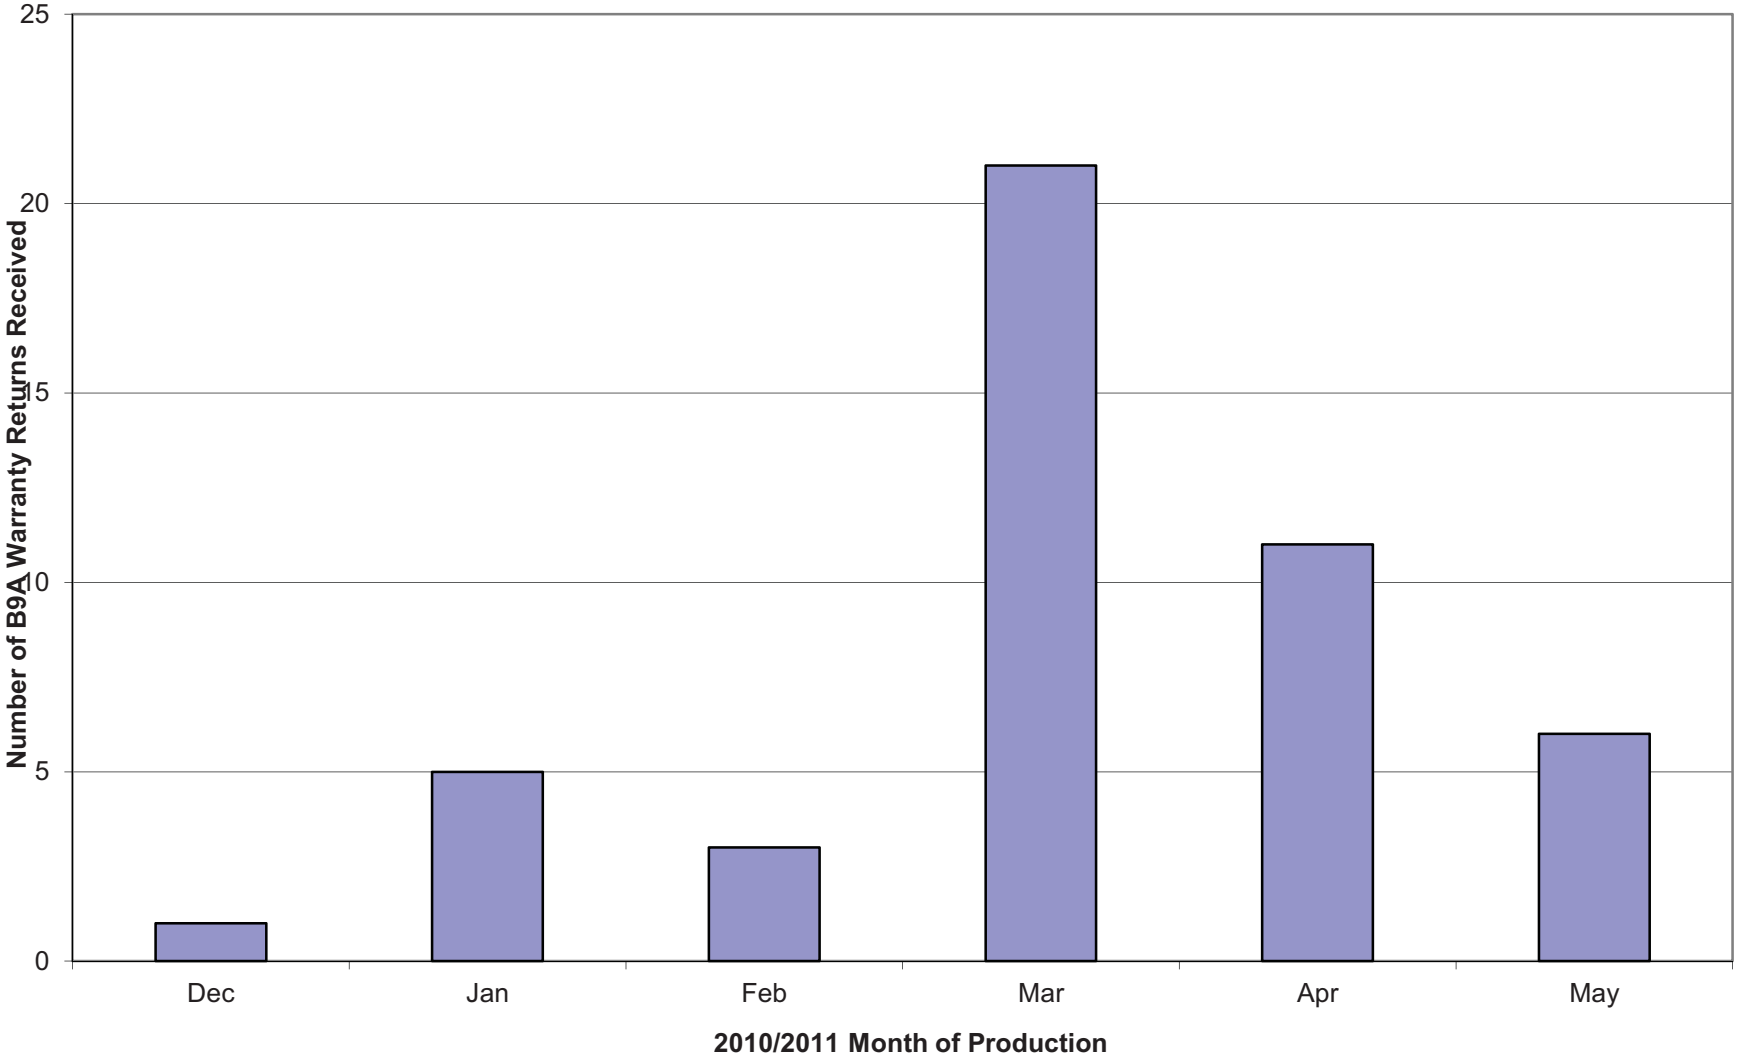
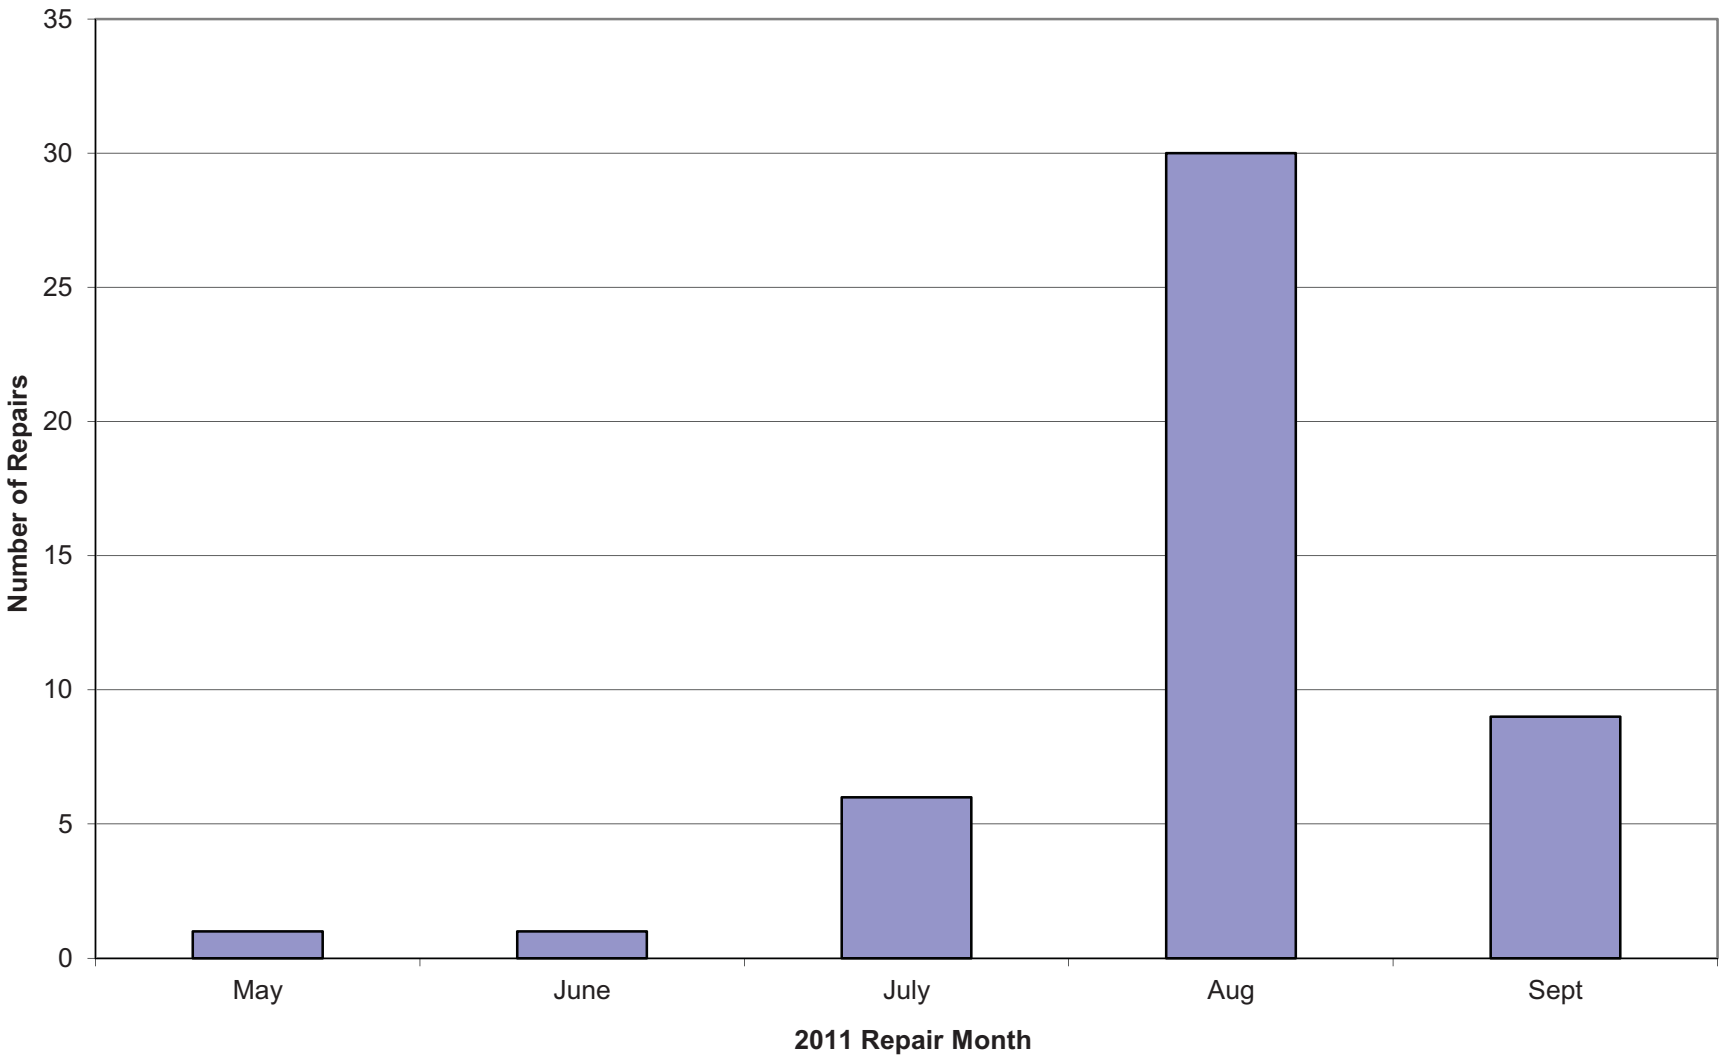
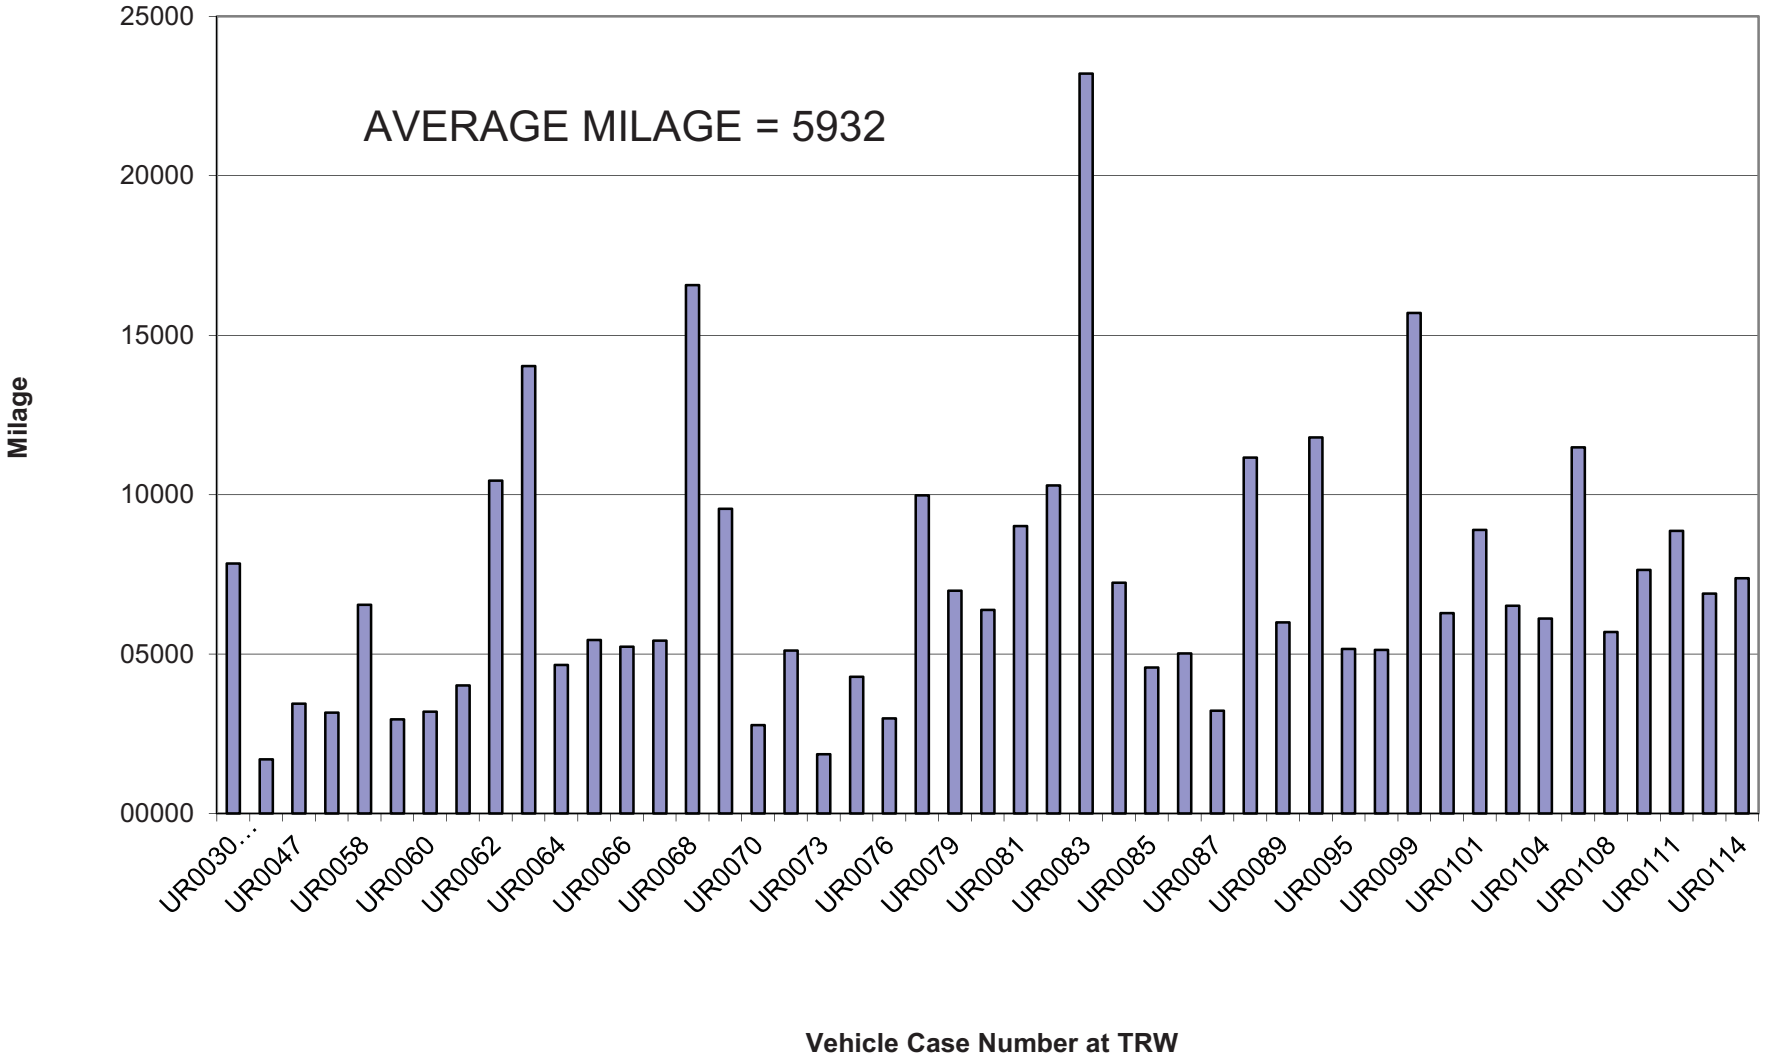
U502 Vehicle Production Month of B9A Warranty Returns



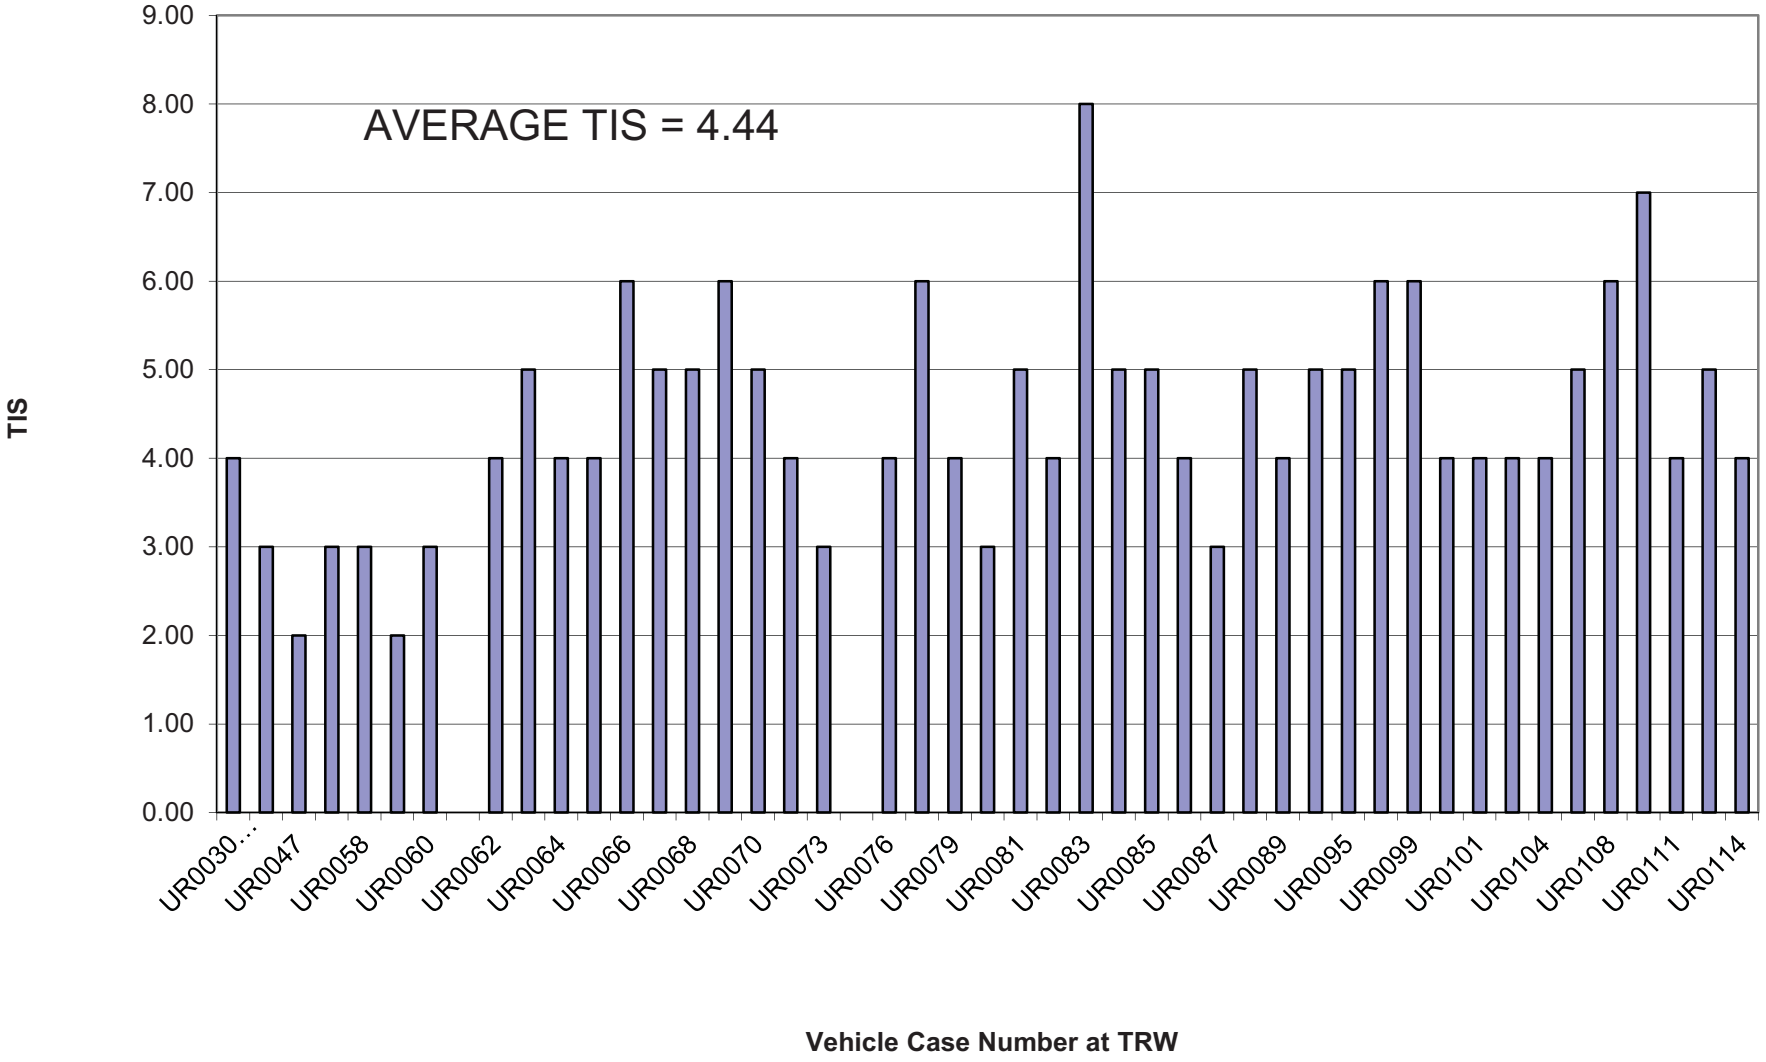
U502 Repair Month of B9A Warranty Returns



