D did not have a suggestion for using a laser to insure edge trim integrity. In the PowerPoint slides they did discuss the position sensor and additional	7/9-Pulled EFF data, no codes, could feel slight bind in gear, ship gear to 26mile for analysis. 7/26- arrived at Rogersville in process to QAO 8/20- found belt damage inside have pictures, unknown cause. See what Ford wants to do with the gear. 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford. Sam to overnight belt back to 26mile let Gates engineering check belt. 8/27- Gates engineers took belt back to plant in US to measure center to center to check for belt stretch. Then will be sent back to their UK plant for final analysis. 9/1- Gates testing did verify issue with belt sent belt to UK for level 3 analysis		
DR-0031 RUA#3933	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	9/27- discussions with Ford on this EOS on the power module issue we agreed to fully decode the EFF data to get all the details when the FET failed. 10/15- details not that helpful, 200 seconds into the journey at 50 kilometers	7/28- pulled EFF data, also has BAD code that set once with B25 8/19- The data shows that Phase 3 top and bottom FETs are short circuit. Power module is having short circuit between V0 and V link terminals. PM will need to be returned to Fairchild in Suzhou, China. 8/26- Mosfet power pack shipped to Fairchild in China. Tracking number is: 9373 7350 7806 9/1- still need 8D update from Fairchild TRW to visit facility and check on this issue. 9/16- power module root caused as EOS by Fairchild. I have 8D available.		
DR-0032	clicking noise turning wheel	No codes	NVH	shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC	7/28- checked data found out after the steering gear was replace vehicle had the same noise, cannot chargeback hotline advised to replace the gear. Found RF shock and knuckle assembly fixed the noise. Case closed		
DR-0034	TC lamp on	No codes		shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC	8/6- pulled EFF data, no codes in the EPAS gear. This was dealer mis-diagnosis read the dealer comments.		

PE12-017 007824

DR-0035	C200C-2F	BD3	TS	In Eval (QAO)	12/1- QAO rechecked the EPP at 120 deg C with no failures. NTF at this time. 12/8- all the testing in the fishbone has been complete with NTF. QAO,26mile & Hella has exhausted all testing and could not find any cause or sign of a potential root cause. will put in pending until we check of any other potential tests that can be run.	8/23- pulled EFF & fault store data and shipped to QAO for analysis 8/27- gear shipped on Rogersville Friday truck to QAO. 9/1- gear passeed leak testing also could not duplicate any codes with ambient ign. Cycling will continue with cold testing. 9/8- still cannot duplicate any codes, bully & performance tested. Finished cold ign. Cycling. 9/22- QAO exhausted testing at gear level, TS team in 26mile looking over testing data to decide if QAO can perform any more testing or gear should be shipped to 26mile for tri-temp testing. Unknown when shipment will arrive for tri-temp oven to QAO and when will it be set-up completely for testing. 9/24- FED EX torque sensor & harness to 26mile for testing today. 9/27- TS & harness arrived at 26mile today. 9/29- 26mile ran TS with power all night NTF now put in tri-temp chamber for temp cycling to see if any codes set. 10/4- tri-temp ign. Cycled for 2-day with no problem found. Joel to x-ray harness. Jim to check TS for further testing. 10/27- shipped TS to Rogersville to remove the shaft then ship to Hella for testing. 11/1- Joel states the xray was clean of the TS harness. TS sent to Rogersville and they sent TS to Hella on 10/30.		
DR-0036	U2011-49	B3A	EPP	In Eval (26mile)	9/15- sent earlier 8D to Ford on similar issue back in May. Check to see if we can close out.	8/20- pulled EFF & fault store data and shipped to 26mile for analysis. 9/9- confirmed offset bridge with xray, to tear out relay to get date code. 9/13 why was this shipped to Ford with post containment if this was an offset bridge.		
DR-0037	snap noise while turning	No codes	NVH	In Eval (PDC)	10/20- EDF & NVH all passed on the gear, found out that the steering gear did not fix the clicking noise in the field, vehicle returned and the dealer replaced the struts & upper strut bearings to fix this noise, claim closed.	8/20- no codes, snapping noise while turning under heavy load. Did not notice any noise while turning input shaft. Ford to put On-vehicle for noise test. 9/2- delivered gear to Tim Snider at PDC 10/6- This gear is still in queue to be EDF tested. need to write an ETR for it and we should have it tested by the end of the week if not sooner. Nick Borgerding will send results as soon as possible.		
DR-0040 RUA#4150	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	11/29- similar test readings to a raised rivet but the rivet is not raised. crosssection contact 5 shows openings between the leadframe and rivet, close as raised rivet.	10/5- pulled EFF & stored data, TS harness melted by tech using torch to remove gear hold down bolt near the IPA. 10/8- gear passed leak test taken upstairs for xray 10/22- xray clear, tri-temp testing over the week-end, John to check results. 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop		
DR-0042	clicking noise turning wheel	No codes	NVH	In Eval (QAO)	10/18- passed leak test, sent to lab for EDF/NVH testing. 2/1- confirmed to close due to other hub & strut issues causing this noise	10/5- did not notice any noise from gear and no codes in fault store. Ship to QAO for analysis		
DR-0043	Int. TC lamp on while turning	No codes		At WPAC	11/15- pulled history on vehicle, tech replaced the PSCM TC lamp still came on during left turns, tech replaced the IC to fix vehicle. NTF with PSCM			
DR-0044 RUA# 4329	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	12/8- in process to UK from 26mile 2/14- confirmed PCB motor clearance issue	11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/11- non powered measurements such as across the phases and possibly the motor PCB. This way, if we can confirm the is a relay problem with the population, we will not destroy or change any evidence by operating the contacts.		
DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions	12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness.		
0KM-Chicago	U3000-49	BAA,BAB, B9B	EPP	In process (QAO)	8/16- confirmed high resistance on the R227 resistor.	8/10- possible R227 issue at the chicago assemby plant. Contain EPP's at QAO between 4/26-5/10		
0KM-Chicago		BAA, BAB, BAE, B3A	EPP	In Eval ((QAO)	7/14- confirmed R227 high resistance &	6/4- able to reproduce the code at 60-70degC 6/7- using PCB test software will not fail, Geoff to check PFR and decide next steps 6/10- issue with VSW supply, R227 measures open circuit. C17 observed to be missing		

0KM-Oakville ABJ28087		B7E	EPP	In Eval (QAO)	5/24- confirmed short on the motor PCB clearance, will be added to the Nidec 8D	waiting on next steps		
0KM-Oakville ABB14285		BD2	TS	In Eval (QAO)	4/1- IPA clockspring damage to ribbon cable, moving gear full CW will raise code BD2. TS has been recirculated at QAO	3/31- in process of evaluation		
0KM-Chicago AG160762 RUA#3558		B3A	EPP	In Eval (Tyco)	5/12- Tyco confirmed raised Rivet	4/13- - As observed Phase 1 and phase 2 do not reach the Vlink level after power up, swapping exercise - The problem does not travel with the ECU problem travels with Motor Relay. Path 4-5 open NOK. Path 3-4- 0.1 ohm OK Coil resistance-170 ohm, Contact 5 not closing.		
0KM-Oakville ABJ28087		B7E	EPP	In Eval (QAO)	5/24- confirmed short on the motor PCB clearance, will be added to the Nidec 8D	waiting on next steps		
0KM U502 102941920 F30238		BD0-BD3	TS	CAP	gear sent back to MAO for analysis and found defective TS harness during the swapping exercise found cut open lt green & black wires, causing all the TS codes to set. Looks like harness had impact mark on the conduit, also has damaged 3-pin plastic connector.			
UR0016	TC lamp on	no codes		At WPAC	4/26- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change			
UR0017	TC lamp on	no codes		At WPAC	4/29- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change

This Saturday 8th, AXIS (the company in charge of the sales yard) reported a vehicle that had lost the Gear assistance. The VRT analyst G. Izaguirre went to AXIS to check this car. When the vehicle was turned ON the assistance was back. Izaguirre drove the car to the Final assy repair bay where I met him to review this case Vehicle rotation # 5310 / VIN : AR375533 EPP # 100841177J30494 / Build Julian date : 124													5/8/2010	
1. When the steering wheel became stuck, what did the driver do to unstick it? The driver did not do anything, the steering got unstuck it hen he stopped 2. Did the steering wheel become stuck in a turn or while driving straight? The steering got stuck in 3 times, 2 in a curve and 1 in a slight curve. 3. If this happened in a turn, approximately what angle was the wheel? 1st time= -30°.....2nd Time= 30°..... 3rd Time= 5° 4. Driver reports the steering wheel was stuck at least three times. Were the driving conditions the same each time it became stuck, and did the driver do the same action each time to unstuck it? Yes, the driver did not do anything to unstuck it, he said he tried to unstuck it putting force in the steering wheel with no success, until the third time putting this force the steering was released.											5/14/2010		6/17/2010

CONCERN: NO POWER STEERING AND LIGHT ON IN MESSAGE CENTER AND TRAC LIGHT ON ABS AND BRAKE LIGHT ON. TECH STATES THAT HE FOUND THAT THE PSCM, C-CM, AND HCM DO NOT COMMUNICATE -TECH FOUND AN OPEN IN THE HS-CAN CIRCUIT VDB05 BETWEEN THE DLC AND THE PSCM -SEEKING GUIDANCE ON HOW TO NARROW DOWN THE LOCATION OF THE OPEN. ADVISED TECH TO ATTEMPT TO NARROW DOWN THE LOCATION OF THE OPEN BY CHECKING CONTINUITY BETWEEN THE MODULES AND JOINT CONNECTORS IN THE VEHICLE. THE JOINT CONNECTORS MAKE IT EASIER TO BREAK THE NETWORK INTO SECTIONS FOR DIAGNOSIS -SINCE THIS VEHICLE IS NEW, THE CONCERN IS LIKELY RELATED TO A PUSHED OUT OR BENT PIN WHICH OCCURRED DURING ASSEMBLY OR TRANSPORT. THE PSCM FAILS THE NETWORK TEST. TODD PLEASE DISCONNECT JOINT 9 AND THE PSCM AND LOAD TEST THE NETWORK CIRCUITS FROM JOINT 9 TO PSCM. IF THAT PASSES THEN WITH THE PCM DISCONNECTED I'D LIKE TO LOAD TEST THE NETWORK THROUGH THE JOINT CONNECTOR TO PSCM. IF THAT PASSES INSPECTION PLEASE INSPECT THE POWER/GROUND/NETWORK TERMINALS FOR LOOSENESS OR PUSHED BACK TERMINAL. IF NO ISSUES ARE NOTED TO LOAD TEST THE PSCM PWR/GRND CIRCUITS WITH A TAIL LAMP			12307 Deacon Jones Ford	30			2LMHJ5AT8AE[redacted]	11/18/2009	10/27/2009	8/11/2009	9/21/2009	MKT 3.5L GDTI w/o park assist	12/7/2009	

RPT ON CAUSE OF NO POWER STEERING TOWED IN CHK NO POWER STEERING ASSIST PERFORM POWER STEERING SYSTEM DIAG INTEGRATED WITH IDS ON LINE RECEIVED 43000:96 C8 U3000 61 48 PSCM INSTRUCTED TO REPL PWR STR GEAR ASSY RE RE PWR STR GEAR ASSY CHK CAST/CAMB TOE OK ROADTEST OK I suspect that there is a flaw in the Active Park Assist SW that was exploited by the Magna testing, but I don't think this is an issue we are seeing in production with Valeo. I suspect that Magna used the Angle control in a subtlety different way than Valeo thus exposing the issue. The likely of a true monitor failure is very low and because this occurred in a cobbled vehicle I think it is an issue we need to study and understand, but not consider a true field APA failure. I will work to understand if any data traces from Magna exist that can help us. Subject: TRW Updated Warranty Trackers all EPAS belt drive platforms 2/2

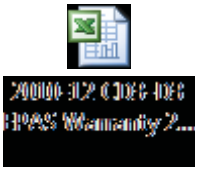
Top Current warranty issue B3A,B43,B6B Tyco relays.
I will set-up a 8am(est) meeting for half hour this Friday to discuss any Tyco updates and the use of solid silver relay contacts.



Eric J Estes
TRW EPAS Steering Systems

Total	Actions taken	PCA date	PCA @ QAO	PCA @ Ford	Recurrence
4	- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. - Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	

1	- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
0	- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	
3	- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	
5	- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	
1	- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	

2	- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	
2	- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
2	- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
15	- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	
0	- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	

0	- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	
41	- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
2	- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
1	- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
1	- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	
1	- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
84	- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
1	- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	

0	- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
1	- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		
1	- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
1	- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
1	- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010

FR-0435	C200C-2F	BD1,BD4	TS	in process (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector
DR-0046	C200C-2F U3000-96	BD3	TS	overwound clockspring	pending	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.
UR0003	C200B-2F C200B-62	BD2,BD4	TS	At WPAC	Open	4/6- need to discuss next week the poke yokes designed at station 50 to check for bent veins/fingers on the torgue sensor. Andrew Bradley will join in the discussion to assist Marion to find a reasonable PCA. QAO will also be involved with the discussions.

	under analysis further testing needed QAO
	under analysis Farmington
	under analysis Rogersville
	under analysis at 26mile

DR-0025	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/13- passed hot puma and high pot test, ship to UK for further analysis.	6/15- submit hot process request 7/9- pulled EFF data, need to ship to 26mile for testing 8/25- set for xray tomorrow 8/26- x-ray clean, next ignition cycling with the application SW 9/7- tri temp ignition cycle did not reproduce any codes, next to hot puma. 9/13- passed hot puma and high pot test, ship to UK for further analysis.	POWER STEERING INOP STEERING GEAR FAULT LIGHT. DTC U2011-49 U3000-96. PPT. P S RACK FAILURE. REPLACE RACK.		08913 REGAN FORD	3139			2FMHK6DTXAB[redacted]	1/28/2010
DR-0028	noise turning steering wheel	No codes	NVH	In Eval (INA)	10/25- Pavel to set-up QCCARS to ship to INA	6/28- submit hot process request 7/28- pulled EFF data, no codes, did not notice any abnormal noise while turning input shaft back & forth, ship gear to QAO for analysis. 8/17- gear failed the EDF test but no noise was notice during testing. Waiting on next steps, could put on-vehicle or could teardown gear? 8/23- failed NVH test, did not notice any audible noise while testing. Check with Dan Ulep & Sylvain Nadeau for the next steps before teardown. 8/24-Sylvain- EDF results would suggest RBNA damage; I'd suspect field misuse damage. The bolts that were so tight that had to be tapped to be removed is a red flag for me that work may have been done by an unqualified mechanic. I would suggest sending the RBNA to INA if workshop misuse confirmation is required. 9/8- rack & ballnut ready to be sent to INA, needs Gabreil to write QCCAR. 10/6- Waiting for QCCAR and contact from INA to receive the part. 10/11- Guillermo working with Pavel to find out who will be writing QCCARS now to ship to INA	CONCERN: NOISE IN STEERING TURNING WHEEL BACK AND FORTH DIAGNOSTICS: VISUAL INSPECTION, PINPOINT TEST KC1 ANY KNOWN CONCERNS-NO. USED CHASSIS EARS TO TRY AND ISOLATE. PARTS REPLACED:: NONE TECH QUESTION: WITH THE CHASSIS EARS IT SOUNDS LIKE THE NOISE IS COMING FROM THE RACK AND PINION. THE SHOP MANUAL STATES THAT THE MOTOR DRIVES A BELT, SO I DONT THINK IT COULD BE THAT. I USED A PAIR OF VISE GRIPS AND GRABBED THE LOWER STEERING SHAFT AT THE RACK WHILE ANOTHER TECH ROCKED THE STEERING WHEEL, NO NOISE. I THINK IT COULD BE THE RACK. RECOMMEND YOU DISCONNECT STEERING SHAFT FROM STEERING RACK AND TURN WHEEL. IF NOISE IS NOT PRESENT WITH STEERING SHAFT DISCONNECTED, RECONNECT STEERING SHAFT AND REMOVE OUTER TIE ROD ENDS FROM STEERING KNUCKLES. IF NOISE IS STILL PRESENT WITH OUTER TIE ROD ENDS DISCONNECTED, SUSPECT EPAS STEERING GEAR IS THE CAUSE OF THIS CONCERN. RECOMMEND YOU REPLACE EPAS STEERING GEAR, AND THEN RE-EVALUATE THIS CONCERN. IF NOISE IS COMPARABLE TO A SIMILAR VEHICLE, NO REPAIRS ARE RECOMMENDED		07892 Capital Ford	12696			1FAHP2KTXAG[redacted]	9/14/2009
DR-0029	U3000-61	B97	EPP	In Eval (QAO)	10/6- ambient ignition cycling, NTF at this time.	7/7- Submit hot process request 7/28- pulled EFF data, customer states gear loses assist intermittently backing out of the driveway, dealer could not duplicate the problem but had a stored U3000-61,performed interactive diagnosis code returned on road test.	CHECK INTERACTIVE DIAGNOSTICS CODE CLEARED AND RESET DIAGNOSTICS LEAD TO EPAS GEAR REPLACEMENT		11164 Metropolitan Ford				1LNHL9FT2AG[redacted]	4/21/2010
DR-0033	C200D-49	B9A	EPP	In Eval (QAO)	8/18- gear passed leak test & ambient ignition cycling, next step to cold testing. 11/1- QAO exhausted all testing of this unit, Pepe looking for next step or should it be sent to UK? 11/2- perform wiggle test on the ribbon cable, then PCB motor clearance check.	7/28- pulled EFF data, shipped get to QAO for analysis.			11605 Autoway L/M	5231			2LMHJ5AT9AB[redacted]	10/23/2009

DR-0010	U0131 C1278 U0428	Int. No Com	System Wiring	Ign feed C145 pin "B"	1/11- Dealer replaced the EPAS gear and vehicle still had same symptom"Int. No Com" replaced EPAS harness to fix vehicle C145 hardshell term."B" broken lock tab. Cannot find 700 tag on this vehicle at this time to chargeback gear replacement.	CONCERN: NO POWER STEERING,ADVANCE TRAC LIGHT ON DIAGNOSTICS FOLLOW WSM 418-00 PINPOINT TEST G FOR THIS CONCERN AND LEAD TO EPAS GEAR REPLACEMENT. REPLACED STILL HAD SAME INTERMITTENT NO COMMUNICATION WHILE DRIVING. ADD-ON 12/21/2009 09:07PM JEFFREY WILLIS(FSE) MSS - FCSD - REG - CINCINNATI DEALER PRINCIPAL REQUESTING FSE ASSISTANCE. THIS VEHICLE IS A STOCK UNIT THAT WAS ORDER BY LOCAL FIRE INSPECTOR. IS DUE TO BE DELIVERED TO CUSTOMER ASAP. ADD-ON 12/23/2009 01:40PM JEFFREY WILLIS(FSE) MSS - FCSD - REG - CINCINNATI VISITED THE DEALER ON 12-18-09. PRIOR TO VISIT, TECH HAD PERFORMED PPT AS ADVISED AND THE STEERING GEAR ASSY BUT THE CONCERN WAS STILL PRESENT. - PERFORMED A TEST DROVE WITH SM, WAS UNABLE TO DUPLICATE THE CONCERN. SM STS WHEN CONCERN OCCURS, THE TRACTION LIGHT COMES ON AND THERE IS NO STEER ASSIST FOR JUST A MOMENT. IF YOU KEEP DRIVING THE ASSIST RETURNS AND CONCERN MAY NOT OCCUR THE REST OF THE DAY. THE TECH AND SM FOUND THIS OCCURS ONLY WHEN VEHICLE IS COLD. - TESTED FOR CMDTCS FOUND I/C AND ABS HAD CODE U0131 (LOSS COMM WITH PSCM) AND ABS HAD CODE U0428 FOR INVALID STEERING DATA. CLEARED ALL CODES, PERFORMED A ON DEMAND TEST OF ABS, I/C AND PSCM WITH ALL PASS (NO DTCS). SINCE CONCERN COULD NOT BE DUPLICATED, I ATTEMPTED TO INDUCE THE SAME ISSUE/DTCS BY CREATING AN OPEN IN THE HS CAN CIRCUITS. FOUND THAT WITH OPEN PRESENT, CODE U0131 RETURNED IN THE I/C AND ABS WITH NO POWER STEERING ASSIST. I INSPECTED THE HARNESS FOR CONCERNS AND FOUND THAT HS CAN - PIN AT CONNECTOR C145 TERM. "B" WAS NOT LOCKED INTO THE HARDSHELL (BROKEN TAB). THIS WAS ALLOWING PIN TO "BACKOUT" AND POTENTIALLY LOSE CONTACT AND LOSE COMMUNICATION INTERMITTENTLY. -- CHECKED WITH						02098 Whites Ford	35		
U502	No Com	No Com	femal terminal 24 in C139 spread open	At dealer	1/31- tech called back and the TC lamps were on all the time now, tech found terminal 24 open in c139. tech replaced the female terminal to fix the lamps & code. Vehicle fixed				TECH COULD NOT DUPLICATE TC LAMP ON, HAS C1B00-29(SWA SIGNAL ERRATIC) IN THE ABS PERFORMED PARKING LOT ROAD TEST THEN PARKED THE CUSTOMER TEST DROVE AND THE TC LAMP CAME ON WITH THE SERVICE PS NOW MESSAGE. TECHCHECKED ALL CONNS,TERMINALS & WIRING HAVE GOOD 12V & GRD FEEDS TO PSCM. 1/24- called dealer back to advise to repair C139 tech will need to get the customer back in to check the terminals 24 & 25.		C139 term. 24 spread open from plant evac/fill connector pins too big	00529 Gene Evans Team Ford	16		

U502	No Com	No Com	femal terminal 24 in C139 spread open	At dealer	1/24- tech found loose female terminal 24 in connector 139, tighten terminal now vehicle is fixed.				CUSTOMER STATES TC & TERRAIN LAMP ON INTERMITTENT, SERVICE ADV TRAC MESSAGE & SHIFTER KNOB LAMP WENT OFF. TECH PHYSICALLY CHECK G101 AND USED BULB TO LOAD TEST THE 12V PSCM CIRCUITS. WIRING,TERMINALS,CONNS CLEAN AND TIGHT. VEHICLE NEVER LOST ASSIST COULD FEEL A LITTLE DIFFERENCE IN STEERING FELL WHEN THE TC LAMPS CAME ON BUT STILL HAD ASSIST.		C139 term. 24 spread open from plant evac/fill connector pins too big	20546 Fette Ford	207		
U502	No Com	No Com	femal terminal 24 in C139 spread open	At dealer	1/24- tech found loose female terminal 24 in connector 139, tighten terminal now vehicle is fixed.				CUSTOMER TOOK DELIVERY OF VEHICLE AND DRIVE ONE BLOCK AND BOTH TC & TC OFF LAMPS ON. CUSTOMER DROVE BACK TO DEALER SHUT VEHICLE OFF, TECH STARTED THE VEHICLE UP AND PULLED INTO HIS STALL AND THE TC LAMPS WERE OFF AS HE PULLED INTO HIS STALL THEN THE TC LAMPS CAME ON AND NOW WILL NOT GO OUT WITH EVERY START. HAS GOOD 12V FEEDS TO THE PSCM HE WILL DOUBLE CHECK G101 FOR POOR CONNECTIONS. AT ONE TIME THIS VEHICLE HAD LOW VOLTAGE BUT THE TECH DID NOT EXPERIENCE ANY LOW VOLTAGE ISSUE COULD HAVE HAPPENED DURING NEW CAR PREP. Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	Verbatim	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Gear Build Date	ECU Build Date	EPP Build Date	Eng. Type	Date of Repair	Motor build date
UR0090 RUA# 5175	U2011-49	B3A	EPP	In eval Tyco	10/17- B3A reapeating PH2 motor relay open contacts. Ship to Tyco 12-7- Tyco found NTF with the relay. SEM on contacts some material found on the contacts that does not affect the operation.	9/26- pulled stored & EFF data from the gear and shipped to MAO for further testing		06672 Battlefield Ford	00636	1FMHK7D81CG[redacted]	7/19/2011	7/14/2011	5/13/2011	5/14/2011	3.5L wo/APA	8/22/2011	4/19/2011
UR0125	U3000-49	A16		in eval MAO	11/11- all a codes set no stored b-codes vehicle only set the TC lamp on it did not lose assist. PPT lead to gear replacement with resetting U3000-49, shipped gear to MAO. No ther parts replaced			05340 Royal Oak Ford	183	1FMHK7D82CG[redacted]	8/17/2011	8/13/2011	12/6/2010	12/10/2010	3.5L wo/APA	10/7/2011	5/17/2011
UR0126	U3000-72	A30, E30	EPP	in process UK	12/6-fault following ECU found low resistance on R28 generating incorrect Vbatt readings on ECU. Sergio to ship to UK	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis		04664 Jordan Ford	523	1FMHK8F8XCG[redacted]	8/30/2011	8/26/2011	7/5/2011	7/7/2011	3.5L wo/APA	9/24/2011	
UR0127	U0300-00	BFD	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis			00165 Gene Latta Ford	50	1FMHK8F82CG[redacted]	8/29/2011	8/24/2011	7/6/2011	7/8/2011	3.5L wo/APA	10/6/2011	
UR0128	U3000-49	B25	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis			07852 Fairview Ford	20	1FMHK7F83CG[redacted]	8/31/2011	8/27/2011	7/7/2011	7/9/2011	3.5L w/APA	9/14/2011	
UR0129	U3000-49	BC5	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis			04332 Armstrong Ford	5	1FMHK7F88CG[redacted]	8/23/2011	8/18/2011	6/29/2011	7/2/2011	3.5L w/APA	9/7/2011	
UR0130	C200B-2F C200B-62	BD2,BD4	TS	in eval MAO	11/11- no damage to the ts harness. pulled stored and EFF data from gear, shipped to MAO for analysis			09179 Inver Grove Ford	146	1FMHK8F85CG[redacted]	8/17/2011	8/12/2011	6/16/2011	6/20/2011	3.5L w/APA	9/30/2011	
UR0131	U3000-49 U3000-96	B7E,BAD	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis			01741 Lakeland Ford	71	1FMHK7F89CG[redacted]	9/16/2011	9/12/2011	7/21/2011	7/21/2011	3.5L wo/APA	10/24/2011	
UR0132	U3000-49 U3000-96	BAE	EPP	in process MAO	11/23- pulled stored and EFF data from gear, shipped to MAO for analysis			05167 Bob Allen Ford	309	1FMHK8D83CG[redacted]	10/4/2011	9/25/2011	8/17/2011	8/19/2011	3.5L wo/APA	11/4/2011	
UR0133 RUA# 5364	U2011-49 U3000-96	B3A	EPP	in process UK	12/13- could duplicate B3A failure in lab. surrogate relay test OK, ribbon cable wiggle test ok, 5amp test done found faulty motor relay. Save for workshop next year.	11/23- pulled stored and EFF data from gear, shipped to MAO for analysis		01185 McKay Ford	180	1FMHK7D89CG[redacted]	9/23/2011	9/20/2011	8/4/2011	8/5/2011	3.5L wo/APA	10/26/2011	6/8/2011
UR0134	TC lamp on	mult can codes A2A		in process MAO	12/9- Tech states intermittent TC lamp on while driving could not get the lamp to come on but tech states he lost communication with the PSCM unknow if he had IDS issues hotline advised to replace PSCM if all the wiring was tested.			04013 Manhatten Ford	1699	1FMHK8B83CG[redacted]	8/8/2011					11/14/2011	
UR0135	C200B-2F	BD0, BD2	TS	in process MAO	12/9- pulled stored and EFF data shipped to MAO for analysis			06552 Central Ford	148	1FMHK7B83CG[redacted]	10/6/2011	9/30/2011		3/24/2011	3.5L wo/APA	11/5/2011	
UR0136	TC lamp on	mult can codes		in process MAO	12/9- tech replaced the steering gear for C1B00 and mult can codes in all modules and vehicle came back with same TC lamp on in the CQIS report. Unknown what the fix was tech did not mention what was done to fix this issue in AWS, most likely CAN electrical connection issue.			03208 Stone Motors	947	1FMHK8F85CG[redacted]	9/6/2011					10/25/2011	
UR0137	U2011-49	B3A	EPP	in process MAO	12/9- pulled stored and EFF data shipped to MAO for analysis			02709 Tom Holzer Ford	444	1FMHK8D85CG[redacted]	9/28/2011	9/22/2011	7/28/2011	7/29/2011	3.5L wo/APA	10/28/2011	9/22/2011
UR0138	U3000-49	B43	EPP	in process MAO	12/9- pulled stored and EFF data shipped to MAO for analysis			05579 Fuller Ford	483	1FMHK7B81CG[redacted]	8/27/2011	8/24/2011	7/7/2011	7/9/2011	3.5L wo/APA	11/5/2011	5/19/2011
UR0139	C1B00-29 no assist	no stored A or B codes		in process MAO	12/9- pulled stored and EFF data shipped no codes had one E66 code shipped to MAO for analysis Tech states that there are 8-9 modules that fail the network test then tech states no communication with the PSCM. I had no problems with the communication.			07749 Future Ford	2	1FMHK8D87CG[redacted]	10/19/2011	10/14/2011			3.5L wo/APA	11/1/2011	

UR0140	C200D-49	B9A	EPP	At WPAC computers down	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.			04515 Boggus Ford	2476	1FMHK7B84CG[redacted]	9/19/2011	9/6/2011	7/22/2011	7/22/2011	3.5L wo/APA	11/17/2011	
UR0142	U3000-49	BA4,BA5,BC2	EPP	At WPAC computers down	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.			04867 Mike Shad Ford	4131	1FMHK7D89CG[redacted]	7/18/2011	6/23/2011	4/7/2011	4/8/2011	3.5L wo/APA	11/22/2011	
UR0143	U3000-49 U3000-96	B43,B25	EPP	At WPAC computers down	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.			06582 Don Bohn Ford	2831	1FMHK7D85CG[redacted]	9/2/2011	8/29/2011	7/14/2011	7/15/2011	3.5L wo/APA	12/1/2011	6/5/2011
UR0144	PS in/op	no codes		chargeback	12/19- found out dealer replaced two EPAS gears, this was the first did not find anything wrong with the gear. Tech states in the cqis report that this vehicle had a u3000-96 after pulling codes the gear never had a u3000-96. to chargeback the gear.			05700 Champion Ford	1546	1FMHK7F90CG[redacted]	8/22/2011				3.5L wo/APA	10/15/2011	
UR0145	U2011-49	B3A	EPP	At WPAC computers down	12/19- pulled EFF and stored data, had E66,A66 & A3A codes. going to freight ship to MAO on 1/6.			01980 Beau Townsend Ford	3126	1FMHK8F83CG[redacted]	9/10/2011	9/7/2011	7/22/2011	7/22/2011	3.5L wo/APA	11/25/2011	
UR0146	Int. No Com	no codes		At WPAC computers down	12/19- tech states he has intermittent no communication in the CQIS report. After 15min road test lost communication, problem int. with can bus			08223 Link Ford	1192	1FMHK7F80CG[redacted]	8/18/2011	8/13/2011	12/17/2010	12/12/2010	3.5L wo/APA	10/7/2011	
0KM	C200B-2F C200C-2F	BD0-BD3, B90	TS	in eval Hella	12/19- cutting process issue, 8D sent to Ford, looking to get a two step cutting process approved for the torque ring templates.	12/6- found metalic fiber shorting on PCB swapped ECU and harness to verify IPA assembly. To ship IPA assem. To Hella		CAP							3.5L wo/APA		
0KM RUA# 5366	U2011-49	B3A	EPP	in eval MAO	12/13- could duplicate B3A failure in lab. surrogate relay test OK, ribbon cable wiggle test ok, 5amp test done found faulty motor relay			CAP						7/13/2011	3.5L wo/APA

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	Verbatim	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Gear Build Date	ECU Build Date	EPP Build Date	Eng. Type	Date of Repair	Motor Build Date	Date	Part ETA
UR0021	U3000-49 U3000-96	BAA,BAB,B9B,BAD	EPP	in eval Melexis	8/15- Geoff to review Melexis 8D and check for further information to finalize.	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level3 5/24- Faults raised each cycle. R227 discarded as a root cause. Vsw circuitry working fine.PCB software found that Bridge enable line is disabled periodically. Ship to UK for further testing 6/29- found faulty Aux. ASIC in the ECU, Anting to contact Melexis so UK and ship out for analysis. 7/4- Aux ASIC arrived in Melexis		03073 Mullinax Ford	03735	1FMHK8B88BG[redacted]	1/18/2011	1/7/2011	10/30/2010		3.5L wo/APA	4/28/2011			
UR0025	U3000-49	B25	EPP	In eval 26 Mile	9/12- tri-temp ignition cycling at 26mile NTF	5/26- pulled stored & EFF data shipped to MAO for further testing 6/10- this is not a shorted FET issue according to the EFF data. Cannot duplicate the issue at this time. 7/18- Sergio to send Geoff PFR for next steps.		20609 Orange Motor Co	00008	1FMHK7D89BG[redacted]	3/29/2011	2/28/2011	1/4/2011	1/8/2011	3.5L wo/APA	4/21/2011			
UR0030 RUA#4878	C200D-49	B9A	EPP	In eval UK	8/8- teardown and inspection of PCB had NTF, next step is to check the flux density of the permanet magnet in the motor. 8/15- UK motors grp did full teardown and did not find any flux density fault. Will put on hold until the other warranty returns are examined and tested.shipping other parts out to	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle 6/23-B9A -- FNR at ambient. Fault raised at 43 Celsius. To be shipped to UK 6/24- Sergio to send PFR to		05559 Villa Ford	7839	1FMHK8F82BG[redacted]	1/19/2011	1/3/2011	9/26/2010	10/15/2010	3.5L w/APA	5/13/2011	9/17/2010		
UR0032 RUA #4978	U3000-49	BFF,BFC,B1C	EPP	In Eval UK	7/20- ship ECU back to Shirley attention Mike Molloy for further NVM analysis. 8/1- check with Mike on updates 8/8-part has arrived to the UK.	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/11- Sergio to get testing instructions from Geoff on this return.		07590 Van Bortel Ford	03003	1FMHK8F85BG[redacted]	3/4/2011	2/28/2011	12/5/2010	12/8/2010	3.5L w/APA	6/9/2011			
UR0035 RUA# 4979	U2011-49 U3000-49 U3000-96	B7D,BB8	EPP	In Eval UK	8/8- part has not arrived yet in the UK for further testing check with Anting for update	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/25-MAO reproduced B23-found a a low impedance between pin96 and pin97 on main micro IC3. It seems a problem on the soldering.		04161 Eddie Yaklin Ford	04625	1FMHK7D8XBG[redacted]	12/8/2010	12/6/2010	10/1/2010	10/21/2010	3.5L wo/APA	5/31/2011			
UR0037	Making noise no assist	A19	NVH	In Eval 26mile	8/8- found broken pulley from Capstan, submitted presentation to Ford. When 8D is completed will send out to Ford.			00169 Pittsville Motors	06773	1FMHK8D84BG[redacted]	1/31/2011	1/24/2011	11/17/2010	11/19/2010	3.5L wo/APA	5/25/2011			
UR0040	U3000-49	BAE,BAB,BAD	EPP	In eval 26mile	8/10- MAO to hold onto EPP until UK is done testing the three gears with similar codes. 9/12- 26mile done tri-temp testing was able to get to reset once. Benched tested was able to get to fail possible aux. ASIC testing still ongoing.	8/1- raise RUA and ship to UK for further analysis. faults not replicating even when in hot testing. Fault not replicating in lab after hot test over ASIC and IC17. During analysis part failing with BA4 , B3A rep B7E. Power module swapped with a reference on.		08811 Sentry Ford	02050	1FMHK8D83BG[redacted]	2/14/2011	2/7/2011	12/13/2010	12/19/2010	3.5L wo/APA	6/16/2011			
UR0041 RUA# 4980	U2011-49	B3A	EPP	In Eval Tyco	10/26- still under analysis. 11/8- Tyco confirmed Mg, Na, S contamination.	8/1- Phase1 motor relay contact not closing.raise RUA and ship to UK 8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco 10/6- Andy Partridge to check results when he is back off vacation. 10/26- still under analysis.		02199 Bob Gillingham Ford	05016	1FMHK8B88BG[redacted]	12/2/2010	11/23/2010	9/14/2010	9/16/2010	3.5L wo/APA	6/13/2011			

UR0042	C200C-2F	BD3	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1-passed EOL & bench testing 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		01273 Fred Beans Ford	04301	1FMHK8D84BG[redacted]	3/14/2011	3/7/2011	1/20/2011	1/29/2011	3.5L wo/APA	6/20/2011			
UR0043 RUA #4981	U3000-49	BAE,BAB,BAD,BAA	EPP	In Eval UK	8/8- UK received the part today for further testing. 8/22- comfirmed IC17, get reply from Anting and ship to Maxium. 11/7- IC17 damaged removing device from the PCB cannot be tested.	8/1- raise RUA and ship to UK for further analysis.AA I sense working fine and Isense IC17 output incorrect. Signal coming from AA is OK but IC17 output is not good. IC17 temperature sensitive. did not swap Component Same failure mode as CR0030 in which after swapping Pin 5 is found broken.		05319 Rusty Eck Ford	05191	1FMHK8F84BG[redacted]	2/22/2011	2/17/2011	12/11/2010	12/16/2010	3.5L w/APA	6/27/2011			
UR0045	C200D-49	B9A	EPP	In Eval UK	8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders are re-synchronised, ran overnight with ign permanently on NFF, test repeated with ign. cycling for two hrs, NFF	8/1- hot and ambient testing done NTF. cold testing next step 8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders		05928 Premier Ford	1695	1FMHK7D8XBG[redacted]	3/28/2011	3/23/2011	1/24/2010	1/29/2010	3.5L wo/APA	7/1/2011	12/27/2010		
UR0046	C200B-62	BD4	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1- NTF on bench testing, or EOL testing. 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		04927 J.C. 	Raised Rivet	TRW	Tyco	3									1			4	- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. - Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	
	Offset spring	TRW	Tyco					1								1	- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
	Sulphur contamination	TRW	Tyco													0	- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	
	Link relay armature weld failure	TRW	Tyco			1	2									3	- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	
	Plastic contamination	TRW	Tyco			1		1		1		1		1		5	- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	
	Loose plastic tab	TRW	Tyco		1											1	- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	
I240504, I240786, I241589	Noisy gear due to input shat loose on IPA / Missing input shaft bushing	TRW	Rogersville	1					1							2	- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	

J240339-4, J200776-C	Lost of assistance PCB clerance related	TRW	Nidec										1	1		2	- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
I241036, I241386	Missing mounting bushing	TRW	QAO			1		1								2	- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
J030323, J200386	Wrong ECU delivery part number	TRW	QAO									15				15	- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	
I240259	No communication	TRW	QAO													0	- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	
I240647	Bushing off position	TRW	Tenneco													0	- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	
I241180	Failure codes U0100, U2101	TRW	QAO				41									41	- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
I240929	Sensor harness contamination in connector	TRW	Delphi		2											2	- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
I202093	Hex nut bushing without threads	TRW	ENA				1									1	- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
I241645	Missing tie rods	TRW	QAO						1							1	- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	
I202814	Housing's slot over spec	TRW	Sensus							1						1	- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
I241503	Cricket noise	TRW	Rogersville					84								84	- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
J034027	Containment bolt on bushing	TRW	QAO									1				1	- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	
I240225	Noisy gear due to input shat loose on IPA	TRW	Rogersville													0	- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	

No QR	Lost of Asistance. Part recirculated that didn't passed through testing stations	TRW	QAO									1				1	- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		
J240232	Belt sliding while teeth are not well formed	TRW	Gates										1			1	- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
J200776-C	Damaged ribbon cable / Tear down	TRW	QAO										1			1	- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
J240482	Bent finger on IPA	TRW	QAO											1		1	- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010		
No QR	ECU R227 open circuit. C17 damaged or missing	TRW	Anting												1	1	TBD				
J240339, J240482	Lost of assistance. TBD	TRW	TBD										2	2	3	7	TBD

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Issue	Status Open/Closed	current status
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	Open	2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date.
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	Open	2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.
FR-0377	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	Open	1/19- has signature's of a regulator issue need to scope regulator to check for double start-up
FR-0390	C200B-2F	BD0,BD2, BD4	TS	In Eval (QAO)	Open	1/14- pulled EFF & stored data shipped to QAO for analysis. No damage to TS harness
FR-0411	C200C-2F C200B-62	BD1,BD3, BD4	TS	In Eval (QAO)	Open	4/6- Pepe to put pressure on input shaft in different directions while appling torque to the sensor to see if a code will trip from a bent finger.
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0431	C200B-2F U3000-49 U3000-96	BD0,BD2, B31	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0435	C200C-2F	BD1,BD4	TS	in process (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector
DR-0046	C200C-2F U3000-96	BD3	TS	overwound clockspring	pending	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.