U502 Milage at Time of B9A Failure



U502 Time in Service (TIS) until B9A Failure



Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Date of Repair	Month of Vehicle Repair	May	June	July	Aug	Sept	Months betw Build and Repair	State	TIS	Month of Vehicle Build	Dec	Jan	Feb	Mar	Apr
UR0030 RUA#4878	C200D-49	B9A	EPP	In eval UK	8/8- teardown and inspection of PCB had NTF, next step is to check the flux density of the permanet magnet in the motor. 8/15- UK motors grp did full teardown and did not find any flux density fault. Will put on hold until the other warranty returns are examined and tested.shipping other parts out to suppliers for testing	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle 6/23-B9A -- FNR at ambient. Fault raised at 43 Celsius. To be shipped to UK 6/24- Sergio to send PFR to Geoff for analysis. 6/28- Sergio shipped EPP to UK for testing. 7/8- EPP in the thermo chamber ignition cycling, should have results on Monday 7/15-NTF on the thermo chamber, put on the PU/PD rig over the weekend, NTF on the PU/PD rig. Determine next steps. 8/1- email Mike Molloy for update on testing 8/2- tested this unit extensively. Over a week of thermal/ignition cycling, plus two repetitions (4 days total) of the Power-Up Power-Down test cycle. We have not seen any repetition of the B9A fault.Geoff's suggestion is that we submit	05559 Villa Ford	07839	1FMHK8F82BG[redacted]	1/19/2011	5/13/2011	May	1						4.00	CA	4.00	Jan		1			
UR0045	C200D-49	B9A	EPP	In Eval UK	8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders are re-synchronised, ran overnight with ign permanently on NFF, test repeated with ign. cycling for two hrs, NFF	8/1- hot and ambient testing done NTF. cold testing next step	05928 Premier Ford	01695	1FMHK7D8XBG[redacted]	3/28/2011	7/1/2011	July			1			4.00	MS	3.00	Mar				1	
UR0047	C200D-49	B9A	EPP	In Eval 26mile	8/22- are finding issues with seperation between the hall effects and encoder, more testing needed to define cause.	8/2- pulled stored & EFF data shipped to 26 mile for further information. 8/12- Chris bench tested with NTF with start the tri-temp testing to see if B9A resets 8/15- now able to duplicate the B9A will send Geoff the information on the scope and test set-up.	06700 Majic City Ford	03447	1FMHK8F87BG[redacted]	3/29/2011	7/14/2011	July			1			3.50	VA	2.00	Mar				1	
UR0048	C200D-49	B9A	EPP	In eval 26mile	9/12- performed tri-temp ignition cycling and could not reproduce code NTF 9/21-been uploaded with SW and gone through various test on the dynamometer, the unit has not failed at this time, more testing ongoing	8/2- pulled stored & EFF data shipped to MAO for further information 8/31- Not reproducable Cold	08211 Robinson Brothers Ford	03163	1FMHK7D84BG[redacted]	4/5/2011	6/23/2011	June		1				2.00	LA	3.00	Apr					1
UR0058	C200D-49	B9A	EPP	In Eval 26mile	9/21- this unit is in teardown, flex density test, air gap measurement, hall effects swi. Threshold, encoder switching 10/2- x-ray of the motor PCB	8/26- pulled stored & EFF data from the gear and shipped to MAO for further testing	02486 Five Star Ford	06543	1FMHK7D86BG[redacted]	3/24/2011	7/8/2011	July			1			3.00	TX	3.00	Mar				1

Will Cold test next 8/31-Cold testing raised BAA, BAB intermittent. Raised twice and did not repeat.	04921 Bozard Ford	02124	1FMHK7D89BG[redacted]	2/25/2011	2/21/2011	1/4/2011	1/7/2011	3.5L wo/APA	6/23/2011			
UR0054	No Com	No codes		at WPAC will ship out to MAO for analysis	9/12- gear not at MAO at this time I will check WPAC tomorrow. 10/26- still cannot locate the gear will check WPAC	8/19- tech was not able to get the tc lamp on or get the vehicle to act up but states he could not communicate with the PSCM using his IDS. Unknow if this was an IDS issue because there would be lamps on and no steering if he was not able to commincate with the PSCM. I had no trouble pulling data when gear arrived.	03776 Legacy Ford	00016	1FMHK8B82BG[redacted]	5/22/2011	5/18/2011	4/7/2011	4/8/2011	3.5L wo/APA	6/29/2011

UR0047	C200D-49	B9A	EPP	In Eval 26mile	8/22- are finding issues with seperation between the hall effects and encoder, more testing needed to define cause. 11/3- motor PCB at Allegro Simon Malsbury overlooking the analysis. 11/18- cannot locate ribbon cable to check for conformal coat or misalignment	8/2- pulled stored & EFF data shipped to 26 mile for further information. 8/12- Chris bench tested with NTF with start the tri-temp testing to see if B9A resets 8/15- now able to duplicate the B9A will send Geoff the information on the scope and test set-up.		NTF	06700 Majic City Ford	3447	1FMHK8F87BGA45404	3/29/2011	3/24/2011	10/26/2010	2/13/2011	3.5L w/APA	7/14/2011
UR0048	C200D-49	B9A	EPP	In eval 26mile	9/12- performed tri-temp ignition cycling and could not reproduce code NTF 9/21-been uploaded with SW and gone through various test on the dynamometer, the unit has not failed at this time, more testing ongoing. 12/2- found conformal coat in motor relay ribbon cable connector	8/2- pulled stored & EFF data shipped to MAO for further information 8/31- Not reproducable Cold		conformal coat	08211 Robinson Brothers Ford	3163	1FMHK7D84BGA48810	4/5/2011	3/30/2011	12/25/2010	12/26/2010	3.5L wo/APA	6/23/2011
UR0050 RUA# 5048	U3000-49	B6C	EPP	In Eval Freescale	10/26- found micro failure in analysis with Freescale 12/14- RAM failure comfirmed by Freescale, failed ATE fault , have 8D to close off claim. Randon via defectivity	8/2- pulled stored & EFF data shipped to MAO for further information. Tech used heat to remove bolt and melted the bushing materail and black is covering EPP		main micro	03334 Charles Gabus Ford	4666	1FMHK8F85BGA61262	5/2/2011	4/19/2011	2/17/2011	2/24/2011	3.5L w/APA	7/11/2011
UR0051	U3000-49	B25	EPP	In eval MAO	9/12- ambient testing complete with NTF, next step cold testing. 10/26- cold testing complete with NTF, next step to ship to 26 mile for tri-temp testing.	8/2- pulled stored & EFF data shipped to MAO for further information 8/29- Ambient testing did not duplicate. Will Cold test next 8/31-Cold testing raised BAA, BAB intermittent. Raised twice and did not repeat.			04921 Bozard Ford	2124	1FMHK7D89BGA30447	2/25/2011	2/21/2011	1/4/2011	1/7/2011	3.5L wo/APA	6/23/2011
UR0054	No Com	No codes		at WPAC will ship out to MAO for analysis	9/12- gear not at MAO at this time I will check WPAC tomorrow. 10/26- still cannot locate the gear will check WPAC	8/19- tech was not able to get the tc lamp on or get the vehicle to act up but states he could not communicate with the PSCM using his IDS. Unknow if this was an IDS issue because there would be lamps on and no steering if he was not able to commincate with the PSCM. I had no trouble pulling data when gear arrived.			03776 Legacy Ford	16	1FMHK8B82BGA73844	5/22/2011	5/18/2011	4/7/2011	4/8/2011	3.5L wo/APA	6/29/2011

0KM BGA41610	C200B-62	BD4	TS	CAP	no returned part from CAP
0KM BGA30310	No Assist	?		CAP	no returned part from CAP
0KM BGA32423	U3000-49	B25,BB8, B95	EPP	In Eval (26mile)	8/1- We agreed the voltage change at Anting on April 8, 2011 was the PCA that made the impact of no further escapes from Anting. That would work out to be Aug 19th in MAO for the PCA date.
0KM BGA56776		B25,BB8		MAO	8/1- We agreed the voltage change at Anting on April 8, 2011 was the PCA that made the impact of no further escapes from Anting. That would work out to be Aug 19th in MAO for the PCA date.
0KM BGA59863	steering noise on full left stop		NVH	in Eval (26mile)	5/9- mark on the ITR that indicates the ITR over articulated. the gear was dropped or impacted before assembly in the vehicle. Marion,ZF or MAP the gear could be dropped. No marks on the EPAS housing. Unknown source at this time.
0KM	C200B-2F C200C-2F	BD0-BD3, B90	TS	in eval Hella	12/19- cutting process issue, 8D sent to Ford, looking to get a two step cutting process approved for the torque ring templates.
0KM BGA85712	C200B U3000		TS		7/11- finger ring getting hung-up during assembly causing plastic ribbon cable guide to break Greg to check for a different process from the auto assembly. 8/1- SREA submitted for the manual assembly process, will get the dates. 8/15 keep on hold till Don mattern & Matt Surrella make approval upon visit to MAO.

UR0001 RUA# 4308	U2011-49	B3A	EPP	In Eval (Tyco)	3/9- have implemented some containment actions. Starting today Tyco will heat treat(150deg for 1.5hrs) 100% of the rivets from Doduco to reduce contact resistance. 3/2 start shipping rivets weekly to U of Madrid for SEM/EDX analysis. Sorting of Ford stoc
UR0002 (UR0008) RUA# 4384	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	3/9- have implemented some containment actions. Starting today Tyco will heat treat(150deg for 1.5hrs) 100% of the rivets from Doduco to reduce contact resistance. 3/2 start shipping rivets weekly to U of Madrid for SEM/EDX analysis. Sorting of Ford stoc
UR0005 RUA# 4498	U2011-49	B3A	EPP	in Eval (Tyco)	3/16- confirmed Mag,sulfer,sodium contamination, same as UR1 & UR2. here are the changes that are being made at Doduco before the next batch build that will be supervised by Tyco & TRW. Containments such as bucket washing and new sulphur bath to be implem
UR0006 RUA# 4529	U2011-49	B3A	EPP	In Eval (Tyco)	5/4- Tyco confirmed this as a Mg,Na,S failure.
REDACTED FOR RELEVANCE					
UR0008 RUA# 4530	U2011-49	B3A	EPP	In Eval (Tyco)	5/4- Confirned no fault found, contacts clean, no other testing can be done with relay cut out of the board

UR0009 RUA# 4558	U2011-49	B3A	EPP	In Eval (Tyco)	5/4- Confirned no fault found, contacts clean, no other testing can be done with relay cut out of the board
UR0010 RUA# 4585	U2011-49	B3A	EPP	In Eval (Tyco)	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0011 RUA# 4621	U2011-49	B3A	EPP	At Dealer	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0012 RUA# 4596	U2011-49 U2011-61 U3000-96	B3A, B95	EPP	In Eval (Tyco)	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0013 RUA# 4601	U2011-49	B3A	EPP	In Eval (26mile)	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0014 RUA# 4618	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0015 RUA# 4619	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	5/4- Tyco confirmed this as a Mg,Na,S failure.
UR0016	TC lamp on	no codes		Ship to 26mile for storage	4/26- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change

UR0017	TC lamp on	no codes		Ship to 26mile for storage	4/29- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change
UR0018	TC lamp on	no codes		at 26mile storage	5/12- pulled stored data from gear no codes stored in gear, check CQIS data and found the RCM fixed the vehicle. Cannot chargeback the gear to the dealer because hotline advised to change
UR0019	C200B-2F	BD0,BD2	TS	In Eval (MAO)	6/22-Greg Austin checking with Leoni harness company for any suggestions or changes that can be made to assure full insertion of the molex connector. 7/11- The Molex plug on the harness has a paint mark on the lock tab that shows through the mating connector when properly latched. The paint mark color appears to be light gray. Perhaps the mark could be made more visible with lighting directed to the Molex socket on the sensor 7/15- it was agreed that there is visual evidence of the pins showing if the molex conn is not fully inserted. operator instructions does cover the visual inspection.
UR0020 RUA# 4743	U2011-49	B3A	EPP	in eval (Tyco)	6/23- Contamination - confirmed as Mg,Na,S at Tyco

UR0022	Int. No Assist	no codes		at WPAC	5/20- pulled data no ford codes or TRW codes checked hotline CQIS claim and found electrical connection issue with the wiring(UNKNOWN SOURCE) EPAS Gear did not fix symptom. this vehicle set ABS codes U0131,C1B00 & U0253
UR0023	TC Lamp on, U3000-49	AE0		In Eval MAO	6/17- high voltage spike testing did not produce any A codes into the system, cannot reproduce the AEO code. NTF 6/22- will need to get gear back with similar codes and perform vehicle testing. Laura will provide the vehicle.
UR0024 RUA# 4827	U2011-49	B3A	EPP	In Eval Tyco	6/23- Tyco confirmed Mg,S,Na contamination week 35 relay build was in the 3rd batch- Aug 26th.-Sept. 7th
UR0026 RUA# 4809	U2011-49 U3000-96	B3A	EPP	In Eval Tyco	6/23- Tyco confirmed Mg,S,Na contamination, week 25 relay build was in the 1st contact batch- June 13th.-June 20th.
UR0027 RUA#4879	U3000-72	A30	EPP	in eval Tyco	8/1- email Carlos to get update 8/3- A30 was raised a total of 78 times on car. This fault is coming together with a E11, which is a high battery voltage. A30 EFF data confirms this high voltage at 16.8. Relay shipped to Tyco. -Tyco NTF

REDACTED FOR RELEVANCE

UR0029	TC Lamp on	no codes		At WPAC	6/10- pulled stored and EPF data, no ford codes or TRW codes that would cause the TC lamp to come on.
UR0031 RUA#4977	No Com	No Com	EPP	In Eval UK	8/3- raise RUA and ship to UK for further testing. 8/8- part has not arrived yet in the UK check Anting for update 9/30- UK did a visual inspection did not find anything on the board or with the soldered pin. Feels no point with further action due to NTF from MAO.
UR0033	No Com	No Com	EPP	In Eval MAO	7/26- No problem found with EPP communication, pulled normal data from the EPP. Still testing NTF. Unknown if tech mis-diagnosed vehicle for this front abs sensor issue.
UR0034	U2011-61 U3000-96	B95	TS	In Eval Hella	8/31-: Frequency variation on channel 2 without torque--> Failure description: PWM2 jitter, the ASIC has received at Onsemi and the analysis is ongoing, first results are possible on 2th of September.

UR0036	C200B-2F C200C-2F	BD0-BD3	TS	In Eval Hella	8/31- No channel 2--> Function test on application level at all temperatures: The function test was passed. No Conspicuousness were found. Short durability / lifetime test shows no deviation, currently we will reproduce the failure according the information from Sergio. 9/21- Full testing and optical inspections lead to NTF. case closed as NTF

REDACTED FOR RELEVANCE

UR0038 RUA#4997	U2011-49 U3000-96	B3A	EPP	In Eval UK	9/21-confirmed from tycothis is a Mg,Na,S contamination issue
UR0039	No Com	No Com	EPP	In eval MAO	8/10-confirmed C154 Kemet Cap
UR0041 RUA# 4980	U2011-49	B3A	EPP	In Eval Tyco	10/26- still under analysis. 11/8- Tyco confirmed Mg, Na, S contamination.
UR0044	Wheels lock TC lamp on C1B00-64	No codes		At WPAC	7/25-tech did not follow proper diagnostic's vehicle equipped with auto park C1B00-64 leads to SWA sensor in column. Hotliner requested to replace the RCM Chargeback dealer.
UR0049	U3000-49	BA4,BA5, BC2	EPP	In process MAO - Cap shipped to Kemet	8/29-Kemet C154 capacitor issue(cold weld issue)

UR0052	Check eng lamp on U3000-49	AE0		At WPAC	8/10- ship gear out of WPAC and test gear at MAO. If NTF to close case. 9/12- all testing passed, NTF
UR0053	U3000-49	BA4,BA5, BC2		in eval MAO	9/9- confirmed C154 Kemet Cap
UR0057	popping noise frt-end turning	no codes, lamps or noise from the gear		dealer chargeback	8/19- checked the history on this gear because I did not find any thing wrong with the gear physically or internal codes. Found out a bumper beam weld broke and causing the noise. Will chargeback the gear to the dealer
UR0078	TC Lamp on	No codes		In process MAO	9/9- tech installed new PSCM vehicle still will not communicate. Non-TRW issue. Wiring issue. According to CQIS report.
UR0090 RUA# 5175	U2011-49	B3A	EPP	In eval Tyco	10/17- B3A reapeating PH2 motor relay open contacts. Ship to Tyco 12-7- Tyco found NTF with the relay. SEM on contacts some material found on the contacts that does not affect the operation.

REDACTED FOR RELEVANCE

UR0110	No Assist	No Com	EPP	In Eval MAO	10/17-Confirmed Kemet cap C154 10/26- get approval from Anting to ship C154 back to Kemet for analysis.

3/3- pulled snap shot data that has B3A, gear now in process to 26mile for analysis. 3/4- will arrive at 26mile this afternoon for analysis. Will hook up surrogate relay over the weekend if no codes set will remove the relay and ship to Tyco for test when		motor relay contamination (Mg,S,Na)
3/7- customer will drop off vehicle at VSC garage for replacement as soon as MAO gear arrives at the VSC center. I will pick-up the gear after		motor relay contamination (Mg,S,Na)
3/3- talked to tech states vehicle is hard to turn the wheel even on the hoist, no boot damage only code tech states he had U0253 which is not a PSCM code advise tech to call back with more diagnostic's, all	WEB FORM DATA - CONCERN: STEERING ASSIST IS INOP, LOUD GROWLING NOISE WHEN ATTEMPTING TO TURN THE STEERING WHEEL DIAGNOSTICS: VISUAL INSPECTION IS OK, NO VISIBLE SIGNS OF CAUSE, GROWLING NOISE APPEARS TO BE COMING FROM ELECTRIC MOTOR ON STEERING RACK. HOO	cannot locate
3/9- EFF stored data pulled by Ford, will set-up appointment next week with the VSC center to have the gear pulled. 3/16- I pulled EFF and fault		NTF

3/10- EFF stored data pulled by Ford, will set-up appointment next week with the VSC center to have the gear pulled 3/24- surrogate relay installed and being testing for any resetting codes.		NTF
4/1- picked up gear from WHQ VSC garage, pulled EFF and stored data. 4/4 John Burnett will install surrogate relay and test ambient if testing passes will remove relay and ship to		motor relay contamination (Mg,S,Na)
3/30- checked interactive diagnostic's intermittent B3A sets to ship gear back to 26mile for analysis.		motor relay contamination (Mg,S,Na)
4/1- shipped from the dealer to CAP then to 26mile for testing, install surrogate relay test with		motor relay contamination (Mg,S,Na)
4/8- Arrived at 26mile for testing, will not make the workshop will install surrogate relay and test 4/13- done testing with the surrogate relay will ship relay to		motor relay contamination (Mg,S,Na)
4/11- pulled fault store and EFF data, shipped gear to 26mile for further testing 4/13- testing with surrogate relay if passes will ship out relay to UK		motor relay contamination (Mg,S,Na)
4/11- pulled fault store and EFF data, shipped gear to 26mile for further testing 4/13- testing with surrogate		motor relay contamination (Mg,S,Na)

Non TRW issue

	CUST REPORTS T/C LIGHT STAYING ON. TECH VERIFIED THIS CONCERN SELF TEST CODE C-1B00-64 FROM ABS MODULE. TECH REPORTS NO CODES FROM RCM. TECH REPORTS REPLACED THE STEERING RACK PER NHL RECOMMENDATION. TECH REPORTS VEHICLE STILL HAS T/C LIGHT ON CONCERN. RECONTACTED NHL WAS INFORMED TO REPLACE THE RCM. TECH REPLACED THE RCM REPORTS NORMAL T/C LIGHT FUNCTION NO RETURN CODES. TECH IS NOW SEEKING APPROVAL CODE FOR RCM REPLACEMENT	Non TRW issue
	WEB FORM DATA - CONCERN: ADVANCE TRAC LIGHT ON DIAGNOSTICS: RUN OASIS NO TSBS FOUND ROADTEST VECH PARTS REPLACED:: NONE TECH QUESTION: THIS IS A NEW VECH WITH ABS DTC C1B00:64-68 IN MEMORY.I CLEARED THE DTC WENT APPROX 1 MILE HIT THE BRACKES TRACTION CONTROL ACTIVATED AND LAMP CAME BACK ON. SAME DTC SET AGIAN ANY KNOWN CONCERNS REPAIRS OR	Non TRW issue
5/13- pulled stored & EFF data from the gear no TS harness damage. Shipped gear to MAO from WPAC 5/18- - Improper MOLEX connector insertion during assembly process, but no physical defects with molex connector on sensor or TS harness connector. Investigate further operator training. Molex conn. Reinstall and function test IPA. 5/23- reinstalled connector gear passed all testing 6/22-Greg Austin checking with		Molex connector not fully engaged
5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level 3 5/24- Scope traces indicate a motor relay failure. EPP serial number is not found withing		motor relay contamination (Mg,S,Na)

	WEB FORM DATA - CONCERN: NO POWER STEERING ASSIST DIAGNOSTICS: INSPECTED THE STEERING GEAR AND CONNECTOR AND FOUND OK. RAN THE SELF TEST AND THE POWER STEERING MODULE PASSED. THE ABS MODULE HAD CODES C1B00 AND U0131. FOUND THE STEERING ASSIT STARTED WORKING MOMENTARELY AFTER THE SELF TES AND THE STOPED WORKING. MONITORED THE STEERING	Non TRW issue
5/20- pulled data found several can bus codes. Unknown if any would cause the TC lamp to come on. 6/6- Laura to check with Rob Kostadina on history of AE0 code 6/15- Sergio to perform open and short testing on reference EPP to see if similar code sets. Also perform voltage spikes to see if code can be set.		NTF
5/25- surrogate relay test, raise RUA ship to UK for week 24 workshop 6/8- shipped relay to Tyco for relay workshop next week		motor relay contamination (Mg,S,Na)
5/26- pulled stored & EFF data shipped to MAO for further testing, motor build date 8/30/2011 6/9- shipped relay out to Tyco for relay workshop next week.		motor relay contamination (Mg,S,Na)
5/26-Found out vehicle had a battery voltage code 3003, U0100 CAN BUS code ECU/PCM A code from unknown module. Checking history 5/31- all the codes came from the PSCM low voltage code event U3003-68, U0100-		NTF