	Raised Rivet	TRW	Tyco	3									1			4	- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. - Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	
	Offset spring	TRW	Tyco					1								1	- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
	Sulphur contamination	TRW	Tyco													0	- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	
	Link relay armature weld failure	TRW	Tyco			1	2									3	- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	
	Plastic contamination	TRW	Tyco			1		1		1		1		1		5	- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	

	Loose plastic tab	TRW	Tyco		1											1	- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	
I240504, I240786, I241589	Noisy gear due to input shat loose on IPA / Missing input shaft bushing	TRW	Rogersville	1					1							2	- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	
J240339-4, J200776-C	Lost of assistance PCB clerance related	TRW	Nidec										1	1		2	- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
I241036, I241386	Missing mounting bushing	TRW	QAO			1		1								2	- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
J030323, J200386	Wrong ECU delivery part number	TRW	QAO									15				15	- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	
I240259	No communication	TRW	QAO													0	- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	
I240647	Bushing off position	TRW	Tenneco													0	- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	
I241180	Failure codes U0100, U2101	TRW	QAO				41									41	- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
I240929	Sensor harness contamination in connector	TRW	Delphi		2											2	- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
I202093	Hex nut bushing without threads	TRW	ENA				1									1	- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
I241645	Missing tie rods	TRW	QAO						1							1	- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	

I202814	Housing's slot over spec	TRW	Sensus							1						1	- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
I241503	Cricket noise	TRW	Rogersville					84								84	- Return to Job 1 sensor design. - Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
J034027	Containment bolt on bushing	TRW	QAO									1				1	- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	
I240225	Noisy gear due to input shat loose on IPA	TRW	Rogersville													0	- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
No QR	Lost of Asistance. Part recirculated that didn't passed through testing stations	TRW	QAO									1				1	- Develop password that locks ability to operators to define station to send recirculated parts. - Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		
J240232	Belt sliding while teeth are not well formed	TRW	Gates										1			1	- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	
J200776-C	Damaged ribbon cable / Tear down	TRW	QAO										1			1	- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
J240482	Bent finger on IPA	TRW	QAO											1		1	- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010		
No QR	ECU R227 open circuit. C17 damaged or missing	TRW	Anting												1	1	TBD				
J240339, J240482	Lost of assistance. TBD	TRW	TBD										2	2	3	7	TBD

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Issue	Status Open/Closed	current status
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	Open	2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date.
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	Open	2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.
FR-0377	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	Open	1/19- has signature's of a regulator issue need to scope regulator to check for double start-up
FR-0390	C200B-2F	BD0,BD2, BD4	TS	In Eval (QAO)	Open	1/14- pulled EFF & stored data shipped to QAO for analysis. No damage to TS harness
FR-0411	C200C-2F C200B-62	BD1,BD3, BD4	TS	In Eval (QAO)	Open	4/6- Pepe to put pressure on input shaft in different directions while appling torque to the sensor to see if a code will trip from a bent finger.
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness
FR-0431	C200B-2F U3000-49 U3000-96	BD0,BD2, B31	TS	in Eval (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness

Case Number	Ford DTCs	Symptom	Component	Issue	status	Engine
FR-0014	C200B-C200C-2F U3000-96		TS	TS harness damage	Closed	2.5L Hybrid
FR-0018	C200B-62 U3000-96	BD0-BD4	TS	8D Complete (Hella)	Pending	
FR-0020	U200B-2F U200C-2F	BD0-BD3	TS	TS solder joint	Closed	
FR-0031	C200B-62 U3000-96	BD4	TS	Bent TS finger	Closed	
FR-0036	U2011-61 U3000-96	B95	TS	TS ASIC	Closed	
FR-0042	U3000-96	BD3	TS	TS harness damage	Closed	2.5L Hybrid
FR-0043	C200C-2F U3000-96	BD3	TS	TS burrs leadframe	Closed	

FR-0435	C200C-2F	BD1,BD4	TS	in process (QAO)	Open	3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector
DR-0046	C200C-2F U3000-96	BD3	TS	overwound clockspring	pending	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.
UR0003	C200B-2F C200B-62	BD2,BD4	TS	At WPAC	Open	4/6- need to discuss next week the poke yokes designed at station 50 to check for bent veins/fingers on the torgue sensor. Andrew Bradley will join in the discussion to assist Marion to find a reasonable PCA. QAO will also be involved with the discussions.

0KM BR188663	U3000-61	B97	EPP	In Eval (Anting)	**12/13- waiting on Raymond Qiu to send out 8D. Preliminary report states it was a bushing from the conveyer, now trying to figure out how that got into the EPP.**	11/11- once gear arrives to QAO ship to UK for analysis. 11/29- bushing found in EPP discussions with Anting, shipped to Anting for Analysis.							
0KM BR190049 RUA# 4235	U3000-49 U2011-61 U3000-96	B25, B95	EPP	In Eval (Fairchild)	**1/31- compare other B25 failure with this return.**	11/5- also has a battery voltage code event U3003-68 HSAP will send gear back to QAO for analysis. 11/11- change the Power Module and see if the replaced Module is being damaged by another condition at ECU. 11/29- PM failure ship to Anting then send to Fairchild for analysis. EOS on the PM 12/10- shipped the ECU to the UK for analysis.							
0KM BR195438 RUA# 4234	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**1/10- IC11 Aux ASIC failure sent to Melexis and confirmed an ASIC failure analysis ongoing. 2/7- EOS in ASIC happened when PM failed.**	**11/23- PM damaged short circuit 12/10- shipped ECU to UK for analysis.**							
0KM BR206427		BB8, B7D	EPP	In Eval (QAO)	**1/14- Pepe will check the PM connections to see if that is causing the B6B's & B32's after PM replacement. Geoff will check the information**	**12/21- Analysis results showed another PM damaged (TOP FET2). replaced PM and ECU is giving now B32. Geoff to look over results. 1/14- Pepe will check the PM connections to see if that is causing the B6B's & B32's after PM replacement. Geoff will check the information**							
0KM BR218836 RUA# 4297	U3000-49 U3000-96	B25	EPP	In Eval (UK)	**1/31- shipped to UK for further testing will use this PM return to compare against the other B25 0KM PM failure 2/7- arrived in the UK today, will start testing.**	**1/5- set B25 three times then set C69, to ship to QAO for analysis 1/17- Short circuit confirmed at PM. This time Both FETS from phase 2 were found under this condition.**							

0KM BR243453 RUA# 4402		B25		In Eval (UK)	**2/11- shipped EPP to UK for analysis, no testing done at this time.**	**2/11- shipped EPP to UK for analysis, no testing done at this time.**							
0KM BR244911 RUA#4401	U3000-49 U3000-97	B25	EPP	in process (UK)	**2/28- PM fitted on the ECU assembly testing just started at this time.**	**2/1- EPP shipped to UK for analysis**							
0KM BR247974 RUA# 4403	U3000-49 U3000-98	B25	EPP	in Eval (UK)	**3/8- QAO has incorporated in the PUMA test a car battery in parallel with the power supply for low current supply at start-up same as Marion.**	**2/1- EPP shipped to UK for analysis** **2/11- arrived in UK no testing done to this EPP assembly**							
0KM BR310758	reject at prerolls no codes		EPP	In Eval (QAO)	**5/17- ship ECU back to Anting for analysis**	**5/5- Unit remains in power-up status everytime the ignition is turned on.** **IC3 micro Voltage observed by IoHwAb.Scaled BatteryVoltage variable read from PSCM system is 0.14V**							
0KM BR332227	C200B-62	BD4	TS	In process (Hella)	**6/7- Pepe confirmed IPA, to ship assembly to Hella for further testing.**	**6/2 -gear arrived at QAO late afternoon, will check status 6/3. QAO started 200% inspection on May 12th.** **6/6- IPA removed from the gear and confirmed not a bent finger, channel one issue. Need more help from Don Blandino & Jim Loria on the channel one signal and next steps. Ship to Hella for further analysis?**							
0KM BR342036	U2011-49	B3A	EPP	in process QAO	**6/9- relay arrived at QAO late afternoon, testing indicates motor relay. To raise RUA and overnight to Tyco for relay workshop.**								

FR-0184	U3000-49	BC5	EPP	In Eval (UK)	**4/6- Pepe found EPP assembly will ship to Geoff for more testing**	**1/31- ECU just arrived in the UK Andy will start testing. 3/21- Geoff looking for EPP assembly to be sent to the UK.**							04570 Bluebonnet Motors	13170
FR-0205	No Com	No Com	EPP	In Eval (QAO)	**5/9- need to put EPP back through temp cycling to see if they can get the no com to fail again. QAO did see a shorted issue with C15 because had 0 volts between input and ign. But once pin 2 was lifted & soldered back on the IC14 the ECU has been working properly with no problems.**	**5/6- could not communicate with test box no visual issues with 2 or 3-pin connector terminals shipped to QAO for testing 6/14- passed leak test, ambient ign. Cycling with no faults. Bully ambient & cold with performace testing. 6/15- gear bully tested with no faults. Cold testing next. 10/11- next steps to tri-temp EPP assembly 10/15- right before installing into tri-temp chamber was no able to communicate with ECU. Next to check regulator output**			NO COMMUNICATION TO MODULE VERIFIED CONCERN PARKING LOT ROAD TEST DIAGNOSE EPAS SYSTEM NO COMMUNICATION TO POWER STEERING CONTROL MODULE PERFORMED PINPOINT TEST D. REPLACED POWER STEERING CONTROL MODULE. This is the only warranty claim listed at this time. vehicle returned a week after sale			04024 Bob Hurley Ford	195
FR-0234	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	**5/9- still need to put the regulator on for further testing to confirm this was not an ECU or motor clearance issue.**	**5/28- pulled EFF data, shipped gear to QAO for testing. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 7/7- passed all QAO B9A testing, bully,hot puma, ign cycling cannot reproduce code. Shipped gear to UK for further testing 8/3- Voltage regulator damaged during cooling down exercise, need to find out what the next step is. 9/9- with damaged regulator cannot find out if this is a regulator issue. To perform**							09357 Jersey City Ford	25321
FR-0235	P07AE-09	AF1	NVH	In Eval (26mile)	**2/4- Jose performed the housing measurements and gauging. Need to go over final results and report out.**	**5/28- pulled EFF buffer data, shipped gear to QAO. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 8/2- Unit is FNR and it has been disassembled. No unusual condition found. Next step will be to send the Pinion Housing and Rack and Ball nut to Metrology laboratory in order to discard any bent condition at those components**			C S STEERING HARD TO TURN IDS RETRIVE 2 DTC C200B AND P07AE FIND OPEN AT SJB FUSE #42 FIND HARNESS 14290 RUBBING UNDER FRONT OF VEHICLE REPAIR WIRE AND REROUTE WIRE GREEN CIRCUIT #CBP42 REPAIR WIRE AND RE ROUTE WIRE CLEAR CODES RETEST FIND STEERING STILL HARD WITH 1 DTC P07AE FOLLOW PP TEST TO F4 ANSWER YES THAT DTC PO7AE IS STILL PRESENT ORDER EPAS STEERING GEAR REPL STEERING GEAR,TECH 3			10288 Valley Stream L/M	19157
FR-0239	P07AE-09	AF1	NVH	In Eval (26mile)	**2/4- Jose performed the housing measurements and gauging. Need to go over final results and report out.**	**6/14- Pulled EFF fault data, shipped gear to 26mile. 6/16- Friction gear is in the lab to be leak tested and measure yoke set. 6/21- pinion housing bend, need to perform teardown & lay-out to determine if rack is bent also. 6/28- Jason to check 32 Mile to get FR0239 laid out. I have to find the CMM holding fixture and a print, and get the parts up there. Working on the print and fixture now**							11068 Findlay L/M	21233
FR-0241	U3000-49 U2011-49	B43, BB9	EPP	In Eval (QAO)	**1/31- tri-temp ign. Cycling is the next steps to reproduce any codes**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started 11/8- ambient ign cycling cannot reproduce. Next to cold ign. Cycle**							01237 Kindle Ford	2604

FR-0242	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**11/8- ambient ign cycling cannot reproduce. Next to cold ign. cycle**	**6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started 11/8- ambient ign cycling cannot reproduce. Next to cold ign. Cycle**					10302 Crest Ford	885
FR-0244	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- tri-temp testing done, performance with not trouble found. To perform the high pot testing then strip back plastic to check for PCB motor clearance issue.**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started**					09675 Borgman Ford	9087
FR-0259	U3000-49	B60	EPP	In Eval (FSL)	**11/12- target test date was pushed back to 12/15 for the first test. 1/10- test delayed till 12/26, validation testing still on the production line, waiting on details of clean product. 3/24- ship 8D to Ford 6/30/2010 is the continous improvement for particles SACVD clean receipe & 11/5/2010 ADC channels to converter test at freescale.**	**6/30- Intermittent B60 code resets in message center. pulled EFF data and ship to QAO 7/7- QAO to ship EPP to UK for analysis. 7/28- Micro ADC fault, need to remove micro put on development board for further testing before sending to FSL. 7/30- Micro still intact on the ECU, now tri-temp testing with ignition cycling to get see if failure will occur 8/2- able to duplicate code, indicating micro**					04984 Key Scales Ford	7
FR-0265	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	**5/29- was pulling B93 & B9A continue testing**	**6/30- OBH screws removed, cannot leak test. Pulled EFF data and shipped to QAO**					02975 North Bros. Ford	21788
FR-0282	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- NFF after passing all the tri-temp ign. Cycling next step to high pot testing then check for PCB motor clearance issue**	**7/16- pulled EFF data shipped to QAO for analysis**					04865 Desoto Ford	5659
FR-0299	C200D-49	B9A	EPP	In Eval (QAO)	**10/18- tri-temp testing passed no faults found.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**					20659 Breakey Motors	17922
FR-0308	steering noisey	No Codes	NVH	In Eval (INA)	**10/25- Pavel to write the QCCARS to ship out to INA**	**9/13- can hear ballnut noise while turning input shaft, did not notice any damage & no stored codes. 9/27- Test results out of specification. Frequency amplitude at 600Hz is around 1.9 en CCW.With this condition on 600hz band RBNA swapped with a good known referente RBNA.Noise testing passed after RBNA swaping with no issues to report. Checking RBNA performance it is being detected too much looseness at Ballnut**					04587 Helfman Ford	2187

DR-0018	U3000-49 U3000-96	BBB	EPP	In Eval (UK)	2/7- Kimball needs to get with KOA find cause of R96 resistor internal failure.	3/17- submit hot process request, dealer borrowed a gear from a vehicle on a lot to get the customer into the vehicle. Called dealer to make sure two repairs were not sent out under 3504. found out there are two repair orders in CQIS for this repair both have 3504 causal repairs and two labor ops. one should be charged back to the dealer. 4/9- shipped gear to QAO 4/21- in QAO leak check ok, has not tested in lab. 5/4- no leaks will start testing next week 5/24- in fridge ready for testing 6/7- passed ambient bully & performance testing cold bully testing nex 6/15- Unit has been ignition cycled over 12 hours. after that fault repeated 2 times and then no more. Unit was warmed and ignition cycles in progress. 7/12- Geoff to send Tim Diez info on BBB fault description., Geoff sent out 7/14. 10/20- BBB set every ign. Cycle now- Geoff thinks this is a micro issue, to ship the ECU to the UK. 11/29- further testing to be done either solder joint or R96 resistor is the cause at this time. 12/16 ECU is back at Kimball and		
DR-0025	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/13- passed hot puma and high pot test, ship to UK for further analysis.	6/15- submit hot process request 7/9- pulled EFF data, need to ship to 26mile for testing 8/25- set for xray tomorrow 8/26- x-ray clean, next ignition cycling with the application SW 9/7- tri temp ignition cycle did not reproduce any codes, next to hot puma. 9/13- passed hot puma and high pot test, ship to UK for further analysis.		

DR-0027 RUA# 3940	No Com	No Com	EPP	In Eval (UK)	10/15- OnSemi came back and states the diode was overcurrent, suggesting this is a one off failure. 11/1- sent questions back to the manufacture about this diode failure waiting on response UK. 1/10- Kimball looking for continous improvement plan for this defectivity on the diode, will work with OnSemi.	6/22- dealer to call back with hot process information to return gear. 7/28- Pulled EFF data, technician could not communicate using his IDS. I could not communicate using my CANape at WPAC. 8/20- Pepe found defective voltage regulator, need to confirm regulator issue after Geoff checks the data. 8/30- Geoff to look over the final data from QAO to decide if the regulator should be sent direct to Infineon or to the UK for additional testing. 9/1- QAO to send Geoff ECU assembly so they can remove the regulator. 9/6- ECU sent to Geoff tracking # 9373 7350 8684 by Fedex 9/8- arrived in the UK today 9/17- not regulator issue found diode on circuit that is leaky more testing need to check other parts of the circuit. 9/27- diode sent out to supplier from the UK for testing. 10/8- Geoff at Kimball next week to follow-up any diode updates.		
DR-0028	noise turning steering wheel	No codes	NVH	In Eval (INA)	10/25- Pavel to set-up QCCARS to ship to INA	6/28- submit hot process request 7/28- pulled EFF data, no codes, did not notice any abnormal noise while turning input shaft back & forth, ship gear to QAO for analysis. 8/17- gear failed the EDF test but no noise was notice during testing. Waiting on next steps, could put on-vehicle or could teardown gear? 8/23- failed NVH test, did not notice any audible noise while testing. Check with Dan Ulep & Sylvain Nadeau for the next steps before teardown. 8/24-Sylvain- EDF results would suggest RBNA damage; I'd suspect field misuse damage. The bolts that were so tight that had to be tapped to be removed is a red flag for me that work may have been done by an unqualified mechanic. I would suggest sending the RBNA to INA if workshop misuse confirmation is required. 9/8- rack & ballnut ready to be sent to INA, needs Gabreil to write QCCAR. 10/6- Waiting for QCCAR and contact from INA to receive the part. 10/11- Guillermo working with Pavel to find out who will be writing QCCARS now to ship to INA		
DR-0029	U3000-61	B97	EPP	In Eval (QAO)	10/6- ambient ignition cycling, NTF at this time.	7/7- Submit hot process request 7/28- pulled EFF data, customer states gear loses assist intermittently backing out of the driveway, dealer could not duplicate the problem but had a stored U3000-61,performed interactive diagnosis code returned on road test.		
DR-0033	C200D-49 B9A		EPP	In Eval (QAO)	8/18- gear passed leak test & ambient ignition cycling, next step to cold testing. 11/1- QAO exhausted all testing of this unit, Pepe looking for next step or should it be sent to UK? 11/2- perform wiggle test on the ribbon cable, then PCB motor clearance check.	7/28- pulled EFF data, shipped get to QAO for analysis.		

DR-0038	C200D-49 B9A		EPP	In Eval (QAO)	1/24- could not duplicate the double start-up cooling down the regulator using the scope	9/3- pulled EPP & stored data shipped to QAO for analysis		
DR-0039	U2011-49 U3000-96	BD0-BD3	EPP	In Eval (QAO)	1/24- could not duplicate the double start-up cooling down the regulator using the scope	9/27- interactive diagnosis leads to u2011-49 code then set u300096		
DR-0041	steering noisey	No codes No Com	NVH	In Eval (26mile)	11/8- Pepe to ship the parts of the rack back to 26mile for engineering evaluation. Inspected seals at QAO and checked with operators. 1/4- found out PIP seal will go to a dual lip seal design in April 2011 with the Wontae OBH. CD3 changes in Jan 2011 with new Rane OBH. 1/10- measure groove depth on the OBH. Jason to follow up.	10/5- could not turn input shaft, could feel rust squeezing the IBH boot to the rack, was able to pull Ford codes no codes stored then I was not able to communicate with the ECU 10/18- Pepe to check leak test results, pictures taken of rusted ITR & rack. 10/25- leak test passed, advised to reassemble boots and recheck IPA & boots for leaks 10/27 still not confirmed location of ingression, cannot duplicate leak 11/5- gear torn down indications water ingress from the press in seal in the OBH was pinched or not molded properly. Need to send pictures and decide what to do with the parts. No history known of this vehicle being in a flood, but this area the customer was in did have flooding conditions around the Nashville,TN area are May 2010.		
DR-0045	P07AE-09	AF1	NVH	In Eval (QAO)	5/13-found input shaft very hard to turn, checked history to see if vehicle was in an accident, none in dealer reports. Shipped gear to QAO for further analysis	5/13-found input shaft very hard to turn, checked history to see if vehicle was in an accident, none in dealer reports. Shipped gear to QAO for further analysis		
DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	2/3- had a new operator for the rework process recovering this IPA part; issue has been addressed and talked to the operators about it. Right now we are increasing our quality audits to the rework process as well.	12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness. 1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions 1/26- TS rework broke containment need to see what happened on the line during rework.8/2/2010 is the proper rework date so this is a post containment gear.		
DR-0047	C200C-2F U3000-96	BD1,BD3	TS	In Eval (QAO)	6/8-Confirmed losing channel 2 in the TS of the IPA. Ship IPA to Hella for further analysis.	5/13- pulled stored and EFF data, no damage to gear or TS harness, shipped to QAO for further analysis		
DR-0048	C200D-49 B9A		EPP	in process (QAO	6/6- pulled stored & EFF data, B9A code set erratic 13 & 22 min's into the Journey. possible PCB motor clearance issue.

CONCERN: NOISE IN STEERING TURNING WHEEL BACK AND FORTH DIAGNOSTICS: VISUAL INSPECTION, PINPOINT TEST KC1 ANY KNOWN CONCERNS-NO. USED CHASSIS EARS TO TRY AND ISOLATE. PARTS REPLACED:: NONE TECH QUESTION: WITH THE CHASSIS EARS IT SOUNDS LIKE THE NOISE IS COMING FROM THE RACK AND PINION. THE SHOP MANUAL STATES THAT THE MOTOR DRIVES A BELT, SO I DONT THINK IT COULD BE THAT. I USED A PAIR OF VISE GRIPS AND GRABBED THE LOWER STEERING SHAFT AT THE RACK WHILE ANOTHER TECH ROCKED THE STEERING WHEEL, NO NOISE. I THINK IT COULD BE THE RACK. RECOMMEND YOU DISCONNECT STEERING SHAFT FROM STEERING RACK AND TURN WHEEL. IF NOISE IS NOT PRESENT WITH STEERING SHAFT DISCONNECTED, RECONNECT STEERING SHAFT AND REMOVE OUTER TIE ROD ENDS FROM STEERING KNUCKLES. IF NOISE IS STILL PRESENT WITH OUTER TIE ROD ENDS DISCONNECTED, SUSPECT EPAS STEERING GEAR IS THE CAUSE OF THIS CONCERN. RECOMMEND YOU REPLACE EPAS STEERING GEAR, AND THEN RE-EVALUATE THIS CONCERN. IF NOISE IS COMPARABLE TO A SIMILAR VEHICLE, NO REPAIRS ARE RECOMMENDED			07892 Capital Ford	12696			1FAHP2KTXAG[redacted]	9/14/2009	8/22/2009	5/28/2009	6/19/2009

0KM AR378362		B92	EPP	In Eval (QAO)	**1/14- cut back the plastic and did not find any PCB motor clearance issue. Check with Geoff if there is any further testing to be done** **1/21- this is a one off return and could not find any issue at this time. Can keep in pending just in case we get another one**	**5/24- hot & ambient, next step is to cold test with ignition cycling and motor movement. Then bully test.** **6/21- ign. Cycling, bully, & puma passed next cold ign. Cycling** **8/20- NTF with all the ign. Cycling & hot puma, advised to finish cold testing to complete test.** **10/4- all testing has been done ign. Cycling with no problem found. Next step tri-temp testing.** **12/6- to use the new tri-temp tester to check for any codes.** **12/10- tri-temp complete with no trouble found. Check with Ford to see if we can start to cutaway red plastic to check pins for PCB motor clearance.** **12/15- Ford agreed to cut back red plastic and check for PCB motor clearance.**		
0KM BR111887		BAA, BAB,BAE, B9B, C69	EPP	In Eval (QAO)	**8/19- HSAP sending gear back to QAO for U3000-96, failed in prerolls station.**	**8/19- HSAP sending gear back to QAO for U3000-96, failed in prerolls station.**		
A Non-warranty return RUA# 4108	U2011-49 U3000-96	B6B	EPP	In Eval (Tyco)	**11/10- relay tore down and contacts shown, next to check SEM of the relay contacts.**	**8/27- shipped out of Rogersville on Friday's truck.** **8/26- xray is clear not shorts or offset. Next to see if code resets. Then can do some other tests before relay is removed for inspection.** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.** **10/8- performed hot puma & high pot test with no faults found.** **10/20- shipped to Tyco for relay & contact analysis.**		
DR-0013	U2011-49 U3000-49 U3000-96	BB8, B23	EPP	In Eval (ATE)	9/2- bond wire not well centered into groove due to improper tool setting. Update bond tool installation by dedicated person & provide installation instructions on 9-3-2010 at Fairchild. Geoff sent 8D email to Ford.	2/16- submit hot process request 2/25- dealer did not use the hot process form to return gear it will come back normal part return process 4/12- pulled EFF buffer data and shipped to QAO 4/20- arrived in QAO, to leak check then start testing in lab. 4/23- Samuel able to reproduce B23 the motor PH FET is not closing, the gate signals are working. To check FET with microscope then will use surrogate FET and retest. 4/26- Geoff looked at PFR and advised Samuel to ship power module to Fairchild 5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out		
FR-0056a	U3000-49 U3000-96	B31	EPP	In Eval (26mile)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/24- this is the service gear the tech installed from fr0056 and had a U3000-96 and had to replace again. analysis done at 26-mile.** **9/29- 26-mile with further testing to check B31 code. Check with Simon on progress.** **9/30- make sure this was a service part, testing ongoing, no problems found at this time** **10/1- xrayed ribbon cable and welds no problems found, still will not reproduce fault. Advised to look at circuit diagram** **10/2- Thiha to check with Geoff on pin layout diagram. Fault insertion testing** **10/15- 26mile manual cycling on the bench to check for faults, has not failed at this time.** **10/23- Geoff to check FTA to help with next step testing for B31's at this stage of the analysis.** **11/2- Internal B31 workshop planned after B9A is resolved by electrical teams.** **11/18 On hold, B9A investigation first**		

FR-0060	U3000-49 U3000-96	B31	EPP	In Eval (QAO)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/8- Submit hot process request form** **9/18- pulled EFF & Buffer Data code B31 set before C69 latched out. Jason to ship gear to QAO for testing.** **9/24- gear arrived in QAO for testing** **9/30- take ECU cover off take pictures of the seal. Simon/Geoff to email next steps to inspect and xray.**		
FR-0066	U3000-49	B31	EPP	In Eval (26mile)	**9/9- have not seen any B31 claims since cold weld issue on FR0125, will keep in pending until we confirm no new B31 claims are found.**	**9/21- Submit hot process form, Have no information on the EPAS gear replacement, CQIS claim only lists vehicle would not move due to a transmission issue.** **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile** **9/25- gear at 26-mile to ship to QAO** **9/29-estimate gears to QAO late this Thursday** **10/2- cannot reproduce fault code at this time. Next steps from 26-mile** **10/15- ke sure part is x-rayed before Sergio goes back, 26mile manual cycling on the bench to check for faults.** **10/23- Sergio left EPP at 26-mile for testing, x-rayed PFS could not see any faults with ribbon cable & connections. Geoff to get FTA to decide next steps for other B31 testing.** **11/12- PFS at 26-mile waiting on B31 workshop after B9A's are tested**		
FR-0081	U2011-49	B6B	EPP	In Eval (UK)	**9/7- passed all tri temp ign. Cycling, next hot puma then high pot testing.** **9/13- passed hot puma & high pot testing, ship to the UK**	**10/27- Submit hot process request form** **11/5- Pulled EFF/Buffer fault data at WPAC** **11/6- gear dropped off at 26-mile and shipped to Rogersville to QAO** **11/9- when gear arrives at QAO do shake test for cold weld, x-ray, Geoff to send instructions to Sergio.** **11/12- testing starting today in QAO** **11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found, next step xray motor relay.** **11/24- Puma testing & resistance testing passed** **11/30- xray of motor relay ok & passed hot ignition cycling. Next step testing voltage reading on PCB. Hot ign. Cycling** **12/14- next step hot ignition cycling**		
FR-0107	No Com	BC2	EPP	In Eval (UK)	**9/28- got final report out of Anting & Kimball no areas on the line where contact can be made with R281 using the strain gage test at all stations. I have final report will put in pending to see if we have any more damaged R281 resistors.**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- gear should be sent to the UK to check the monitor micro & related circuits.** **1/4- gear now in process to QAO should be there 1/6.** **1/13- is fault repeatable, cold test the unit. check the reset line and supply line for the monitor micro.Once this is done, then we can decide the best place to continue analysis.** **1/19- photograph the part so that we can read the datecode from it. Could be a C154 issue we have seen before. Sergio & Geoff discussing details.** **1/20- RUA raised will ship to UK for further level 3 testing. Fault relates to PCB or solder joint issue.** **1/28- further PCB testing is indicating a resistor R281 issue. Further testing to confirm.** **3/3- R281 resistor has short on end cap will ship to KOA for analysis by next week.**		
FR-0109	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	**7/16- confirmed this as a double start-up added to B9A list for reg./micro issue. Fulfills parameters to close as regulator issue by meeting criteria established for regulators.**	**12/4- Submit hot process request form** **12/21- pulled EFF & Buffer data and ship to QAO** **1/13- to leak test and start the standard testing** **1/20- could not reproduce the codes, next step to do vibration test on the bully machine. Jose waiting for line to switch back to CD3 to test.** **1/25- passed bully testing, next step to discuss with Jim Loria** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-temp testing can be done. set back to Rog. Att: Andy-truck V08385 SKID# 22** **2/22- all four channels tripped codes at** **-2.9degC EFF data collected. Testing on going in the chamber.** **3/1- Visnu to set-up software to measure voltages when gear trips fault code to find area of fault at TS,**		

FR-0128	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed all tri temp ign. Cycling, next hot puma then high pot testing. 9/13- passed hot puma & high pot testing.**	**1/21- pulled EFF & buffer data, ship to QAO 2/2- In QAO today will start leak testing 2/3- EFF data shows PH1 & PH2 at link voltage when it should be Vlink/2. This points to the motor relay. Not able to reproduce the fault, working with the special B6B sw version. 2/5- using B6B software and ignition cycling overnight cannot reproduce any codes. 2/26-still cannot duplicate the code using the B6B software no faults or LIC's. 3/8- send to 26mile for cold testing 3/10-Checking the west building today to put in for cold testing 4/9- gear never sent back to 26mile still at QAO. 6/29- bully test done ambient, ign. Cycling done ambient & hot. Not fault found, to perform iso(1000v) test and then cold testing.**		
FR-0164	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/13- passed hot puma and high pot testing shipped to UK for more testing.**	**3/22- Pulled EFF/Buffer data shipped gear to QAO 4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform 4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform 6/29- relay measurements performed. Iso(1000v) test done. Ambient/cold ignition cycle done. Cold puma done next step hot puma. 8/25- set for xray tomorrow 8/26- x-ray clean, next tri-temp with the application SW**		
FR-0181	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**4/12- pulled EFF buffer data, shipped out to QAO 4/19- arrived at QAO today 5/3- leak tested, now at the lab ready for testing 6/15- Unit leak tested, no leaks to report. Unit was Measured on the Phases terminals before first ignition. No unexpected conditions found. Unit bully tested No faults found.Unit is into the freezer to be cold tested 6/29- RELAY MEASURED. AMBIENT BULLY TEST DONE. TO PERFORM ISOLATION TEST, THEN AMBIENT IGNITION CYCLING 8/25- set for xray tomorrow**		
FR-0199	U2011-49	B6B	EPP	In Eval (26mile)	**7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**	**4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis 5/12- gears should arrive in QAO on Wednesday 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray clean, next hot Puma 6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test. Perform 1000v isolation test. Send Ford fishbone chart on B6B 6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.**		
FR-0200	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/7- during high pot testing to relay low side unit failed, motor PCB tear down now in process. 10/8- motor PCB teardown at UK NTF**	**4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis 5/12- gears should arrive in QAO on Wednesday 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray clean, next Hot Puma 6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test & 1000v isolation test. 6/25- now ready for tri-temp ign. Cycling 6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.**		
FR-0212	tc lamp on ABS code C1278	A28		At WPAC	**5/7- pulled Ford codes & EFF data no codes list only A28 code**	**5/7- pulled Ford codes & EFF data no codes list only A28 code**		

FR-0213	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/7- during high pot testing to relay low side unit failed, motor PCB tear down confirmed motor PCB clearance issue. 10/1- sent to UK stripped down could not find any area for pin contact to PCB. not a PCB clearance issue. More testing.**	**5/7- pulled EFF buffer data & shipped to QAO 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0214	U2011-49 U3000-96	B3A, B6B	EPP	In Eval (UK)	**1/24- tore down relay, NFF. contacts inspected EDX has evidence of weld.**	**5/7- also has code B6B listed in fault store, had to ship back from Rogersville to 26mile for xray. 5/25- xray clean & passed the resistance test. Check with Geoff on next steps. 6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling 6/10- put into tri-temp chamber with ign. Cycling 6/14- passed 5 days of tri-temp ign. Cycling with no faults. 7/12- solder phases back and recheck with B6B SW in the tri-temp chamber. This B3A also set B6B three times before C69 set in the fault store. 9/7- passed all the testing on the B6B chart, next Ship to UK**		
FR-0215	TC lamp on C1278	A28		At WPAC	**5/20- pulled EFF & Buffer data, kept gear at WPAC could install on vehicle**	**5/20- pulled EFF & Buffer data, kept gear at WPAC could install on vehicle**		
FR-0218	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**5/20- pulled EFF & Buffer data, shipped to 26mile for xray 6/2- xray slightly looks like raised rivet, resistance measurement passes, checking with Geoff on next step 6/7- to perform standard tri-temp ignition cycling first then if that passes to get application code to remain in diagnostic mode from Michele. 6/10- took out of tri-temp after 3 days no B level faults at this time. Next to reflash with B6B intro SW. hot puma done? 6/21- in thermo chamber from 6/7-6/9 ign. Cycling with no faults with B6B test SW, hot puma passed. 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0228	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**5/27- pulled EFF buffer data, ship gear to 26mile for analysis. Next to leak test an xray relay. 6/9- xray tomorrow 6/10- xray clean, next hot Puma 7/12- flashed new B6B SW, now ready for tri-temp ign. Cycling 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		

FR-0237	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- passed B6B SW tri temp test, hot puma & all the high pot testing. Next to perform tri-temp ignition cycling**	**5/28- pulled EFF buffer data, shipped gear to 26mile for leak test and xray.** **6/10- xray clean , hot puma next** **6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test.** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**		
FR-0261	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/22- going to install on the PU/PD unit for 48hrs.**	**6/30- pulled EFF data and ship to 26mile for xray.** **8/26- x-ray clean, next tri-temp with the application SW** **9/1- tri-temp testing able to duplicate B6B 15 ign. Cycles in at 90deg. C, both phase 1 & 2 failed. testing ongoing trying to get gear to fail again.** **9/13- scoping the 3 phases on relay low side cannot duplicate code. passed hot puma & high pot testing, ship to UK for testing**		
FR-0264	U3000-49 U3000-96	B60	EPP	In Eval (UK)	**2/7- UK possible stressing diode fitting to board. Part recovered during analysis at Vishay. Cannot prove what the cause was. One off with this diode issue, like to put in pending just in case another similar issue comes up.**	**6/30- Also has codes BA4 & B7A, B60 stored in EFF data, shipped to QAO for analysis.** **7/7- QAO to ship EPP to UK for analysis.** **7/28- hardware issue on PCB, testing still ongoing to isolate the area.** **8/2- something pulling phase 1 low, need to check several components to find drain or short.** **8/4- found out this is not an ASIC issue further testing needs to be done to pinpoint the circuit problem on phase one** **9/8- diode failed in the circuit, sent back to the supplier for analysis.** **9/20-To send back to the diode manufacture.** **10/6- UK still testing diode, next to xray before sending diode to manufacture. 10/27 Diode has been sent Vishay. X-ray was clear.** **12/6- manufacture confirmed diode issue but when they decapsulated the diode the fault went away. Now**		
FR-0271	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/13- passed hot puma and high pot testing shipped to UK for more testing.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- x-ray clean, next tri-temp with the application SW** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**		
FR-0273	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- x-ray clean, next tri-temp with the application SW**		

FR-0278	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then xray relay. Then perform high pot test on the motor relay low side.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **9/1- performing ignition cycling at this time still needs to be xrayed.**		
FR-0284	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	**9/22- 24hr ign. Temp cycling to see if offset bridge shows up.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.** **9/13- passed hot puma & high pot testing, ship to UK**		
FR-0288	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/26- x-ray clean, next tri-temp with the application SW**		
FR-0290	U2011-49	B6B	EPP	In Eval (26mile)	**9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/26- x-ray clean, next tri-temp with the application SW**		

FR-0304	C200B-2F C200B-61	BD2, BD4	TS	In Eval (Farmington)	**3/7- all resources to test has been exhausted at this time with NTF. Will keep in pending and check for other TS returns with similar faults**	**9/2- pulled EFF & stored data and shipped to QAO for analysis. Intermittent PS loses assist.** **9/22- passed leak test, started to bench test wiggle test harness could not duplicate code. Start ambient ignition cycling** **9/27-ambient ignition cycled over 12hrs still cannot produce any codes.** **10/4- still at gear level to put into tri-temp chamber and recheck for codes.** **10/6- next step to tri-temp test at QAO** **removed IPA cover no visual issues internally or on the TS PCB. Next to do wiggle testing during bench testing.** **10/12- next step to performance test hot.** **11/17- use higher temps for tri-temp at 120 deg C instead of 90 deg C. for profile also discuss turning the TS 2 turns CW & CCW while testing** **12/3-Awaiting next steps before disassy**		
FR-0307	TC lamp on C1277	No Codes		At WPAC	**9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).**	**9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).**		
FR-0309	TC lamp on C1278	E1E		At WPAC	**9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on C1278.**	9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on.		
FR-0314 RUA# 4149	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis.** **9/29- received gear today and passed leak test ready for xray.** **10/8- xray clear not fault found, follow standard test procedure.** **10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found** **11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop.** **11/2- sent to Tyco for Nov.22-24 relay workshop** **11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**		

FR-0316	TC lamp on C1278	No Codes		At WPAC	**9/27- pull EFF & stored data no codes stored, checking CQIS & AWS for any history information.**			
FR-0327	C200C-2F U3000-96	BD1, BD3	TS	In Eval (Farmington)	**3/7- all resources to test has been exhausted at this time with NTF. Will keep in pending and check for other TS returns with similar faults**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. No damage to TS harness** **10/18- leak test passed sent to lab to start analysis.** **11/8- ign cycled need to check with Sam on other testing performed on this gear.** **11/15- all the ignition cycling & tri-temp testing has been performed with no trouble found. Bench testing with wiggle testing no trouble found.** **11/17- found metallic burr on one of the rotor teeth, advised to ship IPA assembly direct to Hella for analysis. Pepe to contact Angie for information & QCCAR data.** **11/18- hella received TS will start function testing** **12/1- rotor burr did not cause the codes, Hella function tested sensor assembly with no trouble found. Need to discuss further testing.** **12/8- Hella to check PCB below the burr make sure no contact has been made to the board. Measure**		
FR-0331	U3000-49 U3000-96	BA4,BA5,BC2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld.** **Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were**	**10/18- pulled EFF & stored data shipped to QAO. Found couple small dents in ECU cover & 2-pin plastic housing broken.** **2/3- confirmed C154 issue, need to ship Kemit in the US for analysis.** **2/5- capacitor arrived at Kemet in US** **2/14- confirmed cold weld issue at US facility**		
FR-0356	U3000-49	BA4,BA5,BC2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld.** **Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis** **2/3- confirmed C154 issue, need to ship Kemit in the US for analysis.** **2/5- capacitor arrived at Kemet in US** **2/14- confirmed cold weld issue at US facility**		

FR-0365	C200B-2F C200C-2F C200B-61	BD2, BD3,B90	TS	In Eval (26mile)	**3/7- Ford agreed due to the vehicle issues listed in the customer & vehicle comments to move to pending and if resources allow later and more testing needed to install on-vehicle.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. TS harness conduit pinched near EPP but no wire damage.** **1/25- did TRI TEMP and ignition cycling and Hot testing as well and no faults observed. turn input shaft stop to stop while testing NTF. Next step to put on bully tester 5 times with NTF.** **2/3-Jim Loria/Don Blandino thinks this vehicle had other vehicle problems that caused the TS codes.** **2/11- Sam to put gear through bully testing 5X, if that passes to remove the IPA & ECU cover and visual inspect for poor wiring connections or moisture. If that is Ok to ship back to 26mile for further testing.** **2/22- gear arrived at 26mile for testing.** **3/4- performed bench testing at 26mile with NTF, advised to put the IPA cover & ECU covers back on and see if we can find a hybrid for on-vehicle testing. Will discuss with Ford engineering.**		
FR-0389	U3000-49 U3000-96	BA4,BA5,B C2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld.** **Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were**	**1/14- pulled EFF & stored data shipped to QAO for analysis.** **2/3- confirmed C154 issue, need to ship Kemit in the US for analysis.** **2/5- capacitor arrived at Kemet in US**		
FR-0393	U3000-49	BA4,BA5,B C2	EPP	In Eval (QAO)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire alignment issue with wire in the wrong spot during weld.** **Geoff sent out 8D to Ford for analysis at this time. more testing required by Kemet to setup a test to prove these warranty returns were the failures listed in the 8D.**	**1/21- pulled EFF & stored data shipped to QAO for analysis** **2/3- confirmed C154 issue, need to ship Kemit in the US for analysis.** **2/5- capacitor arrived at Kemet in US**		
QAO line failure- 1 RUA-2983		B9A	EPP	In Eval (UK)	**3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100% containment operation run some bad units through to see if they fail**	**12/14- able to duplicate code, looking at interaction with auxillary ASIC & hall effects**		

QAO line failure- 2 RUA-2983		B9A	EPP	In Eval (UK)	**12/14- able to duplicate code, looking at interaction with auxillary ASIC & hall effects**	**12/14- able to duplicate code, looking at interaction with auxillary ASIC & hall effects**		
QAO line failure- 3 RUA-2983		B9A	EPP	In Eval (UK)	**3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100% containment operation run some bad units through to see if they fail**	**12/14- able to duplicate code, looking at interaction with auxillary ASIC & hall effects**		
0KM BGA22399	U3000-61	B91		In Eval (UK)	2/25- EPP has been tested on the PU/PD rig with ignition cycling and tri-temp testing with NTF	1/27- vehicle passed all static & dynamic tests but lost assist on the final road test. Gear could be pulled and sent to 26mile for analysis. Cannot duplicate the concern in the vehicle at this time. 1/28- Mike Fontana will go to CAP record all in vehicle data and try to duplicate the code, if not will remove gear take back to 26mile for further analysis. 2/2- performed electrical endurance, code check, spring stand test at various voltages and vehicle test we can't reproduce this fault, checking with Geoff on next steps		
0KM BR247653	rattle under dash		TS	In Eval (Rogersville)	**2/9- Rogersville received the IPA yesterday and started the investigation of the missing bushing. Rogersville has approval to purchase the camera's. still checking to see if this was a operator mishandling issue. April 1st is target date for completion of both camera's on line 2 & 3.**	**1/31- plant found movement in the input shaft. QAO will ship to Rogersville for analysis. Possible missing bushing in the IPA assembly.**		
0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (Rogersville)	**2/9- have approval to modify line 1 with new grippers and smaller diameter ,March 21st completion date. 5/10- have modification on line 2 for a vision system at station 50 to elimination the visual inspection will need to get timing when that will be implemeted on line 2.**	**11/29- found one bent finger on the rotor, impact mark on top of the finger. QAO investigating cause. 12/6- QAO still looking for causes but also looking for new ways of testing for bend finger after station handling at the grenade pin removal station. 12/15- looking to install laser that detects bent fingers on the rotor, and should be installed in the granade pin detection fixture. We still need to continue analyzing, meanwhile, Third party sorting at Rogerville & 100% sorting for this condition in QAO. 1/5- unsure if laser system can be done at grande pin detection station, still discussing and checking other options. Sorting still continuing at Rogersville & QAO. Couple of the bent rotors found in sorting sent back to Rogersville look for any witness marks on the rotors. 1/10- plan for containment at Rogersville: > 100% visual check for bent rotors added to operator's control sheet**		
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	**4/6- just have confirmation that the new target date for the new camera's on line 2 & 3 is 6/7/2011.**	**11/29- movement of the input shaft causing the rattle noise QAO removed IPA and shipped, arrived in Rogersville today for analysis. 12/1- found no pin stamp on the shaft indicating this failed the deflection test bench still trying to understand how this made it into the gear. Machine logic to recognize bushing & input shaft will change today. Looking at installing a timer to install delay & tell the difference between the input shaft and bushing installation. should have 8D finished by COB Friday. 12/6- Jonathon Harris from Ford at Rogersville to inspect the operation & mistake proofing operation to be set-up on the line & handling issue for failed parts. They will use a green dot to identify a pin stamp on input shaft at EOL. 1/5- implement a camera system on the Prodel line to insure part will have a pin stamp, get quote & timing at the end of the week.**		

0KM BR753424		BAA,BAB, B9B, BAC,BB8	EPP	In Eval (UK)	**2/7- exhausted all testing cannot duplicate the code, like to close off as NTF. Can submit all the testing results that has been done.**	**9/14-bully tested 5 times, ignition cycling cannot reproduce the codes, ECU cover removed and R227 inspected did notice any damage no measurements taken. Cover reinstalled and ignition cycling ongoing.** **9/20- next step** **1) Run the attached configuration while drawing some current.** **2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes.** **9/24- instructions to test from Geoff** **We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as follows:** **1) a) Measure the 2.5V Ref with CANape (I sent you a configuration for doing this which included 'ADC.Pseudobuffer[12] to [15]'**

FR-0001	U3000-49 U3000-96	BA4	EPP	Monitor Micro	**9/14- dates approved by Bill in TRW/Ford warranty meeting to close out**	**4/20** EPP tested at Shirley Ign. cycled cooling to -20C can duplicate code. **5/8** sent to FSL mult. testing of monitor micro unable to duplicate failure. **5/21** micro sent back to Shirley to replicate failure for FSL **5/25** Shirley able to replicate the fault trying to isolate it with a standalone micro test for FSL **6/1** confirm with FSL testing does indicate a micro failure & using micro standalone test stand agree to the proper testing procedures to find micro flash root cause. **6/4**- FSL engineering to witness micro code using the modified standalone test and agree to go forward with there micro testing. **6/5** - Part returned to FSL for further anlaysis, FSL confirmed their agreement that failure is wihtin their device.. **6/12** - FSL continue to characterise the failure at room and extremes of temperature. TRW escalated FSL performance in FSL and now we have improved design support. **6/15** - Micro testing action plan sent to FSL, testing complete on 6/18 **6/22** - Proven not a flash fault standard ATE. Reviewed clears shows an issue in the core miro bits of mathmatics. Mico test for containment. Will need to Identify which process is effective as containemt. Freescale i **6/30** - Summary the containment at Freescale will be July 30, 2009 **7/6**- Summary the containment at Freescale will be July 30, 2009 Containment at Kimball about 1 week later, Nee **7/7** - Kimball has QCCAR and will monitor Freescale. Report as closed with 7/30 containment **7/8** - Theo to revise 8D (latest date was June 11) **7/13** -Paul will have 8d updated for Tuesday 7/14 **7/14** - 8D sent to Theo Brockmann at Shalka for review will send to Ford 7/15. **7/15** - Theo send 8D to Eric and Martha to be sent to customer. **7/20** - Jeff Jacks to get information to Ford on latest timelime of action items from Freescal and to also provide inf **7/21** - Jeff to have to get the timing information from Freescale on dates of Containment. Also will need D3 firmed **7/27** - Augest 11th target for start of testing parts. Clean point to Kimball estamated Augest 18, 2009. **7/28** - 8D submitted to Paul for update 8d for customer	4/15 WPAC parts review 4/20 EPP in UK for further testing 5/8 micro sent to FSL 5/21micro sent back to Shirley 6/5- sent back to FSL acknowledge testing failure 6/15 - Freescale in Malaysia now testing after initial evaluation in Germany
FR-0002	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**7/21 -** 8D updated need Ford Closure	**5/27** gear taken to Washington checked resistance reading of relay at room temp and passed before shipping out to UK **6/1** Shirley found erratic high resistance resistance reading on phase 3 contact pair. x-ray shows evidence of raised baseplate contact #5. **6/4** send out relay to Tyco to confirm causal issue with relay contacts **6/12** still awaiting failure analysis response from Tyco, will chase 6/15. **6/15** - Tyco in Portugal **6/19** - Confirm raised rivet raise but not confirment if it is the fault. **6/24** - Built week 29 **6/30** - Confirmation on raised rivit **7/2** - Tyco are still working on the failure analysis as the device is marginal on their tests and pass the 4-point terminal to contact test. During Tyco visual inspection they identified a possible substance on suspect contact and sent the part for EDX/SEM analysis. The analysis shows the suspect anomaly to not be an issue Cross-cut currently being performed - Next update expected Monday 6nd July **7/6-** X-ray equipment and personnel in Mexico today **7/7** - 1) Tyco confirmed raised rivet with cross-cut 2) X-ray will not be allowed to go to QAO. Parts to be sent to	5/27 parts review part taken to Washington to ship out to the UK 6/1 in UK for testing 6/4- relay sent to Tyco 6/15 - Tyco in Portugal

FR-0003	U3000-49 U3000-96	B32	**EPP**	Rev. Cap	**9/17- Kevin agreed to sign off the electrical testing. Kimball will start this new tesing this Monday morning Sept. 21st. Approx clean date to QAO 12/7 & HSAP 12/11. Martha update 8D dates and send to Bill Bouse.**	**5/20** - Testing at 26-mile to duplicate B32 code. **5/21-22** no contamination found removing lid. unable to duplicate code at room temp. further heat cycling at this time found current leakage more pronounced with the PFS isolated at 85Deg. C. **5/27**- EPP shipped out to the UK for further testing. **5/28**- EPP arrived at Shirley late. **6/1**-Testing confirmed issue with PFS. **6/4**- Testing set-up to identify faulty component **6/10** - Electrolyte found under ribbon cable connector on the ECU. Capacitor sent to Epcos for analysis. **6/15**- Supplier confirm that the device was not subjected to over voltage. Electrolytes leaking from capacitor. **6/16** - Ongoing. Testing on going at Epcos **6/22** - Capacitor is installed backward in circuit board. Kimball has 8D report to be distributed to team and QAO. vision system effectiveness was verified (17.06) - informing operators about issue and perform robust operators' retraining on each production shift (target 18.06) - implement additional 100% visual inspection on heatsink assembly and packing stations (target 18.06) - quarantine and visual inspection of finished products on Kimball stock – no C2 polarization failures were found s **7/2** - 8D copied with sent to QAO **7/6** updated and sent from Kimball with latest dates. Need to finalize 8d for closure	5/20 WPAC parts review 5/20 EPP in Washington for testing. 5/27 EPP shipped to UK 5/28 EPP arrived at UK 6/10- Capacitor sent to Epcos
FR-0004	C1B00-62 C200D-49 U3000-96	B9A	EPP	Ribbon Cable Connector	**9/21- change in Anting 46-47 that would see the change in HSAP week 2 2010.**	**6/8** - pulled code B9A caused C69 lockout code. B93 set once in between B9A faults set. Torque sensor swapped no change with B9A setting, must turn input shaft slightly to set code **6/12** - Intermittent Open Circuit seen on Hall inputs to ECU at the Ribbon cable connector. X-ray shows a potential anomalie **6/15** - Discussions started with Schalke on next steps. Intermittent connection of ribbon cable **6/18** - Part Shipped to Tyco **6/22** - Presentation provided to Group will need to be distrubited. Found issue in connector installation. Currently TRW installed a rework procedure and working on a solution for proper installation of connector. **6/23** - Confirmation Anting performing updated procedure **7/6-** Schalke working with Anting and PE/ME to inverstigate potential process tool or design change. Mtg 7/9 **7/7-** Schalke/Anting have asked ATS to design a guide tool for pressing in connetor. ATS will have a draft proposal 7/9 **7/9** Presentation received. Need to evaluate and implement if acceptable. **7/10** - Have ideas for guide tool from ATS. Will review again next Wed. Would like to discuss possibility for design change if tool does not work. Will discuss next week with engineering. **7/13** - Seen presentations on the improvement in the possible process. Long term goal is to have an engineering **7/14** - Will forward latest 8D to Ford 7/15. **7/15** - Sent to Ford	6/8 WPAC No Parts Review 6/8 taken to Washington for analysis 6/9 sent to UK 6/18 sent at Tyco
FR-0005	U2011-49	B3A	EPP	loose screw	**7/10 -** Recommending that we contact STA to review and close 8d	**6/12-** gear in process to Washington **6/15-** tear down gear and check U.K for next relay test steps. **6/16 -** Epp will be sent to Europe for Analysis **6/22** - Waiting for anaylsis **7/2** - 8D sent to B. Bouse on update **7/6** - Verfied carryover actions from Scalke to Anting with photographs of assy line controls. Need to finalize 8d for closure. **7/9** - Need to arrange a mtg with Ford STA (Jonathon Harris) to review and close 8D. **7/10** - Recommending that we contact STA to review and close 8d	5/25 ordered gear for customer on back order 6/4 dealer received gear waiting for dealer to send back 6/9 part sent out will be here for tomorrow 6/11 part arrived at WPAC 6/12- gear at Wasington to pull Level 1 codes & testing 6/17- EPP ship to Europe

FR0006	U2011-49	B3A	**EPP**	Raised Rivet	**9/10- confirmed two raised rivets in the relay after xray**	6/3 tech performed parking lot road test, hiway road test and restarted after cold start and B3A code did not reset at this time. 6/5 Called dealer back they road tested the vehicle for two days with no codes returned to customer yesterday. Vehicle fixed at this time. 8/26- customer returned with same code replaced the EPAS gear 8/31- submit hot process form to ship part back to WPAC 9/2- pulled level 1 data second time back for same code. Code did clear and did not reset on return. Need to get EPP xrayed in Livonia 9/10- confirmed two raised rivets in the relay after xray	1814
FR-0007	U2011-49 U3000-96	B3A	EPP	**Raised Rivet**	Same Case updates as FR002	**6/12** - confirmed B3A pulling data on-vehicle. Waiting on dealer to swap in new part **6/15** - Will pick-up part today and deliver gear to Washington. Part not ready **6/16** - Eric to Pick -up Part to send to Washington. 26 mile to perform anayslsis **6/17-** Pin 1 & 2 at 50m ohms but pin 3 and any pin has 8k ohms resistance. **6/18** - Confirm raised rivet raise. Part shipped to Tyco **6/23** - Tyco Request QCCAR, QAO Providing documentation to Tyco. Tyco received part and undergoing anaylsis **6/26** - QCCAR written **6/29** - Tyco Reported Raised Rivit as Root cause. **7/2** - Tyco confirm Raised contact as per TRW analysis Device fails Tyco EOLT. Cross cut confirms bad contact riveting **7/6-** X-ray equipment and personnel in Mexico today **7/7** - X-ray will not be allowed to go to QAO. Parts to be sent to Laredo for X-ray from QAO **7/9** - Loose Rivet same as FR002 **7/10** - X-ray machine not working in Laredo so containment only being done with woodpecker test. Simon and Mark to review parts flagged as raised rivet to validate the screening process to use parts in pipeline. If we can prove those found during woodpecker have the condition, may be able to stop x-ray	6/9- dealer ordered gear on back order. Waiting on FSE to meet TRW at dealer so TRW can pull data and exchange warranty service gear. 6/12 dropped replacement gear at dealer waiting for tech to replace. Will pick-up and deliver to Washington 6/16 dropped gear off at Washington late afternoon 6/18 - Sent to TYCO for anyalsis. Tracking number:918881479187
FR-0008	U2011-61 C200D-49 U3000-49 U3000-96	B95	EPP	Aux ASIC	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**	**6/16 -** Dealer waiting on backorder gear **7/6 -** Dealer still waiting on backorder- stock unit **7/13** - Need Dealership verbatium **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention. **7/27** - Start Level 2 anaylsis PFR Started. Talked to UK will start additional testing on FR008. Clear codes and power up and test the repability. **7/29** - UK and 26 Mile software working on the diagnostics of the compents for testing the fault. When faults were	**6/15**- dealer waiting on backorder service gear **8/20** - Part to be shipped to UK for further anaylsis.
FR-0010	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**8/6-** Closed confirmed raised rivet issue.	**6/18 -** waiting on service gear **6/23 -** 700 tag issued after gear replaced and sending the gear back normal part return, no hot process return. should see the gear week of 7/13 **7/13** - Need Dealership verbatium	**7/22** - Part at 26 Mile Washington **7/24** - Part shipped to
FR-0011	U3000-96	B25	EPP	Rev. Cap	**9/2- same as case FR-0003**	**6/17**- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/6** - dealer waiting on backorder **7/13** - Need Dealership verbatium **8/3** - WPAC possibly sent gear to Indy with other hydralic steering gears on accident. Email sent to locate gear. **8/10**- gear was found and will be sent back this week to WPAC 8/27- dropped gear off at 26-mile 8/31- need more information from UK. Remove power filter stage check capacitor. 9/2- pulled power filter stage enough to find rev. capacitor. To get serial number to check vision system test.	**6/17**- dealer ordered part

FR-0012	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	**6/17**- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/3** - service gear sent out to dealer **7/13** - Need Dealership verbatium **7/30**-Called and resent hot process form **8/7**- gear being sent normal parts return process, gear shipped 2 weeks ago 8/27- Mike Taylor disasemble EPP and bring to Livonia for X-Ray	**6/17**- dealer ordered part
FR-0013	U3000-61	B97	EPP	loose screw	**8/6-** 8D sent out pending closure. (rework part)	**6/18-** dealer ordered gear for resetting code **7/3** - service gear sent out to dealer **7/29** - Part Arrival at Ford. **7/30 -** Sounds like screw under ECU. Will take apart today in 26mi to verify if rework or not. Simon/Paul to verify. Just verified as prior to containment date. Part was reworked verified screw location covered under the 8D containment for screw assembly. Martha provoided 8D numbers SPC09FO013 and RFW2009F01 8/6- 8D sent out pending closure	**6/18**- dealer ordered gear
FR-0014	C200B-C200C-2F U3000-96		TS	TS harness damage (HSAP)	**7/14 -** Discussion with Ford can be closed out a non TRW issue.	**6/22-** tech found cut torque sensor harness, tried to repair wires but U3000-96 would not clear. **7/10** - Wire harness damage is in same location as the Hermosillo issue. Discuss action with Bouse **7/13** - Need Discussion With Ford to remove off list **7/14** - Discussion with Ford can be closed out a non TRW issue.	
FR-0015	U3000-96		TS	Dealer Training vehicle, unplugged TS conn. & cycled ignition several times to set C69	**7/21 -** Sent buffer data to team. Will transport to Washington. Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.	**6/24** - confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/3** - service gear sent out to dealer **7/20** - Part at Ford undergoing Level 1 Anaylsis. Please note this vehicle was involved in a traing exceise. ETA to Washington 7/21. Dealer training vehicle. **7/21** - Sent buffer data to team. Will transport to Washington. Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.	**7/20 -** Part at Ford

FR-0016	U3000-49 U3000-96	BAD	EPP	FET(TRU6) Epoxy splash	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**	**6/30**- dealer waiting on backorder-customer vehicles **7/15**- dealer received gear this morning. Need Dealer Verbatium **7/20** - Part at Ford undergoing Level 1 Anaylsis. ETA to Washington 7/21 **7/21** - Sent buffer data to team. Will transport to Washington. Need PFR **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Geoff Jacks and T. Than working on testing parmaters for gear anaylsis. **7/24** - Currently code is repetable still working with UK on anaylsis. **7/27** - TRW 26 mile working with UK on anaylsis for diagnostics. Level 2 Anaylsis **7/30** - Need to take EPP lid off to verify cause. Need to verify the outputs and inputs to the ASIC compair good vs. bad. Also, evaluate solder joints and mico.	**7/20 -** Part at Ford **7/22** - Part at 26 Mile Washington 8/20 - Part to be shipped to UK for further anaylsis.
FR-0017	U3000-49 U3000-96	B32	EPP	In Eval (Schalke)	**8/6- sent Salim information and history on this return because he will visit Schalke. He will check the 2-pin for possible area of water intrusion because 2-pin had some corrosion noted**	~~7/1- Dealer received part~~ **7/7**- hot process submitted **8/6**- gear returned to WPAC, data pulled **8/10**- take gear this Tuesday to 26-mile for testing **8/11**- gear still at WPAC, will transport to 26-mile once other gears are Xrayed in Livonia **8/12**- gear taken to 26-mile for testing 8/27- broken ribbon cable between coil on relay, either between track & relay or track and connector. 9/2- open track, white residue on track, need to remove PFS out to get to the PCB. Will send out pictures today. Will do pressure test today.	
FR-0018	C200B-62 U3000-96	BD0-BD4	TS	In Eval (Hella)	**3/9- Ecu terminals & IDE connector is clean from any strands or debris.**	~~7/1 - Dealer waiting on back order- customer vehicles~~ **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/21**- Part received at Ford performed buffer data. Washington waiting for Part arrival **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Code has not reproduced Sensor enginnering evaluated part no issue performed visuale inspection on the top of solder with microscope seen no issues (Can't see back side unless destry part not at that level of anaylsis). Currently on still on root cause anaylsis will set up gear and test for Hot and Cold chamber cycling to reporduce failure.	**Hella**
FR-0019	N/A	N/A	NVH	**RBN Ball**	**8/6-** Rob K will talk with Bill about 8D closure	~~7/27 - Currently part on host test at 26 Mile no issues reported~~ **7/6** - service gear sent to dealer today **7/9** - Gear is in transit to WPAC **7/13** - Gear at 26 Mile and is undergoing anaylsis. Currently Thia Than is pulling codes and will have a discussion of next steps in process. Possible next steps are EDF testing. **7/15** - EDF testing **7/20** - No codes reported in the Level 1 Anaylsis. **7/24** - Issue with RNBA ball bearing in on gear assembly. **7/27** - QAO identified two areas of concern assembly and teardown. Currently imporved handling and will	**7/13** - Part at 26 Mile for anaylsis
FR-0020	U200B-2F U200C-2F	BD0-BD3	TS	Solder issue on Hella Sensor	**9/3- clean stock used in QAO on July 30th, clean stock at HSAP on July 31st.**	**7/9** - Torque Sensor Assembly missed a solder joint. Contact Angie at Rogersville about returning the unit. **7/10** - Part to be in Rogersville today. Angie to review. Then likely on to Hella. Angie should send pictures to Hella today. **7/13** - Update from TRW on process. **7/14** - Part on way to Hella. 100% visual inspection, 100% visual inspection sort at Rogesville and Hella so far no suspect parts identified. Target for preliminary 8D 7/15/2009. - Confirm date with Mike Davies **7/17** - Containment - they have 100% visual inspection on the line after the Automatic optical Inspection (AOI) for the solder joints. 3668 checked, 2 suspect parts removed, but not failures against the IPC soldering requirements for class 3 joints (highest level). They are also changing the AOI pass criteria to 100% solder fillet (class 3 requires min 75%) as further containment.	**7/14** - Part on way to Hella for review

FR-0021	No Codes	No Codes	No gear installed	EPAS Gear was not installed. No fluid in gear was axle seal leak	**7/14 -** No fluid in EPAS was wrong diagnostic have closed out issue.	**7/6 -** service gear sent to dealer **7/7**- SF states no codes or messages in the dash but he found red fluid on the bottom of the EPAS gear, SF did not know gear does not have fluid internally. At this time customer is driving the vehicle and will return to get evaluated again to see where the transmission fluid is coming from. Dealer received EPAS service gear yesterday advised not to replace for this fluid leak. **7/13** - Need Dealership verbatium. Also need to eliminate from the list at no fluild in EPAS system **7/14** - No fluid in EPAS was wrong diagnostic have closed out issue.	
FR-0022	U2011-49	BB9	EPP	Rev. Cap	**8/17 -** same as case FR-0003	**7/3** - dealer replaced the gear **7/6 -** service gear sent to dealer, Gear in process to WPAC **7/9 -** Gear received and under investigation at 26 Mile. **7/10** - Room temp testing did not show anything. Will try hot/cold testing (Thia) **7/13** - Testing has proving NTF and will test Power Down sequence. **7/14** - PFR submitted **7/15** - Part ship to Shirley for anaylsis **7/20** - Part arrival at UK. Access to start testing on rig for anylsis 7/27. Currently test stand is used for the Ford software validation for release. **7/28** - Part is waiting for test rig currently is delayed for the U502 software release. Once software is completed part will go on test. **7/30 -** Started on test this morning on the power up and power down rig. **8/6**- removed off rig cannot repeat failure. Install in temp. chamber to recheck. Discuss Monday on next steps with Geoff Jacks **8/10**- will try to test under load same as FR0025 to duplicate concern. **8/17** - closed to issue case FR-0003	**7/15** - Part ship to Shirley for anaylsis
FR-0023	U3000-96	B3A	EPP	Raised Rivet	**8/27- UK confirmed raised rivet in phase 3. sent to Tyco today**	**7/6** - service gear sent to dealer **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/21**- Part received at Ford performed buffer data. Washington waiting for Part arrival **7/22** - Part at 26 Mile Washington PFR created. Part on test. **7/23** - Send PN to Geoff Jacks to verify relay build date. No high resistance. Woodpecker show no issues.	**7/20 -** Part at Ford **7/22** - Part at 26 Mile Washington **7/29** - Part shipped to UK **8/3**- part arrived in UK
FR-0024	U3000-96	B3A	EPP	Raised Rivet	**8/10-** confirmed raised rivet	**7/6** - Dealer ordered part on backorder- customer vehicle **8/3** - Came into Ford today, data pulled **8/4**- delivered to 26 mile **8/6**- X-ray's confirm raised rivet contact, confirm relay date code & Thiha to check contact resistances.	8/4- delivered to 26 mile
FR-0025	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**8/17 - same as** case FR-0003	**7/6** - Dealer waiting on back order- customer vehicles **7/13** - Need Dealership verbatium **7/20** - Expected arrival at Ford 7/21 **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. Remaval EPP from gear. **7/30** - Paul will give information to Simon on how to proceed	
FR-0026	U2011-49 U3000-96	B3A	EPP	no weld vstar pin	**11/9- Martha has 8D from Angie Caudell will update and send out to Ford. Clean date into QAO week 1 of 2010.**	**7/7**- Dealer ordered part. - customer vehicle. Email request Canadian gear to be sent back to WPAC **7/15** - Part arrival at Ford will anaylsis at TRW Need PFR. **7/16** - Part arrival at TRW 26 Mile will perform standard B3A test procedures. **7/17** - Confirmed the B3A found not high resistance and going to X-Ray **7/20** - Part in Liviona for anaylsis currently X-ray machine down. If not able to X-ray will ship part to UK for anaylsis. **7/21** - X-ray confirmed no raised rivit and need confirmation from UK on either to woodpecker test or ship to UK. Woodpecker the part at 26 Mile. **7/22** - Will start testing process on oscillascope to evaluate EPP and relay. Currently part set a A3A with the start of woodpeckering based on the scope test will evaluate the next steps **7/27** - Run all test then remove the relay X-ray and shipment of part. **7/28** - A3A has occured once again part needs to be shipped to UK for deeper evaluation and testing.	**7/16** - Part arrival at TRW 26 Mile **7/29** - Part Shipped to UK. **8/3**-part arrived in UK 8/20 - Part at Anting

FR-0027	No Com	No Com	EPP	In Eval (UK)	**12/14- Geoff checking with Murata that 11/30 was confirmed data for blade change.**	**6/30**- NO P/S ASSIST, NO COMM /W PSCM **7/1** - dealer ordered part **7/14** -gear sent to dealer **8/3** - Came into Ford today, data pulled **8/4**- delivered to 26 mile **8/10**- level 1 testing able to pull data using gas tune, retested HEV tune and could not pull data, verified with 26-mile. Testing started in 26-mile. **8/11**- Instrument setup the micro to check for micro or CAN Bus issues. **8/12**- Martha to start QCCAR, Geoff & Thiha continue to test the micro circuits **8/20** - Part is intermittent are testing all joints and ciruits for intermitten occurances. **8/24** - Checking voltages. Not starting up properly 9/2- crystal not operating properly faulty all the time now, needs further testing to find cause. 9/8- Thiha to send Geoff crystal/micro information to follow up on the testing 9/11- Thiha sent traces to Geoff to discuss next steps, part will likely be sent to UK for additional analysis. 9/14- Thiha to check one more scope trace and send out to UK this afternoon for addition testing. 9/21- ignition cycling if still does not fail thermo chamber testing. Thiha sent Geoff traces today	8/4- delivered to 26-mile
FR-0029	U3003-68	No Com	EPP		**9/17- pulled EFF & Buffer data only found battery voltage code event U3003-68(E10). tech replaced the gear and the same no communication returned. Dealer error assistant manager advised to replace gear tech found poor ign. terminal connection in EPAS 3-pin conn. tighten reinstalled vehicle fixed**	**7/17**- emailed Canadian contact to send gear back to the WPAC **8/12**- resent email to Canadian contact to check if dealer shipped gear 8/31- talked to Trevor in parts sent EPAS gear back Friday. Should see gear end of this week. 9/8- talked to Vic Mackers at Canadian hotline he will ship part to WPAC today.	
FR-0030	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**7/17**- Dealer replacing gear for intermittent loss of assist, submit hot process. No codes listed **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. **7/28** - UK and TRW software working on the anaylsis test at 26 mile for evaluation of part. **7/30 -** Not repeatable. Waiting to get on EDF stand. Only know it failed at 50°c. Code never latched out. Need to get EFF data to Shirley	
FR-0031	C200B-62 U3000-96	BD4	TS	Bent TS finger	**9/11- meeting today at 11am and agreed on containment actions & dates from Rogersville & QAO to close 8D.**	**7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started. **7/28** - Jim L. has part for deeper dive anaylsis. **7/29** - Failure has been reproduced next steps are testing the area of the failure. **7/30** - Need to rule out harness. J. Loria to take off tq sensor cover for further evaluation of sensor. Loria should communicate with UK team during evaluation for recommended steps.. **8/3-** Found reluctor ring contact bend down on CB. Rogersville & QAO to construct fishbone for possible causes **8/4**- Rogersville implemented a quality alert on the process line and QAO has 100% inspection for a bent pin. Need to get 8D out. **8/6-** Rogersville to investigate mark on tooth for possible causes. Hella to update 8D late next week. **8/10**- Martha updated QAO control plan- IPA teeth inspected before installed in gear. 200% IPA inspection at QAO & Rogersville for containment Rogersville testing part on line to see if it will be kicked out & check possible causes of marks on teeth. **8/11**- Todd Williams to put IPA through mechanical displacement test. Then take to lab to check mark on tooth and	
FR-0032	U2011-49 U3000-49 U3000-72 U3000-96	B43	EPP	Raised Rivet	**9/8- Tyco confirmed this part to be a raised rivet**	**7/22**- Local dealer Bob Thibodeau will replace gear tomorrow I will pickup and deliver tomorrow **7/24** - Part received in Washington performing Level 1 anaylsis. Need to start documention **7/27** - Level 2 anaylsis and PFR started **7/28** - UK and TRW software working on the anaylsis test at 26 mile for evaluation of part. **7/30** - Will turn on again to see if code repeats **8/6**- 26-mile verified code will repeat after sitting for a few days, possible contaimination, use PUMA tool to confirm load data, finish fault store data 8/12- nothing found in the fault data pulling out the power filter stage for testing 8/31- Xrayed and sent to tyco 9/1- last check part stuck in customs on the way to Tyco 9/4- reached Tyco today will teardown and report out next week

FR-0038		B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	**7/29**- no EPAS codes listed in AWS report. Gear will come back normal part return routing to WPAC 8/24- Pulled EFF & Buffer Data 8/27- Mike Taylor to bring EPP to Livonia for X-Ray	
FR-0039	U3000-49 U2011-49 U3000-96	BBA	EPP	In Eval (UK)	**3/25- put on the PUPD rig for a couple days still cannot reproduce code.** **8/11- have exhausted all the testing on this return looking for NFF.** **8/30- possible check wire bond, PCB & solder issues**	**8/5**- submitted dealer hot process form to return gear **8/12**- Pulled EFF & Buffer data, does not match interactive diagnosis(see FR0048). Found out dealer had 2 warranty gears and sent wrong EPAS gear with RO. This gear replaced today should be back next week. 8/25- Pulled Eff & Buffer data code BBA 8/27- dropped gear off at 26-mile 8/31- Geoff Jacks requested part to be sent to UK for testing 9/2- part has not been shipped Geoff wants 26-mile to perform testing. 9/10- cannot duplicate code put in thermo chamber for hot test. 9/11- still cannot duplicate any codes at this time	
FR-0040	P07AE-09	AF1	NVH	Customer damage gear impact	**8/17 -** Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes	**8/4**- customer backed into a curb, then set P07AE-09 this should be rejected **8/5**- submitted dealer hot process form to return gear **8/12**- Pulled EFF & Buffer data sent out for evaluation. Check date when can install on EDF stand. Will take to 26-mile Thursday. **8/17** - Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes 8/20 - email from Ford I am OK with letting this go. Hard to have the dealer go back to the owner for payment. Agree with you Wes that	
FR-0041	U3000-96	B3A	EPP	Raised Rivet	**8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile	**8/5**- submitted dealer hot process form to return gear **8/6-** gear returned to WPAC, data pulled **8/10**- take gear this Tuesday to 26-mile for testing **8/11**- take gear to Livonia Tech 3 for Xray. **8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile	

FR-0042	U3000-96	BD3	TS	TS harness damage (HSAP)	**8/25-** TS harness cut & damaged near second retainer to the IPA- HSAP issue. I have gear here at hotline for inspection.	8/5- Dealer sent gear back normal parts return with 700 tag 8/25- TS harness cut & damaged near second retainer to the IPA- HSAP issue	
FR-0043	C200C-2F U3000-96	BD3	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send Hella 8D to Ford(12/9)**	8/7- Dealer sent gear back normal part return, no codes listed in the AWS report. 8/27- dropped gear off at 26-mile 8/31- Jim Loria found issue with TS, needs additional analysis before sending to Rogersville 9/1- Jim found one channel of the TS dropping low indicating a shorted circuit, will continue to test circuits 9/2- Jim found 50 ohm short between channel 2 & ground. Further testing to find cause. 9/4- path of moisture through the TS harness this is old version harness. To finish up testing on TS at 26-mile and ship TS to Hella for level 3 analysis. Include Ian Ingram on all the sensor testing information. 9/9- arrived at Hella emails sent to Ian Ingram to give a status update on testing. 9/14- testing results from Hella will be done Tuesday morning and sent out. 9/16- TS testing still on-going at Hella will Markus will report back complete testing results when finished	
FR-0044	U2011-49	BB9	EPP	Rev. Cap	**9/14- same as case FR-0003**	8/24- Pulled EFF & Buffer Data 8/27- dropped gear off at 26-mile 8/31- Geoff Jacks requested part to be sent to UK for testing 9/2- part has not been shipped Geoff wants 26-mile to perform testing. 9/10- cannot duplicate code put in thermo chamber for hot test. 9/14- confirmed Rev fitted capacitor	
FR-0045	C200B-61 U3000-96	B90	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send Hella 8D to Ford(12/9)**	8/25- Pulled Eff & Buffer data code BD0,BD2,BD4 an B90 final code set 8/31- Jim Loria testing, no updates at this time. 9/1- Jim cannot get the code to reproduce, further testing needed 9/9- part sent back to Simon/Thiha for further intermittent testing. 9/10- Simon could not duplicate any codes will talk to Jim Loria on further testing 9/11- part has been run over the weekend still cannot duplicate any codes at this time, compare 9/14- cannot reproduce any faults, testing will start this week to check for intermittents. 9/14- Insert square wave and cycle ignition 5 sec on & off. Check back with results 9/30- gear is queue for ignition cycling testing 10/5- currently ignition cycling, going to do wiggle testing of the ribbon cable while cycling	
FR-0046	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**	8/27- Tomorrow Mike Taylor to bring EPP to Livonia for X-Ray	
FR-0047	U3000-49 U3000-96	BA9	EPP	In Eval (FSL)	**3/15- send 8D to Ford. This fix was using the new pod design fixed on 12/31/2008 at FSL, But the new burn-in program screen test, 12/30/2010 at FSL which estimates 4/25/2011 into QAO.**	Deflection testing has been re established at QAO due to this concern. 10/8- development test target date set for 11/30/2010. 12/20- part now on physical analysis for root cause. Geoff to get the date code to see when the new test arrives into Anting.	