6/6- no codes in fault store, did not notice any noise turning input shaft back & forth from center. Shipped to MAO for EDF/NVH testing	CONCERN: FRONT END MAKES RUBBING SOUND FROM FRONT WHEN TURNING IN A PARKING LOT. DIAGNOSTICS: N/A PARTS REPLACED:N/A TECH QUESTION: ANY KNOWN CONCERNS? WERE YOU ABLE TO VERIFY THE CONCERN? YES AT WHAT SPEED DOES THIS OCCUR? WHEN VEHICLE IS STOPPED AND TURNING WHEEL MOST FREQUENTLY. AT WHAT RPM DOES THIS OCCUR? 750 CUSTOMER STATES CHEKC FOR NOISE WHEN TURNING WHEEL VERIFY NOISE WHEN TURNING. ISOLATE NOISE TO RACK ASSY.	NTF
	5/9- TECH TO CHECK PIDS FOR ERRATIC OPERATION WHEN THIS INTERMITTENT TC LAMP CAME ON, REPLACED THE EPAS GEAR SAME SYMPTOMS OCCUR 05/19/2011 02:45PM ERIC ESTES MSS - TSO - DIGITAL IMAGE RTDA CONTACTED DEALER FOUND OUT THE YAW SIGNAL WAS STUCK ON 0 ALL THE TIME DURING ROAD TEST. DEALER REPLACED THE RCM AFTER 20 MILES OF ROAD TEST NO TC LAMP ON, TC ACTIVATION OR ABS CODES, VEHICLE FIXED AT THIS TIME. TO RELEASE BACK TO CUSTOMER	Non TRW issue
7/1- could not pull any Ford or Canape data, verified equipment does work, shipped to MAO for analysis. 7/25- It was found a low impedance between pin2 IC14 and ground. IC14 circuit open pin 2 of IC14 still present resoldered pin 2 and everything is working nomal at this time. ECU fixed Sergio did notice some marks close to pin 2 and		IC14
7/1- was able to get into Canape data. After new EPAS gear installed vehicle returned 14 miles later with ABS & TC lamp coming on found shorted harness for abs frt sensor.		NTF
7/1- pulled stored and EFF data, shipped to MAO for analysis 8/1-Checked with oscilloscope. Unstable Channel 2 PWM when no torque is applied. You can see a varation in channel 2		TS ASIC jitter

8/1- BD3 fault is raised when IPA is fully turned CCW. Reference EPP used. Fault travelling with IPA. IPA signals are scoped. Observed a voltage drop in 5V supply. After a while fault is replicated, there was no signal on channel 2. bobby to ship to Hella.		NTF
8/8- found broken pulley from Capstan, submitted presentation to Ford. When 8D is completed will send out to Ford.		cracked belt pully
8/1- MAO working on ambient and hot testing. 8/8- MAO testing still ongoing 8/11- cannot duplicate code fits the Mg,Na contamination dates shipped to UK then Tyco week 25 relay build		motor relay contamination (Mg,S,Na)
7/25- no other claims on this vehicle		C154 cold weld
8/1- Phase1 motor relay contact not closing.raise RUA and ship to UK 8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco 10/6- Andy Partridge to check results when he is back off vacation. 10/26- still under analysis.		motor relay contamination (Mg,S,Na)
		Non TRW issue
8/2- pulled stored & EFF data shipped to MAO for further information 8/2- pulled stored & EFF data shipped to MAO for further information.		C154 cold weld

8/2- could not pull any codes only had a AEO code(CAN message fault)in PSCM check CQIS case dealer replaced EPAS gear and same codes set(U3000-49) no change, dealer could not fix vehicle and vehicle was bought back. Int no		NTF
8/19- pulled EFF & stored data does fit the signature of a Kemet C154 failure shipped to MAO to confirm		C154 cold weld
		Non TRW issue
		Non TRW issue
9/26- pulled stored & EFF data from the gear and shipped to MAO for further testing		NTF
		Non TRW issue
10/7- could not pull any data from gear no communication with canape shipped to MAO for further testing		C154 cold weld
10/21- pulled stored & EFF data from the gear and shipped to MAO for further testing		bent TS finger
10/21- pulled stored & EFF data from the gear and shipped to MAO for further testing. No damage to TS harness		bent TS finger
3/13- pulled Ford codes unknown what the TRW codes are at this time, to pull CANape codes and ship to 26mile for analysis. 3/21- tri-temp ignition cycled for 36 hrs with no A3A's, E66's or		motor relay contamination (Mg,S,Na)

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates	Issue Status	Verbatim	P&A Code/ Dealer Name/ Dealer State	Miles	VIN	Vehicle Build Date	Gear Build Date	ECU Build Date	EPP Build Date	Eng. Type	Date of Repair	Motor Build Date	Date	Part ETA
UR0021	U3000-49 U3000-96	BAA,BAB,B9B,BAD	EPP	in eval Melexis	8/15- Geoff to review Melexis 8D and check for further information to finalize.	5/16- CAP shipped gear direct to 26mile, performed level1 analysis shipped to MAO for level3 5/24- Faults raised each cycle. R227 discarded as a root cause. Vsw circuitry working fine.PCB software found that Bridge enable line is disabled periodically. Ship to UK for further testing 6/29- found faulty Aux. ASIC in the ECU, Anting to contact Melexis so UK and ship out for analysis. 7/4- Aux ASIC arrived in Melexis		03073 Mullinax Ford	03735	1FMHK8B88BGA14250	1/18/2011	1/7/2011	10/30/2010		3.5L wo/APA	4/28/2011			
UR0025	U3000-49	B25	EPP	In eval 26 Mile	9/12- tri-temp ignition cycling at 26mile NTF	5/26- pulled stored & EFF data shipped to MAO for further testing 6/10- this is not a shorted FET issue according to the EFF data. Cannot duplicate the issue at this time. 7/18- Sergio to send Geoff PFR for next steps.		20609 Orange Motor Co	00008	1FMHK7D89BGA44512	3/29/2011	2/28/2011	1/4/2011	1/8/2011	3.5L wo/APA	4/21/2011			
UR0030 RUA#4878	C200D-49	B9A	EPP	In eval UK	8/8- teardown and inspection of PCB had NTF, next step is to check the flux density of the permanet magnet in the motor. 8/15- UK motors grp did full teardown and did not find any flux density fault. Will put on hold until the other warranty returns are examined and tested.shipping other parts out to	6/10- pulled stored & EFF data shipped to MAO for further testing, does have the updated FNU5-B2-AMBBB SW in this vehicle 6/23-B9A -- FNR at ambient. Fault raised at 43 Celsius. To be shipped to UK 6/24- Sergio to send PFR to		05559 Villa Ford	7839	1FMHK8F82BGA15758	1/19/2011	1/3/2011	9/26/2010	10/15/2010	3.5L w/APA	5/13/2011	9/17/2010		
UR0032 RUA #4978	U3000-49	BFF,BFC,B1C	EPP	In Eval UK	7/20- ship ECU back to Shirley attention Mike Molloy for further NVM analysis. 8/1- check with Mike on updates 8/8-part has arrived to the UK.	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/11- Sergio to get testing instructions from Geoff on this return.		07590 Van Bortel Ford	03003	1FMHK8F85BGA29508	3/4/2011	2/28/2011	12/5/2010	12/8/2010	3.5L w/APA	6/9/2011			
UR0035 RUA# 4979	U2011-49 U3000-49 U3000-96	B7D,BB8	EPP	In Eval UK	8/8- part has not arrived yet in the UK for further testing check with Anting for update	7/1- pulled stored and EFF data, shipped to MAO for analysis. 7/25-MAO reproduced B23- found a a low impedance between pin96 and pin97 on main micro IC3. It seems a problem on the soldering.		04161 Eddie Yaklin Ford	04625	1FMHK7D8XBGA11017	12/8/2010	12/6/2010	10/1/2010	10/21/2010	3.5L wo/APA	5/31/2011			
REDACTED FOR RELEVANCE																			
UR0040	U3000-49	BAE,BAB,BAD	EPP	In eval 26mile	8/10- MAO to hold onto EPP until UK is done testing the three gears with similar codes. 9/12- 26mile done tri-temp testing was able to get to reset once. Benched tested was able to get to fail possible aux. ASIC testing still ongoing.	8/1- raise RUA and ship to UK for further analysis. faults not replicating even when in hot testing. Fault not replicating in lab after hot test over ASIC and IC17. During analysis part failing with BA4 , B3A rep B7E. Power module swapped with a reference on.		08811 Sentry Ford	02050	1FMHK8D83BGA25329	2/14/2011	2/7/2011	12/13/2010	12/19/2010	3.5L wo/APA	6/16/2011			
UR0041 RUA# 4980	U2011-49	B3A	EPP	In Eval Tyco	8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco 10/6- Andy Partridge to check results when he is back off vacation. 10/26- still under analysis.	8/1- Phase1 motor relay contact not closing.raise RUA and ship to UK 8/8- UK received the part today for further testing.week 25 relay 8/16-shipped to Tyco		02199 Bob Gillingham Ford	05016	1FMHK8B88BGA10215	12/2/2010	11/23/2010	9/14/2010	9/16/2010	3.5L wo/APA	6/13/2011			

UR0042	C200C-2F	BD3	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1-passed EOL & bench testing 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		01273 Fred Beans Ford	04301	1FMHK8D84BGA37263	3/14/2011	3/7/2011	1/20/2011	1/29/2011	3.5L wo/APA	6/20/2011			
UR0043 RUA #4981	U3000-49	BAE,BAB,BAD,BAA	EPP	In Eval UK	8/8- UK received the part today for further testing. 8/22- comfirmed IC17, get reply from Anting and ship to Maxium. 11/7- IC17 damaged removing device from the PCB cannot be tested.	8/1- raise RUA and ship to UK for further analysis.AA I sense working fine and Isense IC17 output incorrect. Signal coming from AA is OK but IC17 output is not good. IC17 temperature sensitive. did not swap Component Same failure mode as CR0030 in which after swapping Pin 5 is found broken.		05319 Rusty Eck Ford	05191	1FMHK8F84BGA32125	2/22/2011	2/17/2011	12/11/2010	12/16/2010	3.5L w/APA	6/27/2011			
UR0045	C200D-49	B9A	EPP	In Eval UK	8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders are re-synchronised, ran overnight with ign permanently on NFF, test repeated with ign. cycling for two hrs, NFF	8/1- hot and ambient testing done NTF. cold testing next step 8/8- cold testing finished with NTF ship to UK for further testing 8/12- will let motors grp perform full speed & load testing before returning to lab when EPP arrives. 9/21- testing of rotating the motor through the point where the hall and encoders		05928 Premier Ford	1695	1FMHK7D8XBGA45135	3/28/2011	3/23/2011	1/24/2010	1/29/2010	3.5L wo/APA	7/1/2011	12/27/2010		
UR0046	C200B-62	BD4	TS	In process MAO	9/12- performed tri-temp ignition cycling while moving input shaft stop to stop with NTF. Check with Don/Jim on further testing. 11/2- unit removed from tri-temp chamber after one month of testing has been done with NTF. Next step to ship to MAO for a teardown analysis	8/1- NTF on bench testing, or EOL testing. 8/3- ambient & cold testing done with NTF, next step hot testing-NTF. 8/11- ship to 26mile for tri-temp testing		04927 J.C. Subject: FW: 2010-11 TRW Warranty Tracker

Rob M,

Here is the latest U502 warranty information we can review with Marty today, in addition to the stop ship summary and feedback from opening the CAN circuit in the Explorer at Building 5.

Regards,
Tim Snider (tsnider1@ford.com)

QR number	Description	Liability	Liability Tier	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Total	Actions taken	PCA date	PCA @ QAO	PCA @ Ford	Recurrence
I240208, I240512, I240760, I031437, I241013, I241151, I241124, I241277, I241469, I241496, I241663, No QR, J240339-3	Lost of assistance / Relay related																				
	Raised Rivet	TRW	Tyco	3									1			4	- Modify lower punch from flat to a cone shape for a more robust rivet - Installation of vision system to confirm post-rivet geometry. Improve EOL cotact resistance testing	5/19/2009	8/11/2009	8/18/2009	
	Offset spring	TRW	Tyco					1								1	- Vision camera installed to prevent missaligned bridge. - Install feature to guide the spring during welding process	9/11/2009 10/9/2009	1/8/2010	1/15/2010	
	Sulphur contamination	TRW	Tyco													0	- Contact laser cleaning on week 40/08 - Test effectiveness to be more rep. of the application (low current testing) at Tyco and Nidec	Sept. 2008 4/2/2009	6/25/2009	7/2/2009	
	Link relay armature weld failure	TRW	Tyco			1	2									3	- Laser sampling / Lens cleaning. - Welding station PM change	10/9/2009 10/22/2009	1/8/2010	1/15/2010	

	Plastic contamination	TRW	Tyco			1		1		1		1		1		5	- Close back of riveting machine and buffer before and after cleaning. -Molding dept. particle reduction. New ionizatrion bars on coil body, cover and base plate.	9/30/2009 11/7/2009 12/11/2009	3/5/2010	3/12/2010	
	Loose plastic tab	TRW	Tyco		1											1	- Improved alignment of base to armature. - 2 cameras installed to check for tab presence. - Blow and vacuum cleaning installation	8/6/2009	10/29/2009	11/5/2009	
I240504, I240786, I241589	Noisy gear due to input shat loose on IPA / Missing input shaft bushing	TRW	Rogersville	1					1							2	- Poke yoke system installation to prevent non stacked shafts to be passed through before bushing is installed	1/8/2010	1/15/2010	1/22/2010	
J240339-4, J200776-C	Lost of assistance PCB clerance related	TRW	Nidec										1	1		2	- Test to confirm the impedance level between 0V and signal pins in the ribbon cable. - EC to cut back the 0V plane in the PCB artwork, to remove the potential for this overlap	Nov. 09 EC ongoing	10/21/2010	10/23/2010	
I241036, I241386	Missing mounting bushing	TRW	QAO			1		1								2	- Vision camera to detect missing bushings intalled in assy. line	Oct. 2009	Oct. 2009	Oct. 2009	
J030323, J200386	Wrong ECU delivery part number	TRW	QAO									15				15	- Investigate feasibility to run cross check verification of correct software info. Between Bully and NVH machine. - Improve line programming to add new part numbers by minimizing manual intervention	2/15/2010 3/1/2010	2/15/2010 3/1/2010	3/8/2010	
I240259	No communication	TRW	QAO													0	- Recirculation process set up. - Operators retraining	3/31/2009	3/31/2009	4/7/2009	
I240647	Bushing off position	TRW	Tenneco													0	- Rubber process cleaning improvement at supplier	5/12/2009	5/26/2009	6/2/2009	

I241180	Failure codes U0100, U2101	TRW	QAO				41									41	- Activation test process change - Woodpecker process improvement	9/4/2009 9/13/2009	9/4/2009 9/13/2009	9/20/2009	
I240929	Sensor harness contamination in connector	TRW	Delphi		2											2	- Process audit improvement at supplier	10/30/2009	11/6/2009	11/13/2009	
I202093	Hex nut bushing without threads	TRW	ENA				1									1	- Visual camera system	11/30/2009	11/30/2009	12/5/2009	
I241645	Missing tie rods	TRW	QAO						1							1	- Poka yoke installation to assure programming of the part number to be produced into the data base	1/15/2010	1/15/2010	1/22/2010	
I202814	Housing's slot over spec	TRW	Sensus							1						1	- Materials handling improvement to remove set up parts	12/12/2009	1/15/2010	1/22/2010	
I241503	Cricket noise	TRW	Rogersville					84								84	- Return to Job 1 sensor design. Install guide in op. 60 to turn IPA's input shaft 45 degrees and assure finger retainer in properly installed	12/19/2009	12/19/2009	12/26/2009	
J034027	Containment bolt on bushing	TRW	QAO									1				1	- Bolt removal at SL station added	2/17/2010	2/17/2010	12/26/2009	
I240225	Noisy gear due to input shat loose on IPA	TRW	Rogersville													0	- Add bushing on "t" bar and pinion union. - Change to a new grease	Mar. 2009	Mar. 2009	Apr. 2009	
No QR	Lost of Asistance. Part recirculated that didn't passed through testing stations	TRW	QAO									1				1	- Develop password that locks ability to operators to define station to send recirculated parts. Develop traveling card system for recirculated parts	2/25/2010	2/25/2010		
J240232	Belt sliding while teeth are not well formed	TRW	Gates										1			1	- Supplier to remove tape to hold rubber in mandreel. - Molds are being inspected twice (a) 100% at the stripper after demold operation of the slab and (b) at the cooling station prior to placing the next jacket on the m	3/29/2010	4/15/2010	TBD	

J200776-C	Damaged ribbon cable / Tear down	TRW	QAO										1			1	- Develop the usage of one individual centering tool for the tear down operation	3/30/2010	3/30/2010	4/7/2010	
J240482	Bent finger on IPA	TRW	QAO											1		1	- Desing and implement a Christmas tree tool base to avoid using IPA's container to place this tool	5/25/2010	5/25/2010		
No QR	ECU R227 open circuit. C17 damaged or missing	TRW	Anting												1	1	TBD				
J240339, J240482	Lost of assistance. TBD	TRW	TBD										2	2	3	7	TBD

Case Number	Ford DTCs	TRW Code (Sympto	Compone nt	Gear Location	Current Updates	Issue Status	Gear location	Report State
0KM BR145302	TC lamp on C1277	E30	EPP	In holding (Tyco)	**12/10- perform the resistance tests if ok ship to Tyco for next workshop. 12/13- resistance test passes testing, wait for UK to give the OK to ship to Tyco.**	**9/22- When the ignition key is turned ON, the Gear assistance delays for around 2 to 3 seconds. There is a code set in the ABS module (C1277) related to the steering wheel sensor angle. Izaguirre thinks the faulty part could be the Gear. I checked this Gear and found E30 link relay open circuit or retry. 9/24- when gear arrives resistance test then use 5amp load and check resistance again. 10/4- gear still at plant, has not been shipped at this time. 11/8- has been ign. Cycled cold NTF, next to resistance test & 5a resistance test.**		
0KM BR154043		BA4,BA5, BC2	EPP	In Eval (QAO)	**1/10- Pepe will send Geoff the information on the testing so they can check against the EPP FR0326 in the UK. 1/14- testing is still on-going at UK for faults.**	**10/25- next to measure the 2.5V ref using CANape. Run the unit without ignition cycling. Report back to Geoff on the results 11/10- Pepe to repeat the measurement while measuring these points: 1) 2.5V ref at Monitor Micro (as on previous traces) 2) 2.5V ref at Aux ASIC (the other side of R72) 3) The VSW supply to the ASIC 11/17- Pepe did perform tests and did notice some spikes in the 2.5v ref. voltage waiting for Geoff to respond. 12/13- Pepe to perform 2.5v testing on known good unit to compare results with this ECU.**		
0KM BR188663	U3000-61	B97	EPP	In Eval (Anting)	**12/13- waiting on Raymond Qiu to send out 8D. Preliminary report states it was a bushing from the conveyer, now trying to figure out how that got into the EPP.**	11/11- once gear arrives to QAO ship to UK for analysis. 11/29- bushing found in EPP discussions with Anting, shipped to Anting for Analysis.		
0KM BR190049	U3000-49 U2011-61 U3000-96	B25, B95	EPP	In Eval (Fairchild)	**11/11- change the Power Module and see if the replaced Module is being damaged by another condition at ECU. 11/29- PM failure ship to Anting then send to Fairchild for analysis. EOS on the PM 12/10- shipped the ECU to the UK for analysis.**	11/5- also has a battery voltage code event U3003-68 HSAP will send gear back to QAO for analysis.		
0KM BR195438	U3000-49 U3000-96	B25	EPP	In Eval (Melexis)	**1/10- IC11 Aux ASIC failure sent to Melexis and confirmed an ASIC failure analysis ongoing**	**11/23- PM damaged short circuit 12/10- shipped ECU to UK for analysis.**		

0KM BR198102	C200B-62 U3000-96	BD4	TS	In Eval (QAO)	**1/19- provided pictures of the dunnage to Ford. Found by reducing the contact area of the gap set tool will decrease the potential of bending a finger, target date 2/28 installed & PPAP . Rogersville still inspection 100% at EOL and offline inspections before shipping to QAO and have not found any bent fingers.**	**11/29- found one bent finger on the rotor, impact mark on top of the finger. QAO investigating cause. 12/6- QAO still looking for causes but also looking for new ways of testing for bend finger after station handling at the grenade pin removal station. 12/15- looking to install laser that detects bent fingers on the rotor, and should be installed in the granade pin detection fixture. We still need to continue analyzing, meanwhile, Third party sorting at Rogerville & 100% sorting for this condition in QAO. 1/5- unsure if laser system can be done at grande pin detection station, still discussing and checking other options. Sorting still continuing at Rogersville & QAO. Couple of the bent rotors found in sorting sent back to Rogersville look for any witness marks on the rotors. 1/10- plan for containment at Rogersville: > 100% visual check for bent rotors added to operator's control sheet**		
0KM BR198415	rattle under dash	No Codes	TS	In Eval (Rogersville)	**1/26- no approvals at this time will check with Scott Little to verify the timing.**	**11/29- movement of the input shaft causing the rattle noise QAO removed IPA and shipped, arrived in Rogersville today for analysis. 12/1- found no pin stamp on the shaft indicating this failed the deflection test bench still trying to understand how this made it into the gear. Machine logic to recognize bushing & input shaft will change today. Looking at installing a timer to install delay & tell the difference between the input shaft and bushing installation. should have 8D finished by COB Friday. 12/6- Jonathon Harris from Ford at Rogersville to inspect the operation & mistake proofing operation to be set-up on the line & handling issue for failed parts. They will use a green dot to identify a pin stamp on input shaft at EOL.**		
0KM BR753424		BAA,BAB, B9B, BAC,BB8	EPP	In Eval (UK)	**1/10- now trying PCB test SW to compare with reference unit**	**9/14-bully tested 5 times, ignition cycling cannot reproduce the codes, ECU cover removed and R227 inspected did notice any damage no measurements taken. Cover reinstalled and ignition cycling ongoing. 9/20- next step 1) Run the attached configuration while drawing some current. 2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes. 9/24- instructions to test from Geoff We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as**		
0KM BR206427		BB8, B7D	EPP	In Eval (QAO)	**1/14- Pepe will check the PM connections to see if that is causing the B6B's & B32's after PM replacement. Geoff will check the information**	**12/21- Analysis results showed another PM damaged (TOP FET2). replaced PM and ECU is giving now B32. Geoff to look over results.**		
0KM BR218836	U3000-49 U3000-96	B25	EPP	In process (UK)	**1/17- Short circuit confirmed at PM. This time Both FETS from phase 2 were found under this condition.**	**1/5- set B25 three times then set C69, to ship to QAO for analysis**		