FR-0048	No Com	No Com	EPP	In Eval (Anting)	**3/3- Ford has been sent the update 8D Mike Bahena, Tim Snider & Tim Dietz all concluded to close this case**	**8/12**- Retreived the EFF & Buffer data, tech states he could not communicate with the PSCM **8/17** -Part received at 26 Mile **8/20** - testing all joints and ciruits for intermitten occurances. 8/27- Still no communication. Geoff Jacks has next step testing for Simon to try. 9/21- Still cannot reproduce, to put through ignition cycling if that passes then thermo chamber to get the part to fail 9/30- to get a timeline of failed part when first tested at 26-mile. Geoff coming to 26-mile next week will help with diagnosis 10/6- had communication when first received, checked regulator passed voltage tests. Heated EPP still passes. Next step is to ignition cycle. 10/8- going into hot ignition cycling tomorrow 10/15-ECU cover taken off, water ingress in EPP, residue on back of PFS. If built at Schalke to ship for leak	
FR-0049	U3000-96	BB7	EPP	Rev. Cap	**9/11- same as case FR-0003**	**8/14-** Submit Hot Process request form 9/2- Pull EFF & buffer data at WPAC 9/4- Dropped gear off at 26-mile	
FR-0050		No Com	EPP	dry solder joint (Kimball)	**11/9- Martha to send Geoff & Mike Davies Kimball 8D & TRW 8D to review, then send out to Ford by Wednesday. Get clean date into QAO**	**8/14-** Submit Hot Process request form **8/25**- Cannot pull Eff & Buffer Data from EPAS module 8/27- dropped gear off at 26-mile 8/31- Not tested yet will be tested with FR0027 & 48 9/16- Thiha to send Geoff scope traces. ECU now reset and working at this time. 9/21- Simon found resistor failure in the ignition circuit.	
FR-0051		No Com	EPP	Damaged regulator (over voltage)	**10/23- specific testing on diode protection on-going with Ford electrical team**	**8/14-** Submit Hot Process request form 9/18- dealer shipped part today should be at WPAC on Monday 9/25- could not pull any EFF/Buffer data from gear, No Communication.	UK
FR-0052	U0121-00	A8D	Non TRW issue	Int CAN BUS fault, tech replaced the ABS module to fix vehicle at this time.	**8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.**	**8/25-** vehicle returned with the same codes after EPAS gear replaced, tech replaced the ABS module vehicle fixed at this time. Geares not need to be tested, Pulled A8D code CAN BUS Lat Accel Absent fault 8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.	
FR-0053		binding	NVH	Customer damage gear impact	**8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter & Bill agreed.**	**8/25-** earlier dealer states vehicle hit curb. FSE visited dealer and approved EPAS gear for binding while steering with no codes, steering wheel off center & frt tires badly cupped 8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter agreed.	
FR-0054	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**9/2- Pulled EFF & Buffer data** **9/4- dropped gear off at 26-mile** **9/11- testing to start next week on B9A faults**	
FR-0055	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**12/9- Via connections exposed one Via Onsemi that is going too deep. It went through the metal 2.5 layer and touched the nitride layer, this finding confirmed the measured short. corrective action Onsemi refer to continuous defect reduction**	**8/31- submit hot process form to ship part back to WPAC** **9/11- dealer shipped back park normal parts return to the WPAC, couple weeks for return.** **9/18- pulled EFF & Buffer Data code BD2 I set before C69 latched out. Jason to ship gear to QAO for testing.** **9/24- gear arrived in QAO for testing** **9/30- TS PCB problem- QAO to send to Rogersville for inspection/test then send to Hella.** **10/1- Martha to send out tracking number to Rogerville for arrival**	

FR-0056		AF1	NVH	On-vehicle test(Ford)	**9/29 - Bill installed on vehicle and could not duplicate any friction code or notice any steering issues. Dealer did not follow Interactive diagnostic's on the first gear or call the hotline for assistance. Friction code only set once and cleared that's why it came into the dealer with C1277 code only in the ABS & the PSCM code cleared. Dealer Error at this time**	**8/31- submit hot process form** **9/4- gear returned to 26-mile for testing** **9/8- NTF at 26-mile, passed leak test & EDF test stand. Called dealer tech or service writer cannot remember if vehicle was driven straight in with no assist that set AF1 code then when tech pulled codes and road tested had B6A. He states the only set code was C1277 with the no PS assist fault in the message center.** **9/14- cannot find any friction issues with this gear, passed leak testing no visible corrosion at the ITR, IPA areas. Passed EDF stand info sent to Bill. See if Ford would like to test on vehicle.** **9/17- will pick-up gear today from 26-mile and return to Ford for on-vehicle testing** **9/18- sent Bill B email that this friction code cleared will not reset, passed all 26-mile testing. Gear is here**	
FR-0057	No Codes	No codes	EPP	In Eval (26mile)	**2/5- been a month now and still cannot find gear at 26mile. Considered lost at this time exhausted all areas gear could be located.**	8/28- tech states vehicle has no codes or lamps on and has communication, load tested battery and ignition feeds pass and never has PS assist. Tech will double check ignition feed for terminal tension or pin push out. Tech already ordered gear assembly per symptom chart. 8/31- Submit hot process form to ship part back to WPAC 9/18- pulled EFF & Buffer Data- only code listed A28(angle offset invalid fault) will give gear to Bill Bouse for on vehicle testing. 10/16- next step to put on EDF stand if passes to teardown., talk to Bill on location of gear 10/23 10/30- vehicle at 26-mile vehicle did fail with no assist and the TC lamp on to remove gear, leak test and remove ECU cover for voltage testing.	
FR-0058	U3000-96		No gear returned	Gear will not be returned	**9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.**	**9/3- Submit hot process request form** **9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.**	
FR-0059	U3000-49 U3000-96	BAB	EPP	PCB copper slivers in lamination	**3/8- Merix, Kimball & TRW in discussion on dates and final summary.** **5/18- Geoff sent out final 8D to Guillermo**	**9/3- Submit hot process request form** **9/8- Delivered to WPAC today** **9/9- pulled EFF & Buffer data at WPAC** **9/10- shipped gear from WPAC to 26-mile** **9/11- gear received at 26-mile** **9/18- pulled codes and cannot duplicate addition testing needed** **9/30- Simon to perform standard test on EPP**	Merix
FR-0061	No Codes	Constant Assist	NVH	In Eval	**10/8 Angel states there is a potential risk to hit the rack with the IPA tower if the operation is not performed with care. He needs to get Ford approval to take pictures**	**9/10- gear still in vehicle at the dealer, tech pulling all codes, pull batt feed see if vehicle has hard pull.** **9/11- Tech will take snapshot data and email back. Dealer ordered EPAS gear and I submitted hot process request.** **9/18- pulled EFF & Buffer data, no codes found cracked gear housing below the IPA. Impact on TS housing looks like it caused crack. Wes Porter to inspect damage Monday morning and be there for disassembly.** **9/21- confirmed broken t-bar, checking impact study to brake t-bar. Also check possiblity where impact**	
FR-0062	No Codes	A28	TS	missing pinion shaft nut	**11/6- pinion nut torque station in QAO updated and in operation on 10/29. Martha to update and send 8D to Ford. Close out**	**9/11- Submit hot process form** **9/24- pulled EFF & Buffer Data, only stored code is A28(angle offset invalid fault). no visible damage to the gear, get gear to 26-mile for testing** **9/25- gear in analysis at 26-mile** **9/29- found missing pinion nut on TS, QAO working containment actions and to start 8D.** **9/30- quality alert in that assembly station in QAO. Checking containment actions on mistake proofing pinion nut installation & torque.** **10/1-Increase the initial torque to monitor the angle in the torque gun, this in order to avoid double torque over one same component, complete.** **In process to develop a new torque socket for the station, this socket will include a position sensor to verify what socket is use in each torque (Pinion nut or pinion plug) in case the sensor detect an incorrect socket even the torque was correct the part will be rejected.**	

FR-0063	P07AE-09	AF1	NVH	distorded gear housing	**10/6- 8D submitted to Ford, continue investigation at Benteler & HSAP for possible areas of damage**	**9/11- Submit hot process form** **9/18- pulled Eff & Buffer data does have B6A twice left at 26-mile for Costas to analyze.** **9/23- friction gear is similar to earlier 0 KM part with damaged datum on Pinion Housing, Pavel wants gear sent back to QAO for analysis. Shipped out from 26-mile.** **9/29- layout gear and compare with 0km part with same symptoms & friction code. Martha to add information to the 8D** **10/2- Angel Salazar to investigate gear handling on subframes at Benteler & HSAP to find possible area of**	
FR-0064	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**3/3- Tyco has concluded with all the relay testing that NTF with the relay testing.**	**9/21- Submit hot process form** **10/5- pulled EFF/buffer fault data.** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **10/28- code repeatable and link relay will not close. To send to the UK for level 3 testing.** **11/9- in Uk testing cannot reproduce at this time.**	Tyco
FR-0065	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**	**9/21- Submit hot process form** **9/25- pulled EFF & Buffer data, B9A code shipped to QAO for Analysis.** **9/29-estimate gears to QAO late this Thursday** **10/2- xray ribbon cable area, cannot duplicate fault or find any visual faults with the ribbon cable at this time.** **10/12- sergio in-process to deliver to 26mile for testing**	
FR-0067	No Codes	A28	Unknown Issue	NTF	**10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**	**9/21- Submit hot process form, little information on the repair. Tech was trying to fix the ABS steering angle sensor reading for a couple of days and looks like he replaced the gear for an erratic swa sensor reading. no PSCM code listed in interactive diagnosis so unsure why tech replaced the gear. could be a chargeback gear.** **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile, steering angle sensor changes position turning full Left and right** **9/29-estimate gears to QAO late this Thursday** **10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**	
FR-0068	U3000-49	B32	EPP	In Eval (QAO)	**8/27- Pepe to locate EPP and report out the latest testing.** **9/24- still cannot find EPP part, need to close cannot continue with the analysis.**	**9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.** **10/5- pull EFF/buffer fault data.** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis.** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **11/9- passed leak test, not rev. cap. Testing on-going at QAO. Get update from Sergio does code repeat & next step testing.** **11/18 - SA:Fault no reproduced. Leak test done OK. Ambient cycling ignition done**	
FR-0069	NVH	growling noise gear/ park. Turn wheel noise goes away	TS	TS ASIC	**11/9- confirmed TS jitter same as FR0036, confirmed TS ASIC was built in 2/10/09 before July 09 clean date. Martha to update 8D send out to Ford.**	**9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.** **10/5- pulled EFF/buffer fault data** **10/12- dropped gear off at 26-mile, verified knocking noise, Jim Ioria to verify noise.** **10/21- TS sent to Rogersville** **10/23- part received at Rogersville today Update on Monday.** **10/26- Comfirmed TS ASIC is prior build to FR0036 which same TS ASIC concern. Apr.09 is the build date and FR0036 was in June. Clean date week 31.** **10/28- part arrived at Hella today for testing, lab testing to start Monday**	

FR-0070	P07AE-09	AF1	NVH	In Eval (QAO)	**11/02- Costas looking to close this & FR0056 for false detection.**	**9/28- Submit hot process request back to WPAC** **10/5- pulled EFF/buffer fault data** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis** **10/23- gear passed pressure test bellows removed no signs of contamination. Put on EDF stand today and passed all checks. Costas checking next steps for testing. Possible false detection.**	
FR-0071	C200C-2F U3000-96	BD1, BD3	TS	In Eval (26mile)	**6/30- TS cover removed have pictures, not sure if pinion plug and other parts were removed at QAO. QAO did have TS removed and scoped the channels with no failures, now that TS has been inspected this is consided NTF.**	**9/29- Submit hot process request form** **10/5- pulled EFF/Buffer fault data has** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis,** **10/23- gear arrived yesterday, next step to pressure check for leaks, then normal TS testing procedure.** **11/9- Sergio cannot duplicate code looking to engineering group on next step analysis before removal of any parts. Advised Jim Loria to send next step testing to Sergio.** **11/18 - SA:Fault no reproduced. Leak test done OK. Ambient ignition done OK.** **11/24- need to confirm with Jim Loria next step testing.** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-**	
FR-0072	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**8/11- exhausted all testing criteria, at NTF.**	**10/2- Submit hot process request form** **10/16- EFF/Buffer fault data collected shipped to 26mile. B9A code filled stored data.** **10/23- need to leak check gear and take upstairs for testing.** **10/30- passed leak check, install gear on vehicle check for resetting B9A code. Sent fault data for review**	
FR0073	C200D-49	B9A	EPP	In Eval (Nidec)	**7/2-encoder failure due to ESD damage, the surge or ESD destroyed because the punchthrough occurs on output Tr of OUT-B. Allegro saying that the part was ESD damaged somewhere in the supply chain.**	**10/2- Submit hot process request form** **10/12- Pulled EFF/Buffer fault data, pulled B9A code, dropped off at 26-mile for analysis.** **10/23- pass leak test, get update from Simon.** **11/18 On hold pending outcome of other B9A investigations** **10/30- hold for evaluation of B9A workshop this Tuesday.** **1/18- still at 26-mile holding for next step testing.**	
FR-0074	U3000-49 U3000-96	B25	EPP	motor terminal ground plane short	**4/19- CD3/D3 formal Kickoff is planned for week of April 19th.Assuming approval week of April 19th Nidec can start shipping to Anting on May 18th.* For CD3/D3 Change will be incorporated in August/Sept timeframe based on depleting existing inventories. JC to provide updated incorporation plan in Tuesday Engineering Change meeting and Thursday**	**10/6- Submit hot process request form** **10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile, then ship to QAO for testing.** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **10/27- a low resistance(25 Ohms) between Vlink and 0volts, measuring resistance between pin10 (Motor_relay_HS) and pin9 (hall_supply_0volts) of the ribbon cable the 25 Ohms are found. To send to UK for testing.** **11/4- x-ray has not shown any anomalies removed the motor PCB, cut away some of the connector plastic of the motor to allow inspection of the solder joints.** **11/16 Analysis continuing with Nidec** **11/23- Nidec to check pin resistance measurement for shorts ICA. Mike Davies advised Ford of changes**	UK
FR-0075	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/2- confirmed plastic contamination is from the relay cover. Martha to get the information in the old 8D to close out.**	**10/5- Submit hot process request form** **10/12- pulled EFF/Buffer fault data has B3A code, dropped off at 26-mile for analysis.** **10/14- x-ray parts did not show cold weld, raised rivet or offset bridge. Next to check resistances** **10/16- thiha to check resistance, if fail will ship to Tyco. if pass resistance test will put on puma cycle.** **10/29- failed resistance test at 26mile, shipped to Tyco. Tyco did receive the relay today** **11/9- checking with Tyco on relay testing from last week. Mike Davies to follow up** **11/19- still working with Tyco to check proper contact resistances.** **11/23- confirm plastic contamination, need to confirm where plastic came from coil base or cover. RUA# 2961**	

FR-0076	C200B-2F U3000-96	BD0 TS		at DSC1 (ford hotline)	**10/16- found TS harness conduit crushed on gear flange near IPA and cut the one wire. HSAP plant issue. I have gear here in Dearborn for inspection.**	**10/6- Submit hot process request form**	
FR-0077*	U3000-96	BB7	EPP	In Eval (UK)	**9/9- NTF in UK for B6B testing at this time. No weld marks on the relay for the motor relay tear down. 10/8- no evidence of any relay weld, motors grp. to check motor windings. six weeks to teardown. 11/29- motor teardown with NTF, no other tests can be performed, check with Ford to close out.**	**10/12- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile 11/4- shipped to Rogersville 11/6- arrived at Rogersville put on truck to QAO 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found 11/24- passed hot ignition cycling, in normal operation B3A set. Advised to send Simon the EFF data for Michelle to decode Monday. 11/30- EFF data decoded Geoff to look at and make decision on analysis. 12/14- Next step testing 1/7- EFF shows that the link voltage (drive stage supply voltage) is very low at less than 3V. This has led**	
FR-0078 RUA#3250	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/7- confirmed NFF with all testing performed at Tyco.**	**10/12-Submit hot process request form 10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile for analysis. 10/23- pass leak test, get update from Simon. 10/28- mike to x-ray part in Livonia this week. 10/29- did not find anything in the xray this morning. Resistance test then hot Puma testing. 11/02- passed the resistance, hot puma & resistance test. Ambient tested over the weekend no problems found at this time 11/6- hot & cold ignition cycling testing next, x-ray ribbon cable. 11/17 passed bench testing. Hot / cold next**	
FR-0079	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**	**10/16- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile to ship to QAO 11/6- x-ray leading to offset bridge suspected, to hot puma test next. 11/23- passed hot puma test. Check resistance before sending to Tyco should fail resistance test if this is an offset bridge. 11/24- after testing found high resistance. 12/14- raise RUA- 03161 & PFR. ship relay out to Tyco today**	
FR-0080 RUA#4016	U3000-49	B43	EPP	In Eval (QAO)	**8/20- believe PFS is still in QAO, Pepe check for the latest status. 8/27- Pepe found PFS to raise RUA and send to Tyco for final testing. 10/6- NFF at Tyco.**	**10/16- Submit hot process request form 10/30- pulled EFF/Buffer Data dropped off at 26-mile 11/4- shipped to Rogersville 11/6- arrived at Rogersville put on truck to QAO 11/12- testing starting today in QAO 11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found 11/19- hot ignition cycling, 11/20- high resistance found contact 4 recheck with amp load across contact. Martha to follow up. 11/24- passed load test across contacts. Sergio to send Simon EFF fault data for Michelle to decode on**	

FR-0082	N/A		No gear returned	Gear will not be returned	**11/11- called dealer back to find out what happened to gear and PM states he returned it back to the RCRC and no 700 tag was on this part so the part is scraped, will not get this gear back.**	**10/27- Submit hot process request form**	
FR-0083	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**11/20- reverse capacitor found.**	**10/27- Submit hot process request form** **11/5- Pulled EFF/Buffer fault data at WPAC** **11/12- testing starting today in QAO** **11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found,** **11/19- next to hot woodpecker test**	
FR-0084	N/A	BD0-BD3	TS		**11/6- dropped gear off at 26-mile, TS harness damaged, heat tape rubbed through. With the mileage good chance this is customer related damage. No other warranty claims**	**10/27- Submit hot process request form** **11/5- Pulled EFF/Buffer fault data at WPAC**	
FR-0085	N/A	No Com	EPP	IC14 power supply (Infineon)	**1/13- have updated 8D sent out, Geoff has a couple slides to update. new process, dummy leadframe is used then scraped first production lead frame marked and additional visual inspected.**	**10/27- Submit hot process request form** **11/5- Could not pull EFF/Buffer fault data from module no communication.** **11/16 Shipped to UK** **11/17 Under Analysis** **11/17 under analysis in UK, still ignition cycling trying to reproduce no com** **11/19- swapped parts IC14 power supply for the monitor micro, part in thermo chamber part failed again.** **11/23- Geoff to send power supply chip for the monitor micro to Infineon tomorrow for analysis.** **11/30- Infineon received chip and will send update when their testing is completed.** **12/3- Infineon has confirmed IC14 has identified irregularities on the leadframe.**	
FR-0086	No Codes	Cricket noise	NVH	squeeling noise turning wheel	**2/8- confirmed finger ring trapped under IPA cover**	**10/27- Submit hot process request form** **11/5- did not notice any abnormal noise turning the input shaft back & forth, no codes in the fault data.** **11/9- dropped off at 26-mile for Costas testing leak test then EDF test stand.** **11/12- all the testing at 26-mile could not duplicate the noise from the gear. NTF at this time. Unknown if we should put on-vehicle for testing.**	
FR-0087	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/2- confirmed rev. capacitor**	**10/27- Submit hot process request form** **11/13- pulled EFF/Buffer data shipped to 26-mile** **11/20- ship part to QAO, should be in QAO Nov. 25th, date range fits rev. cap remove PFS after leak check.**	

FR-0088	U2011-49	B3A	EPP	Raised Rivet	**11/19- confirmed a raised rivet, to send to Tyco(Evora)**	**10/27- Submit hot process request form** **11/5- pulled EFF/Buffer fault data at WPAC** **11/6- dropped gear off at 26-mile for analysis** **11/9- EPP sent out for x-ray in Livonia** **11/18 - Mike to X Ray again zoomed in today, potential raised rivet**	
FR-0089	No Codes	No codes	NVH	grinding noise turning the wheel	**3/9- after further investigation it was determinded that misuse was the cause of failure**	**11/3- Submit hot process request form** **11/12- Pulled EFF/Buffer fault data and verify noise in gear while turning** **11/19- failed EDF stand results, possible bent rack, gear sent to Harold for teardown** **11/30- Costas states The RBNA is in material lab where they will do further investigation on surface**	
FR-0090	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**	**11/4- Submit hot process request form** **11/13- Pulled EFF/Buffer fault data, shipped to 26-mile** **12/1- passed leak test, brough upstairs to start testing.** **12/7- x-ray looks like an offset bridge, passed Puma test then found 4 ohms on phase 2 that went away after rechecking the other phases. Need to capture scope traces after hot puma test.** **12/14- raise RUA# 03160, get additional testing information and send to Tyco.**	
FR-0091	U3000-49 U3000-96	B97	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**	**11/11- Submit hot process request form** **11/20- pull EFF/Buffer fault data, ship to QAO** **12/3- fault repeats suspect B-FET-3, damaged on the power FET Pack. Sergio to cut the wirebond on MOSFET_G6 and measure voltage to isolate power module. Short stays on the power module.** **12/7- confirmed power module QAO sent direct to supplier(Fairchild) for analysis.** **12/14- shipped to Fairchild stuck in customs, QAO to send paperwork.** **1/7- Kimball/TRW in discussions with Fairchild on testing & analysis. EOS is Fairchilds claim, TRW working with Fairchild on this analysis.** **1/25- get build dates from each power module and compare dates. Sergio to send Geoff information. Line**	
FR-0092	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**	**11/11- Submit hot process request form** **12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO** **12/15- B25 fault repetitive. PH3&VLINK found shorted to 0 volts. Short traveled with ECU. Isolate by cutting bond wires and then perform power module swap. Wait for Sergio to return this week.** **1/12- confirmed FET power pack, ship to Fairchild for B-FET-3.** **1/18- part stuck in customs waiting on paper work from QAO. Guillermo to check status and get update by next Monday** **2/2- part has been examined by Fairchild, needs further testing. Failure is electrical short and maybe an EOS event or device related and suggests to further analyze in fab site. Checked plant LogIQ status no EPAS codes set at all test stations. Happened 22 days after build and did not leave dealer after dropped**	
FR-0093	NVH	Cricket noise	NVH	In Eval (26mile)	**1/26- Cal Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**	**11/30- Submit hot process request form** **12/15- found out PM left dealership so will not be hot processed. will get the gear sent through normal parts returns to the WPAC.** **1/7- Pulled EFF & Buffer Data, did not notice any noise turning the input shaft back & forth**	
FR-0094	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/3- in evaluation QAO found rev. cap**	**11/12- Submit hot process request form** **11/20- pull EFF/Buffer fault data, ship to 26mile**	

FR-0095	U3000-49 U3000-96	BA4	EPP	In Eval (UK)	**4/21- 8D sent to Ford with the corrective action dates, sent 8D to Ford on 4/19.**	**12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO** **12/15- B7E fault repetitive. Measures taken with ECU functional sw. leakage on motor phase 3. cut the bond wire for the gate of Phase 3 bottom** **1/5- Jose to perform power module swap, wait for Sergio to return this week** **1/13- short followed the ECU, Geoff to review report from QAO.** **1/22- work being completed further testing needed,results leading to diode fault.** **1/25- diode 21 ok, EPP needs level 3 testing to ship to UK, tracking # 8674 8338 0093** **1/27- just arrived in the UK for testing.**	
FR-0096	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**11/20-Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak test and sent upstairs remove EPP and perform ignition cycling.** **3/26- has been tri-temo tested for two days and no failures at this time.** **3/31- in cold chamber now, no failures at this time.** **4/20- has been shipped out to the UK today**	
FR-0097	C200D-49	B9A	EPP	In Eval (UK)	**8/11- exhausted all testing criteria, at NTF.**	**11/12- Submit hot process request form** **11/20- pull EFF/Buffer fault data, ship to 26mile** **12/1- passed leak test, brough upstairs to start testing.** **12/7- able to get this B9A to reset sent to UK** **12/14- RUA 03162- need PFR sent, additional bench testing in UK.**	
FR-0099	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/15- gears arrived in QAO in analysis found rev. capacitor.**	**11/24- Submit hot process request form** **12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO**	
FR-0100	U2011-49	B3A	EPP	In Eval (Tyco)	**2/12- Tyco has confirmed offset bridge**	**11/30- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- offset bridge** **- Re-Puma (3 or 4 times)** **- Perform resistance test while hot.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **- Send to Tyco**	
FR-0101	U3000-96	B7F	EPP	In Eval QAO	**1/13- arrived in QAO testing will start after FR0103 is complete. Found out gear is a non-warranty repair. SM states after alarm company worked on vehicle EPAS gear failed so the dealers sales department covered the repair.**	**11/30- Submit hot process request form** **12/21- pulled EFF & Buffer data, ship to QAO**	

FR-0102	P07AE-09	AF1	NVH	distorded gear housing	**2/1- found damaged datum pic's show impact marks at the datum & mounting ring and the materials lab confirmed the housing was out of specs. Unknown where the inpact occurred.**	**11/30- Submit hot process request form** **12/21- pulled EFF & Buffer data, ship to QAO** **1/13- Jose to start the friction testing today.**	
FR-0103	U3000-96	B25	EPP	In Eval (UK)	**8/3- exhausted all testing in the UK could not duplicate any codes NTF.** **8/30- possible check wire bond, PCB & solder issues.**	**11/30- Submit hot process request form** **12/21-pulled EFF & Buffer data, sent to QAO** **1/13- fault code is not reproducing, to analyze data to find potential cause and lead toward next step testing.** **1/15-ambient cycling latched code BC5 found scratches on the PCB, QAO to ship to UK for further testing.** **1/20- arrived in UK today.** **1/29- Geoff still able to repeat B25, other testing being done unable to analyze further. Make sure this is not a rev. cap**	
FR-0104	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**1/25- Tyco confirmed raised rivet**	**11/30- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- raised rivet** **- Did it fail hot or room temp?** **- Next step - perform resistance check immediately after failing Puma.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **- Send to Tyco**	
FR-0105 RUA#3628	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- could not see any issues with xray** **- Perform resistance test at room temp.** **-Re-Puma (3 or 4 times - if not already done)** **- Perform resistance test while hot** **1/15- tri- temp ign. Cycling, try to get in chamber next week.** **1/18- set aside for FR0096(B9A) testing.**	
FR-0106	U2011-49	B3A	EPP	In process (Tyco)	**1/25- Tyco confirmed offset bridge**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- offset bridge** **Re-Puma (3 or 4 times)** **- Perform resistance test while hot.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA**	

FR-0108		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak tested** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **1/22- Thiha was able to get the code to set one time while tri-temp testing. Testing still ongoing** **1/28- thiha to send geoff decoded information when the one code set on the tri temp tester** **2/3- Thiha was able to duplicate the B9A again once while tri-temp testing sent results to Geoff Jacks.** **2/10- Geoff sent 26mile the canopy configuration to use while tri-temp testing to capture this data. Waiting for the** **2/19- one temp chamber broken and waiting for DR0004 in the other chamber to finish. Data logging is ready for operation.**	
FR-0109	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	**7/16- confirmed this as a double start-up added to B9A list for reg./micro issue. Fulfills parameters to close as regulator issue by meeting criteria established for regulators.**	**12/4- Submit hot process request form** **12/21- pulled EFF & Buffer data and ship to QAO** **1/13- to leak test and start the standard testing** **1/20- could not reproduce the codes, next step to do vibration test on the bully machine. Jose waiting for line to switch back to CD3 to test.** **1/25- passed bully testing, next step to discuss with Jim Loria** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-temp testing can be done. set back to Rog. Att: Andy-truck V08385 SKID# 22** **2/22- all four channels tripped codes at** **-2.9degC EFF data collected. Testing on going in the chamber.** **3/1- Visnu to set-up software to measure voltages when gear trips fault code to find area of fault at TS,**	
FR-0110	N/A	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**12/4- Submit hot process request form** **1/7- pulled EFF & Buffer Data, ship to 26mile** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **2/3- cannot reproduce any codes at this time with hot & cold ignition cycling** **3/22- to move into the cold chamber for testing** **4/16- in the west building now thermo testing** **4/21- thermo testing since 4/15 in chamber still cannot reproduce code. To Hot Puma test next** **4/23- Tri-temp and ignition cycling in the W. building. CANape running to capture fault if trips.** **4/26- has not failed for over one week.** **5/7- to hot puma test if that passes to ship to the UK for complete B9A testing.**	
FR-0111 RUA#3212	U3000-49 U3000-96	B3A	EPP	In Eval (UK)	**9/24- UK did SEM test and the results lead to NTF.**	**12/4- Submit hot process request form** **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21-Re-Puma recheck resistance** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **1/11- could not confirm issue with xray, have not duplicated the code, perform the standard test and conf. with Geoff to find next step testing.** **1/18- hot woodpecker couple of times and check resistances. Geoff & Thiha to follow up on the details.** **1/25- attach relay back on board or into a KG unit for additional Puma testing.** **2/3- several attemps to put relay back on a known good PCB with no luck, possible relay damage from**	

FR-0112	U3000-96	BB7	EPP	In Eval (QAO)	**2/3- found Rev. C2 Cap in the PFS**	**1/11- Pulled EFF & buffer data also pulled BB9 & BB5 with the BB7 code. Ship to QAO.** **2/1- leak tested no leaks, benched tested cannot duplicate code.**	
FR-0113	C200B-61 C200B-62	B90	TS	In Eval (Hella)	**9/22- talked about vstress testing at On-Semi that was implemented 4-3-2010 to catch this issue and also Hella implemented their Vstress test at Hella ICT on 9-14-2010.** **so PCA dates into QAO would be OnSemi's ASIC's took one week to arrive into Hella for this Vstress testing so PCA dates are 5-22-2010 for OnSemi change into QAO & for Hella's change**	**1/11- Pulled EFF & buffer data also pulled BD4 & B95 with the B90 code. Shipped to QAO.** **2/1- leak tested no leaks, benched tested cannot duplicate code** **2/3- EFF data shows a problem with the channel 1 torque. Check for any potential damage on the harness. Nothing obvious found. EFF data shows data original fault occurred at low temperature, at 4° C. Need to test at cold temperatures.** **2/5- ambient ignition cycling did not reproduce any code, bully testing next. Data shows code reset at 4degC.** **3/8- in process to 26mile for cold testing** **3/10-Checking the west building today to put in for cold testing** **3/19- will go into the cold chamber after DR0004 is done testing.** **3/26- will be hooked after DR0004 is done testing In the east building**	
FR-0114		No B Codes-A65	EPP	In Eval (QAO)	**4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.**	**1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC** **2/2- tech should not have replaced gear with no lamps or symptoms after clearing code and road testing, did not record any interactive diagnosis so tech did not follow interactive diagnosis for this repair.** **3/8- shipped to QAO for standard no com testing** **4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time** **4/19- pass through bully test several times to confirm an intermittent**	
FR-0115		A16	EPP	In Eval (QAO)	**4/19- pass through bully test several times to confirm a NTF.**	**1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC** **3/8- shipped to QAO for standard no com testing** **4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time**	

FR-0116		BB7	EPP	In Eval (QAO)	**2/3- found Rev. C2 Cap in the PFS**	**1/11- Pulled EFF & buffer data also had BD0-BD3 codes with BB7. shipped out to QAO** **2/1- leak tested no leaks, benched tested cannot duplicate code**	
FR-0117	Chirp noise turning wheel	Cricket noise	NVH	In Eval (26mile)	**1/13- leak test, verified the cricket noise no further action.**	**1/11- pulled EFF & buffer data, I did notice the cricket noise turning the input shaft back & forth. Shipped to 26mile**	
FR-0118	squeak noise coming from	Cricket noise	NVH	In Eval (26miles)	**1/26- Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**	**1/14- Pulled EFF data, did not notice any squeak noise turning input shaft. Ship to 26mile 1/15**	
FR-0119	U2011-49	B3A	EPP	In Eval (Tyco)	**2/25- Tyco confirmed offset bridge**	**1/14- code cleared and did not reset, unknown why dealer replaced gear, need to pull CQIS report.** **1/18- Found out dealers FSE advised to replace the steering gear for one time code set.** **1/25- passed leak test, check on xray results and testing** **1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week.** **2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco.** **2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps** **2/11- RUA raised shipped to Tyco today est. date to Tyco 2/17**	
FR-0120		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth. Shipped to 26mile 1/15**		
FR-0121	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**2/25- Tyco confirmed offset bridge**	**1/14- pulled eff & buffer data, ship to 26 mile for analysis. Shipped to 26mile 1/15** **1/25- passed leak test. check on xray results and testing,** **1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week.** **2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco.** **2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps** **2/11- RUA raised shipped to Tyco today, est. date to Tyco 2/17.**	
FR-0122		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth.**		

FR-0123		TS harness was repaired by dealer or customer	TS	At WPAC	**2/10- cannot locate the area the TS harness was damaged because dealer cutout a big section of the harness to repair. Will make service manual changes to prevent repair of the harness. Changes will be made to the 2011 m/y and changes will be made to the 2010 also.**	**1/14- Pulled eff & buffer data need to check repair order, could be charged back to dealer, torques sensor harness is taped from IPA to EPP. Will check CQIS & aws reports.** **1/22- talked to dealer harness was damaged when customer brought vehicle to dealer, no accidents or previous known work done. Dealer tried to repair harness dealer could not remember location of repair, need to find area of damage, most likely customer damage.** **1/28- took pictures of the harness unable to deterime where & how the damage occurred on the TS harness. Not sure any further testing can be done. Will discuss with Ford on next steps.**	
FR-0124	C1278 (ABS)	N/A	EPP	In Eval (Tim Snider)	**5/3- No faults occurred.** **I've been running for a couple of weeks with unseated connector - also no issue** **7/6- unseated connector C1010 and able to duplicate TC lamp & code, unknown if this was the fault on this vehicle.**	**1/15- pulled EFF & Buffer Data, sent to Ford make decision what to do with gear.** **1/20- Ford/TRW team talked with tech to get specific information, tech did not think the TC lamp was on during his road test with stored code C1278 that the tech could remember but followed advice of hotline, testing all wiring and connectors if good to replace the EPAS gear.** **3/8- in process to QAO for standard no com testing** **3/10 - intercepted gear at Rogersville Andy E will ship gear directly to Tim Snider. FedEx tracking #037996760000241. It should arrive there by Friday. Gear to be installed on vehicle and tested for C1277 codes.** **4/19- cannot get the gear to fail at this time, further road testing needed to confirm NPF.**	
FR-0125	U3000-49 U3000-96	B31	EPP	cold weld	**3/8- confirmed cold weld, final report need from Tyco.**	**1/21- Pulled EFF & Buffer Data, ship gear to QAO** **2/2- In QAO today will start leak testing** **2/3 - Rattle comes from inside EPP. Confirmed comes from link relay. Cold weld issue** **2/5 - Need to take relay out & remove PFS to confirm cold weld or loose screw.** **2/12- Suspected cold weld. Traceability suggests failure is from same time period as 4 x 0km failures . Shipped to Tyco**	Tyco
FR-0126	C200D-49	B4E	EPP	In Eval (UK)	**2/24- corrective actions have been put in place by Nidec and Anting to catch this issue of weak hall effect signals with new EOL equipment at anting. Nidec has not clearly confirmed the root cause of the issue but we do have new automation equipment tests to contain the issue at Anting starting 4/20/2010.**	**1/21- Pulled EFF & Buffer Data, Pulled B9A & B38 with B4E, ship gear to QAO** **2/2- In QAO today will start leak testing** **2/3- Able to duplicate the faults. Unit only fails at the beginning of the journey. Probably the problem is on the 5V_Hall_supply. Next step: Scope signals from halls.** **2/5- Sergio suggest this is similar to the QAO B4E end of line failures, scope signals from hall effects** **3/2- Able to get B4E and B38 faults. Halls issue. Hall C toggling the output during power up. Motors group in UK looking at QAO end of line failures for similar issues, update soon. In discussions with Nidec** **3/19- next steps to do flux density testing next week.** **3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100% containment operation run some bad units through to see if they fail** **4/20- has been root caused as target magnet flux density issue**	

FR-0127	C1B00-64 (ABS)	A5D	EPP	In Eval (QAO)	**3/17- after reading CQIS verbatims advised the 2 EPAS gears & ABS module installed on this vehicle did not fix. Performing FSA# 10B13 that to address DTC C0048-64. Vehicles are reflashed with brake sw that makes system less sensitive to noise on the MTS.**	**1/21- pulled EFF & Buffer Data, did not pull any B codes only A5D. Check CQIS report found dealer replaced epas gear & ABS module same symptom. After going through owner relations for buy back they replaced another EPAS gear and they said they drove over 700 miles and code did not reset?? have the first EPAS gear at WPAC.** **2/22- this gear would be a good option to install on vehicle and check for any codes. This was installed on hybrid that is why code is C1B00-64 instead of a C1277 on a non-hybrid.** **3/8- shipped to QAO today** **3/17- arrived in QAO ready for testing**	
FR-0129	C200D-2F U3000-96	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**1/21- pulled EFF & buffer data, ship to QAO** **2/2- In QAO today will start leak testing** **2/2- In QAO today will start leak testing** **2/5- ambient ignition cycling did not reproduce any code, bully testing next.** **3/2- Not able to reproduce the fault. Hot and ambient testing.** **3/12-Both failures reproduced at lab after some time without powering up EPP. PLUGs visully inspected with microscope and no contamination found between terminals. 5V outputs of the regulator scoped. Noisy signals but normal, as in good known EPPs. Not possible to reproduce again faults. Cold testing in planned.** **3/19- possible issue with the regulator 5v rails do not come on during first start-up. Ship to UK for analysis**	
FR-0130	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/21- Notice cricket noise while turning input shaft, shipped to 26-mile**		
FR-0131	C1277 (ABS)	A65	EPP	In Eval (QAO)	**4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.**	**1/22- pulled EFF & buffer data, did not notice any codes to cause no assist. Check CQIS why gear was replaced** **3/2- shipped gear to QAO for testing** **4/12-hot, ambient, & cold testing done with no faults.** **4/19- pass through bully test several times to confirm an intermittent**	

FR-0132	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/22- Notice cricket noise while turning input shaft, shipped to 26-mile.**		
FR-0133	C200B-2F C200C-2F U3000-96	BD0-BD4	TS	In Eval (QAO)	**3/31- quality alert has been done changes made moving vclip dispensor & handling of vclips. 8D in process.** **4/19- Rob Mrozek approved process on his visit to QAO last week.**	**1/22-pulled EFF & buffer data, shipped to QAO** **2/8- Jim Loria looked at the EFF data and is confirming the sensor is defective, probably either bent vane or water ingress. channel 1 is not working properly. Need to hook it up to Canopy next week and try rocking the input shaft and see if that affects the problem.** **3/3- with lack of resources at 26-mile suggest to send to QAO to continue testing since channel 1 was failing from the decoded EFF data. Find gear at 26mile** **3/8- shipped to QAO for testing failed at ambient temp.** **3/18- shipped out of Rogersville to QAO** **3/26- Found an extra V clip on the gear between housing and IPA (rotor side). Hella torque sensor windings are damaged due to this. QAO handling** **3/29- get 8D started and put in quality line alert with pictures with the handling of v clips.**	
FR-0134	C200D-49	B9A	EPP	In Process (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**1/22-pulled EFF & buffer data, B9A only set once, shipped to QAO for standard testing** **2/15- shipped out from 26mile to QAO** **2/26- to leak test and start lab work** **3/2- Not able to reproduce faults. Hot and ambient testing. EFF data 4°C** **3/30- cold testing done no faults, bully test next.** **4/21- double check cold testing history, bully tested 10x no failures- hot puma check next.** **5/3- still cold testing for a week, puma testing next** **5/17- cold puma test completed no faults now hot puma testing, then hot/cold bully** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**	
FR-0135	U3000-49 U3000-96	BC5	EPP	In Eval (QAO)	**4/12- send to Anting to analyze seal in PFS for the 2-pin to see if that was water contamination entry.** **5/4- PFS lost at QAO, been looking for the last 2 weeks. Cannot continue with analysis. I would suspect 2-pin conn fault of water intrusion from pictures.**	**1/29- pulled EFF & Buffer data shipped to QAO. Found 2-pin connector corroded** **2/26- Sergio will take photo's of the ECU water contamination in the ECU & 2-pin that could have set codes. EPP leak check was ok no leaks.** **3/20- looks like water contamination entered the 2-pin battery connector harness. Have updated photo's.**	

FR-0136	C200C-2F	BD1, BD3	TS	metallic particle found between terminals on ECU connector for PFS ribbon cable	**3/10- part still at QAO- additional information sent to Ford for would like the pictures & conn. dates from this claim copied to a new 8D.**	**1/29- pulled EFF & Buffer data shipped to QAO. Visual inspection of harness ok** **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/25- found 2 ECU terminals shorted from straind of wire causing code. Geoff will write cars report so QAO can ship to Kimball for analysis.** **3/3- have containment 8D on this wire strand shorting ECU terminals, sent Ford 8D with latest PFR, also send IDE connector dates. VCARs written to ship board to Kimball to update 8D.**	
FR-0137		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal.**		
FR-0138	C200B-2F	BD2	TS	In Eval (Hella)	**5/19- Rob Mrozek & Tim Snider agreed to close**	**2/4- Pulled EFF & Buffer data shipped gear to QAO. Dealer noticed damage to the RF hub cap rear and RF tire damage** **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/26- cannot duplicate the code ambient testing & bully testing. decoded EFF data does not show any faults in the data when BD2 code set. Advised to send Jim Loria the information and discuss details** **3/5- still cannot duplicate code during hot test at EPP level.** **3/10- continue ambient end of line testing.** **3/24- found intermittent open in channel 1 while scoping the signals, used test box & known good cable still has int. open. Send to Rogersville for testing, remove TS & write QCCARS then send to Hella.** **3/29- in Rogersville for line testing then will ship out to Hella.**	
FR-0139	U3000-49 U3000-96	BA4	EPP	In Eval (FSL)	**12/3-Freescale believes defect in silicon/piece of foreign material.** **12/20- 8D due this week from FSL** **1/14- 8D sent from Freescale the clean date is 12/30/08** **2/7- estimated date into QAO is 4/25/2009.**	**2/4- Pulled EFF & Buffer data shipped gear to QAO.** **2/26- Sergio states fault set at 0degC in the fault data. To email Geoff the information to see if EPP can be sent to UK for testing** **3/1- cold testing needs to be done, ambient completed with no faults & bully testing done with no faults. Compare FR0001 & FR0095 with this BA4 failure to compare similar data. Gear sent to UK for cold testing.** **3/10- arrived in UK today RUA sent today.** **3/29- can reproduce fault cold testing appears monitor micro fault, in process to ship to FSL in Munich for analysis.** **4/16- writing test code so they can capture failure data from the micro, will update next week.** **4/19- Geoff to discuss with FSL in teleconferece tomorrow**	

FR-0140		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer**	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer**	
FR-0141	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**4/28- discussions with Nidec & Peter Sinkunas to complete 8D.Mike Davies will send out by end of week.**	**2/4- Pulled EFF & Buffer data, shipped gear to QAO** **2/26- need to leak test and start lab testing** **3/2- Fault is reproduced at ambient after motor is slightly rotated. Motor elec. position does not change its value. Encoders fault. Need to define next steps? EFF data 21° C.** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Despite encoders have correct supply, both are not reading. Send to UK tracking # 9373 7349 8749** **3/19- xray shows poor solder joint on pin 3 of the 5v supply pin. Get Nidec involved with teardown**	
FR-0142	No Codes	Cricket Noise	NVH	In process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile. To store at 26mile**		
FR-0143	No Codes	Cricket Noise	NVH	In Process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile.**		
FR-0144 RUA#3617	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic contaimination on contact 4**	**2/5- Pulled EFF & Buffer data shipped gear to QAO** **2/12- failed leak test, no evidence of moisture dealer could have damaged boot. Gear being tested upstairs.** **2/26- Decode EFF send to Geoff on next step testing.** **3/8- resistance measurement ambient & cold** **3/19- ship down to QAO now that they have cold testing available. This is only the EPP assembly in small box.** **3/30- link relay is not closing fully on startup, second key up it works normal. Failed with 1 amp load. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault.** **4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday.**	

FR-0145	U2011-49	BB7	EPP	In Eval (QAO)	**2/26- Sergio found Rev. Cap**	**2/5- Pulled EFF & Buffer data shipped gear to QAO. Also had BB9 & BB5. Could hear something rattling in EPP. Could be relay cold weld**	
FR-0146	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**3/26- keep part in pending closed position waiting on PCA same as FR0074, testing & approval process still in progress.**	**2/5- Pulled EFF & Buffer data shipped to QAO.** **2/26- gear at QAO inline for testing** **3/2- B9A reproduced. Static motor electrical position while EPP is being turned. Encoders failure. Need to define next steps? EFF data -11°C** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Short between V5_EXT2 and 0VOLTS only present when ribbon is plugged. Current on V5_EXT2 has been measured with an special harness. Found that short is on the motor. Unlikely to be clearance on motor PCB. Send to UK tracking # 9373 7349 8749** **3/19- confirmed int. low impedence on pin 3, 5v supply touching ground plane similar to FR0074.**	
FR-0147	No Com	A5D	EPP	In Eval (QAO)	**8/13- ECU cover removed wiggle testing done NTF. Exhausted all testing never duplicated a No Com issue. This is NTF. Looking at the fault store looks like the battery was disconnected serveral times unsure if this was a connection problem or low battery voltage.**	**2/11- Inspected 2-pin & 3-pin conn. Did not see any problems or contaminates on the terminals pulled EFF/Buffer data, was able to communicate with no problems. Unit still at WPAC, was checking all reporting data for potential chargeback, did not find anything. will ship out next week** **2/25-gear should arrive in QAO 3/1** **3/5- leak tested no leaks, initial bench testing cannot reproduce no com** **3/29- passed cold ambient & hot testing with no faults & CAN Bus ok. Next steps to bully test if that passes to remove cover check ribbon cable for intermittent connections** **4/12- bully testing passed.** **4/21- removing ECU cover and do visual & wiggle testing.**	
FR-0148	C200B-2F C200C-2F	BD0-BD3	TS	At 26mile	**2/15- sent pictures of harness damage to the Ford group, hard to say where damage occurred with 3778 mile on the vehicle. Either HSAP or field. HSAP did not have any EPAS problems on this vehicle going through the plant.**	**2/11- found damaged TS harness with cut wires at first retainer near EPP. Pulled EFF & buffer data. Shipped to 26mile have pictures.**	

FR-0149	U2011-49	B3A	EPP	In Eval (Tyco)	**3/24- Tyco confirmed this is an offset bridge. Pre- containment relay**	**2/11- pulled EFF/buffer data, shipped to 26-mile** **2/19- relay x-rayed potential offset bridge, measure resistance, hot puma & measure resistance again. Raise RUA and ship to Tyco** **2/26- puma testing needs to be done then RUA will be raised and relay shipped to Tyco on Monday** **3/8- RUA# 3404 ready to ship out to Tyco. Check that the proper RUA was sent to Tyco. Simon to check with Mike.**	
FR-0150	No codes	Cricket Noise	NVH	In Process (26mile)	**2/16- shipped to 26mile for storage**	**2/12- turned input shaft notice cricket noise while turning input shaft back & forth from center.**	
FR-0151 RUA#3627	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**2/19- pulled EFF data shipped to 26mile for standard testing.** **2/26- need to leak test and xray** **3/1- leak tested had damage to boot & ITR, looks like damage happened after OTR was remove so unknow if damage occurred removing gear from vehicle or in shipping. Mike will xray EPP this week.** **3/8- mike to xray this Wednesday** **3/15- xray looks clean, next step is resistance testing.** **3/29- xray clean to resistance check & test with surrogate relay.** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- inline for thermo cycling after FR0165.** **4/21- perform resistance check will discuss relay in this Friday's teleconference**	
FR-0152	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**4/19- hella lost the short desoldering the ASIC and sent to ONSemi with no problem found. Lessons learned from this return is to use diamond cutter to remove ASIC from PCB**	**2/19- pulled EFF data and shipped gear to 26mile check EFF data make sure it is not a cold latched concern before sending to QAO** **2/25-gear should arrive in QAO 3/1** **3/3- Sergio found failed channel 1 in Torque sensor, used known good cable & hella test box to confirm. To send torque sensor to Rogersville for quality testing before shipping to Hella.** **3/8- TS arrived in Rogersville today for testing after testing is complete will ship off to Hella.** **3/15- TS arrived in Hella this morning.** **3/18- Hella found TS ASIC failure sent to OnSemi for analysis.** **3/31- Device failed on ATE (bin 12) at room temperature.** **X-ray and Sam analysis showed no anomalies.** **Further analysis to be done at ONSEMI Analysis Center Oudenaarde**	

FR-0153 RUA#3618	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic contaimination on contact 4**	**2/19- pulled EFF data and shipped to 26mile. Need to rattle test gear at 26mile, also will pull EFF data. 2/26-keep gear at 26mile. gear failed at 3.8degC send decoded EFF to Geoff find out what testing should be done next. 3/19- ship down to QAO now that they have cold testing available. 3/30- link relay is not closing fully on startup, second key up it works normal. Failed 1 amp load test. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault. 4/9- Signals scoped at EPP level . Link relay failing. Ship relay to Tyco 4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday. RUA-3618 5/5- week 22-09 relay, at Tyco will report out next week.**	
FR-0154	U2011-49 U3000-96	BB7	EPP	In Eval (QAO)	**3/3- QAO confirmed Rev. Cap**	**2/19- pulled EFF data and shipped gear to QAO. 2/25-gear should arrive in QAO 3/1**	
FR-0155	P07AE-09	AF1	NVH	In Eval (QAO)	**3/15- checked gear for high friction testing lead to low friction with the test results. Code did clear for dealer but dealer was concerned with SWA reading, hotline advised to replace the gear because of the reading.**	**2/19- pulled EFF data and shipped to QAO, include tech comments friction code cleared and did not reset on road test. 2/25-gear should arrive in QAO 3/1 3/3- In lab ready for testing**	QAO
FR-0156	U200B-2F U200C-2F	BD0-BD3	TS	In Eval (QAO)	**3/17- appears a sharp object cut the convolute and cut the TS wires inside. Vehicle did not have any other warranty claims done. No failures at the assembly plant.**	**3/1- pulled EFF/buffer data shipped gear to QAO decoded temp 50degC 3/10- damaged TS harness about 2" from the overmold at IPA. Red wire open Sergio to ship harness back to Englebert & Joel for analysis.**	

FR-0157 RUA#3626	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**3/15- pulled EFF & Buffer data, shipped to 26mile for analysis 3/22- need to leak test gear today 4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling. 4/9- inline for thermo cycling after FR0151 4/21- perform resistance check will discuss relay in this Friday's teleconference 4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps. 4/26- discussed with Ford will send to Tyco for further testing 5/5- week 37-08 relay, in process to tyco 5/12- Tyco to perform Fritt test to 5A.**	
FR-0158	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/15- Pulled EFF & Buffer data, shipped to QAO for analysis 4/9- been delayed in transit, now on its way to QAO 4/19- need to leak test then bully test & hot,cold, ambient testing 6/18- passed all QAO B9A testing, shipped to UK for additional testing**	
FR-0159	squeek noise turning	cricket noise	NVH	In process (26mile)	**3/15- verified cricket noise while turning input shaft, shipped to 26mile put in storage bin**		
FR-0160	C200B-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	**3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile. Sent out pictures**	**3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile.**	

FR-0161	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**		
FR-0162	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**		
FR-0163	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**5/19- Fairchild analyzed power module confirmed EOS at the end of their testing.**	**3/22- Pulled EFF/Buffer data shipped gear to QAO** **4/9- Faulty FET POWER pack. PH3/PH2/0_volts/LINK_voltage shorted, Geoff to approve shipment to Fairchild for level 3 analysis.** **4/16- Geoff advised to ship FET power pack to Fairchild for analysis.** **4/21- looking for anti-static bags to ship power module FET.** **4/23- Rogersville sent out couple static bags to QAO should arrive Monday to ship out Power module FET to Fairchild.** **5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out.** **5/4- part shipped out today to Fairchild(China)**	
FR-0165 RUA#3625	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**3/22- Pulled EFF/Buffer data shipped gear to 26mile for xray** **3/26- leak test gear today so Mike can xray all three B3A's next week** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- surrogate relay on EPP is thermo cycling with ignition cycling.** **4/12- did not fail over the weekend** **4/16- remove surrogate relay this afternoon and thermo test over the weekend. Geoff to get relay batch numbers from Nidec on this one FR0151 & FR0157 all have similar motor build dates around 10/2008.** **4/21- need to do relay resistance check before Friday's teleconference** **4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps.**	

FR-0166	High pitch Squeek while turning wheel quarter turn from center	cricket noise while turning steering	NVH	In Process (26mile)	**3/21- did not notice cricket noise while turing input shaft. Checked the CQIS report and they state the were turning the wheel back & forth from center to get the chirp noise. Will have 26mile double check noise.**		
FR-0167	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (26mile)	**3/21- damaged TS harness, same area as previous harness with hybrid engine**		
FR-0168	P07AE-09	AF1	NVH	In Eval (26mile)	**3/30- gears held in the containment area that failed the QAO line have been scrapped. QAO will assemble couple of gears for 26mile testing.**	**3/21- found cracked gear housing near outside housing large boot clamp. Have pictures** **3/23- 26mile test plan:** **1- Leak test** **2- EDF (power off)** **3- Tear down and inspect components.** **3/25- Friday meeting to update 8D and find root cause at QAO.** **3/29- loose RNB balls failed QAO NVH 5/26/09 then gear teardown 6/29-7/15 before 7/29- revised teardown procedure. teardown done before revised teardown process could have caused the loose balls.** **Gear assembled 10/30/2009 and passed.**	
FR-0169	high pitch squeak while turning	cricket noise	NVH		**3/29- did not notice any cricket noise in the gear while turning the input shaft especially while turning to the right. Check gear for cricket noise.**		

FR-0170	U3000-49	B43	EPP	In Eval (QAO)	**8/25- Tyco confirmed offset bridge**	**3/29- Pulled eff & buffer data ship to QAO for analysis. 4/6- sent gears out to Rogersville to ship to QAO for testing 4/15- gear in QAO ready for testing 5/17- QAO has not started testing 8/13- has performed ambient ignition cycling. Next to perform hot puma & then hot & cold ignition cycling. 8/16- found link relay opening with light tapping, sending PFS to 26mile for xray. 8/17- date code from the relay strongly suggests an offset bridge along with relay opening with light tapping. To raise RUA and send to Tyco for xray. 8/18- Filipe carrying link relay back to Tyco**	
FR-0171	Squeak noise while turning	cricket noise	NVH		**3/29-noticed cricket noise while turning input shaft. Prior to containment actions**		
FR-0172	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (Wuppetal)	**6/29- have all the pictures from Delphi & QAO and only area of molex connector impact damage would be in shipment(box damage) or QAO assembly line.**	**3/29- Pulled eff & buffer data ship to QAO for analysis. Did not notice any damage to the TS harness. 4/6- sent gears out to Rogersville to ship to QAO for testing 4/15- gear in QAO ready for testing 4/19- Broken wire at Molex connector, get information from harness and ship to Delphi. 4/26- Delphi rep. picked up harness at QAO sending harness to Turkey for further analysis.follow-up from Dave Kerska, QCCAR # 378973. 5/17- Delphi verified damaged molex connector & broken red wire, sent Delphi presentation to Ford, harness sent to Wuppetal for further analysis. 6/2- Wuppertal plant states the copper strands are not damaged by a mechanical impact. The terminal is broken inside the connector. It is caused by a mechanical impact to the connector which is not caused by Delphi.**	
FR-0173	high pitched squeek from steering	cricket noise	NVH	In Eval (26mile)	**3/30- verified cricket noise from gear pre-containment build at QAO. Put gear in storage**		
FR-0174	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/31- pulled eff buffer data and shipped gear to QAO 4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday 4/19- need to leak test then bully test & hot,cold, ambient testing 5/17- JL- cold bully test raised E98 LIC's on every ignition cycle 6/18- passed all QAO B9A testing, shipped to UK for additional testing**	

FR-0175 RUA# 3923	U2011-49	B6B	EPP	In Eval (QAO)	**9/9- to locate ECU & cables to do high pot test then teardown to check motor PCB clearance issue. 10/30- relay sent to Tyco woth NTF, PCB clearance NTF. Close as NTF**	**3/31- pulled eff buffer data and shipped gear to QAO 4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 8/18- Filipe carrying motor relay back to Tyco 9/1- Tyco torn down relay no small hot spot but no evidence of welding. NTF 9/7- perform high pot testing then check motor relay PCB cleareance.**	
FR-0176	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	**4/30- T2 signal missing appling stress to clockspring ribbon cable. parts broken cable bent part reworked 2/6/2009, check centering tool use**	**3/31- pulled eff buffer data and shipped gear to QAO 4/6- sent gears out to Rogersville to ship to QAO for testing 4/16- leak test passed also passed bully test 10X. Has been in the cold chamber 13hrs with no failure. Will hot & ambient test next**	
FR-0177	C200D-49	B9A	EPP	In Eval (QAO)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/31- pulled eff buffer data and shipped gear to QAO 4/6- sent gears out to Rogersville to ship to QAO for testing 4/19- need to leak test then bully test & hot,cold, ambient testing 4/21- leak check passed taken to lab for testing 4/26- start the bully test tomorrow when line changes 5/3- bully test passed, now in fridge cold testing then will bully test cold and performance test 5/17- JL- cold bully test raised E98 LIC's on every ignition cycle**	
FR-0178	P07AE-09	AF1	NVH	In Eval (26mile)	**4/28- gear passed case and core harness test, 8D sent to Ford**	**3/31- pulled eff buffer data and shipped gear to 26mile for analysis. No visual damage to gear. Input shaft harder than normal to turn. 4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing. 4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next to teardown for analysis. 4/12- found bent rack near tooth to pinion area, no damage to ITR. Testing on going in materials lab. 4/16- Jason to find out from Nick T what are the next steps in testing this gear 4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report 4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday**	
FR-0179	steering feels very loose	N/A	NVH	In Eval (26mile)	**4/6- 26mile found missing pinion nut same as FR0062. both gears built on same day 3/29/2009. pre-containment date for corrective actions.**	**3/31- noticed up & down input shaft movement, 26mile to analyze.**	

FR-0180	P07AE-09	AF1	NVH	In Eval (26mile)	**4/28- gear passed case and core harness test, 8D sent to Ford**	**3/31- pulled eff buffer data and shipped gear to 26mile. No visual damage to gear. Input shaft harder than normal to turn in both directions. 4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing. 4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next inline after FR0178 for teardown analysis. 4/12- bent rack near ball screw threaded area, on going testing in the materials lab 4/16- Jason to find out from Nick T what are the next steps in testing this gear 4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report 4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday**	
FR-0182 RUA# 3589	U2011-49	B3A	EPP	In Eval (Tyco)	**5/7- Tyco comfirmed this was an offset bridge.**	**4/12- pulled EFF buffer data, shipped out to QAO 4/21- xray indicates offset bridge- ship to Tyco 5/5- week 24 relay, just arrived will send out report to verify offset bridge**	
FR-0183 RUA#3590	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**5/28- Tyco confirmed plastic contamination on contact 5, 3mm of plastic.**	**4/12- pulled EFF buffer data, shipped to 26mile 4/21- xray clean had high resistance on PH3, next to load test and check resistance. 4/26- perform constant voltage test fixed 100ma/5amp current test today. 5/3- failed the voltage test with fixed current. 5/5- relay ready to ship to Tyco, Mike Fontana to send out report analysis to Ford team & Tyco. 5/6- Geoff sent out information to Ford, 26mile to ship to Tyco for level 3 diagnosis. RUA# 3590**	
FR-0185	U2011-61 C200B-62 U3000-96	B95, BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim**	**4/19- Pulled EFF buffer data, shipped gear to QAO 4/26- gear arrived today 5/17- failed leak test around one of the TS cover screws, performed cold & ambient testing with no failure at this time. 5/21- Unit will be frozen and bully tested. Also Performance test will be performed at cold temperature. Planned to be done tomorrow morning 6/2- passed all bully testing & cold/ambient ign. Cycling. 6/7-in lab for cold Performance & Puma testing. SAM testing 6/15- confirmed moisture intrusion, EPP failed leak test 6/25- EPP sent to Anting for analysis. 7/26- same 2-pin PFS leak as FR0208. investigation ongoing at Kimball & Anting.**	
FR-0186	no codes	HEARS NOISE FROM L.S. FRONT OF VEHICLE WHEN AT SLOW SPEEDS AND	NVH	In Eval (QAO)	**6/20-gears passed all NVH & EDF testing at QAO. NTF**	**4/19- did not notice any gear damage or noise turning input shaft. Shipped gear to QAO. 4/26- gear arrived today 5/3- EDF test stand passed with no noise or friction issues, I will check AWS & CQIS reports to make sure vehicle did not return. 5/4- primarily checking for belt slip, QAO EDF test stand needs to be updated to perform all four tests w/dynamic assists. Talk with Chris Manjos to help set-up SW 5/17- talked to Pepe the SW was updated for the full EDF testing, the gear still needs to go back through to verify the full test.**	

FR-0187	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**6/2- broken ferrite core at the small segment of the PCB is the cause why Vcc -line is not given. Design change of the small segment eliminates this part on 8/14/2009 at Hella.**	**4/19- Pulled EFF buffer data, shipped gear to QAO** **4/26- gear arrived today** **4/30- TS swapping exercise lead to defective torque sensor, no visual torque sensor issues need to discuss next steps with engineering. Before sending to Hella.** **5/3- check with Jim Loria next steps before shipping TS out to hella** **5/13- TS failed with four codes BD0-BD3 shipped from Rogersville to Hella, QCCAR #379423** **5/21- Vcc- signal is open against ground. Could be broken cable or weld issue on the FFC cable to pin 1, open when there should be 5v. Hella will send out report this Tuesday 5/25.**	
FR-0188	no codes	gear leaking fluid		gear returned to dealer	**4/19- chargeback to dealer**		
FR-0189	No Com	A28	EPP	In Eval (QAO)	**8/5- NTF with all the standard testing in QAO, to send PFR, close claim as NTF**	**4/19- was able to communicate with EPAS gear, gear not failing at this time. No codes in gear** **4/26- gear arrived today** **8/5- NTF with all the standard testing in QAO, to send PFR**	
FR-0190	C200B-61 C200B-2F	BD2,B90	TS	In Eval (QAO)	**5/5- overwound TS, rework part 2/6/2009 same date as FR0176. missing plastic clockspring tape guide bent clockspring tape. Channel one missing at times.**	**4/19- Pulled EFF buffer data, shipped gear to QAO** **4/26- gear arrived today** **5/3- leak tested, now at the lab ready for testing**	

FR-0191 RUA# 3768	C2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF**	**4/26- pulled EFF Buffer data, shipped to 26mile for testing** **5/5- xray clean, next to perform standard resistance testing** **5/7- resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest.** **5/17- passed tri-temp ignition cycling at this time** **6/7- 5amp hot test then check hot puma test.** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases.** **6/21- passed 1000v isolation test, ship to Tyco for testing. Raise RUA.** **6/28- RUA raised sent to Tyco** **7/9- NFF with all of Tyco's testing, next to open relay and visual inspection.**	
FR-0192	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**4/26- pulled EFF Buffer data, shipped to QAO for testing** **6/14- bully & performance test completed no faults, ambient/cold ign. Cycling, puma testing next.** **6/15- QAO completed all the B9A testing they could with no failures, sent to UK for further testing.** **6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.**	
FR-0193	U3000-61 C200B-62	B90,BD4	TS	In Eval (QAO)	**6/23- found on the QAO assembly line possible cause of bent TS finger is christmas tree installer laid on IPA rack when not in use and when TS drops down to operator could cause the bent finger. A new tray was installed to install the tool on 5/25/2010. proper work instruction printed for operator to use this tray for the tool at all times.**	**4/26- pulled EFF Buffer data, shipped to QAO for testing** **5/24 performance test,bully test, hot/ambient/cold/audit rig ignition cycling all passed, next to puma test then ribbon cable test. JM** **6/7- found one finger of the torque sensor bend down towards the PCB. Put in 8D need to find root cause, Guillermo sent Ford 8D on 0Km bent finger.** **6/14- The damage to the warranty return is due to a handling issue. We cannot determine where the damage occurred - Rogersville or QAO, but we did take the following proactive measures: We attempted to assemble a known bent rotor in order to verify that the Prodel line would reject rotor fingers bent in the upward direction. Part was rejected at the rotor weld station for B1 fault: bent rotor vane. We created a monthly electrician PM to verify correct axis alignment on station B2/B3 - weld stations. This will ensure that the part is being loaded/unloaded correctly and that no tooling is contacting the rotor fingers. We**	
FR-0194	TC lamp on ABS code C1963-20	A28		At WPAC	**6/15- vehicle returned with same symptom and code c1963 found poor connection at ABS module C135.**	**4/26- pulled EFF Buffer data, kept at WPAC deciding if dealer should be charged back for diagnosis. Code C1963 does not lead to EPAS gear with not stored epas codes & did not perform interactive diagnosis.** **4/30- decided by all dealer chargeback did not follow PPT "F" properly for ABS code C1963. the gear will be returned to the dealer.** **5/5- checking to see if gear can be tested on-vehicle checking with Russ Biyashev.**	
FR-0195	steering squeaks	cricket noise	NVH	At 26mile	**4/26- noticed squeak noise in the IPA while turning the input shaft**		

FR-0196	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF**	**4/26- pulled EFF buffer data, shipped to 26mile for testing** **5/5- xray clean, next to perform standard resistance testing** **5/7-resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest.** **5/17- has been running all last week with no faults, been taken off and put to the side for now.** **5/24- perform hot 5amp high resistance test.** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases.** **6/28- check 1000v test by end of week.** **7/9- passed isolation test to raise RUA and ship to Tyco.**	
FR-0197	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis** **5/12- gears should arrive in QAO on Wednesday** **5/18- need to leak test then testing can start in lab** **6/2- passed all bully testing & Performance testing. Next temp ign. Cycling & puma. RG** **6/4- removed ECU cover has found debris in a couple of different areas the 5V. sliver looks like it is shorting across pins 10 & 11 on PL1. At this time it is not shorting.** **6/14- ECU arrived in Kimball today. Geoff will follow-up make sure lab gets part and starts analysis.** **6/22- Suspect fibers that were noted by customer are actually cracks in flux on solder joints. NFF with Kimball testing, Kimball to ship ECU back to UK for further testing.**	
FR-0198	all IP lamps blinking	A16, A2A		chargeback	**4/30- vehicle had same condition after PSCM was replaced, chargeback gear to dealer, the gear will be returned to the dealer**		
FR-0201 RUA#3685	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**6/7- Tyco confirmed raised rivet, week 45- 2008**	**5/6- pulled EFF data & shipped to 26mile for testing** **5/17- xray indicates raised rivet, further resistance testing before shipping to Tyco** **5/18- failed the 5A resistance measurement at Room Temp on the raised rivet shipped to Tyco**	
FR-0202	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- Tyco confirmed plastic contamination on contact 4.**	**5/6- pulled EFF data & shipped to 26mile for testing** **5/17- xray clean, perform 5amp test at ambient & hot.** **6/14- 5amp amp test passed, next tri-temp ign. Cycling.** **6/21- passed ign. Cycling, next to perform 1000v iso. Test.** **6/28- 1000v test to be done by the end of the week** **7/12- passed isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**	

FR-0203	U3000-49	B7E	EPP	In Eval (UK)	**6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane. Pre-containment have pictures of the pin 12 short.**	**5/6- pulled EFF data notice slight damage to ECU cover from shipping damage no return packing & shipped to QAO for testing 6/7- passed leak test, shipped to 26mile for xray of motor PCB ground plane issue. 6/10- Isolation test(1000v) arc is observed between pins PL2.9 (Hall_supply) and PL2.12 (V_Star). Remove ECU first then resistance measurement to ground to verify PCB pin clearance. 6/14- need to xray part to check motor PCB clearance issues. 6/21- PCB in the UK for testing- xray PCB 6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane. Pre-containment have pictures of the short**	
FR-0204	C200D-49	B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**5/6- pulled EFF data and shipped to QAO for testing 6/11- leak testing, slight leak at OBH on interface 6/14- passed bully & performance testing, now down to EPP level to start ignition cycling ambient & cold 6/15- QAO completed all the B9A testing they could with no failures, shipped to UK for further testing. 6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.**	
FR-0206	U200B-2F C200B-61	BD2	EPP	In Eval (QAO)	**6/10- confirmed reworked TS that had missing plastic tape guide & twisted clockspring tape. Rework 6/17/09.**	**5/6- pulled EFF data shipped gear to QAO 6/8- Possible damage at clock spring on IPA. In process of visual inspection**	
FR-0207	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**	**5/7- pulled EFF data shipped to 26mile for xray & testing 5/17- needs to be leak tested today then ready for xray 5/25- xray clean & passed the resistance test. Check with Geoff on next steps. 6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling 6/10- put into tri-temp chamber with ign. Cycling 6/14- passed 5 days of tri-temp ign. Cycling with no faults. 1000v iso test next step 7/12- has performed all the relay testing and passed isolation(1000v) test. Next to take out relay send to Tyco.**	
FR-0208	C200B-62 U3000-96	BD1,BD3, BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim snider**	**5/7- pulled EFF data shipped to QAO for testing, 2-pin conn. Has some corrosion & gear covered in clay or mud.Also had codes BD1,BD3. 5/27- found internal moisture leak in the EPP, moisture traces in the 2-pin. QAO to assemble PFS & ECU cover then ship to Anting for leak evaluation. SAM 6/2- QAO shipped gear to Anting for leak testing around 2-pin. 6/7- shipment arrived in Shanghai today at 5:55pm. 6/14- check status of Anting testing, sent Raymond Qiu an email. 6/21- emailed Raymond Qui to take backside pictures of the PFS with the plastic removed to verify water path from 2-pin. Report out as soon as Raymond responds. 6/25- Anting will remove the molding to check conn. moulding area that it is in place at the 2-pin. Raymond Qiu will follow-up and get pictures.**	

FR-0209	no codes	no codes	chargeback	chargeback	**5/7- no codes, no visual gear issues & no binding while turning input shaft. Customer complaint at times trying to pass someone on highway vehicle rev's high then makes a bang noise. Transmission work fixed this issue**		
FR-0210	C200B-2F U3000-96	BD0,BD2	TS	In Eval (Hella)	**11/10- causal part is the clockspring assembly but lost the root cause sending parts to Tyco. Tyco's 8D NTF. New improved failure analysis process at QAO & Hella. Case closed**	**5/7- pulled EFF data shipped to QAO for testing 6/2- leak test passed, next bully testing. Pepe 6/14- cold/ambient bully test passed, now cold ign. Cycling 6/15- Unit is going to be measured and visual inspection will be performed at component level 6/17- Pepe found twisting clockspring in the lock position he losses channel one. Some marking noted on the clockspring. High resistances notice on channel one. 6/28- send PFR to Todd Williams & Angie Caudill. Discuss if TS should be sent to Rogersville for high resistance on channel one 6/30- We agreed with clockspring torn down at QAO to ship TS to 26mile for Hella's inspection to see if problem is located directly to torque sensor ribbon cable of solder joints. 7/7- Pepe shipping TS assembly to Rogers ville for analysis.**	
FR-0211	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/3- confirmed double start-up during analysis and confirmed a regulator issue**	**5/7- pulled EFF data shipped to QAO for testing 6/2- passed bully & ambient performance testing & ignition cycling. Gear in fridge next cold ignition cycling & performance test. 6/14- cold ignition cycling at this time**	
FR-0213	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- during high pot testing to relay low side unit failed, motor PCB tear down confirmed motor PCB clearance issue.**	**5/7- pulled EFF buffer data & shipped to QAO 6/7- passed leak test, shipped to 26mile for xray 6/9- xray tomorrow 6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma 7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**	
FR-0216	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/4- confirmed a double start-up at QAO, indicates a regulator issue and confirmed a regulator issue.**	**5/20- pulled EFF & buffer data, shipped to QAO for analysis. 6/11- Pepe found damaged TS harness on Pinion side 6/15- passed leak test, ambient & cold ign. Cycling**	
FR-0217 RUA# 3720	U2011-49 U3000-96	B6B	EPP	In Eval (Tyco)	**7/12- Tyco confirmed offset bridge**	**5/20- pulled EFF & Buffer data, shipped to 26mile for xray 6/2- xray indicates offset bridge, resistance measurement passes, checking with Geoff on next step 6/7- agreed for 26mile to raise RUA and send to tyco. 6/14- check shipping status to Tyco. 6/22- Tyco just received relay today**	