FR-0047	U3000-49 U3000-96	BA9	EPP	In Eval (FSL)	**10/8- development test target date set for 11/30/2010.** **12/20- part now on physical analysis for root cause. Geoff to get the date code to see when the new test arrives into Anting.**	emailed the SW group in the UK to get all the SW versions and dates so I can get dates going into QAO.		
FR-0126	C200D-49	B4E	EPP	In Eval (UK)	**11/8- need to contact Nidec to find out why target magnets had weak flux density signal.** **12/17 Numerous contacts with Nidec and still no response, even with Salim pushing it, will try other contacts at Nidec.**	**1/21- Pulled EFF & Buffer Data, Pulled B9A & B38 with B4E, ship gear to QAO** **2/2- In QAO today will start leak testing** **2/3- Able to duplicate the faults. Unit only fails at the beginning of the journey. Probably the problem is on the 5V_Hall_supply. Next step: Scope signals from halls.** **2/5- Sergio suggest this is similar to the QAO B4E end of line failures, scope signals from hall effects** **3/2- Able to get B4E and B38 faults. Halls issue. Hall C toggling the output during power up. Motors group in UK looking at QAO end of line failures for similar issues, update soon. In**		
FR-0139	U3000-49 U3000-96	BA4	EPP	In Eval (FSL)	**12/3-Freescale believes defect in silicon/piece of foreign material.** **12/20- 8D due this week from FSL** **1/14- 8D sent from Freescale the clean date is 12/30/08 for**	**2/4- Pulled EFF & Buffer data shipped gear to QAO.** **2/26- Sergio states fault set at 0degC in the fault data. To email Geoff the information to see if EPP can be sent to UK for testing** **3/1- cold testing needs to be done, ambient completed with no faults & bully testing done with no faults. Compare FR0001 & FR0095 with this BA4 failure to compare similar data. Gear sent to UK for cold testing.** **3/10- arrived in UK today RUA sent today.** **3/29- can reproduce fault cold testing appears monitor micro fault, in process to ship to FSL in Munich for analysis.** **4/16- writing test code so they can capture failure data from the**		
FR-0184	U3000-49	BC5	EPP	In process (UK)	**1/25- Andy Partridge wants Pepe to send the ECU back to the UK for scope testing.**	**4/12- Pulled EFF buffer data, shipped out to QAO** **4/19- arrived at QAO today** **5/3- leak tested, now at the lab ready for testing** **9/1- perform more testing in canape to check the vlink circuit.** **10/11- Canape measurement results sent to Geoff for his response.** **10/18- Sam to perform scope trace when unit sets fault code.** **12/13- Sam sent email to Geoff how to use Kimball's EOLT software.** **1/14- Sam unable to load SW on his computer, Pepe has Kimball's EOLT SW loaded on his computer and will perform the**		
FR-0205	No Com	No Com	EPP	In Eval (QAO)	**10/20- Pepe found open resistor R268 in the ignition feed circuit causing No Com. Finish PFR and send out for further instructions.** **11/8- lift pin 2 of the IC14 and repeat the measurement**	**5/6- could not communicate with test box no visual issues with 2 or 3-pin connector terminals shipped to QAO for testing** **6/14- passed leak test, ambient ign. Cycling with no faults. Bully ambient & cold with performace testing.** **6/15- gear bully tested with no faults. Cold testing next.** **10/11- next steps to tri-temp EPP assembly** **10/15- right before installing into tri-temp chamber was no able to communicate with ECU. Next to check regulator output**		

FR-0214	U2011-49 U3000-96	B3A, B6B	EPP	In Eval (UK)	**9/7- passed all the testing on the B6B chart, next Ship to UK**	**5/7- also has code B6B listed in fault store, had to ship back from Rogersville to 26mile for xray. 5/25- xray clean & passed the resistance test. Check with Geoff on next steps. 6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling 6/10- put into tri-temp chamber with ign. Cycling 6/14- passed 5 days of tri-temp ign. Cycling with no faults. 7/12- solder phases back and recheck with B6B SW in the tri-temp chamber. This B3A also set B6B three times before C69 set in the fault store.**		
FR-0235	P07AE- 09	AF1	NVH	In Eval (26mile)	**10/6- sent email to nick & mat to see if housing is out of specs. 11/15- Manish advised to ship gear to 26mile for further analysis. 11/16- Pepe to ship parts to 26mile for analysis 11/29- housing to be taken up to Burlington near Toronto to have full layout and checked with the gaging tools. 12/2 - Hsg received at 26mile. Awaiting arrival of FR0239 to make one trip to BTI**	**5/28- pulled EFF buffer data, shipped gear to QAO. 6/7- shipped from 26mile to QAO today 6/14- should be in QAO sometime today 8/2- Unit is FNR and it has been disassembled. No unusual condition found. Next step will be to send the Pinion Housing and Rack and Ball nut to Metrology laboratory in order to discard any bent condition at those components 8/13- bent pinion housing suspect with measurements from the lab. looking for next steps. Check with Nick on next steps.**		
FR-0239	P07AE- 09	AF1	NVH	In Eval (26mile)	**11/3- Jason Johnson to get involved with final testing. 11/16- ship parts to 26mile for further analysis. 12/2-Awaiting PH arrival from QAO-Taking to BTI for full layout and gaging**	**6/14- Pulled EFF fault data, shipped gear to 26mile. 6/16- Friction gear is in the lab to be leak tested and measure yoke set. 6/21- pinion housing bend, need to perform teardown & lay-out to determine if rack is bent also. 6/28- Jason to check 32 Mile to get FR0239 laid out. I have to find the CMM holding fixture and a print, and get the parts up there. Working on the print and fixture now 7/6- Jason to ship gear to QAO lab for the pinion housing measurements. 8/3- need update from QAO lab on pinion housing measurements.**		
FR-0241	U3000-49 U2011-49	B43, BB9	EPP	In Eval (QAO)	**11/8- ambient ign cycling cannot reproduce. Next to cold ign. cycle**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started**		
FR-0242	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**11/8- ambient ign cycling cannot reproduce. Next to cold ign. cycle**	**6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. 6/18- in process from Rogersville to QAO. 10/6- found gears at QAO, leak testing started**		

FR-0245	C200D-49	B4E	EPP	In Eval (QAO)	**10/6- cold perf. & 5x cold bully done with NTF. Next step tri-temp testing**	**6/14- pulled EFF data shipped to QAO. B4E only code set intermittently .313 secs into the journey. Found cut on OBH boot. 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 7/27- ign cycling, bully, hot puma passed. Next to start the cold testing.**		
FR-0246*	U3000-49	B43	EPP	In Eval (QAO)	**10/11-now testing in tri-temp chamber 10/27 Tri temp complete and fault not reproducible Next step will be to Xray 11/8- Remove the PFS and send to 26mile for link relay xray.**	**6/14- pulled EFF data shipped to QAO. 6/22- shipped from Rogersville to QAO 7/7- leak tested passed, testing now starting. 9/10- EOL & ambient ign. Cycling done, next step cold testing. 10/8- cold performance, bully & puma all passed, next to tri-temp test.**		
FR-0247 RUA# 3807	TC lamp on C1277 No Assist	No Com	EPP	In Eval (FSL)	**10/18- new 8D received on 10/12 still needs review at UK. 11/12- micro sent back to the UK to recreate the failure. 1/10- can recreate the failure, intermittent ADC faults. At the moment cannot duplicate failure. testing ongoing**	**6/14- dealer states they have no assist and only the TC lamp on with code c1277. no PS message and they could communicate with the PSCM. When I hooked up CANape could not communicate or pulled Ford codes or fault store. 6/22- shipped from Rogersville to QAO 7/2- No Com confirmed at QAO sent EPP to UK for further analysis. 7/9- confirmed micro fault, Monday take off board to confirm micro, if it is to ship to FSL for analysis. 7/16- confirmed micro fault sent micro to FSL in Munich. 7/19- Acknowledged receipt today.**		
FR-0251	P07AE-09	AF1	NVH	In Eval (QAO)	**10/6- check with QAO if we have 8D or CA for this issue at station 70. will check with Guillermo. 10/20- Guillermo to get poke yoke dates for the station. 10/22- send pictures to understand process**	**6/14- friction code cleared for the dealer and did not reset but the steering still hard to turn. I did verify input shaft hard to turn, B6A set twice intermittent. 6/30- shipped to QAO 7/9- there is some suspect of water ingress, I will wait for your opinion and tear down the unit and confirm this contamination by visual inspection. Wanted Pepe to reassemble boots & do a leak test to possible area's of moisture. 8/11-reassembled did not show any leaks during leak test. 8/13-pinion nut was being assembled twice. This condition occurred when operator did not complete full sequence and did**		
FR-0259	U3000-49	B60	EPP	In Eval (FSL)	**11/12- target test date was pushed back to 12/15 for the first test. 1/10- test delayed till 12/26, validation testing still on the production line, waiting on details of clean product.**	**6/30- Intermittent B60 code resets in message center. pulled EFF data and ship to QAO 7/7- QAO to ship EPP to UK for analysis. 7/28- Micro ADC fault, need to remove micro put on development board for further testing before sending to FSL. 7/30- Micro still intact on the ECU, now tri-temp testing with ignition cycling to get see if failure will occur 8/2- able to duplicate code, indicating micro ADC fault. Will remove micro put on development board will wait for Geoff to test SW before shipping to FSL 8/11- did confirm this is a micro fault will send to FSL.**		

FR-0264	U3000-49 U3000-96	B60	EPP	In Eval (UK)	**10/6- UK still testing diode, next to xray before sending diode to manufacture. 10/27 Diode has been sent Vishay. X-ray was clear. 12/6- manufacture confirmed diode issue but when they decapsulated the diode the fault went away. Now they need to find out what the three possible causes that could cause this fault to go away while decapsulation**	**6/30- Also has codes BA4 & B7A, B60 stored in EFF data, shipped to QAO for analysis. 7/7- QAO to ship EPP to UK for analysis. 7/28- hardware issue on PCB, testing still ongoing to isolate the area. 8/2- something pulling phase 1 low, need to check several components to find drain or short. 8/4- found out this is not an ASIC issue further testing needs to be done to pinpoint the circuit problem on phase one 9/8- diode failed in the circuit, sent back to the supplier for analysis.**		
FR-0281	U3000-49	B43	EPP	In Eval (QAO)	**9/2- did standard ambient,hot & cold ignition cycling no codes, performed rattle test no noise. nTF at this time**	**7/16- pulled EFF data shipped to QAO for analysis**		
FR-0304	C200B-2F C200B-61	BD2, BD4	TS	In Eval (QAO)	**1/19- Joel has the results NTF wanted to know if we wanted to pressure test. Will wait for FR0327 and pressure test both harnesses 1/24- Hella performed the complete analysis with NTF to the sensor. Last step to have the TS harness pressure tested**	**9/2- pulled EFF & stored data and shipped to QAO for analysis. Intermittent PS loses assist. 9/22- passed leak test, started to bench test wiggle test harness could not duplicate code. Start ambient ignition cycling 9/27-ambient ignition cycled over 12hrs still cannot produce any codes. 10/4- still at gear level to put into tri-temp chamber and recheck for codes. 10/6- next step to tri-temp test at QAO removed IPA cover no visual issues internally or on the TS PCB. Next to do wiggle testing during bench testing. 10/12- next step to performance test hot.**		
FR-0308	steering noisey	No Codes	NVH	In Eval (QAO)	**10/25- Pavel to write the QCCARS to ship out to INA**	**9/13- can hear ballnut noise while turning input shaft, did not notice any damage & no stored codes. 9/27- Test results out of specification. Frequency amplitude at 600Hz is around 1.9 en CCW.With this condition on 600hz band RBNA swapped with a good known referente RBNA.Noise testing passed after RBNA swaping with no issues to report. Checking RBNA performance it is being detected too much looseness at Ballnut side. This condition will require further investigation at Rack and Ballnut level to determine lash condition. 10/6- ship RBNA & rack to INA for testing**		
FR-0317	P07AE-09	AF1	NVH	In Eval (INA)	**1/3- parts sent to Germany for inspection, Chris Brown will request results on the analysis.**	**9/27- pulled EFF & stored data, shipped gear to QAO for analysis. 10/15- missing large clamp on boot, no grease on ITR and missing soft stop. ITR had pipe wrench teeth marks on ITR. Unknown if tech removed boot & ITR during this R&R. installed on EDF stand and failed peak to peak varation. Next to disassemble to check rack & ballnut. 11/3- to get rack & ballnut sent back to 26mile for evaluation, Jason Johnson to request back. 11/15- QAO to tear down gear and send Jason the rack & ballnut assembly.**		
FR-0319*	rubbing noise in frt. End	No Codes	NVH	In Eval (QAO)	**11/29- failed the NVH test in line for teardown to check the rack & ballnut.**	**10/5- slight resistance while turning input shaft, TS harness conduit crushed near EPP. No codes in fault store shipped to QAO for testing.**		

FR-0324	No Com	No Com	EPP	In Eval (QAO)	**10/18- leak test passed sent to lab to start analysis.** **11/8- Pepe testing resistor & capacitor in the regulator circuit**	**10/5- could not get any data using my CANape at WPAC, re-tried 3 times. The 3-pin & 2-pin clean with no corrosion. No physical damage to gear. Ship to QAO**		
FR-0326	U3000-49	BA4,BA5, BC2	EPP	In Eval (UK)	**1/10- tri-temp ignition cycling cannot reproduce any code will work with data from the 0KM in QAO with same codes.**	**10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **10/5- need to update my software to pull canape on 2011my vehicles, pulled ford codes and snap shot data had ba5 code.** **12/13- Pepe to ship EPP assembly to UK to accelerate testing for this issue.** **12/20- part in the UK today ready for testing.**		
FR-0327	C200C-2F U3000-96	BD1, BD3	TS	In Eval (QAO)	**1/17- could not duplicate any codes after 48hrs of testing at high temp with the original EPP,Harness & TS.** **1/19- could not duplicate any codes during the high temp testing while ign. Cycling & On for 48 hrs. Advised as the last step is to ship the TS to Joel for x-ray & pressure test.** **1/26- Joel has received the TS harness late yesterday still needs to perform the x-ray & pressure test.**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. No damage to TS harness** **10/18- leak test passed sent to lab to start analysis.** **11/8- ign cycled need to check with Sam on other testing performed on this gear.** **11/15- all the ignition cycling & tri-temp testing has been performed with no trouble found. Bench testing with wiggle testing no trouble found.** **11/17- found metallic burr on one of the rotor teeth, advised to ship IPA assembly direct to Hella for analysis. Pepe to contact Angie for information & QCCAR data.**		
FR-0328	U3000-49	B31	EPP	In Eval (QAO)	**11/12- sent email to QAO to send Geoff/Andy the EFF data for next steps. Pepe put EPP through all the tri-temp testing & ign. Cycling NTF. Next to do fault insertion testing.**	**10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. No visual damage to gear** **10/18- leak test passed sent to lab to start analysis.**		
FR-0329	U3000-49 U3000-96	B40	EPP	In Eval (QAO)	**11/18- tri-temp cannot reproduce any codes. Sent Geoff the EFF data for next steps** **12/16- still discussing with Geoff**	**10/18- pulled EFF & stored data shipped to QAO for analysis**		

FR-0330	No Com No start	No Com	EPP	In Eval (QAO)	**11/8- voltage regulator over current condition. Unknown source that caused the over voltage on the CAN BUS circuit. Also the abs module and PCM needed to be replaced for the vehicle to operate with no lamp.**	**10/18- could not comm with the PSCM using Canape. Found out both the ABS & PSCM causing short on CAN BUS high circuit.**		
FR-0331	U3000-49 U3000-96	BA4,BA5, BC2	EPP	In Eval (QAO)	**10/18- pulled EFF & stored data shipped to QAO. Found couple small dents in ECU cover & 2-pin plastic housing broken.**	**10/18- pulled EFF & stored data shipped to QAO. Found couple small dents in ECU cover & 2-pin plastic housing broken.**		
FR-0333	U3000-49 U3000-96	B31	EPP	In Eval (QAO)	**11/12- sent email to QAO to send Geoff/Andy the EFF data for next steps.** **12/16-Geoff has not received anything**	**10/25- pullled EFF & stored data, no external damage, shipped to QAO**		
FR-0334	steering noisey & steering will not turn	No Codes	NVH	At WPAC	**1/3- Jason to follow up with materials lab testing. Check with Mike or gabe. Check with Collen for the data calculations.**	**10/25- no stored codes in memory, boot damaged from ITR unscrewed from the rack, unknown how that happened. No Ford warranty noted.** **11/1- sent out torque specs to Ford engineering to prove ITR's were torqued properly from QAO plant before gear was sent to HSAP. Field Misuse** **12/7- next steps** **-Tim requested a copy of the data / calculations used to determine the ITR to Rack specification. Colleen, do you have this?** **-Have the Mat Lab take photos and measurements to try and evaluate if there was any stretching or damage, or any other visible information we can learn**		
FR-0336	U2011-49	BB5, BAC	EPP	In Eval (QAO)	**12/10- Andy P gave Pepe instruction on testing signals on TRU6 & TRU1.**	**10/25- pulled EFF & stored data, shipped gear to QAO for analysis**		
FR-0341	U2011-49	B6B	EPP	In Eval (UK)	**11/15- pulled EFF & stored data shipped to 26mile for analysis. PFR done and sent to 26mile & UK.** **12/3--Sent to UK.**			
FR-0342	C200D-49	B9A	EPP	In Eval (QAO)	**11/15- pulled EFF & stored data shipped to QAO for analysis.**			

FR-0346	P07AE-09	AF1	NVH	In Eval (26mile)	**1/3- perform gear teardown, inspection and analysis.**	**11/15- pulled EFF & stored data shipped to 26mile for analysis. PFR done and sent to 26mile. 11/29-passed all testing done at the EDF stand. Looking at all the history data & Interactive diagnosis. I don't think the tech followed the PPT properly. He did not show that he cleared the code and the code did not reset. He states in the AWS report that it reset but in the interactive diagnosis & fault store does not show that the code reset. could have been caused by the low pressure in the tires.**		
FR-0347	No Com	No Com	EPP	In Eval (QAO)	**11/15- pulled EFF & stored data shipped to QAO for analysis.**			
FR-0351	P07AE-09	AF1	NVH	In Eval (QAO)	**11/15- pulled EFF & stored data shipped to QAO for analysis. No damage to gear, input shaft turns normal**			
FR-0356	U3000-49	BA4,BA5, BC2	EPP	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0357	P07AE-09	AF1	NVH	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0358	U3000-49	B6C	EPP	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0360	C200D-49	B9A	EPP	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0361	U3000-49	B31	EPP	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0365	C200B-2F C200C-2F C200B-61	BD2, BD3,B90	TS	In Eval (QAO)	**1/25- did TRI TEMP and ignition cycling and Hot testing as well and no faults observed. Next step to put on bully tester 5 times.**	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis. TS harness conduit pinched near EPP but no wire damage.**		
FR-0366	U2011-49	BB5, BB7	EPP	In Eval (QAO)	**11/24- pulled EFF & stored data, shipped gear to QAO for analysis**			
FR-0367	C200D-49	B9A	EPP	In process (QAO)	**12/13- pulled EFF & stored data, shipped gear to QAO for analysis**

In process waiting on relay workshop Nov. 22

Case Number	Ford DTCs	Symptom	Component	Gear Location	Current Updates
DR-0018	U3000-49 U3000-96	BBB	EPP	In Eval (UK)	1/3- KOA still working on analysis. Geoff will follow up
DR-0023	clicking noise turning wheel	N/A	NVH	In Eval (QAO)	10/12- new power supply supplied by Mapro, now EDF machine back up & running. 11/29- passed entire EDF test with NTF, check to close claim.

DR-0025	U2011-49 U3000-96	B6B	EPP	In Eval (UK)	9/13- passed hot puma and high pot test, ship to UK for further analysis.
DR-0027 RUA# 3940	No Com	No Com	EPP	In Eval (UK)	10/15- OnSemi came back and states the diode was overcurrent, suggesting this is a one off failure. 11/1- sent questions back to the manufacture about this diode failure waiting on response UK. 1/10- Kimball looking for continous improvement plan for this defectivity on the diode, will work with OnSemi.
DR-0028	noise turning steering wheel	No codes	NVH	In Eval (QAO)	10/25- Pavel to set-up QCCARS to ship to INA

DR-0029	U3000-61	B97	EPP	In Eval (QAO)	10/6- ambient ignition cycling, NTF at this time.
DR-0033	C200D-49	B9A	EPP	In Eval (QAO)	8/18- gear passed leak test & ambient ignition cycling, next step to cold testing. 11/1- QAO exhausted all testing of this unit, Pepe looking for next step or should it be sent to UK? 11/2- perform wiggle test on the ribbon cable, then PCB motor clearance check.
DR-0038	C200D-49	B9A	EPP	In Eval (QAO)	9/3- pulled EPP & stored data shipped to QAO for analysis
DR-0039	U2011-49 U3000-96	BD0-BD3	EPP	In (WPAC)	9/27- interactive diagnosis leads to u2011-49 code then set u3000-96.
DR-0041	steering noisey	No codes No Com	NVH	In Eval (26mile)	11/8- Pepe to ship the parts of the rack back to 26mile for engineering evaluation. Inspected seals at QAO and checked with operators. 1/4- found out PIP seal will go to a dual lip seal design in April 2011 with the Wontae OBH. CD3 changes in Jan 2011 with new Rane OBH. 1/10- measure groove depth on the OBH. Jason to follow up.
DR-0042	clicking noise turning wheel	No codes	NVH	In Eval (QAO)	10/18- passed leak test, sent to lab for EDF/NVH testing.
DR-0044	U2011-49 U3000-96	B6B	EPP	In process (UK)	12/8- in process to UK from 26mile

DR-0045					
DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	1/26- TS rework broke containment need to see what happened on the line during rework.2/8/2010 is the proper rework date so this is a precontainment gear.

Issue Status	Gear location	Report State
3/17- submit hot process request, dealer borrowed a gear from a vehicle on a lot to get the customer into the vehicle. Called dealer to make sure two repairs were not sent out under 3504. found out there are two repair orders in CQIS for this repair both have 3504 causal repairs and two labor ops. one should be charged back to the dealer. 4/9- shipped gear to QAO 4/21- in QAO leak check ok, has not tested in lab. 5/4- no leaks will start testing next week 5/24- in fridge ready for testing 6/7- passed ambient bully & performance testing cold bully testing nex 6/15- Unit has been ignition cycled over 12 hours. after that fault repeated 2 times and then no more. Unit was warmed and ignition cycles in progress. 7/12- Geoff to send Tim Diez info on BBB fault description., Geoff sent out 7/14. 10/20- BBB set every ign. Cycle now- Geoff thinks this is a micro issue, to ship the ECU to the UK. 11/29- further testing to be done either solder joint or R96 resistor is the cause at this time. 12/16 ECU is back at Kimball and resistor is back to manufacturer for analysis		
5/24- did not notice any damage to the gear or boots. Turning input shaft is smooth with no noise that I noticed. 6/7- make sure after leak check to put on NVH test, QAO can use Audit rig for testing then put on the EDF tester 7/26- arrived at Rogersville in process to QAO 8/16- leak tested checking QAO for latest update. 10/6- has EDF test been completed? 10/11- power supply for the EDF machine damaged, supplier from Netherland found issue with internal component, specialty component not sure of repair at this time. QAO sent back-up PS to Marion, Marion sent their's in for repair. Pepe will check with Sergio to see the status of the one sent to Netherland for repair.		