FR-0219	high pitch squeal noise steering	cricket noise	NVH		**5/20- turned input shaft to verify cricket noise turning back & forth from center.**		
FR-0220 RUA# 3777	U3000-49	B32	EPP	In Eval (Tyco)	**7/9- has code B31 & B32, Tyco has confirmed failure of link relay as cold weld. Next to open relay to inspect weld. Confirmed bridge weld failure at Tyco.**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 6/25- indication cold weld of the link relay, relay build date 2/10/2009 PFS rattles & has open to send link relay to Tyco today**	
FR-0221	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (QAO)	**6/17- over wound TS clockspring, IPA rework 6/17/2009**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today**	
FR-0222	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**	**5/24- pulled EFF & fault store shipped gear to 26mile for analysis. 6/7- inline for leak testing then xray 6/9- xray tomorrow 6/10- xray clean, next 5amp test 6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps 6/14- passed 5amp & puma testing with no faults. 1000v isolation test next. 7/12- passed tri-temp ignition cycling & isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**	

FR-0223	P07AE-09	AF1	NVH	In Eval (QAO)	**7/30- passed all criteria on the EDF stand, NTF at this time.**	**5/24- pulled EFF & fault store shipped gear to QAO for analysis.** **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today**	
FR-0224 RUA#4045	U2011-49	B3A	EPP	In Eval (Tyco)	**10/15- NTF with the testing at Tyco, next will open the relay and perform visual analysis.** **10/27-Tyco found a black plastic particle** **11/1- follow-up once 8D is sent.**	**5/21- dealer sent back a sunvisor instead of the EPAS gear back to WPAC, dealer charged back for the part.** **7/7- dealer sent the proper EPAS gear back to the WPAC, part ready for xray at 26mile.** **9/9- clear xray, next to follow standard testing procedure.** **9/13- ign. Cycled over the weekend no problem found.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.** **10/5- ship to Tyco should arrive on 10/8.**	
FR-0225	TC lamp on C1278			chargeback	**5/21- dealer sent back a hydraulic gear instead of the EPAS gear back to WPAC, dealer charged back for the part.**		
FR-0226	C200B-2F C200C-2F U3000-96	BD2,BD3	TS	In Eval (QAO)	**5/27- pulled EFF buffer data, found pinched TS harness. Have pictures of damage.**		

FR-0227 RUA#4056	U2011-49 U3000-49	B43	EPP	In Eval (Tyco)	**10/8- QAO exhausted all their testing, shipped to Tyco** **10/27- confirmed Offset Bridge, precontaiment. Geoff waiting to get update on the 8D.**	**5/27- pulled EFF buffer data, ship gear to QAO for analysis. Also pulled BB7 & BB9 codes from fault store** **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today**	
FR-0229*	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**11/12- UK received the part testing has not started.** **12/17- PCB motor clearance was confirmed in the UK**	**5/27- pulled EFF buffer data, shipped gear to QAO for analysis. Also pulled codes B38 & B4E from the fault store.** **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **9/9- passed all the EOL & standard testing. Ship to UK for further analysis.** **10/6- tri temp test before shipping to UK. 10/27 Tri-temp complete, generated BB5,BB7 and BB9 faults but no B9A fault. So ship to Uk for further analysis**	
FR-0230	C200B-2F	BD0,BD2	TS	In Eval (Kimball)	**9/2- Ford asking if the PFS was to print, mainly inside diameters of the 2/3 pin conn.. Sent email to Anting & Kimball to check. Confirmed 2-pin water entry sent Kimball report to Ford.**	**5/28- pulled EFF data, shipped gear to QAO for testing.** **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **6/30- At lab but has not started, will start to testing sometime this week.** **7/7- Water ingress due 3 PIN connector of PFS causing malfunction of the system. Also sent email to Anting to see if this PFS needs to be sent to Kimball to have the PFS head molding removed to check access of the moisture into the EPP.** **8/27- shipped to Kimball today.** **DHL#: 357 3958 054**	
FR-0231	Noise in frt-end while turning	N/A	NVH	In Eval (26mile)	**8/16- gear when through the NVH & EDF test and passed all tests. NTF**	**5/28- did not notice any gear damage or noise while turning input shaft. 26mile to leak test then put on EDF & then check cricket noise.** **6/7- check gear on NVH first then put on EDF tester.** **6/14- just a note on these returns, what I have notice with problems with the left trans axle seal leaking on the EPAS gear making the gear look like it leaks fluid then on turns the trans pump will whine & the steering gear gets replaced. This dealer added 1 quart of trans fluid on this repair.** **6/21- EPP was accidently removed from the gear, not sure if EPP should be reinstalled? Check with Ford** **7/7- reinstall EPP on gear, NVH test & EDF test to verify any noise concerns. Mark Bugosh is going to put the EPP back on and get the belt tension as good as he can, then give it to the lab downstairs.** **ETR# U2010-00605 for the lab to do EDF and NVH.**	

FR-0232 RUA# 4110	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**5/28- pulled EFF data, shipped gear to QAO for testing. Also pulled BB7 from the fault store similar to FR0227** **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **7/2- passed ign. Cycling, bully, hot/ambient puma testing with no failures** **7/7- shipped PFS to 26mile for xray of the link relay.** **9/1- PFS xray clean, next step to resistance testing ambient & hot.** **10/8- need to do hot resistance test** **10/20- hot resistance check was performed in QAO. To ship PFS to Tyco.** **11/1- waiting on Tyco relay workshop Nov.22-24** **11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis**	
FR-0233	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**8/6- confirmed double start-up, indicates regulator issue. Confirmed regulator issue.**	**5/28- pulled EFF data, shipped gear to 26mile. No gear or harness damage** **6/17- gear ready for leak testing at 26mile should be done by tomorrow** **6/21- Jason to check latest status.** **6/28- shipped to QAO** **7/20-Test in progress. Ignition cycling, IPA movement movement from stop to stop, functional test. Fault not reproducible.** **7/26- testing now for a double start-up, has the E22 code in fault store.** **7/28- QAO to get freezer spray and test for the double start-up**	
FR-0236	TC LAMP ON TURNING	N/A		In storage (QAO)	**5/28- pulled codes only had A8E in the fault store. Found out dealer had same TC lamp on after replacement. Found rear ABS wheel speed sensors mis-wired. Cannot chargeback EPAS since hotline advised to replace. EPAS gear was not the causual part# in AWS.**		
FR-0238	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At 26mile	**6/14- found TS harness conduit near the EPP contacted in three spots, broken black wire in harness. shipped gear to 26mile. Have pictures.**		

FR-0240	light squeal noise while turning	cricket noise	NVH	At 26mile	**6/14- verified cricket noise while turning the input shaft. Close and store at 26mile**	**6/14- verified cricket noise while turning the input shaft. Close and store at 26mile**	
FR-0243	C200D-49	B9A	EPP	In Eval (QAO)	**11/8- double start-up , send Geoff the info to confirm regulator issue.**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code.** **6/18- in process from Rogersville to QAO.** **10/6- found gears at QAO, leak testing started**	
FR-0245	C200D-49	B4E	EPP	In process (UK)	**1/31- ship motor assem. to UK to check for possible PCB motor cleareance issue.** **2/1- QAO found PCB motor clearance issue at PL2 at 500v, ship to Andy in UK to physically check short.**	**6/14- pulled EFF data shipped to QAO. B4E only code set intermittently .313 secs into the journey. Found cut on OBH boot.** **6/22- shipped from Rogersville to QAO** **7/7- leak tested passed, testing now starting.** **7/27- ign cycling, bully, hot puma passed. Next to start the cold testing.** **10/6- cold perf. & 5x cold bully done with NTF. Next step tri-temp testing**	
FR-0246 RUA# 4342	U3000-49	B43	EPP	In Eval (UK)	**3/23- confirmed that this was human sweat on the relay contacts and the only area that this can happen is right after the laser clean station and they install new plexi glass doors to prevent this issues. The new doors at Tyco were installed on 3/12/2010 that would be june 18, 2010 into QAO.**	**6/14- pulled EFF data shipped to QAO.** **6/22- shipped from Rogersville to QAO** **7/7- leak tested passed, testing now starting.** **9/10- EOL & ambient ign. Cycling done, next step cold testing.** **10/8- cold performance, bully & puma all passed, next to tri-temp test.** **10/11-now testing in tri-temp chamber 10/27 Tri temp complete and fault not reproducible Next step will be to Xray** **11/8- Remove the PFS and send to 26mile for link relay xray.** **1/31- 26mile shipped link relay to UK for Andy to take to the workshop** **2/9- NTF with relay SEM has some strange burn/ contamination on the contacts, Andy to bring relay back**	

FR-0247 RUA# 3807	TC lamp on C1277 No Assist	No Com	EPP	In Eval (FSL)	**1/31- UK still trying to recreate the failure, NTF at this time. 2/4- go back and put micro on the original ECU for testing to recreate the no com symptom. 4/19- UK has reinstalled the micro on the original ECU and has exhausted their testing and cannot get the ECU to fail after freescale performed their testing. closing as NTF**	**6/14- dealer states they have no assist and only the TC lamp on with code c1277. no PS message and they could communicate with the PSCM. When I hooked up CANape could not communicate or pulled Ford codes or fault store. 6/22- shipped from Rogersville to QAO 7/2- No Com confirmed at QAO sent EPP to UK for further analysis. 7/9- confirmed micro fault, Monday take off board to confirm micro, if it is to ship to FSL for analysis. 7/16- confirmed micro fault sent micro to FSL in Munich. 7/19- Acknowledged receipt today. 7/30- device now having a hard time failing, now in tri temp chamber at 125C to see if they can get to fail, will report out next week 8/16- micro under analysis at FSL in Malaysia, Geoff will follow-up in tomorrows call with FSL**	
FR-0248	steering type noise & leaking oil	No codes		WPAC	**6/14- trans axle fluid down 2 qts from lf axle seal leak getting on EPAS gear. Chargeback, dealer repaired left axle seal & bushing and then added 9qts of trans fluid**		
FR-0249	C200D-49 U3000-96	B9A	EPP	In Eval (QAO)	**10/18- next step to tri-temp testing 5/3- close as regulator S/W issue**	**6/14- pulled EFF data shipped to QAO for analysis 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 8/3- confirmed double start-up during**	
FR-0250	C200B-2F	BD0,BD2	TS	In Storage (26mile)	**6/14- dealer attempt to repair the TS harness so we lost the exact location of damage, looks like the repair was under the heat tape. Have pictures.**		

FR-0251	P07AE-09	AF1	NVH	In Eval (QAO)	**10/6- check with QAO if we have 8D or CA for this issue at station 70. will check with Guillermo. 10/20- Guillermo to get poke yoke dates for the station. 10/22- send pictures to understand process. 4/10- PCA it's a poke yoke that works by preventing the screw in tool to work in reverse (pinion nut and plug tool), the implementation date was**	**6/14- friction code cleared for the dealer and did not reset but the steering still hard to turn. I did verify input shaft hard to turn, B6A set twice intermittent. 6/30- shipped to QAO 7/9- there is some suspect of water ingress, I will wait for your opinion and tear down the unit and confirm this contamination by visual inspection. Wanted Pepe to reassemble boots & do a leak test to possible area's of moisture. 8/11-reassembled did not show any leaks during leak test. 8/13-pinion nut was being assembled twice. This condition occurred when operator did not complete full sequence and did not torque the pinion nut properly. Operator needs to turn back the pinion nut tool in order to re-torque it. But due to the rack and pinion assembly this action makes the rack travel to end position and make the rack and pinion crash.**	
FR-0252	TC lamp on C1963	No codes		In Storage (26mile)	**6/14- check CQIS report and after EPAS gear was install vehicle returned 165 miles later with the same TC lamp on with C1963 tech found poor connection at the ABS module, repaired and fixed the vehicle. Cannot chargeback hotline advised to replace the EPAS gear.**		
FR-0253	U3000-49 U3000-96	B7E	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**	**6/14- pulled EFF data and shipped to QAO for analysis 6/22- shipped from Rogersville to QAO 7/20 - PFR Complete. Waiting Warranty team decision. Leaks at bellows. Discuss 7/21- X-ray? Failed at orange connector at 750 and 1000V. 7/21- symptoms appear to be another PCB motor clearance issue. Follow same process as FR0258 9/9- advised to teardown and check PCB motor clearance**	
FR-0254	C200B-61 C200C-2F U3000-96	BD3,B90	TS	In Eval (QAO)	**7/26- QAO confirmed overwound clockspring, rework was done 5/21/2009. pre-containment**	**6/14- pulled EFF data and shipped to QAO for analysis 6/22- shipped from Rogersville to QAO 6/30- leak tested found leak at pinion plug, will start testing sometime this week.**	

FR-0255	No Com	No Com	EPP	In Eval (Infinion)	**10/18- Geoff has presentation to talk about the EOS issue 10/18- Tim Diez looking for number after the ISO2 pulse. 10/27 Geoff now has number and will include in presentation. 11/1- Geoff presented a couple of slides to Ford and Tim Diez & Tim Snider agreed to close this issue as EOS.**	**6/30- pulled EFF data, No Com with my Equipment at WPAC. shipped to QAO 7/7- leak tested passed, testing now starting. 7/16-Low Impedance at Pin 2 of integrated can circuit. Have disconnected ribbon cable. Next step send to UK for Level 3 on Tues? 7/28- somehow EPP shipped to the wrong location UK now trying to get EPP back from New Castle. 7/30- EPP should arrive in UK on Monday, this is when the testing will start. 8/2- UK has received the EPP today after testing something with the CAN IC circuit. Analysis still ongoing. 8/4- confirmed a defective CAN IC chip needs to send to Infinion for further analysis. 9/8- CAN IC chip EOS, excessive voltage on the CAN circuit. The ABS module was also replaced no ABS module return from Conti-Teves.**	
FR-0256	C200B-2F C200B-61 U3000-96	BD0, B90	TS	In Eval (QAO)	**8/13- Delphi advised this cracked shrink tube caused by rough handling. Advised the torque sensor bolts were missing when received at WPAC, harness was unplugged from EPP & no bolts in IPA. Unknown why dealer would remove bolts. Unknown damage to harness.**	**6/30- pulled EFF data, BD0,BD4,B90 codes set, unknown why dealer removed both bolts for TS harness at IPA cannot be leak checked 7/7- leak test could not be performed missing bolts at the TS harness at the IPA, unknown why dealer removed bolts. testing now starting. 7/20 - Functionals, bully, ignition cycling stop to stop. Still not reproducible 7/26- put bolts back into the TS harness at the IPA and leak check to verify no leak paths. Then continue to test. 7/30- signs of moisture inside IPA unknown when bolts were removed from the TS harness, when reassembled TS failed leak test 8/5- Dave Kerska finding out what plant to send the TS harness to in Turkey or Germany.**	
FR-0257	C200B-2F U3000-96	BD0,BD2	TS	In Eval (Hella)	**10/7- There are nearly 70 chambers (tools) and chamber A was the oldest. By the results at the automatic test equipment the semiconductor supplier is able find out which process step losses robustness (Yield) and canremove/stop production. Close out claims as of 10/13/2010 by Tim Snider**	**6/30- pulled EFF data BD0 & BD2 with c69 lock out code, no visible damage to TS harness. shipped to QAO for analysis 7/7- leak tested passed, testing now starting. 7/20- One channel for IPA no signal. No visual damage. IPA T1 signal absent. Known TS issue by using the TS swapping exercise. Ship TS to Rogersville. 8/5- gear shipped out of Rogersville to Hella 8/11- Hella just received warranty return today and has confirmed no channel 1. will report out when they find root cause. 8/26- ASIC failed on Automatic testequipment at room temperature. X-ray and Sam analysis showed no anomalies. Further investigations were started and we expect update of the analysis (with root cause) latest on 3th of september from the sub-supplier.**	
FR-0258	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**	**6/30- pulled EFF data and ship to QAO 7/7- leak tested passed, testing now starting. 7/16-Low Impedance between terminals 9 and 10 on PL2 connector (Motor PCB clearance? symptoms same as FR0074). 7/19-Compare to clean date and check how many line rejects Nidec has had (Jacks/Davies). Check xray next. 9/9- advised to teardown and check PCB motor clearance**	

FR-0259	U3000-49	B60	EPP	In Eval (FSL)	**11/12- target test date was pushed back to 12/15 for the first test. 1/10- test delayed till 12/26, validation testing still on the production line, waiting on details of clean product. 3/24- ship 8D to Ford 6/30/2010 is the continous improvement for particles SACVD clean receipe & 11/5/2010 ADC channels to converter test at freescale.**	**6/30- Intermittent B60 code resets in message center. pulled EFF data and ship to QAO 7/7- QAO to ship EPP to UK for analysis. 7/28- Micro ADC fault, need to remove micro put on development board for further testing before sending to FSL. 7/30- Micro still intact on the ECU, now tri-temp testing with ignition cycling to get see if failure will occur 8/2- able to duplicate code, indicating micro ADC fault. Will remove micro put on development board will wait for Geoff to test SW before shipping to FSL 8/11- did confirm this is a micro fault will send to FSL. 8/16- geoff will follow-up with FSL tomorrow with latest update. 10/6- FSL developed test to be completed 11/2 to capture ADC micro failure.**	
FR-0260	TC lamp on C1B00-64	A65		shipped to QAO	**6/30- only had tc lamp with ABS code C1B00-64, no PSCM codes or symptoms. Vehicle had several stored communication code errors. Tech did follow the diagnostic's properly but hotline to not guide tech and suggested to replace epas gear if wiring to gear was ok.**		
FR-0262 RUA# 4046	U2011-49	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco says NTF**	**6/30- pulled EFF data and ship to 26mile for xray. 8/26- x-ray clean, next tri temp ignition cycling 9/13- tri temp ign. Cycled over weekend cannot reproduce code. 9/17- to perform 5amp resistance test & hot puma 9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**	
FR-0263 RUA# 4047	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco found glass contamination 11/1- Tyco to send out 8D for approval.**	**6/30- pulled EFF data and ship to 26mile for xray. 8/26- x-ray clean, next tri temp ignition cycling 9/13- tri temp ign. Cycled over weekend cannot reproduce code. 9/17- to perform 5amp resistance test & hot puma 9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**	

FR-0266	C200D-49	B9A	EPP	In Eval (QAO)	**8/4- confirmed a double start-up at QAO, indicates a regulator issue and confirmed a regulator issue.**	**6/30- B9A set once in the fault store, pulled EFF data and shipped gear to QAO.** **7/7- leak tested passed, testing now starting.**	
FR-0267	C200B-2F U3000-96	BD0,BD2	TS	In process (Delphi)	**8/13- Delphi stating this is a assembly issue blue wire has most strain compared to other wires in harness. Tim advised we can closed no other Delphi harnesses used in our future gears.**	**6/30- pulled EFF data shipped to QAO for analysis.** **7/7- leak tested passed, testing now starting.** **7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position** **7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position.** **7/22- harness shipped from QAO to Delphi**	
FR-0268	C200D-49	B9A	EPP	In Eval (QAO)	**8/3- confirmed double start-up during analysis and confirmed a regulator issue.**	**6/30- pulled EFF data shipped to QAO for analysis.** **7/7- Fault is not possible to reproduce. Testing is ongoing. Bully test passed, Performance testing passed. I will tear down to EPP level to perform ignition cycling (HOT and COLD).**	
FR-0269	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/6- A DVM resistance measurement confirmed that this was the case Motor PCB teardown showed that this failure was caused by Motor PCB Clearance issue.**	**6/30- pulled EFF data and shipped to 26mile for xray** **8/26- x-ray clean, next tri-temp with the application SW** **9/1- during anbient bench testing on power up able to get B6B to set right away. Vlink short circuit low side drive. Next to cut away red plastic to verify PCB motor pin clearance on PL2.**	

FR-0270	U3000-49	BAA,BAB, B9B	EPP	In Eval (QAO)	**7/23-Guillermo sent revised 8d out but still waiting some information. Confirmed r227 impact and high resistance.**	**7/13- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor. 7/19 3 0km failures same R227 resistance failures. Also found some at hot Puma QAO. 7/19-Component location drawing sent to Ford.**	
FR-0272	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/9- no testing needed after xray, this falls outside the 6 months in service range. Xray suspect offset bridge, to remove the relay**	
FR-0274 RUA#3939	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**9/24- Tyco ran relay through their analysis and lead to NTF.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis. 8/27- passed leak test, failed the 5amp load test cycled the ignition now passes load test. Advised to let it sit over the weekend and recheck 5amp load test see if it fails again. 9/1- has recheck the 5amp load test and the resistance are a little over what a normal reading would be. Raise RUA and ship relay to Tyco. 9/13- shipped relay to Tyco**	
FR-0275	Fluid leak			chargeback shipped to Columbus Warehouse	**10/7- shipped to Columbus Warehouse from WPAC**	**7/16/2010- dealer states fluid leaking out of the boots, chargeback gear to dealer#2776. gear covered in oil, most likely trans fluid.**	

FR-0276	TC lamp on C1277	A28, A65		In Eval (Ford)	**9/27- Tim states on-vehicle test did not produce any codes or lamps. Close with NTF**	**7/16- pulled EFF data, need to check CQIS report** **8/3- Tim Snider picked up gear from 26mile and will do on-vehicle testing at Ford.**	
FR-0277 RUA# 4048	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco says NTF**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**	
FR-0279	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/16- pulled EFF data shipped to 26mile for xray & analysis.** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**	
FR-0280	U3000-49	BAA,BAB, B9B	EPP	In process (QAO)	**7/23-Guillermo sent revised 8d out but still waiting some information. Confirmed r227 impact and high resistance.**	**7/16- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor** **7/23-Guillermo sent revised 8d out but still waiting some information.**	
FR-0281 RUA# 4337	U3000-49	B43	EPP	In Eval (UK)	**3/23- confirmed that this was human sweat on the relay contacts and the only area that this can happen is right after the laser clean station and they install new plexi glass doors to prevent this issues. The new doors at**	**7/16- pulled EFF data shipped to QAO for analysis** **9/2- did standard ambient,hot & cold ignition cycling no codes, performed rattle test no noise. nTF at this time** **1/10- tri-temp ignition cycling cannot reproduce any code** **1/31- ship link relay to Tyco for the relay workshop.** **2/9- NTF with relay SEM has some strange burn/ contamination on the contacts, Andy to bring relay back**	

FR-0283	C200D-49	B9A	EPP	In Eval (QAO)	**5/9- to close as a confirmed double start-up**	**7/16- pulled EFF data shipped to QAO for analysis** **9/7- ambient,cold ignition cycle with no faults, next to hot puma**	
FR-0285	over sensitive steering	A28	NVH	In Eval (Ford)	**11/13- gear location at Ford PDC, Tim Snider's desk.**	**7/16- pulled EFF data, no visible gear damage. Rack turns smooth input shaft solid. Unknown issue sent to QAO for analysis.** **8/3- passed EDF test stand, next EOL testing, not sure EOL will detect any issue with this concern with no codes. Check with Ford if this should be sent back for on-vehicle testing.** **8/9- Gear passed EDF stand test.QAO to ship gear back to 26mile so Ford can put on-vehicle test.** **8/12- Jason received gear at WPAC, need to give to Tim Snider for on-vehicle testing.** **8/23- Jason to give gear to Mike Bahena to deliver to Tim Snider** **11/12- note from Tim Snider** **I have this gear next to my desk. There does not seem to be much desire from Dynamics to evaluate this gear as part of a TGW investigation since they believe this is a bump steer issue and there is a design change coming 2011 MY post Job 1 on the knuckle to fix it. Point 12, the outer tie rod ball center, will**	
FR-0286	P07AE-09	AF1	NVH	In Eval (QAO)	**1/3- Germany to report out to Chris Brown & advise Jason on any updates.**	**7/16- pulled Eff data, steering stiff turning the input shaft. Noticed a nick mark on the tip of the datum no other damage noticed.** **8/6- a friction rejection was confirmed as a bent pinion housing. Will send PFR out later today.** **11/16- to ship parts to 26mile for further analysis** **12/2-RBNA received at 26mile** **12/7- PH at QAO in process to 26mile will be sent to Burlington with FR0239 once it arrives and BNA will be sent back to QAO for storage hold.**	
FR-0287	C200D-49	B9A	EPP	In Eval (UK)	**2/10- QAO to send original EPP back to the UK for additional testing.** **3/21- Geoff still looking for the EPP assembly to be shipped to UK.** **4/6- cannot locate the EPP at QAO unknown if it was scrapped when ECU was shipped to UK for testing. No further testing can be done. NTF**	**7/16- pulled EFF data, shipped gear to QAO for analysis. Also has a B4E in the fault store.** **8/19- finish ignition cycling & hot puma testing if that passes to ship to UK for flux density test.** **8/26- the data shows that it is a supply fault, rather than a Hall effect or motor fault. Next step to repeat the test looking at 5V HALL on the motor PCB and on the ECU.** **If the output of the Aux ASIC (pin 40) is not ok then there's 2 options:** **1) Aux ASIC failure** **2) Low impedance between 5V HALL and 0V (potentially the motor PCB clearance issue?)** **10/6- ECU arrived in the UK today**	

FR-0289	C200B-2F C200C-2F	BD2, BD3	TS	In Eval (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis. Also has a stored B90 code**	
FR-0291	C200C-2F C200B-62	BD3, BD4	TS	In process (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**	
FR-0292	C200B-62	BD4, B90	TS	In process (QAO)	**8/9- no testing needed after xray, this falls outside the 6 months in service range.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**	
FR-0293	C200B-2F	BD0, BD2	TS	In Eval (QAO)	**8/20- damaged TS harness, found blue wire in the harness cut near the IPA. Field issue**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**	

FR-0294	C200C-2F C200B-62	BD3, B90	TS	In Eval (QAO)	**8/27- found over wound torque sensor, plastic guide damaged clock spring part was reworked on 5/18/2009**	**7/30- pulled EFF data and shipped gear to QAO for analysis.**	
FR-0295	U2011-49	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**	
FR-0296	U2011-49	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**	**7/30- pulled EFF data and shipped gear to 26mile for xray and analysis** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**	
FR-0297	Rubbing noise while turning	No Codes	NVH	In Eval (QAO)	**9/8- INA confirmed rack bent on the inboard side of the rack. Have measurements.**	**7/30- IBH boot has slight nick could be a hole, notice slight ticking noise while turning.** **8/19- passed leak test and EDF test stand** **8/24-gear failed NVH, suspect on Rack and Ballnut. We'll try some testing on the rack & ballnut.** **8/27- confirmed rack & ballnut to ship to INA for testing.**	

FR-0298	C200B-2F C200C-2F	BD2, BD3	TS	In process (QAO)	**found overwound torque sensor, rework done 5/21/2009.**	**7/30- pulled EFF data and shipped gear to QAO for analysis.** **8/9- no testing needed after xray, this falls outside the 6 months in service range.**	
FR-0300	P07AE-09	AF1	NVH	In Eval (QAO)	**1/3- Germany to report out to Chris Brown & advise Jason on any updates.**	**7/30- pulled EFF data and shipped gear to QAO for analysis. Very stiff turning input shaft.** **8/27- this is confirmed bent rack, send Nick data for further information.** **11/3- Jason Johnson to request rack & ballnut back for 26mile evaluation. 12/2- RBNA received at 26mile**	
FR-0301	C200B-2F	BD0, B90	TS	In Eval (26mile)	**10/12- confirmed knick in the shrink tube leak, close with known Delphi issue.**	**8/23- pulled EFF & stored data shipped to QAO for analysis.** **8/27- shipped out of Rogersville on Friday's truck.** **9/8- all ambient & cold ignition cycling & EOL testing performed with no faults. Next puma testing then remove TS cover.** **9/9- removed TS cover found corrosion in the housing, on the sensor & shaft. Looking for next steps from the TS team.** **9/10- shrink tube on harness is no damaged or cracked, green seal slightly swelled. Check with Joel what next steps should be. Send out current information and pictures.** **9/21- harness failed the vacuum test install known good harness and that passed, put original harness on with pressure in dunk tank could not find any bubbles. Could only find small nick on the shrink tube. To contact Joel to see if more testing is needed or ship harness back to 26mile for testing.**	
FR-0302	C200B-2F	BD0, BD2	TS	In Eval (QAO)	**9/29- showed IPA cover pics to Ford, this is the first one seen with this drilled hole and looking at the fault store it look like this occurred early in mileage. OK to close claim according to Tim.**	**9/2- pulled EFF & stored data and shipped to QAO for analysis.** **9/22- during leak teat at QAO notice hole in the TS cover, removed cover and some metal shaving in IPA and rust marks on the harness holder. Sam to remove the plastic cover to check PCB. Unknown who drilled hole in TS cover, no vehicle history.**	

FR-0303	C200D-49	B9A	EPP	In Eval (QAO)	**10/18- tri-temp testing lead to double start-up, indications point to a regulator issue.** **10/19- Geoff confirmed to close this as a double start-up condition.**	**9/2- pulled EFF & stored data and shipped to QAO for analysis.** **10/15- leak test passed, now testing in tri-temp chamber.**	
FR-0305	U3000-49 U3000-96	B9B, BAA	EPP	In Eval (QAO)	**10/4- screen test did not fail hot, with damage to R227 to close claim** **10/11- now tri-temp testing**	**9/2- pulled EFF & stored data and shipped to QAO for analysis. To check high resistance at R227.** **9/20- R227 has impact mark on the resistor but passes all the resistance measurements.** **9/21- next step** **1) Run the attached configuration while drawing some current.** **2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes.** **9/24- instructions to test from Geoff** **We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as follows:** **1) a) Measure the 2.5V Ref with CANape (I sent you a configuration for doing this which included 'ADC.Pseudobuffer[12] to [15]'**	
FR-0306	No Com	No Com	EPP	In Eval (Infineon)	**12/16 on 11/29 presented to Ford and explained Inf found a scrap of material in mold regulator with c/a presented. Ford accepted? Closed**	**9/2- could not pull any data using my Canape at WPAC, tried 3 times no communication with ECU.** **9/29- Andy Partridge gave Pepe instruction for testing this no comm gear for this regulator issue. Waiting on testing to be completed.** **9/30- there is no low impedance path's to any of the suggested tests. Took more measurements on IC14.** **10/4- passed all Andy's suggested testing at QAO next step to ship gear to UK for level 3 analysis. To ship ECU only.** **10/6- ECU arrived in the UK today.** **10/8- UK found regulator failure, to xray before shipping to Infineon.** **10/25- regulator testing in progress.** **10/27 Regulator now with Infineon.** **11/8- Infineon detected a metal sliver between the pins of the regulator leadframe. Now checking for possible sources of the contamination**	
FR-0310	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**10/8- xray indicates offset bridge, close as offset, pre-contamination, get relay date code for Geoff's chart. This is outside Ford's testing range**	**9/20- shipped gear to 26mile for xray & analysis. Pulled EFF & stored data.** **9/23- leak test passed sent upstairs for Mike Taylor to xray.**	

FR-0311	U3000-49	BAB,BAA, BB7, B9B	EPP	In Eval (QAO)	**9/29- analysis by SAM at QAO confirmed R227 was damaged.**	**9/20- shipped gear to Rogersville then to QAO for analysis. Pre-containment for the R227 resistor impact.**	
FR-0312	C200C-2F	BD1, BD3	TS	In Eval (QAO)	**10/12- confirmed leak in the shrink tube(Delphi harness) nick in harness to close with known issue.**	**9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. 9/28- TS harness failed leak test now in lab. 10/4- found internal IPA corrosion on the shaft, & board. To take pictures of the harness shrink tube for damage. Send pics to joel & Engelbert. 10/6- ship harness to 26mile for Joel to analyze.FEDEX : 9373 7350 9810 10/11- joel performed xray clear next step to pressure test TS harness.**	
FR-0313	U3000-49	BAA,BAB, B9B, BAE	EPP	In Eval (QAO)	**9/30- SAM confirmed R227 resistor open and has been impacted. Closed**	**9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. Precontainment for the R227 resistor impact.**	
FR-0314 RUA# 4149	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**	**9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis. 9/29- received gear today and passed leak test ready for xray. 10/8- xray clear not fault found, follow standard test procedure. 10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop 11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**	

FR-0315	U3000-49	BAA,B9B, BAE	EPP	In Eval (QAO)	**10/25- the damage to R227 fits the dates, precontainment. Closed**	**9/27- pulled EFF & stored data, shipped to QAO for analysis. 10/20- visual inspection does show contact of R227. further testing ongoing. 10/22- R227 & C17 have damage but the gear will not fail at this time. Will continue to test.**	
FR-0318	U3000-49	BAA,BAB, B9B, BAE	EPP	In Eval (QAO)	**10/20- have verified that the R227 has been impacted. To close out**	**9/27- pulled EFF & stored data, shipped gear to QAO for analysis. Pre-containment for the R227 resistor impact**	
FR-0320	No Com	No Com	EPP	At WPAC	**10/8- Tim inspected gear the connector was fully inserted & appears from the corrosion the rubber gasket around the connector was in place. Indication leads to water wicking in from the wires.**	**10/5- took pictures of corrosion in the 2-pin, did not want to pull any data, going to measure how far 2-pin was installed in connector. Ford to visually inspect this Friday.**	
FR-0321	C200C-2F	BD1, BD3	TS	At WPAC	**10/5- TS harness damaged and cut wires near the EPP housing flange, took pictures and sent to Ford. To ship to columbus warehouse**		

FR-0322	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**10/20- found broken wire in TS, under middle of harness under the heat tape. Close as damaged TS harness. Take pictures and put in PFR.**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis.** **10/18- leak test passed sent to lab to start analysis.**	
FR-0323	TC lamp on C1B00-2F	A28		At WPAC	**11/22- ABS group made SW change to prevent this steering angle code from setting on starting or shut down. The ABS SW launch was completed on 8/20/2010**	**10/5- only have A28,A29, A65 codes stored in the fault store. No visual damage to gear. Have gear at wpac.**	
FR-0325	TC lamp on C1B00-2F	A29		At WPAC	**10/5- tech states TC lamp on doing parking lot manuvers.** **11/15- ABS software launch 8/20/2010 for TC lamp on, this vehicle is precontainment.**	**10/5- tech states TC lamp on doing parking lot manuvers.**	
FR-0326 RUA#4239	U3000-49	BA4,BA5,B C2	EPP	In Eval (UK)	**2/21- Kemet has stated that a couple of root causes related to these failures and the most likely failure is the C154 anode wire contamination failure during welding & wire**	**10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **12/13- Pepe to ship EPP assembly to UK to accelerate testing for this issue.**	
FR-0330	No Com No start	No Com	EPP	In Eval (QAO)	**11/8- voltage regulator over current condition. Unknown source that caused the over voltage on the CAN BUS circuit. Also the abs module and PCM needed to be replaced for the vehicle to operate with no lamp.**	**10/18- could not comm with the PSCM using Canape. Found out both the ABS & PSCM causing short on CAN BUS high circuit.**	

FR-0332		BD1, BD3	TS	In Eval (QAO)	**11/10- Joel did confirm this is a shrink tube leak did not notice and damage to the shrink tube but the leak is coming from this sealed shrink tube.**	**10/18- pulled EFF & stored data shipped gear to QAO for analysis.** **11/4- TS harness leak at shrink tube area, no visual signs with microscope. To ship Joel the TS harness for pressure test.** **11/8- Joel has the harness and will PSI test tomorrow.**	
FR-0334	steering noisey & steering will not turn	No Codes	NVH	At WPAC	**12/7- next steps** **-Tim requested a copy of the data / calculations used to determine the ITR to Rack specification. Colleen, do you have this?** **-Have the Mat Lab take photos and measurements to try and evaluate if there was any stretching or damage, or any other visible information we can learn** **we will have the Material properties of the ITR and Rack verified to spec.**	**10/25- no stored codes in memory, boot damaged from ITR unscrewed from the rack, unknown how that happened. No Ford warranty noted.** **11/1- sent out torque specs to Ford engineering to prove ITR's were torqued properly from QAO plant before gear was sent to HSAP. Field Misuse**	
FR-0335	U3000-49	BAA, B9B	EPP	In Eval (QAO)	**12/20- found damaged R227 resistor and high resistance, close to R227 damage at Anting.**	**10/25- pullled EFF & stored data, IBH broken mount from shipping back to WPAC no shippign foam to protect gear.**	
FR-0337	C200B-2F C200C-2F	BD0-BD3	TS	At WPAC	**10/25- found cut TS harness wires near the EPP flange. Took pictures, hybrid eng.**		
FR-0338	U3000-49 U3000-96	BAA, B9B	EPP	In process (QAO)	**11/18- R227 damage and measurement out of spec to confirm R227 issue.**	**11/5- pulled EFF and stored data no damage shipped to QAO for analysis.**	

FR-0339	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At WPAC	**11/5- Found damaged Leoni harness, dealer tried to repair harness. Location of damaged near the IPA. Have pictures.**		
FR-0340	U3000-49	BAA,BAB, BAE	EPP	In Eval (QAO)	**12/20- found damaged R227 resistor and high resistance, close to R227 damage at Anting.**	**11/15- pulled EFF & stored data shipped to QAO for analysis**	
FR-0343	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (QAO)	**12/8- information sent to UK to confirm this is a regulator issue with a double start-up.**	**11/15- pulled EFF & stored data shipped to QAO for analysis. 11/22- check EFF for signature status for a regulator issue. Then check for double start-up. Otherwise normal gear level testing.**	
FR-0344	C200B-2F U3000-96	BD0,BD2	TS	At WPAC	**11/15- damaged TS harness cut blue wire near EPP first retainer, took pictures**		
FR-0345	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At WPAC	**11/15- damaged TS harness all wires cut off near the EPP flange, took pictures**		
FR-0348	No Assist PS message fault on	Wrong gear sent back		chargeback	**11/15- Dealer sent back a hydraulic gear instead of the EPAS gear. Dealer Chargeback**		
FR-0349	C200B-2F C200C-2F U3000-96		TS	At WPAC	**11/15- TS harness damaged, dealer tried to repair the Lenoni harness, but had U3000-96(C69). Took pic's**		
FR-0350	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**	
FR-0352	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**	
FR-0353	Rubbing noise while turning		NVH	In Eval (26mile)	**11/15- found torn boot, transmission removed and replaced at 20K miles, have pictures of the torn boot, Non-TRW issue.**		
FR-0354	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**	**11/15- pulled EFF & stored data shipped to QAO for analysis.**	

FR-0355	Vehicle wonders while driving	No Codes	NVH	chargeback	**12/3- did not see any deterorated of mounting bushing on the gear. Tech replaced the gear performed a complete alignment. Tech should have performed full alignment before gear replacement. Chargeback due to no problems found with bushings. Gear was EDF tested at 26mile with NTF. WPAC could not chargeback because gear was sent out for more testing,**	**11/15- pulled EFF & stored data shipped to 26mile for analysis. Did not notice any issues with the bushings. Tech should have performed an alignment first before replacing the gear.** **11/29- passed EDF testing and the bushings are not worn, Jason to ship gear back to WPAC for dealer chargeback.** **12/3- did not see any deterorated of mounting bushing on the gear. Tech replaced the gear performed a complete alignment. Tech should have performed full alignment before gear replacement. Chargeback due to no problems found with bushings. Gear was EDF tested at 26mile with NTF. WPAC could not chargeback because gear was sent out for more testing,**	
FR-0359	C200C-2F U3000-96	BD0-BD3	TS	In storage (26mile)	**11/24- Found damaged TS harness near the EPP flange. Cut wires**		
FR-0360	C200D-49	B9A	EPP	In Eval (QAO)	**4/4- confirmed double start-up to close per signature of the regulator issue.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**	
FR-0362	P07AE-09	AF1	NVH	In Eval (26mile)	**12/20- found boot damaged, cause unknown but could have been damaged removing axles when they replaced the transmission prior to EPAS gear replacement.**	**12/7- pulled EFF & stored data, could not turn input shaft, found internal corrosion OBH ITR nut rusted. Advised to reinstall new boot clamps and leak check**	
FR-0363	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up**	
FR-0364	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up**	
FR-0366	U2011-49	BB5, BB7	EPP	In Eval (QAO)	**4/4- found damaged R227 similar in date of the other damaged resistors from Anting**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**	
FR-0367	C200D-49	B9A	EPP	In Eval (QAO)	**4/4- confirmed double start-up to close per signature of the regulator issue.**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis**	
FR-0368	U3000-49	BAA,BAB, BAE	EPP	In Eval (QAO)	**4/4- found damaged R227 similar in date of the other damaged resistors from Anting**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis**	
FR-0369	C200B-2F C200C-2F	BD2,BD3	TS	In Eval (QAO)	**1/19- found IPA rework on 5/21/2009 overwound clockspring and broken plastic guide. Precontainment, close**	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis** **1/18- found leak at pinion plug during leak test. Performed tri-temp ignition cycling & dynamic testing NTF. Removed IPA cover oil film on the finger ring. Advised Pepe to complete the PFR and send out to decide on next steps.**	
FR-0370	U3000-49 U3000-61 U3000-96	B97	EPP	In process (QAO)	**1/4- nothing more can be done with this return. Field handling issue**	**12/20- have pictures of a hole drilled into the EPP, looks like hole was drill through the Rh floor board, unknown of any aftermarket accessory installed on this vehicle.**	
FR-0371	B200B-2F B200C-2F	BD0-BD3	TS	In process (QAO)	**1/12- confirmed regulator SW issue with EFF data & has double start-up.**	**12/20- pulled EFF & stored data shipped gear to QAO for analysis.**	
FR-0372	TC lamp on	A65		In storage (26mile)	**12/20- pulled EFF and buffer data no codes or EFF data. Will keep gear at 26mile for storage**		

FR-0374	C200D-49	B9A	EPP	In Eval (QAO)	**2/1- confirmed double start-up with scope and a regulator issue**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**	
FR-0378	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**3/14- confirmed this is a regulator issue, found double start-up**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis** **1/19- has signature's of a regulator issue need to scope regulator to check for double start-up**	
FR-0379 RUA# 4324	U2011-49 U3000-96	B3A EPP		In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK.** **2/14- no further testing can be done**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis** **1/21- x-ray, puma test, & high pot test with NTF removed relay for Tyco.**	
FR-0380 RUA# 4325	U2011-49 U3000-97	B3A EPP		In Eval (UK)	**2/21- found Magnesium, sulfer & sodium contamination on the contacts same as the U502 B3A's but**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis.** **2/9- contact contamination, appears to be possible oil fron the rivet machine, further analysis needed to confirm.**	
FR-0381	P07AE-09	AF1	NVH	In Eval (QAO)	**2/28- Mat Alder also inspected this return at QAO- Pieces of soft stop, and housing in the rack groove probably caused the friction issue.** **3/21- Mat Alder talked about getting new softstop design in the CD3 products before end of year.**	**1/10- heavy mud all over the gear, turned IPA did not feel any binding stop to stop** **1/26- rubber softstop in pieces on the IBH side, loose pieces of rubber on the rack. Teardown the rest of the rack and take pictures of any debris in the gear housing.** **2/21- passed friction testing on the audit rig, damaged ITR** **2/28- Mat Alder also inspected this return at QAO- Pieces of soft stop, and housing in the rack groove probably caused the friction issue.** **3/21- Mat Alder talked about getting new softstop design in the CD3 products before end of year.**	
FR-0382	C200D-49	B9A	EPP	In Eval (QAO)	**1/26- confirmed double start-up with the scope. Close as a regulator issue.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**	
FR-0383	U3000-49	BAA, BAB, B9B	EPP	In Eval (QAO)	**2/2- confirmed damaged R227 resistor with high resistance.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis**	
FR-0384	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**2/1- confirmed a double startup using the scope and cooling the regulator.**	**1/10- pulled Eff & stored data, shipped gear to QAO for analysis** **1/19- has signature's of a regulator issue need to scope regulator to check for double start-up**	
FR-0385 RUA# 4326	U2011-49	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- raised rivet issue, shown on xray and relay teardown confirmed precontainment with the raised rivet**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis** **2/9- raised rivet issue, shown on xray and relay teardown confirmed raised rivet precontainment with the raised rivet issue.**	
FR-0386	stiff return to center after turn	No Codes	NVH	In Eval (QAO)	**2/28- from the pictures and gear analysis from Mat Alder it looks to be a single impact event that caused the bushing & housing damage.**	**1/10- no codes in stored data, felt binding while turning IPA.** **1/26- removing bellows found particles of aluminum on teardown found aluminum from the from the OBH bushing area, see pictures.**	
FR-0387 RUA# 4327	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK.** **2/14- no further testing can be done**	**1/10- pulled Eff & stored data, shipped gear to 26mile for analysis** **1/21- x-ray, puma test, & high pot test with NTF removed relay for Tyco.**	

FR-0388	C200D-49	B9A	EPP	In Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**1/14- pulled EFF & stored data shipped to QAO for analysis**	
FR-0391	U3000-49 U3000-96	BAA,B9B, BAD	EPP	In Eval (QAO)	**2/2- confirmed damaged R227 resistor with high resistance.**	**1/14- pulled EFF & stored data shipped to QAO for analysis**	
FR-0394 RUA# 4506	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**1/21- pulled EFF & stored data shipped to 26mile for analysis 1/31- relay to ship to UK for Andy to take to the Tyco workshop 2/22- relay was kept at 26mile for more testing, x-ray clean no defects 3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK 3/31- Tyco will perform analysis, outside contamination batch range.**	
FR-0395		BD0-BD3	TS	in Eval (QAO)	**4/6- confirmed double start-up close as a micro/regulator SW issue.**	**1/31- pulled EFF & stored data, ship to QAO for analysis. Did not get the proper data QAO to pull the proper codes. Has the latest software 41515711C(MFB2) need to get my software updated.**	
FR-0396 RUA# 4507	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**1/31- relay to ship to UK for Andy to take to the Tyco workshop 2/22- relay was kept at 26mile for more testing, x-ray clean no defects 3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK. 3/31- Tyco will perform analysis, outside contamination batch range.**	
FR-0397	C200D-49	B9A	EPP	in Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**1/31- pulled EFF & stored data, ship to QAO for analysis**	
FR-0398 RUA# 4382	U2011-49	B3A	EPP	In Eval (Tyco workshop Feb 7th)	**2/9- NTF with the relay analysis at this time, contacts clean. Will discuss next steps with Tyco & UK. 2/14- no further testing can be done with the EPP or relay at this time, to close case**	**1/28- high pot test NTF, removed relay for Tyco. 1/31- relay to ship to UK for Andy to take to the Tyco workshop**	
FR-0400	C200D-49	B9A	EPP	in process (QAO)	**2/11- has signature's of a regulator issue and scope check does confirm a double start-up. Close**	**1/31- pulled EFF & stored data, ship to QAO for analysis**	
FR-0401	U2011-49	B3A	EPP	In Eval (26mile)	**4/6- have pic's of the PFS ribbon cable with heavy corrosion, closing claim due to water intrusion in the 2-pin. Tight terminals will fix this issue.**	**1/31- corrosion in the battery 2-pin connector, 26mile will perform testing to confirm PFS water intrusion issue or other relay circuit issues. 2/22- x-ray at 26mile clean no defects 3/14- looking at the corrosion inside the EPP and down by the motor relay believe the water caused the B3A, motor build date at 4/4/2010 is not around any build issues. Will send pic's to Geoff to comment.**	
FR-0402	fluid leak	fluid leaking from gear		chargeback	**1/31- no fluid in gear had WPAC chargeback gear to dealer.**		
FR-0407	U3000-49	BA4,BA5,BC2	EPP	in Eval (QAO)	**3/3- confirmed c227 Kemet internal weld issue**	**2/11- pulled stored and EFF data no codes, QAO to check C154**	
FR-0409	C200D-49	B9A	EPP	in Eval (QAO)	**5/16- confirmed double start-up regulator SW issue**	**2/11- pulled stored and EFF data shipped gear to QAO for analysis**	
FR-0413	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	**3/15- did have signature of regulator and does have double start-up to confirm a regulator issue.**	**2/28- Pulled stored & EFF data shipped gear to QAO for analysis**	
FR-0412 RUA# 4509	U2011-49 U3000-96	B3A	EPP	in Eval (Tyco)	**4/6- all x-rays & testing performed by Tyco with NTF, contacts clean cannot find anything wrong with the relay.**	**2/22- pulled stored & EFF data shipped gear to 26mile. 3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK 3/31- Tyco will perform analysis, outside contamination batch range.**	
FR-0414 RUA# 4510	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- confirmed Mg,S,Na contact contaimination at Tyco. new relay batch dates.**	**2/28- pulled stored & EFF data shipped gear to 26mile for xray and surrogate relay testing. 3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK 3/31- Tyco will perform analysis, outside contamination batch range.**	

FR-0416 RUA# 4511	U2011-49	B3A	EPP	in Eval (Tyco)	**4/6- confirmed Mg,S,Na contact contaimination at Tyco. new relay batch dates.**	**2/28- pulled stored & EFF data shipped gear to 26mile for xray and surrogate relay testing. 3/14- ambient tested with surrogate relay no codes set. Removed relay and shipped to UK 3/31- Tyco will perform analysis, outside contamination batch range.**	
FR-0417	C200D-49	B9A	EPP	in Eval (QAO)	**5/16- confirmed double start-up regulator SW issue**	**2/28- Pulled stored & EFF data shipped gear to QAO for analysis**	
FR-0419	C200D-49	B9A	EPP	in Eval (QAO)	**3/15- confirmed double start-up regulator SW issue.**	**3/4- Pulled stored & EFF data shipped gear to QAO for analysis**	
FR-0420	C1B00	No Codes		At WPAC	**3/11- shipped gear to 26mile for storage at this time. ABS did update their SW 8/20/2010 to fix C1B00 codes setting on hybrids.**	**3/4- no stored codes or Ford codes listed. Called hotline stated the TC lamp comes on, tech could not verify, not sure if C1B00 reset for test to replace the steering gear.**	
FR-0424 RUA# 4559	U2011-50	B3A	EPP	in process (UK)	4/18- confirmed Mg,S,Na on the contacts during the relay workshop	**3/18- pulled stored & EFF data shipped to 26mile for testing 3/24- surrogate relay testing at this time 3/31- Tyco will perform analysis, outside contamination batch range 4/6- shipped relay to UK this afternoon, Geoff should have it Friday**	
FR-0425 RUA# 4560	U2011-51	B3A	EPP	in process (UK)	4/18- confirmed Mg,S,Na on the contacts during the relay workshop	**3/18- pulled stored & EFF data shipped to 26mile for testing 3/24- surrogate relay testing at this time 3/31- Tyco will perform analysis, outside contamination batch range 4/6- shipped relay to UK this afternoon, Geoff should have it Friday**	
FR-0426	C200D-49	B9A	EPP	in Eval (QAO)	**5/3- confirmed double start-up issue for the update SW micro/reg issue**	**3/25- pulled EFF & stored data, shipped to QAO for analysis**	
FR-0429	C200C-2F U3000-96	BD1,BD3 BC5	TS	in Eval (QAO)	**4/19- Pepe sent PFR to me and is evident that the moisture did come in from the 2-pin connector and caused both link relay code and the TS codes. This issue will be fixed by the tight terminal fix**	**3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness 4/18- passed leak test, tri-temp ignition cycling, pulled cover off to do wiggle testing and found corrosion on the PFS PCB. To ship to Kimball to pull the plastic cover to verify how moisture got on the PCB.**	
FR-0433	IP erratic & CEL lamp on	No Codes		in storage (26mile)	**3/28- EPAS gear replaced and vehicle had the same issue. checked CQIS & AWS reports and found PSCM harness from C1010 to the 3-pin at the PSCM shorted causing the erratic CAN BUS issues. Hotline advised to replace the EPAS gear so cannot chargeback to dealer**		
FR-0435	C200C-2F	BD1,BD4	TS	in Eval (QAO)	**4/26- pulled the PFS and corrosion on the board and the ribbon cable that would cause the torque sensor codes to set.**	**3/25- pulled EFF & stored data, shipped to QAO for analysis. No damage to the TS harness, but found corrosion in the 2-pin connector**	
FR-0437	C200D-49	B9A	EPP	in process (QAO)	4/26- confirmed double start-up regulator SW issue	**4/15- pulled EFF and stored data shipped to QAO for analysis**	
FR-0438	C200B-2F C200C-2F	B9A BD0-BD3	TS	in process (QAO)	4/26- confirmed double start-up regulator SW issue	4/15- pulled EFF and stored data shipped to QAO for analysis	
FR-0439	U3000-49	BA4,BA5,BC2	EPP	in Eval (QAO)	5/3- confirmed Kemet capacitor C154 issue	**4/15- pulled EFF and stored data shipped to QAO for analysis**	
FR-0441	TC lamp on	C1B00		At WPAC	4/20- found this a hybrid where the ABS SW was change to prevent a false SWA code.	4/15- pulled EFF and stored data, no codes set. Checked history no other parts installed	

FR-0442	C200D-49	B9A	EPP	in Eval (QAO)	**5/3- confirmed double start-up issue for the update SW micro/reg issue**	4/15- pulled EFF and stored data shipped to QAO for analysis	
FR-0443	U3000-96	cannot be tested	TS	At WPAC	4/15- found the plastic on the 3-pin connector completely broken and terminals bent, 2-pin conn also broken. Cannot get the connectors on to test.		
FR-0445	C200B-2F C200C-2F	BD0-BD3	TS	in Eval (QAO)	4/29- confirmed double start-up for regultator issue	**4/15- pulled EFF and stored data shipped to QAO for analysis. No damage to the TS harness**	
FR-0447	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- confirmed double start-up issue	4/21- pulled EFF and stored data shipped to QAO for analysis	
FR-0448	P07AE-09	AF1	NVH	in Eval (QAO)	5/10- passed all the EDF/NVH testing and performed teardown with no damage or out of spec dimensions on the internal parts. NPF with analysis.	**4/21- pulled EFF and stored data shipped to QAO for EDF/NVH testing slight stiffness turning input shaft stop to stop**	
FR-0449	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- water ingress EPP 2-pin connector, corrosion on the PFS board near the ribbon cable connection	4/21- pulled EFF and stored data shipped to QAO for analysis	
FR-0450	C200B-2F C200C-2F	BD0-BD3	TS	in process (QAO)	6/13- confirmed double start-up issue	4/21- pulled EFF and stored data shipped to QAO for analysis	
FR-0458	C200B-2F C200C-2F	BD0-BD3	TS	In process (QAO)	6/13- confirmed double start-up issue	5/9- pulled the EFF data ship to QAO for analysis.	
FR-0460	TC Lamp On	No Codes		will ship to Columbus warehouse	5/9- tech installed the EPAS gear same condition with the TC lamp on with yaw codes found defective RCM reading from the roll stability control module in the RCM		
FR-0461	TC Lamp On	No Codes		in storage at 26mile	5/9- will ship to 26mile for storage, advised if Ford would like to install on vehicle to verify TC lamp on, they can pick it up anytime for testing		
FR-0462	U3000-49	BA4,BA5,BC2		in process (QAO)	6/10- found Kemet Cap C154 cause code to set	5/9- pulled the EFF data ship to QAO for analysis.	

FR-0463	no assist at times	no codes		shipped to Columbus warehouse	5/9- wrong gear sent back not the original gear that was listed at the plant(ECU s/n# 102722001C3005D 9/29/ 2010 ECU build date) and the EPAS s/n# date codes are newer than the vehicle build dates so a newer gear was returned to the WPAC center. No codes or problems with this returned gear.		
0KM BR154043		BA4,BA5,BC2	EPP	In Eval (UK)	**3/15- has confirmed that in May 2011 a new vision system will be installed as the PCA to check for proper weld. This is estimated to get into QAO in Sept.** **3/21- Geoff jacks and Kinmball Rep will visit Kemet in early June to verify vision system operation.**	**10/25- next to measure the 2.5V ref using CANape. Run the unit without ignition cycling. Report back to Geoff on the results** **11/10- Pepe to repeat the measurement while measuring these points:** **1) 2.5V ref at Monitor Micro (as on previous traces)** **2) 2.5V ref at Aux ASIC (the other side of R72)** **3) The VSW supply to the ASIC** **11/17- Pepe did perform tests and did notice some spikes in the 2.5v ref. voltage waiting for Geoff to respond.** **12/13- Pepe to perform 2.5v testing on known good unit to compare results with this ECU.** **1/10- Pepe will send Geoff the information on the testing so they can check against the EPP FR0326 in the UK.** **1/14- testing is still on-going at UK for faults.** **1/31- Pepe will check C154 Cap for internal opens**	
0KM BR145302 RUA# 4240	TC lamp on C1277	E30	EPP	In Eval (UK)	**relay tested and tear down with no trouble found, contacts clean after analysis.**	**9/22- When the ignition key is turned ON, the Gear assistance delays for around 2 to 3 seconds. There is a code set in the ABS module (C1277) related to the steering wheel sensor angle. Izaguirre thinks the faulty part could be the Gear. I checked this Gear and found E30 link relay open circuit or retry.** **9/24- when gear arrives resistance test then use 5amp load and check resistance again.** **10/4- gear still at plant, has not been shipped at this time.** **11/8- has been ign. Cycled cold NTF, next to resistance test & 5a resistance test.** **12/10- perform the resistance tests if ok ship to Tyco for next workshop.** **12/13- resistance test passes testing, wait for UK to give the OK to ship to Tyco.**	
0KM BR102838		BAA, BAB,BAE, B9B, C69	EPP	In process (QAO)	**7/29- HSAP sending gear back to QAO for U3000-96, failed in prerolls station. Confirmed R227 high resistance.**		
0KM AR406647		BAA, BAB,BAE, B9B	EPP	In process (QAO)	**7/12- Anting to submit 8D this week on mechanical stop out of adjustment at vacuum station that was contacting the board damaging R227.**	**6/15- QAO to complete level 1 & 2 testing when gear arrives from HSAP** **6/18- QAO found damaged open R227 resistor , ship to Kimball.** **6/21- have presentation and suspect root cause from Anting.**	
0KM AR430358		B9B,BAA, BAB	EPP	In process (QAO)	**7/8- confirmed high resistance at the R227.**	**7/7- In process to QAO for evaluation, check R227 resistor for damage.**	

0KM BR109457	No start	No Com	EPP	In Eval (UK)	**10/15- decoded EFF data found excessive 33v on the battery term. . Unknown where the high voltage source came from. 11/1- Ford investigating anything in the plant that could cause this CAN spike. 12/6- had intial abs issue at pre-rools at plant but code cleared not parts installed. will keep in pending to**	**9/17- The VRT reported a vehicle found in the yard because it did not start the engine. There were noticed that when the Gear was disconnected the vehicle started without problems. So, the vehicle was taken to the repair area inside the building. I met the VRT analyst Izaguirre in the repair area. Izaguirre could not to get communication with the Gear. The conclusion was the problem is with the High Speed CAN in the Gear EPP circuit. As soon as another witness Gear was connected the vehicle worked fine. 9/24- indication of CAN HI & LOW shorted, check for something on the rails then check every IC to regulator. 9/27- testing on this shorted regulator IC12 leading to level 3 analysis to be performed in the UK. 10/4- just arrived in UK today 10/6- confirmed input to regulator has gone short circuit, more testing needed on that circuit.**	
0KM BR218079		B9A	EPP	In Eval (QAO)	**12/20- arrived in QAO for testing found double start-up & all criteria leads to regulator issue found out this unit has SW FB2AMFB2 and the new SW fix for the regulator is FB2AMFB3. emailed the SW group in the UK to get all the SW versions and dates so I can get dates going into QAO.**	**12/20- arrived in QAO for testing found double start-up & all criteria leads to regulator issue found out this unit has SW FB2AMFB2 and the new SW fix for the regulator is FB2AMFB3.**	
0KM AR661730 RUA# 3682		B9A	EPP	In Eval (UK)	**5/24- motor PCB clearance issue, low resistance to ground between 5v encoder & grd. Plane**	**5/3- ambient, hot ,bully test pass, next cold bully test then performance test. Then hot/cold puma testing 5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.**	
0KM BR167331		B9A	EPP	In Eval (QAO)	**10/25- This is a clear double start-up. this is pre corrective action SW. regulator issue.**		
0KM BR142333		B7E	EPP	In Eval (QAO)	**9/27- found PCB motor cleareance issue Pin 12 to pin 9 at motor PCB has varying resistance found pin 12 too close to the ground plane. Have picture.**		

0KM BR142333		B7E	EPP	In Eval (QAO)	**9/27- found PCB motor cleareance issue Pin 12 to pin 9 at motor PCB has varying resistance found pin 12 too close to the ground plane. Have picture. This is pre-containment gear buid date 9/3/2010. new PCB design change for CD3 is 9/15/2010.**		
0KM BR155342		BD0-BD3	EPP	In Eval (QAO)	**10/15- evidence points to double start up, close as regulator issue. Precontainment on the SW update.**		
0KM BR106781	U3000-49 U3000-96	BC5	EPP	In Eval (QAO)	8/27- confirmed water intrusion, water marks in the CAN and battery connectors; they were ran through the leak testing station, and both parts passed in good condition. Will check with UK for proper EPP leak testing using new 2 & 3 pin connectors to check the integrity of the connector wells.	**8/16 BC5 (repeated four times) and B69. This vehicle has not been verified for water presence yet. FR0135(BC5) confirmed 2-pin conn. Corrosion. 8/23- did not arrived at QAO yet**	
0KM BR600577	U3000-49 U3000-96	B40	EPP	In Eval (QAO)	8/27- confirmed water intrusion, water marks in the CAN and battery connectors; they were ran through the leak testing station, and both parts passed in good condition. Will check with UK for proper EPP leak testing using new 2 & 3 pin connectors to check the integrity of the connector wells.	**8/16- It was found with water in the 2-pin and the CAN socket (please see picture attached). The Yazaki connectors were checked by the Yazaki supplier representative. He did not find anything wrong with them. Currently the Gear and the Yazaki harness are in the quarantine crib. The VRT desicion (Fernando Ulloa) is to send both parts to Ford USA in order to continue the analysis over there about how the water got to ingress in the sockets. 8/23- did not arrive at QAO yet**	
0KM BR109633	U3000-49 U3000-96	B40	EPP	In Eval (QAO)	**9/2- The result of this EPP was also a water immersion through the CAN connector. Confirmed also with Hermosillo that this vehicle was also parked in the lot that had the other damaged vehicles when all the flooding appear.**	**8/23- did not arrive at QAO yet 8/5- The Gear without assistance was removed from the car and I have already shipped it to TRW QOA (FedEx track # 8699 4789 8215. The Gear will be delivered by this Monday 9th. 8/30- testing still on going with no fault found at this time, will talk with Geoff to see if the cover can be remove to inspect for moisture.**	

0 KM (RUA 2878)	No Com	No assist & no communic ation	Ignition Pin Contaminate	No Com	**11/12- QAO still puma testing using pogo pins and regular connectors that would catch contaminate on ECU terminals**	9/17- TRW 26-mile received gear from Chicago plant and confirmed no communication 10/2- material check of the substance on the ignition pin is super glue. Unknown how substance got there. 10/15- checking areas in the process supply line for contaminate(super glue) to drip on ignition terminal. 10/26- Check QAO electrical checks would fail using there connections. find out if an EPP would fail with this	26-mile
0KM AR427443	U3000-49 U3000-96	B7E	EPP	In Eval (QAO)	**8/18- confirmed PCB motor clearance issue closed**	**7/27- just arrived at QAO testing starting today** **8/3- failed the isolation(1000v) test indicating PCB motor clearance issue. Looking to xray before board to make sure no other concerns before motor PCB removal.** **8/9- agreed to remove motor PCB 99% sure motor PCB terminal clearance issue.**	
0KM AR355344 RUA# 3559		B43	EPP	In Eval (Tyco)	**5/28- Tyco confirmed plastic contamination on contact 4 of the link relay.**	**4/6- Link relay voltage is not reaching the working value due high value of resistance between contacts when is relay is closed, when this value should be close to 0. Part is disassembled in order to confirm the relay that is the root cause for B43. Relay that is not working properly is confirmed.** **5/5- week 45- 09 relay, no updates from Tyco.** **5/24- xray clean pass all resistance testing, switching marks on all contacts, slight plastic contaimination on contact 4 that may have caused the malfunction.**	
0KM AR244868 RUA#3030		B3A	EPP	In Eval (Tyco)	**6/7- confirmed motor relay plastic contamination, relay build date 7/6/2009.**	**5/5- week 28-09 relay, black plastic particles on base and bridge of contact# 3. material analysis to check coil base or cover.**	
0KM RUA#3317		B3A	EPP	In Eval (QAO)	**3/13- Tyco confirmed plastic contamination on contact. Close out**	**2/12- Voltage at phase1 never reaches the closed contact status. Further testing** **Confirmes motor relay failure has been declared. relay must be send to TYCO for further analysis.** **2/15- relay has been shipped to Tyco**	

0KM AR369007		BD0-BD3	TS	In Eval (QAO)	**6/23- found on the QAO assembly line possible cause of bent TS finger is christmas tree installer laid on IPA rack when not in use and when TS drops down to operator could cause the bent finger. A new tray was installed to install the tool on 5/25/2010. proper work instruction printed for operator to use this tray**	**4/30- found one bent tooth on the torque sensor ring, small impact mark on the base of the sensor, unknown root cause at this time.** **5/17- QAO working on root cause where tooth bent, checking Rogersville & Hella handling.**	
0KM AR407556	C200B-2F C200C-2F	BD0,BD2, BD3	TS	In Eval (QAO)	**7/8- Angel states this Gear was replaced and sent to the scrap. Unfortunately I could not find it at the scrap crib. For the future cases, if any, I will get an agreement with the Final assy repair area and the VRT in order to remove the damaged harness and to keep them for further detailed analysis**	**6/10- cut TS harness at EPP conn. get the harness under a microscope to understand the mechanism of the failure. talk to Angel to support the VTR team on getting the part to them for analysis** **6/21- Guillermo to check lastest status with Angel.**	
0KM AR390291		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**5/24- in process from QAO to UK** **6/21- checking for regulator issue on this return.**	
0KM AR657700 RUA# 3680		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**3/26- ignition cycled at cold, ambient and hot– The testing consisted of ignition on for 5 seconds, off for 5seconds** **– Torque simulator attached to cause the motor to rotate** **• Ambient 24 hours** **• -20°C 12 hours** **• 90°C 3 hours** **Unit has also been subjected to the following tests:** **– Bully test** **No faults or LICs generated**	
0KM AR354559 RUA# 3681		B9A	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	**4/21- ambient & hot testing done. Next step to hot puma then bully test.** **5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.** **5/24- IC12 5v regulator not coming up at times similar to FR0110. testing ongoing to find root cause of fault.**	

0KM AR265204 RUA#3196	U2011-49	B3A	EPP	In Eval (UK)	**7/7- no updates will discuss in Friday's meeting with Tyco. NTF with testing at Tyco**	**12/9- no faults reproduced, ECU lid removed no optical abnormalies, passed cycling overnight. Next steps vibration testing, Measurements of integrity of relevant signals (Motor Relay Drive, VSTAR etc), Motor relay contact resistance measurements and tomorrow X ray of motor relay** **12/14- Int. code raised B6B on hot Puma test. x-ray clear & resistance test passed. Compare scope traces at point of failure.Hot Puma testing for the next two days until failure. Noise difference between known good relay and this relay.** **1/6- noisey relay stops with known good relay. Advised to ship EPP to Geoff for further testing before shipping relay to Tyco.**	
0KM AR375533 RUA# 3698		B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**	**5/8- (QAO) At PUMA unit was warmed until 100°C, but fault was not repeatable. Some axial movements were done in order to find out fault.** **- Unit is fault cleaned and turned back on. Fault is not present.** **- Ignition Cycling. Fault is not raised.** **- Unit was cold during 24 hours. Fault is not raised.** **5/24--xray clean, tri-temp ignition cycling, bully test , 5amp load testing passed resistance measurement.** **6/7- Tyco received relay testing ongoing** **7/7- NFF with Tyco's testing, will discuss further with Tyco this Monday.**	
0KM AR401390	steering wheel sticking three times while driving at HSAP	No codes	NVH	In Eval (QAO)	**7/7- NTF with teardown, nick on ballnut not the caused from anything in the internal housing.**	**6/21- no codes in fault store, will edf test next. functional data sent out to Ford passed functional data.** **6/22-Gear will be proceed to teardown and report published tomorrow.** **6/25- has been torn down and everything looks normal, no unusual findings. Send pics & report to Ford.**	
0KM- HSAP		BD0-BD3	TS	In Eval (QAO)	3/31Unit has been ignition cycled at all temps. No fault found at this time. Questioned ts harness was disconnected testing gear.	3/9- Bully Test 5 times. No fault found after test repeatibility	
QAO line failure RUA#3616		B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed offset bridge**	**4/22- BBhighX Open circuit on contacts with coil energised --- Old PUMA failure. Shipped to Tyco** **5/5- week 31-09 relay, testing started will report out next week. Suspect offset bridge.**	
QAO line failure RUA#3619		B43	EPP	In Eval (Tyco)	**6/7- Tyco has fishbone process, wire broke during machine term. tension during or after the stress relief while wrapping on the coil holder. Hella to reduce speed & movement of the winding machine.**	**4/22- E30/A30 & BBHighX ----- Open link relay coil --- Recent PUMA failure. New failure mode.I have not seen any open coil in this relays** **4/27- should arrive at Tyco this Thursday** **5/5- week 1- 2010 relay, testing started will report out next week.** **5/12- Perform additional tests more specifically related to finding intermittent open coil.**	

DR-0001	No codes	Int. vehicle pulls left or right while driving feels like wheel wants to turn on its own	NVH	NTF	**10/26- EDF stand pass and tear down gear pictures sent out. To close out with NTF**	9/14- second time in customer feels pressure in the steering wheel and the vehicle will pull one way or another. No codes or message in the message center. Tech cannot duplicate customer concern. Vehicle returned third time. replaced EPAS gear per dealership customer still unhappy with steering on vehicle, customer bought 20 vehicles from dealer, so dealer bought customer out of this vehicle so now dealer owns vehicle drove vehicle over 100 miles with new EPAS gear cannot duplicate. dealer could not duplicate any steering concerns with original gear. tech did not attempt Interactive diagnosis on this vehicle to perform symptom tests. 9/15- submit hot process to dealer to get gear sent back to WPAC 9/18- pulled EFF & Buffer data only code listed A8E(CAN Veh Lat Accel Invalid Fault). Will give the gear to Mike Bahena for on vehicle testing. 9/28- Mike to install on vehicle sometime today for testing 10/1- Mike drove the vehicle and could not duplicate any steering issues, will drive again tomorrow. If nothing is found will pull the buffer data, take to 26-mile to install on EDF stand. 10/12- cannot find any problems on vehicle Mike Bahena to take to 26-mile to install on EDF stand for testing. 10/15- vehicle passed the EDF stand testing, next to teardown for inspection.	Dearborn
DR-0002	No codes known at this time	Noise from EPAS gear all the time turning the wheel	**NVH**	water contaimination	**10/26- gear tear down and water contamination in pictures sent out to Ford team. Close out due to cut bellow removing bubble wrap on pre-delivery gears.**	9/17- gear hot processed back to WPAC 9/24- gear arrived at WPAC yesterday pulled EFF & Buffer data, no codes, gear has visible cut boot damage, take gear to 26-mile, Mike Puleri wants to be present for teardown. **9/28-** preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation. 9/28- preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation. 9/30- bellows removed and some rust spotting noted need to get Harold to teardown entire gear and take pictures to send out.	26-mile
DR-0003	No Com	No assist & no communication	EPP	In Eval (FSL)	**10/6- Geoff has received 8D just need to clear up some minor concerns to close this out.** **10/15- FSL sent new version 8D to Geoff he will look over the 8D to confirm it is good enough to send out.** **11/1- just need clean dates into Kimball to close out 12/16 need clean dates at Anting**	9/21- gear will not be returned, tech found poor ignition feed connection at the 3-pin. Unknown what the cause is 9/24- tech could dupicate the no com after 35 miles of driving, to return vehicle to customer. Advised the tech to replace the gear per harness testing passed. When backorder gear comes in tech will call to hot process gear back to WPAC 10/1- submittted the hot process request form. 10/12- pulled EFF & Buffer fault data, has communication 10/15- no com repeatable during ignition cycling, micro not starting up properly, going to UK for additional testing. 10/23 all voltages to the hardware of the micro working properly at this time. 10/26- get with the micro experts & FSL to proceed on next step testing. 11/3- need to consult the micro expert for next step testing, currently micro expert working on FR0027(No Com). Will get to this return next week. Work to ongoing. 12/14- Put original code back in and perform ignition cycling to duplicate failure 1/7- testing ongoing, still cannot duplicate no com. 1/11- Next step to modify application now starting to fail again, using Vector boot code to send out information. 1/29- with John micro expert leaving UK will need to find other option to contiue work. Outsourcing could be other	UK
DR-0004	C200B-2F C200C-2F	BD0-BD3	EPP	In Eval (UK)	**7/7- has double start-up issue considered a regulator/micro issue. Need timing for the SW fix**	10/30- picked gear up from WHQ garage, pulled eff/buffer fault data and dropped off at 26-mile for testing. 11/11- Jim Loria to start testing this week. 12/14- Jason check with Jim Loria latest updates on analysis 1/11- ignition cycle for 24-48 hrs to try to duplicate, may need vibration test. Need information from Jim what has been tested up to this point. 2/10- add temp cycle-ignition test info when Jim gets back to 26 mile. The plan is to read the fault codes to see if a sensor code was logged during testing	26-mile
DR-0006	U3000-96		Non-warranty	Customer Damage non-warranty	12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.	11/20- Submit hot process request 12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.	

DR-0007	C1B00-2F	No Com	EPP	In Eval (26mile)	3/22- Concluded CAN system wiring issue on vehicle based on testing found numerous CAN codes & EFF data. ABS module has ABS CAN code U0131(no com with PSCM). EPP tested with no problem found and mech. gear check for belt slip and no problems found.closed claim d	12/10- Submit hot process request 1/7- No communication with Canape, pulled bus data had 5 can bus codes. Ship to 26mile. 1/25- no faults on bench was able to get into ECU with no problems also looks like tech have cleared codes. next inline for ignition cycling. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. If all electrical testing is NTF do all mechanical testing check put on EDF stand, check belt slip check other parts for exceeding rack travel(A29) 2/8- CARS written and inline waiting for EDF stand for testing. 2/22- all EDF test stand data came back normal and no codes latched, send to teardown to check for any belt slip. Send information when testing done so we can close out	
DR-0008 RUA# 3697	No Com	BC2	EPP	In Eval (UK)	1/11- sent 8D to Ford for analysis will keep in pending until I get a response.	12/16- Submit hot process request 1/8- could not communication with ECU, shipped to 26mile 1/25- needed to unlock CCP, looks like dealer cleared codes serveral times. Ignition cycling over the weekend cannot reproduce any issues with no communication. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. check my equipment for communication, check compare date code with 85 & 27 epoxy & resonator issues. 2/8- Simon will decode EFF data to see if torque sensor code were all set at the same time, of if we need to list as torque sensor return. 2/22- This is a BC2 code looking for diagnostic help from Geoff on next steps. 3/8- Simon sent fishbone to start testing, discussing sending gear to QAO for Sergio to test. 3/19- send gear to QAO today for analysis. 4/9- sent EFF data to QAO & fishbone for testing. 4/19- has been bully tested 5 time and hot, ambient, & cold tested with no failures at this time. 4/21- Geoff advised to get xray of Epp at a certain angle, Samuel needs to consult Geoff on location of capacitor then QAO needs to find new xray supplier. 4/26- shipping EPP back to 26mile to xray internal capacitor 5/3-Andy shipped EPP to 26mile for xray 5/7- Geoff explained to Mike F how to xray EPP	
DR-0009	U3000-61 U3000-96	B99	EPP	In Eval (26mile)	3/18-waiting on Mike B to get the Magna test profile or detailed information that raised the B99 fault so Abe has a starting point.	1/4- Submit hot process request form 2/9- inadvertantly shipped to some supplier in the mid-west (somebody screwed up the shipping docs.). It is coming back to me, and will be rerouted to WPAC. 2/10- Vic has received the gear back today and will ship to WPAC 3/2- Pulled EFF/Buffer data Greg Bendzinski to pickup gear and return it to 26mile. Upstairs in lab	
DR-0011	C200B-61 C200C-2F U3000-96	BD3,B90	TS	In Eval (Hella)	**3/26- damaged clock spring due to improper IPA reworked, IPA was manual centered here at QAO without special tool. 8D in process** **4/19- Rob M. agreed needs poke yoke system to make sure tech is using the proper tool for tear down. PCA target date Aug/Sept. 2010**	2/3- submit hot process request 2/12- Pulled EFF/buffer data. Has codes B90 & BD3 then set C69. shipped gear to 26mile 2/19- should arrive in QAO on 2/22 2/23- confirm TS issue should arrive in QAO on 2/22 3/3- fault reproduced while turning the input had known good harness & hella test box to confirm TS was the cause. Rogersville received the TS today will test when line is converted to D3 before sending to Hella. 3/5- passed testing at Rogersville, they discussed this concern with Jim Loria and advised it is possible to pass with this type of short. Rogerville will ship to Hella 3/8-Rogersville shipped TS out to Hella. 3/15- gear arrived in Hella this morning, testing started 3/22- 8D submitted to Ford overwinded and bent FFC & Plate protection broken in clockspring. 3/24- discuss areas of potential losing center position. At Rogersville? QAO & during analysis. Need to incorporate test during analysis to check clockspring out of position.	