6/15- submit hot process request 7/9- pulled EFF data, need to ship to 26mile for testing 8/25- set for xray tomorrow 8/26- x-ray clean, next ignition cycling with the application SW 9/7- tri temp ignition cycle did not reproduce any codes, next to hot puma. 9/13- passed hot puma and high pot test, ship to UK for further analysis.		
6/22- dealer to call back with hot process information to return gear. 7/28- Pulled EFF data, technician could not communicate using his IDS. I could not communicate using my CANape at WPAC. 8/20- Pepe found defective voltage regulator, need to confirm regulator issue after Geoff checks the data. 8/30- Geoff to look over the final data from QAO to decide if the regulator should be sent direct to Infineon or to the UK for additional testing. 9/1- QAO to send Geoff ECU assembly so they can remove the regulator. 9/6- ECU sent to Geoff tracking # 9373 7350 8684 by Fedex 9/8- arrived in the UK today 9/17- not regulator issue found diode on circuit that is leaky more testing need to check other parts of the circuit. 9/27- diode sent out to supplier from the UK for testing. 10/8- Geoff at Kimball next week to follow-up any diode updates.		
6/28- submit hot process request 7/28- pulled EFF data, no codes, did not notice any abnormal noise while turning input shaft back & forth, ship gear to QAO for analysis. 8/17- gear failed the EDF test but no noise was notice during testing. Waiting on next steps, could put on-vehicle or could teardown gear? 8/23- failed NVH test, did not notice any audible noise while testing. Check with Dan Ulep & Sylvain Nadeau for the next steps before teardown. 8/24-Sylvain- EDF results would suggest RBNA damage; I'd suspect field misuse damage. The bolts that were so tight that had to be tapped to be removed is a red flag for me that work may have been done by an unqualified mechanic. I would suggest sending the RBNA to INA if workshop misuse confirmation is required. 9/8- rack & ballnut ready to be sent to INA, needs Gabreil to write QCCAR. 10/6- Waiting for QCCAR and contact from INA to receive the part. 10/11- Guillermo working with Pavel to find out who will be writing QCCARS now to ship to INA		

7/7- Submit hot process request 7/28- pulled EFF data, customer states gear loses assist intermittently backing out of the driveway, dealer could not duplicate the problem but had a stored U3000-61,performed interactive diagnosis code returned on road test.		
7/28- pulled EFF data, shipped get to QAO for analysis.		
10/5- could not turn input shaft, could feel rust squeezing the IBH boot to the rack, was able to pull Ford codes no codes stored then I was not able to communicate with the ECU 10/18- Pepe to check leak test results, pictures taken of rusted ITR & rack. 10/25- leak test passed, advised to reassemble boots and recheck IPA & boots for leaks 10/27 still not confirmed location of ingression, cannot duplicate leak 11/5- gear torn down indications water ingress from the press in seal in the OBH was pinched or not molded properly. Need to send pictures and decide what to do with the parts. No history known of this vehicle being in a flood, but this area the customer was in did have flooding conditions around the Nashville,TN area are May 2010.		
10/5- did not notice any noise from gear and no codes in fault store. Ship to QAO for analysis		
11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/5- pulled EFF & stored data, no visual damage shipped to QAO for analysis 11/11- non powered measurements such as across the phases and possibly the motor PCB. This way, if we can confirm the is a relay problem with the population, we will not destroy or change any evidence by operating the contacts.		

12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness. 1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions

PARTS REPLACED:: NONE TECH QUESTION: WITH THE CHASSIS EARS IT SOUNDS LIKE THE NOISE IS COMING FROM THE RACK AND PINION. THE SHOP MANUAL STATES THAT THE MOTOR DRIVES A BELT, SO I DONT THINK IT COULD BE THAT. I USED A PAIR OF VISE GRIPS AND GRABBED THE LOWER STEERING SHAFT AT THE RACK WHILE ANOTHER TECH ROCKED THE STEERING WHEEL, NO NOISE. I THINK IT COULD BE THE RACK. RECOMMEND YOU DISCONNECT STEERING SHAFT FROM STEERING RACK AND TURN WHEEL. IF NOISE IS NOT PRESENT WITH STEERING SHAFT DISCONNECTED, RECONNECT STEERING SHAFT AND REMOVE OUTER TIE ROD ENDS FROM STEERING KNUCKLES. IF NOISE IS STILL PRESENT WITH OUTER TIE ROD ENDS DISCONNECTED, SUSPECT EPAS STEERING GEAR IS THE CAUSE OF THIS CONCERN. RECOMMEND YOU REPLACE EPAS STEERING GEAR, AND THEN RE-EVALUATE THIS CONCERN. IF NOISE IS COMPARABLE TO A SIMILAR VEHICLE, NO REPAIRS ARE RECOMMENDED	

CHECK INTERACTIVE DIAGNOSTICS CODE CLEARED AND RESET DIAGNOSTICS LEAD TO EPAS GEAR REPLACEMENT	
09/16/2010 08:01AM BETH MIYA MSS - FCSD - TECH SVC HOTLINE TECHNICIAN REPLY: STEERING RACK NOT ROOT CAUSE. REPLACED STEERING RACK, NOISE STILL PRESENT.

FR-0307	TC lamp on C1277	No Codes		At WPAC	**9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).**
FR-0309	TC lamp on C1278	E1E		At WPAC	**9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on C1278.**
FR-0314 RUA# 4149	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**
FR-0316	TC lamp on C1278	No Codes		At WPAC	**9/27- pull EFF & stored data no codes stored, checking CQIS & AWS for any history information.**
FR-0350	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**
FR-0352	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**

FR-0354	C200D-49	B9A	EPP	In Eval (QAO)	**12/10- QAO confirmed this is a regulator issue with a double start-up**
QAO line failure- 1 RUA-2983		B9A	EPP	In Eval (UK)	**3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100%**
QAO line failure- 2 RUA-2983		B9A	EPP	In Eval (UK)	**12/14- able to duplicate code, looking at interaction with auxillary ASIC & hall effects**
QAO line failure- 3 RUA-2983		B9A	EPP	In Eval (UK)	**3/26- failed the flux density test. Get details of testing from Simon Wright & get with Nidec to explain their 100% containment operation run some bad units through to see if they fail**

Issue Status
5/3- ambient, hot ,bully test pass, next cold bully test then performance test. Then hot/cold puma testing 5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.
5/24- hot & ambient, next step is to cold test with ignition cycling and motor movement. Then bully test. 6/21- ign. Cycling, bully, & puma passed next cold ign. Cycling 8/20- NTF with all the ign. Cycling & hot puma, advised to finish cold testing to complete test. 10/4- all testing has been done ign. Cycling with no problem found. Next step tri-temp testing. 12/6- to use the new tri-temp tester to check for any codes. 12/10- tri-temp complete with no trouble found. Check with Ford to see if we can start to cutaway red plastic to check pins for PCB motor clearance. 12/15- Ford agreed to cut back red plastic and check for PCB motor clearance.
12/20- arrived in QAO for testing found double start-up & all criteria leads to regulator issue found out this unit has SW FB2AMFB2 and the new SW fix for the regulator is FB2AMFB3.

8/27- shipped out of Rogersville on Friday's truck.
8/26- xray is clear not shorts or offset. Next to see if code resets. Then can do some other tests before relay is removed for inspection.
9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.
10/8- performed hot puma & high pot test with no faults found.
10/20- shipped to Tyco for relay & contact analysis.

12/16- Submit hot process request
1/8- could not communication with ECU, shipped to 26mile
1/25- needed to unlock CCP, looks like dealer cleared codes serveral times. Ignition cycling over the weekend cannot reproduce any issues with no communication. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. check my equipment for communication, check compare date code with 85 & 27 epoxy & resonator issues.
2/8- Simon will decode EFF data to see if torque sensor code were all set at the same time, of if we need to list as torque sensor return.
2/22- This is a BC2 code looking for diagnostic help from Geoff on next steps.
3/8- Simon sent fishbone to start testing, discussing sending gear to QAO for Sergio to test.
3/19- send gear to QAO today for analysis.
4/9- sent EFF data to QAO & fishbone for testing.
4/19- has been bully tested 5 time and hot, ambient, & cold tested with no failures at this time.
4/21- Geoff advised to get xray of Epp at a certain angle, Samuel needs to consult Geoff on location of capacitor then QAO needs to find new xray supplier.
4/26- shipping EPP back to 26mile to xray internal capacitor
5/3-Andy shipped EPP to 26mile for xray
5/7- Geoff explained to Mike F how to xray EPP

2/16- submit hot process request
2/25- dealer did not use the hot process form to return gear it will come back normal part return process
4/12- pulled EFF buffer data and shipped to QAO
4/20- arrived in QAO, to leak check then start testing in lab.
4/23- Samuel able to reproduce B23 the motor PH FET is not closing, the gate signals are working. To check FET with microscope then will use surrogate FET and retest.
4/26- Geoff looked at PFR and advised Samuel to ship power module to Fairchild
5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out

8/23- pulled EFF & fault store data and shipped to QAO for analysis
8/27- gear shipped on Rogersville Friday truck to QAO.
9/1- gear passeed leak testing also could not duplicate any codes with ambient ign. Cycling will continue with cold testing.
9/8- still cannot duplicate any codes, bully & performance tested. Finished cold ign. Cycling.
9/22- QAO exhausted testing at gear level, TS team in 26mile looking over testing data to decide if QAO can perform any more testing or gear should be shipped to 26mile for tri-temp testing. Unknown when shipment will arrive for tri-temp oven to QAO and when will it be set-up completely for testing.
9/24- FED EX torque sensor & harness to 26mile for testing today.
9/27- TS & harness arrived at 26mile today.
9/29- 26mile ran TS with power all night NTF now put in tri-temp chamber for temp cycling to see if any codes set.
10/4- tri-temp ign. Cycled for 2-day with no problem found. Joel to x-ray harness. Jim to check TS for further testing.
10/27- shipped TS to Rogersville to remove the shaft then ship to Hella for testing.
11/1- Joel states the xray was clean of the TS harness. TS sent to Rogersville and they sent TS to Hella on 10/30.
11/2- Hella will start testing on TS tomorrow morning and will update in the Ford meeting tomorrow.
11/17- Hella sent final 8D NTF, Jim Loria to check EPP level for possible causes. Don & Jim to complete BD3 fishbone and rule out any other possible causes with the EPP.
11/19- QAO to tri-temp EPP assembly will install known good TS & harness and will manually input torque from the sensor. will test over the weekend for results on Monday.
11/22- new instructions for EPP testing.
1. Put the EPP into a thermal chamber, Power off, but hooked up to a power/ignition/CAN source and good TS outside of the chamber.
2. Soak the unit in the chamber at 120 C for 2 hrs.
3. Power on the EPP from outside the chamber.
4. Put a torque of a few Nm onto the TS.
5. Check if any codes or lics are raised

8/14- Submit Hot Process request form
9/18- dealer shipped part today should be at WPAC on Monday
9/25- could not pull any EFF/Buffer data from gear, No Communication.

9/24- this is the service gear the tech installed from fr0056 and had a U3000-96 and had to replace again. analysis done at 26-mile.
9/29- 26-mile with further testing to check B31 code. Check with Simon on progress.
9/30- make sure this was a service part, testing ongoing, no problems found at this time
10/1- xrayed ribbon cable and welds no problems found, still will not reproduce fault. Advised to look at circuit diagram
10/2- Thiha to check with Geoff on pin layout diagram. Fault insertion testing
10/15- 26mile manual cycling on the bench to check for faults, has not failed at this time.
10/23- Geoff to check FTA to help with next step testing for B31's at this stage of the analysis.
11/2- Internal B31 workshop planned after B9A is resolved by electrical teams.
11/18 On hold, B9A investigation first

9/8- Submit hot process request form
9/18- pulled EFF & Buffer Data code B31 set before C69 latched out. Jason to ship gear to QAO for testing.
9/24- gear arrived in QAO for testing
9/30- take ECU cover off take pictures of the seal. Simon/Geoff to email next steps to inspect and xray

9/21- Submit hot process form, Have no information on the EPAS gear replacement, CQIS claim only lists vehicle would not move due to a transmission issue. **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile** **9/25- gear at 26-mile to ship to QAO** **9/29-estimate gears to QAO late this Thursday** **10/2- cannot reproduce fault code at this time. Next steps from 26-mile** **10/15- ke sure part is x-rayed before Sergio goes back, 26mile manual cycling on the bench to check for faults.** **10/23- Sergio left EPP at 26-mile for testing, x-rayed PFS could not see any faults with ribbon cable & connections. Geoff to get FTA to decide next steps for other B31 testing.** **11/12- PFS at 26-mile waiting on B31 workshop after B9A's are tested**
10/27- Submit hot process request form **11/5- Pulled EFF/Buffer fault data at WPAC** **11/6- gear dropped off at 26-mile and shipped to Rogersville to QAO** **11/9- when gear arrives at QAO do shake test for cold weld, x-ray, Geoff to send instructions to Sergio.** **11/12- testing starting today in QAO** **11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found, next step xray motor relay.** **11/24- Puma testing & resistance testing passed** **11/30- xray of motor relay ok & passed hot ignition cycling. Next step testing voltage reading on PCB. Hot ign. Cycling** **12/14- next step hot ignition cycling**
11/20-Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak test and sent upstairs remove EPP and perform ignition cycling.** **3/26- has been tri-temo tested for two days and no failures at this time.** **3/31- in cold chamber now, no failures at this time.** **4/20- has been shipped out to the UK today**
12/4- Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- gear should be sent to the UK to check the monitor micro & related circuits.** **1/4- gear now in process to QAO should be there 1/6.** **1/13- is fault repeatable, cold test the unit. check the reset line and supply line for the monitor micro.Once this is done, then we can decide the best place to continue analysis.** **1/19- photograph the part so that we can read the datecode from it. Could be a C154 issue we have seen before. Sergio & Geoff discussing details.** **1/20- RUA raised will ship to UK for further level 3 testing. Fault relates to PCB or solder joint issue.** **1/28- further PCB testing is indicating a resistor R281 issue. Further testing to confirm.** **3/3- R281 resistor has short on end cap will ship to KOA for analysis by next week.**

12/4- Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile. Leak tested** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **1/22- Thiha was able to get the code to set one time while tri-temp testing. Testing still ongoing** **1/28- thiha to send geoff decoded information when the one code set on the tri temp tester** **2/3- Thiha was able to duplicate the B9A again once while tri-temp testing sent results to Geoff Jacks.** **2/10- Geoff sent 26mile the canopy configuration to use while tri-temp testing to capture this data. Waiting for the** **2/19- one temp chamber broken and waiting for DR0004 in the other chamber to finish. Data logging is ready for operation.**
12/4- Submit hot process request form **12/21- pulled EFF & Buffer data and ship to QAO** **1/13- to leak test and start the standard testing** **1/20- could not reproduce the codes, next step to do vibration test on the bully machine. Jose waiting for line to switch back to CD3 to test.** **1/25- passed bully testing, next step to discuss with Jim Loria** **1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-temp testing can be done. set back to Rog. Att: Andy-truck V08385 SKID# 22** **2/22- all four channels tripped codes at** **-2.9degC EFF data collected. Testing on going in the chamber.** **3/1- Visnu to set-up software to measure voltages when gear trips fault code to find area of fault at TS,**
12/4- Submit hot process request form **1/7- pulled EFF & Buffer Data, ship to 26mile** **1/13- leak tested and brought upstairs for testing** **1/15- hot cold ign cycling and try to reproduce the code.** **2/3- cannot reproduce any codes at this time with hot & cold ignition cycling** **3/22- to move into the cold chamber for testing** **4/16- in the west building now thermo testing** **4/21- thermo testing since 4/15 in chamber still cannot reproduce code. To Hot Puma test next** **4/23- Tri-temp and ignition cycling in the W. building. CANape running to capture fault if trips.** **4/26- has not failed for over one week.** **5/7- to hot puma test if that passes to ship to the UK for complete B9A testing.**
1/21- pulled EFF & buffer data, ship to QAO **2/2- In QAO today will start leak testing** **2/3- EFF data shows PH1 & PH2 at link voltage when it should be Vlink/2. This points to the motor relay. Not able to reproduce the fault, working with the special B6B sw version.** **2/5- using B6B software and ignition cycling overnight cannot reproduce any codes.** **2/26-still cannot duplicate the code using the B6B software no faults or LIC's.** **3/8- send to 26mile for cold testing** **3/10-Checking the west building today to put in for cold testing** **4/9- gear never sent back to 26mile still at QAO.** **6/29- bully test done ambient, ign. Cycling done ambient & hot. Not fault found, to perform iso(1000v) test and then cold testing.**

1/21- pulled EFF & buffer data, ship to QAO **2/2- In QAO today will start leak testing** **2/2- In QAO today will start leak testing** **2/5- ambient ignition cycling did not reproduce any code, bully testing next.** **3/2- Not able to reproduce the fault. Hot and ambient testing.** **3/12-Both failures reproduced at lab after some time without powering up EPP. PLUGs visully inspected with microscope and no contamination found between terminals. 5V outputs of the regulator scoped. Noisy signals but normal, as in good known EPPs. Not possible to reproduce again faults. Cold testing in planned.** **3/19- possible issue with the regulator 5v rails do not come on during first start-up. Ship to UK for analysis**
1/22-pulled EFF & buffer data, B9A only set once, shipped to QAO for standard testing **2/15- shipped out from 26mile to QAO** **2/26- to leak test and start lab work** **3/2- Not able to reproduce faults. Hot and ambient testing. EFF data 4°C** **3/30- cold testing done no faults, bully test next.** **4/21- double check cold testing history, bully tested 10x no failures- hot puma check next.** **5/3- still cold testing for a week, puma testing next** **5/17- cold puma test completed no faults now hot puma testing, then hot/cold bully** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**
2/5- Pulled EFF & Buffer data shipped to QAO. **2/26- gear at QAO inline for testing** **3/2- B9A reproduced. Static motor electrical position while EPP is being turned. Encoders failure. Need to define next steps? EFF data -11°C** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Short between V5_EXT2 and 0VOLTS only present when ribbon is plugged. Current on V5_EXT2 has been measured with an special harness. Found that short is on the motor. Unlikely to be clearance on motor PCB. Send to UK tracking # 9373 7349 8749** **3/19- confirmed int. low impedence on pin 3, 5v supply touching ground plane similar to FR0074.**
3/15- Pulled EFF & Buffer data, shipped to QAO for analysis **4/9- been delayed in transit, now on its way to QAO** **4/19- need to leak test then bully test & hot,cold, ambient testing** **6/18- passed all QAO B9A testing, shipped to UK for additional testing**

3/22- Pulled EFF/Buffer data shipped gear to QAO
4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform
4/9- Ambient testing done. No faults. Hot testing done. No faults. PH1 & PH2 shorted to PH3 in EFF. Next step Insulation test done at 1000 volts. Pepe to perform
6/29- relay measurements performed. Iso(1000v) test done. Ambient/cold ignition cycle done. Cold puma done next step hot puma.
8/25- set for xray tomorrow
8/26- x-ray clean, next tri-temp with the application SW

3/31- pulled eff buffer data and shipped gear to QAO
4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday
4/19- need to leak test then bully test & hot,cold, ambient testing
5/17- JL- cold bully test raised E98 LIC's on every ignition cycle
6/18- passed all QAO B9A testing, shipped to UK for additional testing

3/31- pulled eff buffer data and shipped gear to QAO
4/6- sent gears out to Rogersville to ship to QAO for testing
4/19- need to leak test then bully test & hot,cold, ambient testing
4/21- leak check passed taken to lab for testing
4/26- start the bully test tomorrow when line changes
5/3- bully test passed, now in fridge cold testing then will bully test cold and performance test
5/17- JL - cold bully test raised E98 LIC's on every ignition cycle

4/12- pulled EFF buffer data, shipped out to QAO
4/19- arrived at QAO today
5/3- leak tested, now at the lab ready for testing
6/15- Unit leak tested, no leaks to report. Unit was Measured on the Phases terminals before first ignition. No unexpected conditions found. Unit bully tested No faults found.Unit is into the freezer to be cold tested
6/29- RELAY MEASURED. AMBIENT BULLY TEST DONE. TO PERFORM ISOLATION TEST, THEN AMBIENT IGNITION CYCLING
8/25- set for xray tomorrow

4/26- pulled EFF Buffer data, shipped to QAO for testing
6/14- bully & performance test completed no faults, ambient/cold ign. Cycling, puma testing next.
6/15- QAO completed all the B9A testing they could with no failures, sent to UK for further testing.
6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.

4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis
5/12- gears should arrive in QAO on Wednesday
5/18- need to leak test then testing can start in lab
6/2- passed all bully testing & Performance testing. Next temp ign. Cycling & puma. RG
6/4- removed ECU cover has found debris in a couple of different areas the 5V. sliver looks like it is shorting across pins 10 & 11 on PL1. At this time it is not shorting.
6/14- ECU arrived in Kimball today. Geoff will follow-up make sure lab gets part and starts analysis.
6/22- Suspect fibers that were noted by customer are actually cracks in flux on solder joints. NFF with Kimball testing, Kimball to ship ECU back to UK for further testing.

4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis **5/12- gears should arrive in QAO on Wednesday** **6/7- passed leak test, shipped to 26mile for xray** **6/9- xray tomorrow** **6/10- xray clean, next hot Puma** **6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test. Perform 1000v isolation test. Send Ford fishbone chart on B6B** **6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.**
4/30- Pulled EFF & buffer data, shipped gear to QAO for analysis **5/12- gears should arrive in QAO on Wednesday** **6/7- passed leak test, shipped to 26mile for xray** **6/9- xray tomorrow** **6/10- xray clean, next Hot Puma** **6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test & 1000v isolation test.** **6/25- now ready for tri-temp ign. Cycling** **6/28- check 1000v test by end of week. Geoff check on fishbone for belt drive application.**
5/6- pulled EFF data and shipped to QAO for testing **6/11- leak testing, slight leak at OBH on interface** **6/14- passed bully & performance testing, now down to EPP level to start ignition cycling ambient & cold** **6/15- QAO completed all the B9A testing they could with no failures, shipped to UK for further testing.** **6/28- evidence of a regulator issue will explain data in B9A meeting on Wednesday.**
5/7- pulled EFF data shipped to QAO for testing **6/2- passed bully & ambient performance testing & ignition cycling. Gear in fridge next cold ignition cycling & performance test.** **6/14- cold ignition cycling at this time**
5/7- pulled Ford codes & EFF data no codes list only A28 code
5/7- pulled EFF buffer data & shipped to QAO **6/7- passed leak test, shipped to 26mile for xray** **6/9- xray tomorrow** **6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**
5/20- pulled EFF & Buffer data, kept gear at WPAC could install on vehicle

5/20- pulled EFF & buffer data, shipped to QAO for analysis. **6/11- Pepe found damaged TS harness on Pinion side** **6/15- passed leak test, ambient & cold ign. Cycling**
5/20- pulled EFF & Buffer data, shipped to 26mile for xray **6/2- xray slightly looks like raised rivet, resistance measurement passes, checking with Geoff on next step** **6/7- to perform standard tri-temp ignition cycling first then if that passes to get application code to remain in diagnostic mode from Michele.** **6/10- took out of tri-temp after 3 days no B level faults at this time. Next to reflash with B6B intro SW. hot puma done?** **6/21- in thermo chamber from 6/7-6/9 ign. Cycling with no faults with B6B test SW, hot puma passed.** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**
5/27- pulled EFF buffer data, ship gear to 26mile for analysis. Next to leak test an xray relay. **6/9- xray tomorrow** **6/10- xray clean, next hot Puma** **7/12- flashed new B6B SW, now ready for tri-temp ign. Cycling** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**
5/27- pulled EFF buffer data, shipped gear to QAO for analysis. Also pulled codes B38 & B4E from the fault store. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **9/9- passed all the EOL & standard testing. Ship to UK for further analysis.** **10/6- tri temp test before shipping to UK. 10/27 Tri-temp complete, generated BB5,BB7 and BB9 faults but no B9A fault. So ship to Uk for further analysis**
5/28- pulled EFF data, shipped gear to QAO for testing. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **6/30- At lab but has not started, will start to testing sometime this week.** **7/7- Water ingress due 3 PIN connector of PFS causing malfunction of the system. Also sent email to Anting to see if this PFS needs to be sent to Kimball to have the PFS head molding removed to check access of the moisture into the EPP.** **8/27- shipped to Kimball today.** **DHL#: 357 3958 054**

5/28- pulled EFF data, shipped gear to 26mile. No gear or harness damage **6/17- gear ready for leak testing at 26mile should be done by tomorrow** **6/21- Jason to check latest status.** **6/28- shipped to QAO** **7/20-Test in progress. Ignition cycling, IPA movement movement from stop to stop, functional test. Fault not reproducible.** **7/26- testing now for a double start-up, has the E22 code in fault store.** **7/28- QAO to get freezer spray and test for the double start-up**
5/28- pulled EFF data, shipped gear to QAO for testing. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **7/7- passed all QAO B9A testing, bully,hot puma, ign cycling cannot reproduce code. Shipped gear to UK for further testing** **8/3- Voltage regulator damaged during cooling down exercise, need to find out what the next step is.**
5/28- pulled EFF buffer data, shipped gear to 26mile for leak test and xray. **6/10- xray clean , hot puma next** **6/14- passed hot puma with no faults, Mike F working with Michelle Marion on B6B SW for next test.** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**
6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. **6/18- in process from Rogersville to QAO.** **10/6- found gears at QAO, leak testing started**

6/14- pulled EFF data shipped to QAO. B43 in EFF data, also stored BB9 code. **6/18- in process from Rogersville to QAO.** **10/6- found gears at QAO, leak testing started**
6/14- pulled EFF data shipped to QAO for analysis **6/22- shipped from Rogersville to QAO** **7/7- leak tested passed, testing now starting.** **8/3- confirmed double start-up during analysis, but this is not a regulator issue. To continue with the testing**
6/30- pulled EFF data and ship to 26mile for xray. **8/26- x-ray clean, next tri-temp with the application SW** **9/1- tri-temp testing able to duplicate B6B 15 ign. Cycles in at 90deg. C, both phase 1 & 2 failed. testing ongoing trying to get gear to fail again.** **9/13- scoping the 3 phases on relay low side cannot duplicate code. passed hot puma & high pot testing, ship to UK for testing**
6/30- OBH screws removed, cannot leak test. Pulled EFF data and shipped to QAO

6/30- B9A set once in the fault store, pulled EFF data and shipped gear to QAO. **7/7- leak tested passed, testing now starting.**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/26- x-ray clean, next tri-temp with the application SW** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/26- x-ray clean, next tri-temp with the application SW**

7/16- pulled EFF data shipped to 26mile for xray & analysis.
9/1- performing ignition cycling at this time still needs to be xrayed.