DR-0012	P07AE-09	AF1	NVH	customer misuse	3/3- teardown did find warped housing and bent rack, submitted pics to Ford to confirm curb impact.	2/5- Pulled Eff & Buffer data, gear binds when you turn input shaft to the right. Ship gear to QAO 2/8- vehicle impacted curb but Ford wants to see EDF test results and teardown at 26mile- 2/9- Jason will followup EDF testing & teardown. Inline waiting for EDF after DR0007 is tested. 2/22- failed EDF test stand right away with high torque reading, could see bowed pinion housing Jason to send out EDF data to Ford. This is a warranty return checking to see if we chargeback the dealer. Need to teardown gear for complete details of impact.	26mile
DR-0014 RUA#3540	U2011-49	B3A	EPP	In Eval (26mile)	5/5- confirmed offset bridge, week 24 relay	2/26- submit hot process request form to dealer 3/15- pulled EFF & fault data, ship to 26mile for analysis. 3/22- need to leak test today 4/6- xray looks like offset bridge, do hot puma testing then raise RUA and sent to Tyco. 4/9- xray indicates offset bridge also failed resistance check, sending relay to Tyco today.	
DR-0015		BD3,B90	TS	In Eval (Hella)	**4/6- confirmed overwound clockspring same as DR0011. have updated 8D using separate centering tool for D-car gears**	3/1- submit hot process request, to pickup gear at garage 3/5. 3/5- picked up gear and dropped off at 26mile pulled fault & EFF data. 3/15- able to duplicate code turning gear to the end of travel, testing does indicate torque sensor need to hook up test harness & hella test box to confirm. 3/16- Jim has confirmed there is an intermittent problem with the Torque Sensor on channel 2 while turning input shaft to end stop. Shipping to Rogersville tomorrow. 3/19- gear is at Rogersville, need to bench test then put on line when line changes next week. 3/23- QCCAR #374081 issued for TS shipping out to Hella. 3/29- arrived in Hella Friday should have results by TS meeting this Wednesday 3/31- we believe this is the same case as DR0011 damaged clock spring due to improper IPA reworked, IPA was manual centered at QAO without special tool. 8D in process. Hella has pictures	
DR-0016	P07AE-09	GRINDING NOISE FROM RACK	NVH	At Oakville	4/30- tech states he found boot had a slice like a razor blade causing the water intrusion similar to other early build gears that were shipped to plant in bubble wrap.	3/10- talked to tech found orange water in the drivers side ITR boot, did not notice any damage to boot will inspect boot better after gear is replaced. 3/18- talked to PM to hot process the part back, Vic Matckar will not return until mar.22 to request gear back from dealer. 4/21- still trying to get gear sent back from Oakville, confirmed bellows sliced, see tech comments on 3/19. 4/28- talked to Vic Matckars and they cannot locate the gear, they think the gear was scrapped at WEPEC. From the information this gear will not be returned. The new hot process request now in place will have the dealer send the gear directly back to the WPAC instead of sending the gear back to Oakville then to WPAC.	
DR-0017	C1B00-2F U0428-00	AD9		In Eval (26mile)	4/12- Mike Bahena states "this is an Active Park Assist vehicle meaning the relative SWA comes from the SASM in the steering column and not the steering gear. This explains why the A29 is raised and not the A19 (Invalid RSP). A29 is based on the offset signal from ABS inaddition to rsp, whereas A19 is only based on RSP. It also means that the dealer improperly diagnosed the problem and incorrectly replaced the steering gear. I fully expect this problem to come back if the SASM was not replaced. The AD9 code indicates that the gear detected Invalid data from the	3/22-submit hot process request gear back to WPAC 3/29- pulled eff fault data shipped gear to 26mile, vehicle has a separate SWA sensor with auto park. Unknown if tech found wiring issue after installing new gear. This would be good for on vehicle test. (check customer verbatims).	

DR-0019 RUA#3679	U2011-49	B3A	EPP	In process (Tyco)	6/7- confirmed offset bridge- week 24 precontainment. Will get bigger xray pic.	hot process gear back to WPAC after replacement 4/26- pulled EFF buffer data, shipped gear to 26mile for testing. 5/5- xray indicates offset bridge, check resistances, need to raise RUA then ship to Tyco. 5/12- sent out to Tyco for analysis.	
DR-0020	P07AE-09	AF1	NVH	In Eval (26mile)	7/12- sent Ford the teardown report wo/pics file was too big. Mike B looked over report and advised to close.	hot process gear back to WPAC after replacement 5/3- pulled EFF data, shipped gear to 26mile for testing 5/7- leak test today, then EDF test stand testing 5/17- Leak test passed, EDF failed terribly. Ron said the rack bar is extremely bent in the BNA area. Could not run power ON tests. Could not run power OFF free pinion torque because it was too high. Power OFF mechanical friction was ~3kN. Gear is upstairs now awaiting teardown. Will be a couple days due to current gears in cue already. ITR's looked perfect though, no signs of over travel or bending. 6/4- confirmed bent rack, Jason to sent out Harold's teardown report.	
DR-0021	C200D-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	4/19- Found damaged TS harness, cut wires. Have pics. Sent to Ford eng. with vehicle information.		
DR-0022	C200D-49	B9A	EPP	In Eval (UK)	1/11- Anting started to use the alignment fixture 12/10/2010 adds 43 seconds to the station. The EPP's should arrive into QAO approx 1/28/2011.	4/16- sent out hot process request 5/3- pulled EFF & Buffer data, shipped gear to 26mile for testing, 26mile will start the testing hot/cold ign. Cycling 5/7- leak test today, then will start tri-temp testing 5/11- Leak test passed. Was brought upstairs Friday I believe. Need to confirm w M. Taylor 5/17- undergone testing that indicates a ribbon cable failure- sending to UK for further testing. 6/28- motor ribbon cable insertion process, bent terminals in connector, new design insertion tool in testing phase at this time. 8/16- target date still set for the beginning of December 2010 for all plants to be online with alignment tool.	
DR-0023	clicking noise turning wheel	N/A	NVH	In Eval (QAO)	10/12- new power supply supplied by Mapro, now EDF machine back up & running. 11/29- passed entire EDF test with NTF, check to close claim. 2/8- Ford finding that the hub bearing replacement or torque the hub bearing bolt can fix the clicking noise, TSB is in process and should be complete soon.	5/24- did not notice any damage to the gear or boots. Turning input shaft is smooth with no noise that I noticed. 6/7- make sure after leak check to put on NVH test, QAO can use Audit rig for testing then put on the EDF tester 7/26- arrived at Rogersville in process to QAO 8/16- leak tested checking QAO for latest update. 10/6- has EDF test been completed? 10/11- power supply for the EDF machine damaged, supplier from Netherland found issue with internal component, specialty component not sure of repair at this time. QAO sent back-up PS to Marion, Marion sent their's in for repair. Pepe will check with Sergio to see the status of the one sent to Netherland for repair.	

DR-0024	Clunk snapping noise while turning wheel		NVH	In Eval (26mile)	8/16- passed all NVH & EDF testing. NTF 2/8- Ford finding that the hub bearing replacement or torque the hub bearing bolt can fix the clicking noise, TSB is in process and should be complete soon.	6/21- no codes pulling EFF or fault data, good chance tech mis-diagnosed vehicle returned 3k later with frt. Wheel bearing noise while turning & replaced RF bearing to fix. Can perform NVH & EDF test. Can chargeback steering gear if all tests pass. 7/12- Mike F to follow-up on lab doing NVH test & EDF testing. 7/27- Jason wrote the ETR and brought it to the lab this afternoon.	
DR-0026	noise turning steering wheel	metal to metal noise coming from gear	NVH	At WPAC	8/3- 2011vehicle. gear at WPAC took pictures and sent to Ford, hole in boot unknown how hole got in boot. Ask Ford if they want the gear for inspection.	6/21- checking inventory for new 2011 D3 gears, so I can hot process gear back. 2011 MKT w/APA. 6/22- still checking to see if QAO can send new 2011 D3 gear out to dealer. 7/12- talked to tech found out OBH boot had hole in it a water came out causing the scraping metal noise. Also dealer installed wrong M/Y steering gear on vehicle installed aa5z-3504-je and should be aa5z-3504-ke or ne. advised Ron SM of this issue to change gear when parts are available. gear hot processed back to WPAC	
DR-0030	pop squeal noise turning	No codes	NVH	In Eval (Gates)	9/15- TRW 8D sent to Ford, Tim snider had question about laser system to insure edge trim forward email to Randy Hazell. 9/23- Gates confirmed that the 8D did not have a suggestion for using a laser to insure edge trim integrity. In the PowerPoint slides they did discuss the position sensor and additional	7/9-Pulled EFF data, no codes, could feel slight bind in gear, ship gear to 26mile for analysis. 7/26- arrived at Rogersville in process to QAO 8/20- found belt damage inside have pictures, unknown cause. See what Ford wants to do with the gear. 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford. Sam to overnight belt back to 26mile let Gates engineering check belt. 8/27- Gates engineers took belt back to plant in US to measure center to center to check for belt stretch. Then will be sent back to their UK plant for final analysis. 9/1- Gates testing did verify issue with belt sent belt to UK for level 3 analysis.	
DR-0031 RUA#3933	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	9/27- discussions with Ford on this EOS on the power module issue we agreed to fully decode the EFF data to get all the details when the FET failed. 10/15- details not that helpful, 200 seconds into the journey at 50 kilometers	7/28- pulled EFF data, also has BAD code that set once with B25 8/19- The data shows that Phase 3 top and bottom FETs are short circuit. Power module is having short circuit between V0 and V link terminals. PM will need to be returned to Fairchild in Suzhou, China. 8/26- Mosfet power pack shipped to Fairchild in China. Tracking number is: 9373 7350 7806 9/1- still need 8D update from Fairchild TRW to visit facility and check on this issue. 9/16- power module root caused as EOS by Fairchild. I have 8D available.	
DR-0032	clicking noise turning wheel	No codes	NVH	shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC	7/28- checked data found out after the steering gear was replace vehicle had the same noise, cannot chargeback hotline advised to replace the gear. Found RF shock and knuckle assembly fixed the noise. Case closed	
DR-0034	TC lamp on	No codes		shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC	8/6- pulled EFF data, no codes in the EPAS gear. This was dealer mis-diagnosis read the dealer comments.	

DR-0035	C200C-2F	BD3	TS	In Eval (QAO)	12/1- QAO rechecked the EPP at 120 deg C with no failures. NTF at this time. 12/8- all the testing in the fishbone has been complete with NTF. QAO,26mile & Hella has exhausted all testing and could not find any cause or sign of a potential root cause. will put in pending until we check of any other potential tests that can be run.	8/23- pulled EFF & fault store data and shipped to QAO for analysis 8/27- gear shipped on Rogersville Friday truck to QAO. 9/1- gear passeed leak testing also could not duplicate any codes with ambient ign. Cycling will continue with cold testing. 9/8- still cannot duplicate any codes, bully & performance tested. Finished cold ign. Cycling. 9/22- QAO exhausted testing at gear level, TS team in 26mile looking over testing data to decide if QAO can perform any more testing or gear should be shipped to 26mile for tri-temp testing. Unknown when shipment will arrive for tri-temp oven to QAO and when will it be set-up completely for testing. 9/24- FED EX torque sensor & harness to 26mile for testing today. 9/27- TS & harness arrived at 26mile today. 9/29- 26mile ran TS with power all night NTF now put in tri-temp chamber for temp cycling to see if any codes set. 10/4- tri-temp ign. Cycled for 2-day with no problem found. Joel to x-ray harness. Jim to check TS for further testing. 10/27- shipped TS to Rogersville to remove the shaft then ship to Hella for testing.	
DR-0036	U2011-49	B3A	EPP	In Eval (26mile)	9/15- sent earlier 8D to Ford on similar issue back in May. Check to see if we can close out.	8/20- pulled EFF & fault store data and shipped to 26mile for analysis. 9/9- confirmed offset bridge with xray, to tear out relay to get date code. 9/13 why was this shipped to Ford with post containment if this was an offset bridge.	
DR-0037	snap noise while turning	No codes	NVH	In Eval (PDC)	10/20- EDF & NVH all passed on the gear, found out that the steering gear did not fix the clicking noise in the field, vehicle returned and the dealer replaced the struts & upper strut bearings to fix this noise, claim closed.	8/20- no codes, snapping noise while turning under heavy load. Did not notice any noise while turning input shaft. Ford to put On-vehicle for noise test. 9/2- delivered gear to Tim Snider at PDC 10/6- This gear is still in queue to be EDF tested. need to write an ETR for it and we should have it tested by the end of the week if not sooner. Nick Borgerding will send results as soon as possible.	
DR-0040 RUA#4150	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	11/29- similar test readings to a raised rivet but the rivet is not raised. crosssection contact 5 shows openings between the leadframe and rivet, close as raised rivet.	10/5- pulled EFF & stored data, TS harness melted by tech using torch to remove gear hold down bolt near the IPA. 10/8- gear passed leak test taken upstairs for xray 10/22- xray clear, tri-temp testing over the week-end, John to check results. 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop	
DR-0042	clicking noise turning wheel	No codes	NVH	In Eval (QAO)	10/18- passed leak test, sent to lab for EDF/NVH testing. 2/1- confirmed to close due to other hub & strut issues causing this noise	10/5- did not notice any noise from gear and no codes in fault store. Ship to QAO for analysis	
DR-0043	Int. TC lamp on while turning	No codes		At WPAC	11/15- pulled history on vehicle, tech replaced the PSCM TC lamp still came on during left turns, tech replaced the IC to fix vehicle. NTF with PSCM		
DR-0044 RUA# 4329	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	12/8- in process to UK from 26mile 2/14- confirmed PCB motor clearance issue	11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/11- non powered measurements such as across the phases and possibly the motor PCB. This way, if we can confirm the is a relay problem with the population, we will not destroy or change any evidence by operating the contacts.	

DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions	12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness.	
0KM- Chicago	U3000-49	BAA,BAB, B9B	EPP	In process (QAO)	8/16- confirmed high resistance on the R227 resistor.	8/10- possible R227 issue at the chicago assemby plant. Contain EPP's at QAO between 4/26-5/10	
0KM- Chicago		BAA, BAB, BAE, B3A	EPP	In Eval ((QAO)	7/14- confirmed R227 high resistance &	6/4- able to reproduce the code at 60-70degC 6/7- using PCB test software will not fail, Geoff to check PFR and decide next steps 6/10- issue with VSW supply, R227 measures open circuit. C17 observed to be missing	
0KM- Oakville ABJ28087		B7E	EPP	In Eval (QAO)	5/24- confirmed short on the motor PCB clearance, will be added to the Nidec 8D	waiting on next steps	
0KM- Oakville ABB14285		BD2	TS	In Eval (QAO)	4/1- IPA clockspring damage to ribbon cable, moving gear full CW will raise code BD2. TS has been recirculated at QAO	3/31- in process of evaluation	
0KM- Chicago AG160762 RUA#3558		B3A	EPP	In Eval (Tyco)	5/12- Tyco confirmed raised Rivet	4/13- - As observed Phase 1 and phase 2 do not reach the Vlink level after power up, swapping exercise - The problem does not travel with the ECU problem travels with Motor Relay. Path 4-5 open NOK. Path 3-4- 0.1 ohm OK Coil resistance-170 ohm, Contact 5 not closing.	
0KM- Oakville ABJ28087		B7E	EPP	In Eval (QAO)	5/24- confirmed short on the motor PCB clearance, will be added to the Nidec 8D	waiting on next steps	
0KM U502 102941920 F30238		BD0-BD3	TS	CAP	gear sent back to MAO for analysis and found defective TS harness during the swapping exercise found cut open lt green & black wires, causing all the TS codes to set. Looks like harness had impact mark on the conduit, also has damaged 3-pin plastic connector.		
UR0016	TC lamp on	no codes		At WPAC	4/26- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change		
UR0017	TC lamp on	no codes		At WPAC	4/29- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change

	This Saturday 8th, AXIS (the company in charge of the sales yard) reported a vehicle that had lost the Gear assistance. The VRT analyst G. Izaguirre went to AXIS to check this car. When the vehicle was turned ON the assistance was back. Izaguirre drove the car to the Final assy repair bay where I met him to review this case Vehicle rotation # 5310 / VIN : AR[redacted] EPP # 100841177J30494 / Build Julian date : 124									
	1. When the steering wheel became stuck, what did the driver do to unstick it? The driver did not do anything, the steering got unstuck it hen he stopped 2. Did the steering wheel become stuck in a turn or while driving straight? The steering got stuck in 3 times, 2 in a curve and 1 in a slight curve. 3. If this happened in a turn, approximately what angle was the wheel? 1st time= -30°.....2nd Time= 30°..... 3rd Time= 5° 4. Driver reports the steering wheel was stuck at least three times. Were the driving conditions the same each time it became stuck, and did the driver do the same action each time to unstuck it? Yes, the driver did not do anything to unstuck it, he said he tried to unstuck it putting force in the steering wheel with no success, until the third time putting this force the steering was released.

	CONCERN: NO POWER STEERING AND LIGHT ON IN MESSAGE CENTER AND TRAC LIGHT ON ABS AND BRAKE LIGHT ON. TECH STATES THAT HE FOUND THAT THE PSCM, C-CM, AND HCM DO NOT COMMUNICATE -TECH FOUND AN OPEN IN THE HS-CAN CIRCUIT VDB05 BETWEEN THE DLC AND THE PSCM -SEEKING GUIDANCE ON HOW TO NARROW DOWN THE LOCATION OF THE OPEN. ADVISED TECH TO ATTEMPT TO NARROW DOWN THE LOCATION OF THE OPEN BY CHECKING CONTINUITY BETWEEN THE MODULES AND JOINT CONNECTORS IN THE VEHICLE. THE JOINT CONNECTORS MAKE IT EASIER TO BREAK THE NETWORK INTO SECTIONS FOR DIAGNOSIS -SINCE THIS VEHICLE IS NEW, THE CONCERN IS LIKELY RELATED TO A PUSHED OUT OR BENT PIN WHICH OCCURRED DURING ASSEMBLY OR TRANSPORT. THE PSCM FAILS THE NETWORK TEST. TODD PLEASE DISCONNECT JOINT 9 AND THE PSCM AND LOAD TEST THE NETWORK CIRCUITS FROM JOINT 9 TO PSCM. IF THAT PASSES THEN WITH THE PCM DISCONNECTED I'D LIKE TO LOAD TEST THE NETWORK THROUGH THE JOINT CONNECTOR TO PSCM. IF THAT PASSES INSPECTION PLEASE INSPECT THE POWER/GROUND/NETWORK TERMINALS FOR LOOSENESS OR PUSHED BACK TERMINAL. IF NO ISSUES ARE NOTED TO LOAD TEST THE PSCM PWR/GRND CIRCUITS WITH A			12307 Deacon Jones Ford	30			2LMHJ5AT8AB[redacted]	11/18/2009	10/27/2009
	RPT ON CAUSE OF NO POWER STEERING TOWED IN CHK NO POWER STEERING ASSIST PERFORM POWER STEERING SYSTEM DIAG INTEGRATED WITH IDS ON LINE RECEIVED 43000:96 C8 U3000 61 48 PSCM INSTRUCTED TO REPL PWR STR GEAR ASSY RE RE PWR STR GEAR ASSY CHK CAST/CAMB TOE OK ROADTEST OK I suspect that there is a flaw in the Active Park Assist SW that was exploited by the Magna testing, but I don't think this is an issue we are seeing in production with Valeo. I suspect that Magna used the Angle control in a subtlety different way than Valeo thus exposing the issue. The likely of a true monitor failure is very low and because this occurred in a cobbled vehicle I think it is an issue we need to study and understand, but not consider a true field APA failure. I will work to understand if any data traces from Magna exist that can help us.			A1005 Colony Ford	845			2LMHJ5AT8AB[redacted]	8/31/2009	8/1/2009

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	Gear location	Report State	Verbatim	Assigned To	Root Cause	P&A Code/ Dealer Name/ Dealer State	Miles
0KM BGA32423	U3000-49	B25,BB8,B95	EPP	In Eval (26mile)	5/25- Anting has made some changes to the PS tester to prevent some spikes. Last week Anting sent their PS back to the supplier to get modified to totally prevent any hign voltage spikes at start-up. Lead time 3-5 week around 6/17 for return on rig 2. after that is returned they will send	3/22- arrived at 26mile today, pulled EFF and stored data, will send out the data to find next steps. 3/28- confirmed that the FET is shorted in the PM, John measure a short across the phases. Andy Partridge will report out in							
0KM BGA56776		B25,BB8		MAO	5/25- Anting has made some changes to the PS tester to prevent some spikes. Last week Anting sent their PS back to the supplier to get modified to totally prevent any hign voltage spikes at start-up. Lead time 3-5 week around 6/17 for return on rig 2.	4/25- PM failed, PH2 is found shorted to 0 volts and Vlink							
UR0019	C200B-2F	BD0,BD2	TS	In Eval (MAO)	5/18- - Improper MOLEX connector insertion during assembly process, but no physical defects with molex connector on sensor or TS harness connector. Investigate further operator training. Molex conn. Reinstall and function test IPA. 5/23- reinstalled connector gear passed all testing	5/13- pulled stored & EFF data from the gear no TS harness damage. Shipped gear to MAO from WPAC						02058 Beechmont Ford	13
UR0020 RUA# 4743	U2011-49	B3A	EPP	in process (UK)	5/24- Scope traces indicate a motor relay failure. EPP serial number is not found withing suspicious EPPs due to contamination. Surrogate relay test then ship to UK to forward to Tyco for further analysis in week 24 workshop	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level 3						05126 Gary Crossley Ford	4475
UR0021	U3000-49 U3000-96	BAA,BAB, B9B,BAD	EPP	in Eval UK	5/24- Faults raised each cycle. R227 discarded as a root cause. Vsw circuitry working fine.PCB software found that Bridge enable line is disabled periodically. Ship to UK for further testing	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level3						03073 Mullinax Ford	3735
UR0023	TC Lamp on, U3000-49	AE0		In Eval MAO	6/6- Laura to check with Rob Kostadina on history of AE0 code	5/20- pulled data found several can bus codes. Unknown if any would cause the TC lamp to come on.						06700 Magic City Ford	5155

UR0024 RUA# 4827	U2011-49	B3A	EPP	In process Tyco	6/8- shipped relay to Tyco for relay workshop next week	5/25- surrogate relay test, raise RUA ship to UK for week 24 workshop						06081 San Francisco Ford	14
UR0025	U3000-49	B25	EPP	In eval MAO	6/10- this is not a shorted FET issue according to the EFF data. Cannot duplicate the issue at this time.	5/26- pulled stored & EFF data shipped to MAO for further testing						20609 Orange Motor Co	8
UR0026 RUA# 4809	U2011-49 U3000-96	B3A	EPP	In process MAO	6/9- shipped relay out to Tyco for relay workshop next week.	5/26- pulled stored & EFF data shipped to MAO for further testing, motor build date 8/30/2011						02694 Dean Sellers	3754
UR0027	U3000-72	A30	EPP	in process Tyco	6/13- to check the history on this vehicle to see if it returns with the same code & symptoms for high voltage issue. Sergio to remove the link relay and send out to Tyco for analysis.	5/26-Found out vehicle had a battery voltage code 3003, U0100 CAN BUS code ECU/PCM A code from unknown module. Checking history 5/31- all the codes came from the PSCM low voltage code event U3003-68, U0100-00(CAN engine speed absent), U3000-72(A30) link relay open. code reset according to tech that made the tech replace the gear. I will ship gear to MAO this week. 6/10- checking the EFF data the vehicle had 16.8v that caused the codes to set, no codes set at normal 8-15v power feed. NPF at this time.						08305 Evergreen Ford	49
UR0028	rubbing noise while turning at stop	no codes	NVH	in process MAO	6/10- No problem found EOL EDF/NVH testing. Did find a couple of impact markes on the OBH & EPP. Unsure what the tech moved or changed during gear replacement to fix noise. NPF	6/6- no codes in fault store, did not notice any noise turning input shaft back & forth from center. Shipped to MAO for EDF/NVH testing			CONCERN: FRONT END MAKES RUBBING SOUND FROM FRONT WHEN TURNING IN A PARKING LOT. DIAGNOSTICS: N/A PARTS REPLACED:N/A TECH QUESTION: ANY KNOWN CONCERNS? WERE YOU ABLE TO VERIFY THE CONCERN? YES AT WHAT SPEED DOES THIS OCCUR? WHEN VEHICLE IS STOPPED AND TURNING WHEEL MOST FREQUENTLY. AT WHAT RPM DOES THIS OCCUR? 750 CUSTOMER STATES CHEKC FOR NOISE WHEN TURNING WHEEL VERIFY NOISE WHEN TURNING. ISOLATE NOISE TO RACK ASSY.			20636 Schultz Ford	5475
UR0030	C200D-49	B9A	EPP	In process MAO	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle							05559 Villa Ford	7839

This is the Pareto I use for U502 based off Tim's CD3 Pareto. I've also attached the last one I have from Tim for CD3.

Subject: RE: U502 Paynter 04 11.xls

Laura/Rob,
Mark and I are trying to get TRW in line with what is being done on B-car, Nexteer programs, and HPAS programs in terms of providing a pareto and a paynter chart. I also want to make sure they're consistent globally on C1. We found that Tim was doing a lot of the work himself on CD3 that TRW was apparently doing separately and not sharing.

Subject: RE: U502 Paynter 04 11.xls

Eric,
Mark and I think this will work well. The only thing missing is the pareto set up to show number of claims per root cause but this is easy to do with the data presented in this file. Can you send us the [redacted] and [redacted] files so we can see them? Can these files be cut by model year?

[redacted] is similar to this and is already consistent globally. Please let us know what C1 Europe is doing. The request from this end would be to do it the same as you have presented here. C1 needs to be consistent globally so we can compare Europe and NA. Thanks.

Matthew Surella

Subject: FW: U502 Paynter 04 11.xls

Matt my manager does keep a paynter chart in this format for [redacted] U502 & we will do the same for [redacted] the only difference is they are not tracked by each VIN in this chart. Let me know if you like this chart and I can start sending this out when you need it.

We are still waiting on Europe to send their C1 pareto charts over so we can see what format they use.

Eric

Subject: Updated U502 Warranty Tracker 11-2

We are starting to get 2012 warranty returns back I will start a new paynter chart tab for the 2012 returns once I pull all the data from the gears at WPAC.
The latest U502 vehicle build date in Chicago with the B9A code is June 2011 and I have not seen any 2012's with the B9A at this time.

Let me know if I need to make any changes or if you have any questions, thanks

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Gear Build Date	ECU Build Date	EPP Build Date	Eng. Type	Date of Repair	Motor Build Date	Date	Part ETA
UR0021	U3000-49 U3000-96	BAA,BAB,B9B,BAD	EPP	in eval Melexis	8/15- Geoff to review Melexis 8D and check for further information to finalize.	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level3 5/24- Faults raised each cycle. R227 discarded as a root cause. Vsw circuitry	03073 Mullinax Ford	03735	1FMHK8B88BC[redacted]	1/18/2011	1/7/2011	10/30/2010		3.5L wo/APA	4/28/2011			
UR0025	U3000-49	B25	EPP	In eval 26 Mile	9/12- tri-temp ignition cycling at 26mile NTF	5/26- pulled stored & EFF data shipped to MAO for further testing 6/10- this is not a shorted FET issue according to the EFF data. Cannot duplicate the issue at this time. 7/18- Sergio to send Geoff PFR for next steps.	20609 Orange Motor Co	00008	1FMHK7D89BC[redacted]	3/29/2011	2/28/2011	1/4/2011	1/8/2011	3.5L wo/APA	4/21/2011			
UR0030 RUA#4878	C200D-49	B9A	EPP	In eval UK	8/8- teardown and inspection of PCB had NTF, next step is to check the flux density of the permanet magnet in the motor. 8/15- UK motors grp did full teardown and did not find any flux density fault. Will put on hold until the other warranty returns are examined and tested.shipping other parts out to suppliers for testing	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle 6/23-B9A -- FNR at ambient. Fault raised at 43 Celsius. To be shipped to UK 6/24- Sergio to send PFR to	05559 Villa Ford	7839	1FMHK8F82BC[redacted]	1/19/2011	1/3/2011	9/26/2010	10/15/2010	3.5L w/APA	5/13/2011	9/17/2010		
UR0032 RUA #4978	U3000-49	BFF,BFC,B1C	EPP	In Eval UK	7/20- ship ECU back to Shirley attention Mike Molloy for further NVM analysis. 8/1- check with Mike on updates 8/8-part has arrived to the UK.	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/11- Sergio to get testing instructions from Geoff on this return.	07590 Van Bortel Ford	03003	1FMHK8F85BC[redacted]	3/4/2011	2/28/2011	12/5/2010	12/8/2010	3.5L w/APA	6/9/2011			
UR0035 RUA# 4979	U2011-49 U3000-49 U3000-96	B7D,BB8	EPP	In Eval UK	8/8- part has not arrived yet in the UK for further testing check with Anting for update	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/25-MAO reproduced B23- found a a low impedance between pin96 and pin97 on main micro IC3. It seems a problem on the soldering.	04161 Eddie Yaklin Ford	04625	1FMHK7D8XBC[redacted]	12/8/2010	12/6/2010	10/1/2010	10/21/2010	3.5L wo/APA	5/31/2011			
UR0036	C200B-2F C200C-2F	BD0-BD3	TS	In Eval Hella	8/31- No channel 2--> Function test on application level at all temperatures: The function test was passed. No Conspicuousness were found. Short durability / lifetime test shows no deviation, currently we will reproduce the failure according the information from Sergio.	8/1- BD3 fault is raised when IPA is fully turned CCW. Reference EPP used. Fault travelling with IPA. IPA signals are scoped. Observed a voltage drop in 5V supply. After a while fault is replicated, there was no signal on channel 2. bobby to ship to Hella.	M1626 Sanchez Auto	00008	1FMHK7F82BC[redacted]	4/13/2011	4/7/2011	12/7/2010	12/11/2010	3.5L wo/APA	6/2/2011			
UR0037	Making noise no assist	A19	NVH	In Eval 26mile	8/8- found broken pulley from Capstan, submitted presentation to Ford. When 8D is completed will send out to Ford.		00169 Pittsville Motors	06773	1FMHK8D84BC[redacted]	1/31/2011	1/24/2011	11/17/2010	11/19/2010	3.5L wo/APA	5/25/2011			

UR0040	U3000-49	BAE,BAB,BAD	EPP	In eval 26mile	8/10- MAO to hold onto EPP until UK is done testing the three gears with similar codes. 9/12- 26mile done tri-temp testing was able to get to reset once. Benched tested was able to get to fail possible aux. ASIC issue testing still ongoing.	8/1- raise RUA and ship to UK for further analysis. faults not replicating even when in hot testing. Fault not replicating in lab after hot test over ASIC and IC17. During analysis part failing with BA4 , B3A rep B7E. Power module swapped with a reference on.	08811 Sentry Ford	02050	1FMHK8D83BG[redacted]	2/14/2011	2/7/2011	12/13/2010	12/19/2010	3.5L wo/APA	6/16/2011			
UR0041 RUA# 4980	U2011-49	B3A	EPP	In Eval Tyco	8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco 10/6- Andy Partridge to check results when he is back off vacation. 10/26- still under analysis.	8/1- Phase1 motor relay contact not closing.raise RUA and ship to UK 8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco	02199 Bob Gillingham Ford	05016	1FMHK8B88BG[redacted]	12/2/2010	11/23/2010	9/14/2010	9/16/2010	3.5L wo/APA	6/13/2011			
UR0042	C200C-2F	BD3	TS	In Eval 26mile	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing.	8/1-passed EOL & bench testing 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing	01273 Fred Beans Ford	04301	1FMHK8D84BG[redacted]	3/14/2011	3/7/2011	1/20/2011	1/29/2011	3.5L wo/APA	6/20/2011			
UR0043 RUA #4981	U3000-49	BAE,BAB,BAD,BAA	EPP	In Eval UK	8/8- UK received the part today for further testing. 8/22- comfirmed IC17, get reply from Anting and ship to Maxium.	8/1- raise RUA and ship to UK for further analysis.AA I sense working fine and Isense IC17 output incorrect. Signal coming from AA is OK but IC17 output is not good. IC17 temperature sensitive. did not swap Component Same failure mode as CR0030 in which after swapping Pin 5 is found broken.	05319 Rusty Eck Ford	05191	1FMHK8F84BG[redacted]	2/22/2011	2/17/2011	12/11/2010	12/16/2010	3.5L w/APA	6/27/2011			
UR0045	C200D-49	B9A	EPP	In Eval UK	8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders are re-synchronised, ran overnight with ign permanently on NFF, test repeated with ign. cycling for two hrs, NFF	8/1- hot and ambient testing done NTF. cold testing next step 8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders	05928 Premier Ford	1695	1FMHK7D8XBG[redacted]	3/28/2011	3/23/2011	1/24/2010	1/29/2010	3.5L wo/APA	7/1/2011	12/27/2010		
UR0046	C200B-62	BD4	TS	In Eval 26mile	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing	8/1- NTF on bench testing, or EOL testing. 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing	04927 J.C. Lewis Ford	01410	1FMHK7F87BG[redacted]	5/10/2011	5/1/2011	3/24/2011	3/26/2011	3.5L wo/APA	6/16/2011			

UR0047	C200D-49	B9A	EPP	In Eval 26mile	8/22- are finding issues with seperation between the hall effects and encoder, more testing needed to define cause.	8/2- pulled stored & EFF data shipped to 26 mile for further information. 8/12- Chris bench tested with NTF with start the tri-temp testing to see if B9A resets 8/15- now able to duplicate the B9A will send Geoff the information on the scope and test set-up.	06700 Majic City Ford	3447	1FMHK8F87BG[redacted]	3/29/2011	3/24/2011	10/26/2010	2/13/2011	3.5L w/APA	7/14/2011	12/28/2010		
UR0048	C200D-49	B9A	EPP	In eval 26mile	9/12- performed tri-temp ignition cycling and could not reproduce code NTF 9/21-been uploaded with SW and gone through various test on the dynamometer, the unit has not failed at this time, more testing ongoing	8/2- pulled stored & EFF data shipped to MAO for further information 8/31- Not reproducable Cold	08211 Robinson Brothers Ford	3163	1FMHK7D84BG[redacted]	4/5/2011	3/30/2011	12/25/2010	12/26/2010	3.5L wo/APA	6/23/2011	12/4/2010		
UR0050 RUA# 5048	U3000-49	B6C	EPP	In Eval Freescale	10/26- found micro failure in analysis with Freescale	8/2- pulled stored & EFF data shipped to MAO for further information. Tech used heat to remove bolt and melted the bushing materail and black is covering EPP assembly. 8/29-To be sent to UK	03334 Charles Gabus Ford	04666	1FMHK8F85BG[redacted]	5/2/2011	4/19/2011	2/17/2011	2/24/2011	3.5L w/APA	7/11/2011			
UR0051	U3000-49	B25	EPP	In eval MAO	9/12- ambient testing complete with NTF, next step cold testing. 10/26- cold testing complete with NTF, next step to ship to 26 mile for tri-temp testing.	8/2- pulled stored & EFF data shipped to MAO for further information 8/29-Ambient testing did not duplicate. Will Cold test next 8/31-Cold testing raised BAA, BAB intermittent. Raised twice and did not repeat.	04921 Bozard Ford	02124	1FMHK7D89BG[redacted]	2/25/2011	2/21/2011	1/4/2011	1/7/2011	3.5L wo/APA	6/23/2011			
UR0054	No Com	No codes		at WPAC will ship out to MAO for analysis	9/12- gear not at MAO at this time I will check WPAC tomorrow. 10/26- still cannot locate the gear will check WPAC	8/19- tech was not able to get the tc lamp on or get the vehicle to act up but states he could not communicate with the PSCM using his IDS. Unknow if this was an IDS issue because there would be lamps on and no steering if he was not able to commincate with the PSCM. I had no trouble pulling data when gear arrived.	03776 Legacy Ford	00016	1FMHK8B82BG[redacted]	5/22/2011	5/18/2011	4/7/2011	4/8/2011	3.5L wo/APA	6/29/2011			
UR0055 RUA# 5176	U3000-49	BA4,BA5,B45,B9C, B6C,B71	EPP	in eval UK	10/17- VSW scoped, cannot communicate with ECU. Potential main micro. Waiting on UK for next steps good chance to swap micro and test. 10/26- in analysis of the micro and confirm failure before removing.	8/19- pulled EFF & stored data shipped to MAO for further analysis 9/12- able to reproduce codes, possible monitor micro- testing ongoing	06787 Lake Elsinore Ford	02584	1FMHK7D87BG[redacted]	5/13/2011	5/4/2011	3/16/2011	3/19/2011	3.5L wo/APA	714/2011			
UR0056 RUA# 5160	U2011-49	B3A	EPP	in Eval Tyco	9/12- NTF at this time need to perform the 5amp resistance testing. 9/21- NTF with the 5 amp test, ship to Tyco for testing 10/26- at Tyco waiting for update	8/19- pulled EFF & stored data shipped to MAO for further analysis 9/12- NTF at this time need to perform the 5amp resistance testing. 9/21- NTF with the 5 amp test, ship to Tyco for testing	06338 Shults Ford	00105	1FMHK7B86BG[redacted]	5/12/2011	5/3/2011	2/28/2011	3/17/2011	3.5L wo/APA	7/11/2011			

UR0058	C200D-49	B9A	EPP	In Eval 26mile	9/21- this unit is in teardown, flex density test, air gap measurement, hall effects swi. Threshold, encoder switching 10/2- x-ray of the motor PCB	8/26- pulled stored & EFF data from the gear and shipped to MAO for further testing	02486 Five Star Ford	6543	1FMHK7D86BC[redacted]	3/24/2011	3/21/2011	1/24/2011	1/27/2011	3.5L wo/APA	7/8/2011	12/28/2010