7/16- pulled EFF data shipped to QAO for analysis
7/16- pulled EFF data shipped to QAO for analysis **9/7- ambient,cold ignition cycle with no faults, next to hot puma**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/7- tri-temp ignition cycle cannot reproduce any codes. Next to hot puma, then high pot test on the motor relay low side.** **9/13- passed hot puma & high pot testing, ship to UK**
7/16- pulled EFF data, shipped gear to QAO for analysis. Also has a B4E in the fault store. **8/19- finish ignition cycling & hot puma testing if that passes to ship to UK for flux density test.** **8/26- the data shows that it is a supply fault, rather than a Hall effect or motor fault. Next step to repeat the test looking at 5V HALL on the motor PCB and on the ECU.** **If the output of the Aux ASIC (pin 40) is not ok then there's 2 options:** **1) Aux ASIC failure** **2) Low impedance between 5V HALL and 0V (potentially the motor PCB clearance issue?)**

7/30- pulled EFF data and shipped gear to 26mile for xray and analysis **8/26- x-ray clean, next tri-temp with the application SW**
7/30- pulled EFF data and shipped gear to 26mile for xray and analysis **8/26- x-ray clean, next tri-temp with the application SW**
7/30- pulled EFF data and shipped gear to QAO for analysis. **8/27- leak test, ambient/hot ign cycling & hot puma all passed next step to start cold testing.** **10/15- leak test passed, now testing in tri-temp chamber.**
9/2- pulled EFF & stored data and shipped to QAO for analysis. **10/15- leak test passed, now testing in tri-temp chamber.**

9/7- pulled several can/bus Ford U-codes looked like a CAN bus connection or circuit issue from the codes. U0100-00(lost Com ECU/PCM"A"), U0001-88(HS CAN BUS off), U0121-00(lost Com w/ABS), U0415-22(Invalid data from ABS).
9/7- pulled ford code B1D23-68(E1E) thermo event. Vehicle returned twice for intermittent TC lamp on.
9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis. **9/29- received gear today and passed leak test ready for xray.** **10/8- xray clear not fault found, follow standard test procedure.** **10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found** **11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop.** **11/2- sent to Tyco for Nov.22-24 relay workshop** **11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**
11/15- pulled EFF & stored data shipped to QAO for analysis.
11/15- pulled EFF & stored data shipped to QAO for analysis.

CONCERN: NO POWER STEERING AND LIGHT ON IN MESSAGE CENTER AND TRAC LIGHT ON ABS AND BRAKE LIGHT ON. TECH STATES THAT HE FOUND THAT THE PSCM, C-CM, AND HCM DO NOT COMMUNICATE -TECH FOUND AN OPEN IN THE HS-CAN CIRCUIT VDB05 BETWEEN THE DLC AND THE PSCM -SEEKING GUIDANCE ON HOW TO NARROW DOWN THE LOCATION OF THE OPEN. ADVISED TECH TO ATTEMPT TO NARROW DOWN THE LOCATION OF THE OPEN BY CHECKING CONTINUITY BETWEEN THE MODULES AND JOINT CONNECTORS IN THE VEHICLE. THE JOINT CONNECTORS MAKE IT EASIER TO BREAK THE NETWORK INTO SECTIONS FOR DIAGNOSIS -SINCE THIS VEHICLE IS NEW, THE CONCERN IS LIKELY RELATED TO A PUSHED OUT OR BENT PIN WHICH OCCURRED DURING ASSEMBLY OR TRANSPORT. THE PSCM FAILS THE NETWORK TEST. TODD PLEASE DISCONNECT JOINT 9 AND THE PSCM AND LOAD TEST THE NETWORK CIRCUITS FROM JOINT 9 TO PSCM. IF THAT PASSES THEN WITH THE PCM DISCONNECTED I'D LIKE TO LOAD TEST THE NETWORK THROUGH THE JOINT CONNECTOR TO PSCM. IF THAT PASSES INSPECTION PLEASE INSPECT THE POWER/GROUND/NETWORK TERMINALS FOR LOOSENESS OR PUSHED BACK TERMINAL. IF NO ISSUES ARE NOTED TO LOAD TEST THE PSCM PWR/GRND CIRCUITS WITH A TAIL LAMP OR HEAD LAMP BULB. THERE IS NO POWER STEERING ASSIST. -WE PERFROMED A NETWORK TEST USING THE IDS AND THE FOLLOWING MODULES FAILED: CCM, EPIM, GPSM, HUD, RFTM, SASM, AND PSCM. WITH THE BATTERY DISCONNECTED I

6/11 code did not reset tech returned vehicle to customer	6/11- dealer cleared the code, parking lot road tested and drove 11 miles with no codes that reset.	2098	
6/25- vehicle came in with history code U2011-49 and U0415. no power steering message in the message center. No message during dealer visit and could not duplicate the code. Customer was from out of town so I believe vehicle is back with the customer. No repairs or parts replaced known at this time.			
Code cleared and did not reset after parking lot road test. Drove over 55km without setting code.

Issue	Issue Status
	6/11- TECH STATES THAT HE FOUND PIN 3 CAN BUS CKT. VDB405 OF C1010 PUSHED OUT -THIS PIN WILL NOT LOCK BACK INTO THE CONNECTOR, TERMINAL ITSELF SEEMS FINE - SEEKING GUIDANCE, SHOULD THE ENTIRE HARNESS BE REPLACED? (IT IS NOT A VERY LONG HARNESS, ABOUT 1FT LONG)
	6/8- dealer found visual issue with connection or wiring for CAN BUS error fault 6/11- CAN BUS wire shorted near Conn. C1010 at the A/C bracket bolt, Harness would swing back & forth against the bolt causing intermittent short.
	ABS/EPAS module not responding. No ignition feed to abs/epas at ckt. CBP42 GN, found blown fuse# F42 in SJB install new still blows. Found harness shorted at the catalytic converter shield about 12" from the EPAS connector. vehicle fixed
	FUSE NUMBER 42 10AMP IN THE SMART JUNCTION BOX BLOWN. WIRE CBP42 GN CHAFED THOUGH ON THE A/C COMPRESSOR AT CONNECTOR C1010 MALE SIDE.REPAIR WIRE AND RELOCATE CONNECTOR.
	ABS/EPAS module not responding. No ignition feed to abs/epas at ckt. CBP42 GN, found blown fuse# F42 in SJB install new still blows. Found harness shorted between splice S120 & PSCM connector on the catalytic converter shield. Repaired harness vehicle fixed

Ign feed C145 pin "B"	1/11- Dealer replaced the EPAS gear and vehicle still had same symptom"Int. No Com" replaced EPAS harness to fix vehicle C145 hardshell term."B" broken lock tab. Cannot find 700 tag on this vehicle at this time to chargeback gear replacement.

Verbatim	Root Cause	P&A Code/ Dealer Name/ Dealer State
	C1010 terminal 4 pin pushout hard shell lock broken	01466 Town & Country Ford Indiana
	CAN Bus harness shorted against A/C compressor bolt near C1010	02707 Brighton Ford
	CBP42 ignition feed shorted on catalytic converter heat shield	05591 EL CENTRO MOTORS California
	harness chafed at A/C bracket near connector C1010	65099 FORD MOTOR COMPANY (WHQ) Mich
	CBP42 ignition feed shorted on catalytic converter heat shield	B4412 Parkside Ford Manitoba

CONCERN: NO POWER STEERING,ADVANCE TRAC LIGHT ON DIAGNOSTICS
FOLLOW WSM 418-00 PINPOINT TEST G FOR THIS CONCERN AND LEAD TO EPAS GEAR REPLACEMENT. REPLACED STILL HAD SAME INTERMITTENT NO COMMUNICATION WHILE DRIVING.
ADD-ON 12/21/2009 09:07PM JEFFREY WILLIS(FSE) MSS - FCSD - REG - CINCINNATI DEALER PRINCIPAL REQUESTING FSE ASSISTANCE. THIS VEHICLE IS A STOCK UNIT THAT WAS ORDER BY LOCAL FIRE INSPECTOR. IS DUE TO BE DELIVERED TO CUSTOMER ASAP. ADD-ON 12/23/2009 01:40PM JEFFREY WILLIS(FSE) MSS - FCSD - REG - CINCINNATI VISITED THE DEALER ON 12-18-09. PRIOR TO VISIT, TECH HAD PERFORMED PPT AS ADVISED AND THE STEERING GEAR ASSY BUT THE CONCERN WAS STILL PRESENT. - PERFORMED A TEST DROVE WITH SM, WAS UNABLE TO DUPLICATE THE CONCERN. SM STS WHEN CONCERN OCCURS, THE TRACTION LIGHT COMES ON AND THERE IS NO STEER ASSIST FOR JUST A MOMENT. IF YOU KEEP DRIVING THE ASSIST RETURNS AND CONCERN MAY NOT OCCUR THE REST OF THE DAY. THE TECH AND SM FOUND THIS OCCURS ONLY WHEN VEHICLE IS COLD. - TESTED FOR CMDTCS FOUND I/C AND ABS HAD CODE U0131 (LOSS COMM WITH PSCM) AND ABS HAD CODE U0428 FOR INVALID STEERING DATA. CLEARED ALL CODES, PERFORMED A ON DEMAND TEST OF ABS, I/C AND PSCM WITH ALL PASS (NO DTCS). SINCE CONCERN COULD NOT BE DUPLICATED, I ATTEMPTED TO INDUCE THE SAME ISSUE/DTCS BY CREATING AN OPEN IN THE HS CAN CIRCUITS. FOUND THAT WITH OPEN PRESENT, CODE U0131 RETURNED IN THE I/C AND ABS WITH NO POWER STEERING ASSIST. I INSPECTED THE HARNESS FOR CONCERNS AND FOUND THAT HS CAN - PIN AT CONNECTOR C145 TERM. "B" WAS NOT LOCKED INTO THE HARDSHELL (BROKEN TAB). THIS WAS ALLOWING PIN TO "BACKOUT" AND POTENTIALLY LOSE CONTACT AND LOSE COMMUNICATION INTERMITTENTLY. -- CHECKED WITH

	02098 Whites Ford

Case Number	Ford DTCs	Symptom	Component	Issue	Current Updates
FR-0001	U3000-49 U3000-96	BA4	EPP	Monitor Micro	**9/14- dates approved by Bill in TRW/Ford warranty meeting to close out**

FR-0002	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**7/21 -** 8D updated need Ford Closure

FR-0003	U3000-49 U3000-96	B32	**EPP**	Rev. Cap	**9/17- Kevin agreed to sign off the electrical testing. Kimball will start this new tesing this Monday morning Sept. 21st. Approx clean date to QAO 12/7 & HSAP 12/11. Martha update 8D dates and send to Bill Bouse.**
FR-0004	C1B00-62 C200D-49 U3000-96	B9A	EPP	Ribbon Cable Connector	**9/21- change in Anting 46-47 that would see the change in HSAP week 2 2010.**

FR-0005	U2011-49	B3A	EPP	loose screw	**7/10 -** Recommending that we contact STA to review and close 8d
FR0006	U2011-49	B3A	**EPP**	Raised Rivet	**9/10- confirmed two raised rivets in the relay after xray**
FR-0007	U2011-49 U3000-96	B3A	EPP	**Raised Rivet**	Same Case updates as FR002
FR-0008	U2011-61 C200D-49 U3000-49 U3000-96	B95	EPP	Aux ASIC	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**

FR-0010	U2011-49 U3000-96	B3A	**EPP**	Raised Rivet	**8/6-** Closed confirmed raised rivet issue.
FR-0011	U3000-96	B25	EPP	Rev. Cap	**9/2- same as case FR-0003**
FR-0012	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**
FR-0013	U3000-61	B97	EPP	loose screw	**8/6-** 8D sent out pending closure. (rework part)

FR-0014	C200B-C200C-2F U3000-96		TS	TS harness damage (HSAP)	**7/14 -** Discussion with Ford can be closed out a non TRW issue.
FR-0015	U3000-96		TS	Dealer Training vehicle, unplugged TS conn. & cycled ignition several times to set C69	**7/21 -** Sent buffer data to team. Will transport to Washington. Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.
FR-0016	U3000-49 U3000-96	BAD	EPP	FET(TRU6) Epoxy splash	**10/6- continuous improvement containment actions added to 8D martha to send out to Bill Bouse and close 8D**

FR-0017	U3000-49 U3000-96	B32	EPP	In Eval (Schalke)	**8/6- sent Salim information and history on this return because he will visit Schalke. He will check the 2-pin for possible area of water intrusion because 2-pin had some corrosion noted**
FR-0018	C200B-62 U3000-96	BD0-BD4	TS	In Eval (Hella)	**3/9- Ecu terminals & IDE connector is clean from any strands or debris.**
FR-0019	N/A	N/A	NVH	**RBN Ball**	**8/6-** Rob K will talk with Bill about 8D closure
FR-0020	U200B-2F U200C-2F	BD0-BD3	TS	Solder issue on Hella Sensor	**9/3- clean stock used in QAO on July 30th, clean stock at HSAP on July 31st.**
FR-0021	No Codes	No Codes	No gear installed	EPAS Gear was not installed. No fluid in gear was axle seal leak	**7/14 -** No fluid in EPAS was wrong diagnostic have closed out issue.

FR-0022	U2011-49	BB9	EPP	Rev. Cap	**8/17 -** same as case FR-0003
FR-0023	U3000-96	B3A	EPP	Raised Rivet	**8/27- UK confirmed raised rivet in phase 3. sent to Tyco today**
FR-0024	U3000-96	B3A	EPP	Raised Rivet	**8/10-** confirmed raised rivet
FR-0025	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**8/17 - same as** case FR-0003
FR-0026	U2011-49 U3000-96	B3A	EPP	no weld vstar pin	**11/9- Martha has 8D from Angie Caudell will update and send out to Ford. Clean date into QAO week 1 of 2010.**

FR-0027	No Com	No Com	EPP	In Eval (UK)	**12/14- Geoff checking with Murata that 11/30 was confirmed data for blade change.**
FR-0029	U3003-68	No Com	EPP		**9/17- pulled EFF & Buffer data only found battery voltage code event U3003-68(E10). tech replaced the gear and the same no communication returned. Dealer error assistant manager advised to replace gear tech found poor ign. terminal connection in EPAS 3-pin conn. tighten reinstalled vehicle fixed**
FR-0030	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**

FR-0031	C200B-62 U3000-96	BD4	TS	Bent TS finger	**9/11- meeting today at 11am and agreed on containment actions & dates from Rogersville & QAO to close 8D.**
FR-0032	U2011-49 U3000-49 U3000-72 U3000-96	B43	EPP	Raised Rivet	**9/8- Tyco confirmed this part to be a raised rivet**
FR0033	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**
FR-0034	U2011-49 U3000-96	B3A	EPP	Raised Rivet	**8/10-** confirmed raised rivet
FR-0035	U2011-49 U3000-96	B3A	EPP	Raised Rivet	**8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile

FR-0036	U2011-61 U3000-96	B95	TS	TS ASIC	**9/30- Clean parts now into Hella Sept. 29th. Rogersville working to get timing into QAO/HSAP. Nov. 3rd clean date to get into HSAP.**
FR-0037	U2011-49 U3000-96	B3A	EPP	Raised Rivet	**8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile
FR-0038		B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**
FR-0039	U3000-49 U2011-49 U3000-96	BBA	EPP	In Eval (UK)	**3/25- put on the PUPD rig for a couple days still cannot reproduce code.** **8/11- have exhausted all the testing on this return looking for NFF.** **8/30- possible check wire bond, PCB & solder issues**
FR-0040	P07AE-09	AF1	NVH	Customer damage gear impact	**8/17 -** Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes

FR-0041	U3000-96	B3A	EPP	Raised Rivet	**8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile
FR-0042	U3000-96	BD3	TS	TS harness damage (HSAP)	**8/25-** TS harness cut & damaged near second retainer to the IPA- HSAP issue. I have gear here at hotline for inspection.
FR-0043	C200C-2F U3000-96	BD3	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send**
FR-0044	U2011-49	BB9	EPP	Rev. Cap	**9/14- same as case FR-0003**
FR-0045	C200B-61 U3000-96	B90	TS	In Eval (Hella)	**12/8- stamping burrs on the lead frame is the root cause and supplier Viennaplex/Rejlek confirmed fault. Position of new punching insert will be implemented into the stamping tool. Has new brush station with new welding points. PCA automation/camera process pending till week 4 2010. Ian Ingram to send**
FR-0046	U3000-96	B3A	EPP	Raised Rivet	**8/28- Xray confirmed raised rivet, ship to tyco**

FR-0048	No Com	No Com	EPP	In Eval (Anting)	**3/3- Ford has been sent the update 8D Mike Bahena, Tim Snider & Tim Dietz all concluded to close this case**
FR-0049	U3000-96	BB7	EPP	Rev. Cap	**9/11- same as case FR-0003**
FR-0050		No Com	EPP	dry solder joint (Kimball)	**11/9- Martha to send Geoff & Mike Davies Kimball 8D & TRW 8D to review, then send out to Ford by Wednesday. Get clean date into QAO**
FR-0052	U0121-00	A8D	Non TRW issue	Int CAN BUS fault, tech replaced the ABS module to fix vehicle at this time.	**8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.**
FR-0053		binding	NVH	Customer damage gear impact	**8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter & Bill agreed.**
FR-0054	C200D-49	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**
FR-0055	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**12/9- Via connections exposed one Via Onsemi that is going too deep. It went through the metal 2.5 layer and touched the nitride layer, this finding confirmed the measured short. corrective action Onsemi refer to continuous defect reduction**

FR-0056		AF1	NVH	On-vehicle test(Ford)	**9/29 - Bill installed on vehicle and could not duplicate any friction code or notice any steering issues. Dealer did not follow Interactive diagnostic's on the first gear or call the hotline for assistance. Friction code only set once and cleared that's why it came into the dealer with C1277 code only in the ABS & the PSCM code cleared. Dealer Error at this time**
FR-0057	No Codes	No codes	EPP	In Eval (26mile)	**2/5- been a month now and still cannot find gear at 26mile. Considered lost at this time exhausted all areas gear could be located.**
FR-0058	U3000-96		No gear returned	Gear will not be returned	**9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.**
FR-0059	U3000-49 U3000-96	BAB	EPP	PCB copper slivers in lamination	**3/8- Merix, Kimball & TRW in discussion on dates and final summary.** **5/18- Geoff sent out final 8D to Guillermo**
FR-0061	No Codes	Constant Assist	NVH	In Eval	**10/8 Angel states there is a potential risk to hit the rack with the IPA tower if the operation is not performed with care. He needs to get Ford approval to take pictures**

FR-0062	No Codes	A28	TS	missing pinion shaft nut	**11/6- pinion nut torque station in QAO updated and in operation on 10/29. Martha to update and send 8D to Ford. Close out**
FR-0063	P07AE-09	AF1	NVH	distorded gear housing	**10/6- 8D submitted to Ford, continue investigation at Benteler & HSAP for possible areas of damage**
FR-0064	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**3/3- Tyco has concluded with all the relay testing that NTF with the relay testing.**
FR-0065	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**7/20- has performed all testing and inspections at this time with NTF**
FR-0067	No Codes	A28	Unknown Issue	NTF	**10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**

FR-0068	U3000-49	B32	EPP	In Eval (QAO)	**8/27- Pepe to locate EPP and report out the latest testing. 9/24- still cannot find EPP part, need to close cannot continue with the analysis.**
FR-0069	NVH	growling noise gear/ park. Turn wheel noise goes away	TS	TS ASIC	**11/9- confirmed TS jitter same as FR0036, confirmed TS ASIC was built in 2/10/09 before July 09 clean date. Martha to update 8D send out to Ford.**
FR-0070	P07AE-09	AF1	NVH	In Eval (QAO)	**11/02- Costas looking to close this & FR0056 for false detection.**
FR-0071	C200C-2F U3000-96	BD1, BD3	TS	In Eval (26mile)	**6/30- TS cover removed have pictures, not sure if pinion plug and other parts were removed at QAO. QAO did have TS removed and scoped the channels with no failures, now that TS has been inspected this is consided NTF.**
FR-0072	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**8/11- exhausted all testing criteria, at NTF.**
FR0073	C200D-49	B9A	EPP	In Eval (Nidec)	**7/2-encoder failure due to ESD damage, the surge or ESD destroyed because the punchthrough occurs on output Tr of OUT-B. Allegro saying that the part was ESD damaged somewhere in the supply chain.**

FR-0074	U3000-49 U3000-96	B25	EPP	motor terminal ground plane short	**4/19- CD3/D3 formal Kickoff is planned for week of April 19th.Assuming approval week of April 19th Nidec can start shipping to Anting on May 18th.* For CD3/D3 Change will be incorporated in August/Sept timeframe based on depleting existing inventories. JC to provide updated incorporation plan in Tuesday Engineering Change meeting and Thursday**
FR-0075	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**12/2- confirmed plastic contamination is from the relay cover. Martha to get the information in the old 8D to close out.**
FR-0076	C200B-2F U3000-96	BD0	TS	at DSC1 (ford hotline)	**10/16- found TS harness conduit crushed on gear flange near IPA and cut the one wire. HSAP plant issue. I have gear here in Dearborn for inspection.**
FR-0077*	U3000-96	BB7	EPP	In Eval (UK)	**9/9- NTF in UK for B6B testing at this time. No weld marks on the relay for the motor relay tear down. 10/8- no evidence of any relay weld, motors grp. to check motor windings. six weeks to teardown. 11/29- motor teardown with NTF, no other tests can be performed, check with Ford to close out.**
FR-0078 RUA#3250	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/7- confirmed NFF with all testing performed at Tyco.**

FR-0079	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**
FR-0080 RUA#4016	U3000-49	B43	EPP	In Eval (QAO)	**8/20- believe PFS is still in QAO, Pepe check for the latest status. 8/27- Pepe found PFS to raise RUA and send to Tyco for final testing. 10/6- NFF at Tyco.**
FR-0082	N/A		No gear returned	Gear will not be returned	**11/11- called dealer back to find out what happened to gear and PM states he returned it back to the RCRC and no 700 tag was on this part so the part is scraped, will not get this gear back.**
FR-0083	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**11/20- reverse capacitor found.**
FR-0084	N/A	BD0-BD3	TS		**11/6- dropped gear off at 26-mile, TS harness damaged, heat tape rubbed through. With the mileage good chance this is customer related damage. No other warranty claims**

FR-0085	N/A	No Com	EPP	IC14 power supply (Infineon)	**1/13- have updated 8D sent out, Geoff has a couple slides to update. new process, dummy leadframe is used then scraped first production lead frame marked and additional visual inspected.**
FR-0086	No Codes	Cricket noise	NVH	squeeling noise turning wheel	**2/8- confirmed finger ring trapped under IPA cover**
FR-0087	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/2- confirmed rev. capacitor**
FR-0088	U2011-49	B3A	EPP	Raised Rivet	**11/19- confirmed a raised rivet, to send to Tyco(Evora)**
FR-0089	No Codes	No codes	NVH	grinding noise turning the wheel	**3/9- after further investigation it was determinded that misuse was the cause of failure**
FR-0090	U2011-49	B3A	EPP	In Eval (26mile)	**1/5- Tyco confirmed offset bridge, 8D updated and sent out tomorrow.**

FR-0091	U3000-49 U3000-96	B97	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**
FR-0092	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**3/22- EOS is fairchilds claim, cannot proceed any further with this testing. Sent 8D to Tim Diez**
FR-0093	NVH	Cricket noise	NVH	In Eval (26mile)	**1/26- Cal Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**
FR-0094	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/3- in evaluation QAO found rev. cap**
FR-0095	U3000-49 U3000-96	BA4	EPP	In Eval (UK)	**4/21- 8D sent to Ford with the corrective action dates, sent 8D to Ford on 4/19.**
FR-0097	C200D-49	B9A	EPP	In Eval (UK)	**8/11- exhausted all testing criteria, at NTF.**

FR-0099	U2011-49 U3000-96	BB9	EPP	Rev. Cap	**12/15- gears arrived in QAO in analysis found rev. capacitor.**
FR-0100	U2011-49	B3A	EPP	In Eval (Tyco)	**2/12- Tyco has confirmed offset bridge**
FR-0101	U3000-96	B7F	EPP	In Eval QAO	**1/13- arrived in QAO testing will start after FR0103 is complete. Found out gear is a non-warranty repair. SM states after alarm company worked on vehicle EPAS gear failed so the dealers sales department covered the repair.**
FR-0102	P07AE-09	AF1	NVH	distorded gear housing	**2/1- found damaged datum pic's show impact marks at the datum & mounting ring and the materials lab confirmed the housing was out of specs. Unknown where the inpact occurred.**
FR-0103	U3000-96	B25	EPP	In Eval (UK)	**8/3- exhausted all testing in the UK could not duplicate any codes NTF. 8/30- possible check wire bond, PCB & solder issues.**

FR-0104	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**1/25- Tyco confirmed raised rivet**
FR-0105 RUA#3628	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**
FR-0106	U2011-49	B3A	EPP	In process (Tyco)	**1/25- Tyco confirmed offset bridge**
FR-0111 RUA#3212	U3000-49 U3000-96	B3A	EPP	In Eval (UK)	**9/24- UK did SEM test and the results lead to NTF.**

FR-0112	U3000-96	BB7	EPP	In Eval (QAO)	**2/3- found Rev. C2 Cap in the PFS**
FR-0113	C200B-61 C200B-62	B90	TS	In Eval (Hella)	**9/22- talked about vstress testing at On-Semi that was implemented 4-3-2010 to catch this issue and also Hella implemented their Vstress test at Hella ICT on 9-14-2010. so PCA dates into QAO would be OnSemi's ASIC's took one week to arrive into Hella for this Vstress testing so PCA dates are 5-22-2010 for OnSemi change into QAO & for Hella's change**
FR-0114		No B Codes-A65	EPP	In Eval (QAO)	**4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.**
FR-0115		A16	EPP	In Eval (QAO)	**4/19- pass through bully test several times to confirm a NTF.**

FR-0116		BB7	EPP	In Eval (QAO)	**2/3- found Rev. C2 Cap in the PFS**
FR-0117	Chirp noise turning wheel	Cricket noise	NVH	In Eval (26mile)	**1/13- leak test, verified the cricket noise no further action.**
FR-0118	squeak noise coming from	Cricket noise	NVH	In Eval (26miles)	**1/26- Cal Spurlin checked the "cricket" return and verified that the finger ring was trapped between the cover and the sensor**
FR-0119	U2011-49	B3A	EPP	In Eval (Tyco)	**2/25- Tyco confirmed offset bridge**
FR-0120		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth. Shipped to 26mile 1/15**
FR-0121	U2011-49 U3000-96	B3A	EPP	In Process (Tyco)	**2/25- Tyco confirmed offset bridge**
FR-0122		Cricket noise	NVH	In Eval (26miles)	**1/14- pulled EFF data, noticed cricket noise from turning input shaft back & forth.**

FR-0123		TS harness was repaired by dealer or customer	TS	At WPAC	**2/10- cannot locate the area the TS harness was damaged because dealer cutout a big section of the harness to repair. Will make service manual changes to prevent repair of the harness. Changes will be made to the 2011 m/y and changes will be made to the 2010 also.**
FR-0124	C1278 (ABS)	N/A	EPP	In Eval (Tim Snider)	**5/3- No faults occurred. I've been running for a couple of weeks with unseated connector - also no issue 7/6- unseated connector C1010 and able to duplicate TC lamp & code, unknown if this was the fault on this vehicle.**
FR-0125	U3000-49 U3000-96	B31	EPP	cold weld	**3/8- confirmed cold weld, final report need from Tyco.**
FR-0127	C1B00-64 (ABS)	A5D	EPP	In Eval (QAO)	**3/17- after reading CQIS verbatims advised the 2 EPAS gears & ABS module installed on this vehicle did not fix. Performing FSA# 10B13 that to address DTC C0048-64. Vehicles are reflashed with brake sw that makes system less sensitive to noise on the MTS.**

FR-0130	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/21- Notice cricket noise while turning input shaft, shipped to 26-mile**
FR-0131	C1277 (ABS)	A65	EPP	In Eval (QAO)	**4/21- ran through bully test 5x with no failures. Cannot reproduce no com issue. Contribute this gear as possible wiring issue per set code A65.**
FR-0132	Squeak noise while turning	Cricket noise	NVH	In Process (26mile)	**1/22- Notice cricket noise while turning input shaft, shipped to 26-mile.**
FR-0133	C200B-2F C200C-2F U3000-96	BD0-BD4	TS	In Eval (QAO)	**3/31- quality alert has been done changes made moving vclip dispensor & handling of vclips. 8D in process.** **4/19- Rob Mrozek approved process on his visit to QAO last week.**

FR-0135	U3000-49 U3000-96	BC5	EPP	In Eval (QAO)	**4/12- send to Anting to analyze seal in PFS for the 2-pin to see if that was water contamination entry.** **5/4- PFS lost at QAO, been looking for the last 2 weeks. Cannot continue with analysis. I would suspect 2-pin conn fault of water intrusion from pictures.**
FR-0136	C200C-2F	BD1, BD3	TS	metallic particle found between terminals on ECU connector for PFS ribbon cable	**3/10- part still at QAO- additional information sent to Ford for would like the pictures & conn. dates from this claim copied to a new 8D.**
FR-0137		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal.**
FR-0138	C200B-2F	BD2	TS	In Eval (Hella)	**5/19- Rob Mrozek & Tim Snider agreed to close**

FR-0140		PS Leak	gear chargeback	Chargeback to Dealer	**2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer**
FR-0141	C200D-49 U3000-96	B9A	EPP	In Eval (UK)	**4/28- discussions with Nidec & Peter Sinkunas to complete 8D.Mike Davies will send out by end of week.**
FR-0142	No Codes	Cricket Noise	NVH	In process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile. To store at 26mile**
FR-0143	No Codes	Cricket Noise	NVH	In Process (26mile)	**2/5- Noticed Cricket noise while turning the input shaft, no stored codes. Shipped gear to 26mile.**

FR-0144 RUA#3617	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic containimination on contact 4**
FR-0145	U2011-49	BB7	EPP	In Eval (QAO)	**2/26- Sergio found Rev. Cap**
FR-0147	No Com	A5D	EPP	In Eval (QAO)	**8/13- ECU cover removed wiggle testing done NTF. Exhausted all testing never duplicated a No Com issue. This is NTF. Looking at the fault store looks like the battery was disconnected serveral times unsure if this was a connection problem or low battery voltage.**
FR-0148	C200B-2F C200C-2F	BD0-BD3	TS	At 26mile	**2/15- sent pictures of harness damage to the Ford group, hard to say where damage occurred with 3778 mile on the vehicle. Either HSAP or field. HSAP did not have any EPAS problems on this vehicle going through the plant.**

FR-0149	U2011-49	B3A	EPP	In Eval (Tyco)	**3/24- Tyco confirmed this is an offset bridge. Pre- containment relay**
FR-0150	No codes	Cricket Noise	NVH	In Process (26mile)	**2/16- shipped to 26mile for storage**
FR-0151 RUA#3627	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**
FR-0152	C200B-2F U3000-96	BD2	TS	In Eval (OnSemi)	**4/19- hella lost the short desoldering the ASIC and sent to ONSemi with no problem found. Lessons learned from this return is to use diamond cutter to remove ASIC from PCB**

FR-0153 RUA#3618	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**5/24- Tyco confirmed plastic contaimination on contact 4**
FR-0154	U2011-49 U3000-96	BB7	EPP	In Eval (QAO)	**3/3- QAO confirmed Rev. Cap**
FR-0155	P07AE-09	AF1	NVH	In Eval (QAO)	**3/15- checked gear for high friction testing lead to low friction with the test results. Code did clear for dealer but dealer was concerned with SWA reading, hotline advised to replace the gear because of the reading.**
FR-0156	U200B-2F U200C-2F	BD0-BD3	TS	In Eval (QAO)	**3/17- appears a sharp object cut the convolute and cut the TS wires inside. Vehicle did not have any other warranty claims done. No failures at the assembly plant.**

FR-0157 RUA#3626	U2011-49	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**
FR-0159	squeek noise turning	cricket noise	NVH	In process (26mile)	**3/15- verified cricket noise while turning input shaft, shipped to 26mile put in storage bin**
FR-0160	C200B-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	**3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile. Sent out pictures**
FR-0161	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**

FR-0162	squeek noise turning	cricket noise	NVH	In Process (26mile)	**3/15- noticed cricket noise while turning input shaft,shipped to 26mile and pull in storage bin**
FR-0163	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	**5/19- Fairchild analyzed power module confirmed EOS at the end of their testing.**
FR-0165 RUA#3625	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**7/19-High-Pot Test complete on EPP no issue found. "Fault not Repeatible, set aside as such and return later if something new is found.**
FR-0166	High pitch Squeek while turning wheel quarter turn from center	cricket noise while turning steering	NVH	In Process (26mile)	**3/21- did not notice cricket noise while turing input shaft. Checked the CQIS report and they state the were turning the wheel back & forth from center to get the chirp noise. Will have 26mile double check noise.**

FR-0167	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (26mile)	**3/21- damaged TS harness, same area as previous harness with hybrid engine**
FR-0168	P07AE-09	AF1	NVH	In Eval (26mile)	**3/30- gears held in the containment area that failed the QAO line have been scrapped. QAO will assemble couple of gears for 26mile testing.**
FR-0169	high pitch squeak while turning	cricket noise	NVH		**3/29- did not notice any cricket noise in the gear while turning the input shaft especially while turning to the right. Check gear for cricket noise.**
FR-0170	U3000-49	B43	EPP	In Eval (QAO)	**8/25- Tyco confirmed offset bridge**

FR-0171	Squeak noise while turning	cricket noise	NVH		**3/29-noticed cricket noise while turning input shaft. Prior to containment actions**
FR-0172	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (Wuppetal)	**6/29- have all the pictures from Delphi & QAO and only area of molex connector impact damage would be in shipment(box damage) or QAO assembly line.**
FR-0173	high pitched squeek from steering	cricket noise	NVH	In Eval (26mile)	**3/30- verified cricket noise from gear pre-containment build at QAO. Put gear in storage**
FR-0175 RUA# 3923	U2011-49	B6B	EPP	In Eval (QAO)	**9/9- to locate ECU & cables to do high pot test then teardown to check motor PCB clearance issue. 10/30- relay sent to Tyco woth NTF, PCB clearance NTF. Close as NTF**

FR-0176	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	**4/30- T2 signal missing appling stress to clockspring ribbon cable. parts broken cable bent part reworked 2/6/2009, check centering tool use**
FR-0178	P07AE-09	AF1	NVH	In Eval (26mile)	**4/28- gear passed case and core harness test, 8D sent to Ford**
FR-0179	steering feels very loose	N/A	NVH	In Eval (26mile)	**4/6- 26mile found missing pinion nut same as FR0062. both gears built on same day 3/29/2009. pre-containment date for corrective actions.**
FR-0180	P07AE-09	AF1	NVH	In Eval (26mile)	**4/28- gear passed case and core harness test, 8D sent to Ford**

FR-0182 RUA# 3589	U2011-49	B3A	EPP	In Eval (Tyco)	**5/7- Tyco comfirmed this was an offset bridge.**
FR-0183 RUA#3590	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**5/28- Tyco confirmed plastic contamination on contact 5, 3mm of plastic.**
FR-0185	U2011-61 C200B-62 U3000-96	B95, BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim**
FR-0186	no codes	HEARS NOISE FROM L.S. FRONT OF VEHICLE WHEN AT SLOW SPEEDS AND	NVH	In Eval (QAO)	**6/20-gears passed all NVH & EDF testing at QAO. NTF**

FR-0187	C200B-2F C200C-2F	BD0-BD3	TS	In Eval (QAO)	**6/2- broken ferrite core at the small segment of the PCB is the cause why Vcc -line is not given. Design change of the small segment eliminates this part on 8/14/2009 at Hella.**
FR-0188	no codes	gear leaking fluid		gear returned to dealer	**4/19- chargeback to dealer**
FR-0189	No Com	A28	EPP	In Eval (QAO)	**8/5- NTF with all the standard testing in QAO, to send PFR, close claim as NTF**
FR-0190	C200B-61 C200B-2F	B90, BD2	TS	In Eval (QAO)	**5/5- overwound TS, rework part 2/6/2009 same date as FR0176. missing plastic clockspring tape guide bent clockspring tape. Channel one missing at times.**

FR-0191 RUA# 3768	C2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF**
FR-0193	U3000-61 C200B-62	B90, BD4	TS	In Eval (QAO)	**6/23- found on the QAO assembly line possible cause of bent TS finger is christmas tree installer laid on IPA rack when not in use and when TS drops down to operator could cause the bent finger. A new tray was installed to install the tool on 5/25/2010. proper work instruction printed for operator to use this tray for the tool at all times.**
FR-0194	TC lamp on ABS code C1963-20	A28		At WPAC	**6/15- vehicle returned with same symptom and code c1963 found poor connection at ABS module C135.**
FR-0195	steering squeaks	cricket noise	NVH	At 26mile	**4/26- noticed squeak noise in the IPA while turning the input shaft**

FR-0196	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspection and all pass. NTF**
FR-0198	all IP lamps blinking	A16, A2A		chargeback	**4/30- vehicle had same condition after PSCM was replaced, chargeback gear to dealer, the gear will be returned to the dealer**
FR-0201 RUA#3685	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**6/7- Tyco confirmed raised rivet, week 45- 2008**
FR-0202	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- Tyco confirmed plastic contamination on contact 4.**

FR-0203	U3000-49	B7E	EPP	In Eval (UK)	**6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane. Pre-containment have pictures of the pin 12 short.**
FR-0206	U200B-2F C200B-61	BD2	EPP	In Eval (QAO)	**6/10- confirmed reworked TS that had missing plastic tape guide & twisted clockspring tape. Rework 6/17/09.**
FR-0207	U2011-49	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**
FR-0208	C200B-62 U3000-96	BD4	TS	In Eval (Anting)	**8/11- Ford to check yazaki 2-pin connector issues for water ingress. Confirmed closed by Tim snider**

FR-0209	no codes	no codes	chargeback	chargeback	**5/7- no codes, no visual gear issues & no binding while turning input shaft. Customer complaint at times trying to pass someone on highway vehicle rev's high then makes a bang noise. Transmission work fixed this issue**
FR-0210	C200B-2F U3000-96	BD2	TS	In Eval (Hella)	**11/10- causal part is the clockspring assembly but lost the root cause sending parts to Tyco. Tyco's 8D NTF. New improved failure analysis process at QAO & Hella. Case closed**
FR-0213	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/7- during high pot testing to relay low side unit failed, motor PCB tear down confirmed motor PCB clearance issue.**
FR-0217 RUA# 3720	U2011-49 U3000-96	B6B	EPP	In Eval (Tyco)	**7/12- Tyco confirmed offset bridge**

FR-0219	high pitch squeal noise steering	cricket noise	NVH		**5/20- turned input shaft to verify cricket noise turning back & forth from center.**
FR-0220 RUA# 3777	U3000-49	B32	EPP	In Eval (Tyco)	**7/9- has code B31 & B32, Tyco has confirmed failure of link relay as cold weld. Next to open relay to inspect weld. Confirmed bridge weld failure at Tyco.**
FR-0221	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	In Eval (QAO)	**6/17- over wound TS clockspring, IPA rework 6/17/2009**
FR-0222	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/11- passed all Tyco's testing & mechanically ok. Contacts are all inspected and all pass. NTF**

FR-0223	P07AE-09	AF1	NVH	In Eval (QAO)	**7/30- passed all criteria on the EDF stand, NTF at this time.**
FR-0224 RUA#4045	U2011-49	B3A	EPP	In Eval (Tyco)	**10/15- NTF with the testing at Tyco, next will open the relay and perform visual analysis.** **10/27-Tyco found a black plastic particle** **11/1- follow-up once 8D is sent.**
FR-0225	TC lamp on C1278			chargeback	**5/21- dealer sent back a hydraulic gear instead of the EPAS gear back to WPAC, dealer charged back for the part.**
FR-0226	C200B-2F C200C-2F U3000-96	BD2,BD3	TS	In Eval (QAO)	**5/27- pulled EFF buffer data, found pinched TS harness. Have pictures of damage.**

FR-0227 RUA#4056	U2011-49 U3000-49	B43	EPP	In Eval (Tyco)	**10/8- QAO exhausted all their testing, shipped to Tyco 10/27- confirmed Offset Bridge, precontaiment. Geoff waiting to get update on the 8D.**
FR-0231	Noise in frt-end while turning	N/A	NVH	In Eval (26mile)	**8/16- gear when through the NVH & EDF test and passed all tests. NTF**
FR-0232 RUA# 4110	U3000-49 U3000-96	B43	EPP	In Eval (Tyco)	**12/13- oil contamination found on contacts operator using wrong oil for mantanance on rivet machine. Work instruction did not advised operator of proper oil, so a new procedure was added 8/13/2010. this was a known issue caught by another customer. so the estimated PCA date is Nov. 12 going into QAO. waiting on 8D**
FR-0236	TC LAMP ON TURNING	N/A		In storage (QAO)	**5/28- pulled codes only had A8E in the fault store. Found out dealer had same TC lamp on after replacement. Found rear ABS wheel speed sensors mis-wired. Cannot chargeback EPAS since hotline advised to replace. EPAS gear was not the causual part# in AWS.**

FR-0238	C200B-2F C200C-2F U3000-96	BD0-BD3	TS	At 26mile	**6/14- found TS harness conduit near the EPP contacted in three spots, broken black wire in harness. shipped gear to 26mile. Have pictures.**
FR-0240	light squeal noise while turning	cricket noise	NVH	At 26mile	**6/14- verified cricket noise while turning the input shaft. Close and store at 26mile**
FR-0248	steering type noise & leaking oil	No codes		WPAC	**6/14- trans axle fluid down 2 qts from lf axle seal leak getting on EPAS gear. Chargeback, dealer repaired left axle seal & bushing and then added 9qts of trans fluid**
FR-0250	C200B-2F	BD0, BD2	TS	In Storage (26mile)	**6/14- dealer attempt to repair the TS harness so we lost the exact location of damage, looks like the repair was under the heat tape. Have pictures.**

FR-0252	TC lamp on C1963	No codes		In Storage (26mile)	**6/14- check CQIS report and after EPAS gear was install vehicle returned 165 miles later with the same TC lamp on with C1963 tech found poor connection at the ABS module, repaired and fixed the vehicle. Cannot chargeback hotline advised to replace the EPAS gear.**
FR-0253	U3000-49 U3000-96	B7E	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**
FR-0254	C200B-61 C200C-2F U3000-96	B90,BD3	TS	In Eval (QAO)	**7/26- QAO confirmed overwound clockspring, rework was done 5/21/2009. pre-containment**
FR-0255	No Com	No Com	EPP	In Eval (Infinion)	**10/18- Geoff has presentation to talk about the EOS issue** **10/18- Tim Diez looking for number after the ISO2 pulse.** **10/27 Geoff now has number and will include in presentation.** **11/1- Geoff presented a couple of slides to Ford and Tim Diez & Tim Snider agreed to close this issue as EOS.**

FR-0256	C200B-2F C200B-61 U3000-96	BD0, B90	TS	In Eval (QAO)	**8/13- Delphi advised this cracked shrink tube caused by rough handling. Advised the torque sensor bolts were missing when received at WPAC, harness was unplugged from EPP & no bolts in IPA. Unknown why dealer would remove bolts. Unknown damage to harness.**
FR-0257	C200B-2F U3000-96	BD0,BD2	TS	In Eval (Hella)	**10/7- There are nearly 70 chambers (tools) and chamber A was the oldest. By the results at the automatic test equipment the semiconductor supplier is able find out which process step losses robustness (Yield) and canremove/stop production. Close out claims as of 10/13/2010 by Tim Snider**
FR-0258	U3000-49 U3000-96	B25	EPP	In Eval (QAO)	**10/6- pictures show terminal that are contacting ground plane. To close as PCB motor clearance issue.**
FR-0260	TC lamp on C1B00-64	A65		shipped to QAO	**6/30- only had tc lamp with ABS code C1B00-64, no PSCM codes or symptoms. Vehicle had several stored communication code errors. Tech did follow the diagnostic's properly but hotline to not guide tech and suggested to replace epas gear if wiring to gear was ok.**

FR-0262 RUA# 4046	U2011-49	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco says NTF**
FR-0263 RUA# 4047	U2011-49 U3000-96	B3A	EPP	In Eval (Tyco)	**10/5- ship to Tyco should arrive on 10/8. 10/27 Tyco found glass contamination** **11/1- Tyco to send out 8D for approval.**
FR-0267	C200B-2F U3000-96	BD0,BD2	TS	In process (Delphi)	**8/13- Delphi stating this is a assembly issue blue wire has most strain compared to other wires in harness. Tim advised we can closed no other Delphi harnesses used in our future gears.**
FR-0268	C200D-49	B9A	EPP	In Eval (QAO)	**8/3- confirmed double start-up during analysis and confirmed a regulator issue.**

FR-0269	U2011-49 U3000-96	B6B	EPP	In Eval (26mile)	**9/6- A DVM resistance measurement confirmed that this was the case Motor PCB teardown showed that this failure was caused by Motor PCB Clearance issue.**
FR-0270	U3000-49	BAA,BAB, B9B	EPP	In Eval (QAO)	**7/23-Guillermo sent revised 8d out but still waiting some information. Confirmed r227 impact and high resistance.**
FR-0272	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	**8/27- xray indicate offset bridge and the motor build dates indicate precontainment.**

DR-0006	U3000-96		Non-warranty	Customer Damage non-warranty	12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.
DR-0007	C1B00-2F	No Com	EPP	In Eval (26mile)	3/22- Concluded CAN system wiring issue on vehicle based on testing found numerous CAN codes & EFF data. ABS module has ABS CAN code U0131(no com with PSCM). EPP tested with no problem found and mech. gear check for belt slip and no problems found.closed claim d

DR-0009	U3000-61 U3000-96	B99	EPP	In Eval (26mile)	3/18-waiting on Mike B to get the Magna test profile or detailed information that raised the B99 fault so Abe has a starting point.
DR-0011	C200B-61 C200C-2F U3000-96	B90	TS	In Eval (Hella)	**3/26- damaged clock spring due to improper IPA reworked, IPA was manual centered here at QAO without special tool. 8D in process** **4/19- Rob M. agreed needs poke yoke system to make sure tech is using the proper tool for tear down. PCA target date Aug/Sept. 2010**
DR-0012	P07AE-09	AF1	NVH	customer misuse	3/3- teardown did find warped housing and bent rack, submitted pics to Ford to confirm curb impact.
DR-0014 RUA#3540	U2011-49	B3A	EPP	In Eval (26mile)	5/5- confirmed offset bridge, week 24 relay
DR-0015		B90	TS	In Eval (Hella)	**4/6- confirmed overwound clockspring same as DR0011. have updated 8D using separate centering tool for D-car gears**

DR-0016	P07AE-09	GRINDING NOISE FROM RACK	NVH	At Oakville	4/30- tech states he found boot had a slice like a razor blade causing the water intrusion similar to other early build gears that were shipped to plant in bubble wrap.
DR-0017	C1B00-2F U0428-00	AD9		In Eval (26mile)	4/12- Mike Bahena states "this is an Active Park Assist vehicle meaning the relative SWA comes from the SASM in the steering column and not the steering gear. This explains why the A29 is raised and not the A19 (Invalid RSP). A29 is based on the offset signal from ABS inaddition to rsp, whereas A19 is only based on RSP. It also means that the dealer improperly diagnosed the problem and incorrectly replaced the steering gear. I fully expect this problem to come back if the SASM was not replaced. The AD9 code indicates that the gear detected Invalid data from the
DR-0019 RUA#3679	U2011-49	B3A	EPP	In process (Tyco)	6/7- confirmed offset bridge- week 24 precontainment. Will get bigger xray pic.

DR-0020	P07AE-09	AF1	NVH	In Eval (26mile)	7/12- sent Ford the teardown report wo/pics file was too big. Mike B looked over report and advised to close.
DR-0021	C200D-2F C200C-2F	BD0-BD3	TS	In Process (26mile)	4/19- Found damaged TS harness, cut wires. Have pics. Sent to Ford eng. with vehicle information.
DR-0022	C200D-49	B9A	EPP	In Eval (UK)	1/11- Anting started to use the alignment fixture 12/10/2010 adds 43 seconds to the station. The EPP's should arrive into QAO approx 1/28/2011.
DR-0024	Clunk snapping noise while turning wheel		NVH	In Eval (26mile)	8/16- passed all NVH & EDF testing. NTF
DR-0026	noise turning steering wheel	metal to metal noise coming from gear	NVH	At WPAC	8/3- 2011vehicle. gear at WPAC took pictures and sent to Ford, hole in boot unknown how hole got in boot. Ask Ford if they want the gear for inspection.
DR-0030	pop squeal noise turning	No codes	NVH	In Eval (Gates)	9/15- TRW 8D sent to Ford, Tim snider had question about laser system to insure edge trim forward email to Randy Hazell. 9/23- Gates confirmed that the 8D did not have a suggestion for using a laser to insure edge trim integrity. In the PowerPoint slides they did discuss the position sensor and additional

DR-0031 RUA#3933	U3000-49 U3000-96	B25	EPP	In Eval (Fairchild)	9/27- discussions with Ford on this EOS on the power module issue we agreed to fully decode the EFF data to get all the details when the FET failed. 10/15- details not that helpful, 200 seconds into the journey at 50 kilometers
DR-0032	clicking noise turning wheel	No codes	NVH	shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC
DR-0034	TC lamp on	No codes		shipped to warehouse	10/7- shipped to Columbus Warehouse from WPAC
DR-0036	U2011-49	B3A	EPP	In Eval (26mile)	9/15- sent earlier 8D to Ford on similar issue back in May. Check to see if we can close out.

DR-0037	snap noise while turning	No codes	NVH	In Eval (PDC)	10/20- EDF & NVH all passed on the gear, found out that the steering gear did not fix the clicking noise in the field, vehicle returned and the dealer replaced the struts & upper strut bearings to fix this noise, claim closed.
DR-0040 RUA#4150	U2011-49 U3000-96	B3A	EPP	In Eval (26mile)	11/29- similar test readings to a raised rivet but the rivet is not raised. crosssection contact 5 shows openings between the leadframe and rivet, close as raised rivet.
DR-0043	Int. TC lamp on while turning	No codes		At WPAC	11/15- pulled history on vehicle, tech replaced the PSCM TC lamp still came on during left turns, tech replaced the IC to fix vehicle. NTF with PSCM
DR-0046	C200C-2F U3000-96	BD3	TS	In Eval (QAO)	1/21- found this return was a reworked part and has an overwound clockspring- pre containment with the rework instructions
0KM-Chicago	U3000-49	BAA,BAB, B9B	EPP	In process (QAO)	8/16- confirmed high resistance on the R227 resistor.

0KM-Oakville ABB14285		BD2	TS	In Eval (QAO)	4/1- IPA clockspring damage to ribbon cable, moving gear full CW will raise code BD2. TS has been recirculated at QAO

0KM-Chicago AG160762 RUA#3558		B3A	EPP	In Eval (Tyco)	5/12- Tyco confirmed raised Rivet
0KM-Oakville ABJ28087		B7E	EPP	In Eval (QAO)	5/24- confirmed short on the motor PCB clearance, will be added to the Nidec 8D

Issue Status
4/20 EPP tested at Shirley fgh. cycled cooling to -20C can duplicate code. **5/8** sent to FSL mult. testing of monitor micro unable to duplicate failure. **5/21** micro sent back to Shirley to replicate failure for FSL **5/25** Shirley able to replicate the fault trying to isolate it with a standalone micro test for FSL **6/1** confirm with FSL testing does indicate a micro failure & using micro standalone test stand agree to the proper testing procedures to find micro flash root cause. **6/4**- FSL engineering to witness micro code using the modified standalone test and agree to go forward with there micro testing. **6/5** - Part returned to FSL for further anlaysis, FSL confirmed their agreement that failure is wihtin their device.. **6/12** - FSL continue to characterise the failure at room and extremes of temperature. TRW escalated FSL performance in FSL and now we have improved design support. **6/15** - Micro testing action plan sent to FSL, testing complete on 6/18 **6/22** - Proven not a flash fault standard ATE. Reviewed clears shows an issue in the core miro bits of mathmatics. Mico test for containment. Will need to Identify which process is effective as containemt. Freescale is working on contatinemnt timing for containment. Timing to be distrubited Thursday June 25, 2009. **6/30** - Summary the containment at Freescale will be July 30, 2009 **7/6**- Summary the containment at Freescale will be July 30, 2009 Containment at Kimball about 1 week later, Need to finalize 8d for closure **7/7** - Kimball has QCCAR and will monitor Freescale. Report as closed with 7/30 containment **7/8** - Theo to revise 8D (latest date was June 11) **7/13** -Paul will have 8d updated for Tuesday 7/14 **7/14** - 8D sent to Theo Brockmann at Shalka for review will send to Ford 7/15. **7/15** - Theo send 8D to Eric and Martha to be sent to customer. **7/20** - Jeff Jacks to get information to Ford on latest timelime of action items from Freescal and to also provide information at 8/7 is the date of the completion of stock verification

5/27 gear taken to Washington checked resistance reading of relay at room temp and passed before shipping out to UK
6/1 Shirley found erratic high resistance resistance reading on phase 3 contact pair. x-ray shows evidence of raised baseplate contact #5.
6/4 send out relay to Tyco to confirm causal issue with relay contacts
6/12 still awaiting failure analysis response from Tyco, will chase 6/15.
6/15 - Tyco in Portugal
6/19 - Confirm raised rivet raise but not confirment if it is the fault.
6/24 - Built week 29
6/30 - Confirmation on raised rivit
7/2 - Tyco are still working on the failure analysis as the device is marginal on their tests and pass the 4-point terminal to contact test.
During Tyco visual inspection they identified a possible substance on suspect contact and sent the part for EDX/SEM analysis. The analysis shows the suspect anomaly to not be an issue
Cross-cut currently being performed - Next update expected Monday 6nd July
7/6- X-ray equipment and personnel in Mexico today
7/7 - 1) Tyco confirmed raised rivet with cross-cut 2) X-ray will not be allowed to go to QAO. Parts to be sent to Laredo for X-ray from QAO
7/9 - Tyco 8D received. Need to create/revise TRW 8D w/ this info.
7/10 - X-ray machine not working in Laredo so containment only being done with woodpecker test. Simon and Mark to review parts flagged as raised rivet to validate the screening process to use parts in pipeline. If we can prove those found during woodpecker have the condition, may be able to stop x-ray.
7/13 - Xray and Puma
7/15 - Need 8D updated Martha to reflect the X-ray and Puma
7/20 - Martha to update 8D with X-ray and Puma estimation of completion 7/21
7/21 - 8D updated need Ford Closure

5/20 - Testing at 26-mile to duplicate B32 code.
5/21-22 no contamination found removing lid. unable to duplicate code at room temp. further heat cycling at this time found current leakage more pronounced with the PFS isolated at 85Deg. C.
5/27- EPP shipped out to the UK for further testing.
5/28- EPP arrived at Shirley late.
6/1-Testing confirmed issue with PFS.
6/4- Testing set-up to identify faulty component
6/10 - Electrolyte found under ribbon cable connector on the ECU.
Capacitor sent to Epcos for analysis.
6/15- Supplier confirm that the device was not subjected to over voltage. Electrolytes leaking from capacitor.
6/16 - Ongoing. Testing on going at Epcos
6/22 - Capacitor is installed backward in circuit board. Kimball has 8D report to be distributed to team and QAO.
vision system effectiveness was verified (17.06)
- informing operators about issue and perform robust operators' retraining on each production shift (target 18.06)
- implement additional 100% visual inspection on heatsink assembly and packing stations (target 18.06)
- quarantine and visual inspection of finished products on Kimball stock – no C2 polarization failures were found so far (target 19.06)
7/2 - 8D copied with sent to QAO
7/6 updated and sent from Kimball with latest dates. Need to finalize 8d for closure
7/7 Theo sent out 8d's yesterday but there were some comments and updates needed. Will send out again to Marth 7/7 for closure
7/10 - Latest 8d in Forum and GWD.
7/14 - Will send out latest 8D to Ford.
7/15 - Eric or Martha send 8D to Ford
7/16 - Theo to get information from Customer on the PCA actions from Kimball or Shirley
7/23 - 1. Possible change to testers to detect wrong polarity of electrolytic capacitors. This change could potentially detect at the tester and prevent incorrect product from being shipped. Kimball will provide circuit description to TRW (G, Jacks/K. Rushgrove) of proposed changes by Thursday 23rd July. - Under review for perposal change.
Based on results will look into the possible of redundance in camera systems.
First polarity check is at camera station#3, however polarity marking is still visible to camera station #4. Kimball to assess whether it is possible to add this check to camera #4. Passing a failure through this check would require

6/8 - pulled code B9A caused C69 lockout code. B93 set once in between B9A faults set. Torque sensor swapped no change with B9A setting, must turn input shaft slightly to set code
6/12 - Intermittent Open Circuit seen on Hall inputs to ECU at the Ribbon cable connector. X-ray shows a potential anomalie
6/15 - Discussions started with Schalke on next steps. Intermittent connection of ribbon cable
6/18 - Part Shipped to Tyco
6/22 - Presentation provided to Group will need to be distrubited. Found issue in connector installation. Currently TRW installed a rework procedure and working on a solution for proper installation of connector.
6/23 - Confirmation Anting performing updated procedure
7/6- Schalke working with Anting and PE/ME to inverstigate potential process tool or design change. Mtg 7/9
7/7- Schalke/Anting have asked ATS to design a guide tool for pressing in connetor. ATS will have a draft proposal 7/9
7/9 Presentation received. Need to evaluate and implement if acceptable.
7/10 - Have ideas for guide tool from ATS. Will review again next Wed. Would like to discuss possibility for design change if tool does not work. Will discuss next week with engineering.
7/13 - Seen presentations on the improvement in the possible process. Long term goal is to have an engineering design change, Current looking into short term solutions. Will have meeting on Wednesday and Thursday to go over the short term resolutions.

6/12- gear in process to Washington
6/15- tear down gear and check U.K for next relay test steps.
6/16 - Epp will be sent to Europe for Analysis
6/22 - Waiting for anaylsis
7/2 - 8D sent to B. Bouse on update
7/6 - Verfied carryover actions from Scalke to Anting with photographs of assy line controls. Need to finalize 8d for closure.
7/9 - Need to arrange a mtg with Ford STA (Jonathon Harris) to review and close 8D.
7/10 - Recommending that we contact STA to review and close 8d

6/3 tech performed parking lot road test, hiway road test and restarted after cold start and B3A code did not reset at this time.
6/5 Called dealer back they road tested the vehicle for two days with no codes returned to customer yesterday. Vehicle fixed at this time.
8/26- customer returned with same code replaced the EPAS gear
8/31- submit hot process form to ship part back to WPAC
9/2- pulled level 1 data second time back for same code. Code did clear and did not reset on return. Need to get EPP xrayed in Livonia
9/10- confirmed two raised rivets in the relay after xray

6/12 - confirmed B3A pulling data on-vehicle. Waiting on dealer to swap in new part
6/15 - Will pick-up part today and deliver gear to Washington. Part not ready
6/16 - Eric to Pick -up Part to send to Washington. 26 mile to perform anayslsis
6/17- Pin 1 & 2 at 50m ohms but pin 3 and any pin has 8k ohms resistance.
6/18 - Confirm raised rivet raise. Part shipped to Tyco
6/23 - Tyco Request QCCAR, QAO Providing documentation to Tyco. Tyco received part and undergoing anaylsis
6/26 - QCCAR written
6/29 - Tyco Reported Raised Rivit as Root cause.
7/2 - Tyco confirm Raised contact as per TRW analysis
Device fails Tyco EOLT. Cross cut confirms bad contact riveting
7/6- X-ray equipment and personnel in Mexico today
7/7 - X-ray will not be allowed to go to QAO. Parts to be sent to Laredo for X-ray from QAO
7/9 - Loose Rivet same as FR002
7/10 - X-ray machine not working in Laredo so containment only being done with woodpecker test. Simon and Mark to review parts flagged as raised rivet to validate the screening process to use parts in pipeline. If we can prove those found during woodpecker have the condition, may be able to stop x-ray

6/16 - Dealer waiting on backorder gear
7/6 - Dealer still waiting on backorder- stock unit
7/13 - Need Dealership verbatium
7/24 - Part received in Washington performing Level 1 anaylsis. Need to start documention.
7/27 - Start Level 2 anaylsis PFR Started. Talked to UK will start additional testing on FR008. Clear codes and power up and test the repability.
7/29 - UK and 26 Mile software working on the diagnostics of the compents for testing the fault. When faults were

6/16 - waiting on service gear **6/23 -** 700 tag issued after gear replaced and sending the gear back normal part return, no hot process return. should see the gear week of 7/13
6/17- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/6** - dealer waiting on backorder **7/13** - Need Dealership verbatium **8/3** - WPAC possibly sent gear to Indy with other hydralic steering gears on accident. Email sent to locate gear. **8/10**- gear was found and will be sent back this week to WPAC 8/27- dropped gear off at 26-mile 8/31- need more information from UK. Remove power filter stage check capacitor. 9/2- pulled power filter stage enough to find rev. capacitor. To get serial number to check vision system test.
6/17- confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis **7/3** - service gear sent out to dealer **7/13** - Need Dealership verbatium **7/30**-Called and resent hot process form **8/7**- gear being sent normal parts return process, gear shipped 2 weeks ago 8/27- Mike Taylor disasemble EPP and bring to Livonia for X-Ray
6/18- dealer ordered gear for resetting code **7/3** - service gear sent out to dealer **7/29** - Part Arrival at Ford. **7/30 -** Sounds like screw under ECU. Will take apart today in 26mi to verify if rework or not. Simon/Paul to verify. Just verified as prior to containment date. Part was reworked verified screw location covered under the 8D containment for screw assembly. Martha provoided 8D numbers SPC09FO013 and RFW2009F01 8/6- 8D sent out pending closure

6/22- tech found cut torque sensor harness, tried to repair wires but U3000-96 would not clear.
7/10 - Wire harness damage is in same location as the Hermosillo issue. Discuss action with Bouse
7/13 - Need Discussion With Ford to remove off list
7/14 - Discussion with Ford can be closed out a non TRW issue.

6/24 - confirmed C3000-96 is the only code listed unknown previous codes in the Interactive diagnosis
7/3 - service gear sent out to dealer
7/20 - Part at Ford undergoing Level 1 Anaylsis. Please note this vehicle was involved in a traing exceise. ETA to Washington 7/21. Dealer training vehicle.
7/21 - Sent buffer data to team. Will transport to Washington. Issue closed due to training vehicle and C69 Ford System team taking off line to evaluate diagnostic code.

6/30- dealer waiting on backorder-customer vehicles
7/15- dealer received gear this morning. Need Dealer Verbatium
7/20 - Part at Ford undergoing Level 1 Anaylsis. ETA to Washington 7/21
7/21 - Sent buffer data to team. Will transport to Washington. Need PFR
7/22 - Part at 26 Mile Washington PFR created. Part on test.
7/23 - Geoff Jacks and T. Than working on testing parmaters for gear anaylsis.
7/24 - Currently code is repetable still working with UK on anaylsis.
7/27 - TRW 26 mile working with UK on anaylsis for diagnostics. Level 2 Anaylsis
7/30 - Need to take EPP lid off to verify cause. Need to verify the outputs and inputs to the ASIC compair good vs. bad. Also, evaluate solder joints and mico.

7/1- Dealer received part
7/7- hot process submitted
8/6- gear returned to WPAC, data pulled
8/10- take gear this Tuesday to 26-mile for testing
8/11- gear still at WPAC, will transport to 26-mile once other gears are Xrayed in Livonia
8/12- gear taken to 26-mile for testing
8/27- broken ribbon cable between coil on relay, either between track & relay or track and connector.
9/2- open track, white residue on track, need to remove PFS out to get to the PCB. Will send out pictures today. Will do pressure test today.

7/1 - Dealer waiting on back order- customer vehicles
7/13 - Need Dealership verbatium
7/20 - Expected arrival at Ford 7/21
7/21- Part received at Ford performed buffer data. Washington waiting for Part arrival
7/22 - Part at 26 Mile Washington PFR created. Part on test.
7/23 - Code has not reproduced Sensor enginnering evaluated part no issue performed visuale inspection on the top of solder with microscope seen no issues (Can't see back side unless destry part not at that level of anaylsis). Currently on still on root cause anaylsis will set up gear and test for Hot and Cold chamber cycling to reporduce failure.

7/6 - service gear sent to dealer today
7/9 - Gear is in transit to WPAC
7/13 - Gear at 26 Mile and is undergoing anaylsis. Currently Thia Than is pulling codes and will have a discussion of next steps in process. Possible next steps are EDF testing.
7/15 - EDF testing
7/20 - No codes reported in the Level 1 Anaylsis.
7/24 - Issue with RNBA ball bearing in on gear assembly.
7/27 - QAO identified two areas of concern assembly and teardown. Currently imporved handling and will

7/9 - Torque Sensor Assembly missed a solder joint. Contact Angie at Rogersville about returning the unit.
7/10 - Part to be in Rogersville today. Angie to review. Then likely on to Hella. Angie should send pictures to Hella today.
7/13 - Update from TRW on process.
7/14 - Part on way to Hella. 100% visual inspection, 100% visual inspection sort at Rogesville and Hella so far no suspect parts identified. Target for preliminary 8D 7/15/2009. - Confirm date with Mike Davies
7/17 - Containment - they have 100% visual inspection on the line after the Automatic optical Inspection (AOI) for the solder joints. 3668 checked, 2 suspect parts removed, but not failures against the IPC soldering requirements for class 3 joints (highest level).
They are also changing the AOI pass criteria to 100% solder fillet (class 3 requires min 75%) as further containment.

7/6 - service gear sent to dealer
7/7- SF states no codes or messages in the dash but he found red fluid on the bottom of the EPAS gear, SF did not know gear does not have fluid internally. At this time customer is driving the vehicle and will return to get evaluated again to see where the transmission fluid is coming from. Dealer received EPAS service gear yesterday advised not to replace for this fluid leak.
7/13 - Need Dealership verbatium. Also need to eliminate from the list at no fluild in EPAS system
7/14 - No fluid in EPAS was wrong diagnostic have closed out issue.

7/3 - dealer replaced the gear
7/6 - service gear sent to dealer, Gear in process to WPAC
7/9 - Gear received and under investigation at 26 Mile.
7/10 - Room temp testing did not show anything. Will try hot/cold testing (Thia)
7/13 - Testing has proving NTF and will test Power Down sequence.
7/14 - PFR submitted
7/15 - Part ship to Shirley for anaylsis
7/20 - Part arrival at UK. Access to start testing on rig for anylsis 7/27. Currently test stand is used for the Ford software validation for release.
7/28 - Part is waiting for test rig currently is delayed for the U502 software release. Once software is completed part will go on test.
7/30 - Started on test this morning on the power up and power down rig.
8/6- removed off rig cannot repeat failure. Install in temp. chamber to recheck. Discuss Monday on next steps with Geoff Jacks
8/10- will try to test under load same as FR0025 to duplicate concern.
8/17 - closed to issue case FR-0003

7/6 - service gear sent to dealer
7/13 - Need Dealership verbatium
7/20 - Expected arrival at Ford 7/21
7/21- Part received at Ford performed buffer data. Washington waiting for Part arrival
7/22 - Part at 26 Mile Washington PFR created. Part on test.
7/23 - Send PN to Geoff Jacks to verify relay build date. No high resistance. Woodpecker show no issues.

7/6 - Dealer ordered part on backorder- customer vehicle
8/3 - Came into Ford today, data pulled
8/4- delivered to 26 mile
8/6- X-ray's confirm raised rivet contact, confirm relay date code & Thiha to check contact resistances.

7/6 - Dealer waiting on back order- customer vehicles
7/13 - Need Dealership verbatium
7/20 - Expected arrival at Ford 7/21
7/24 - Part received in Washington performing Level 1 anaylsis. Need to start documention
7/27 - Level 2 anaylsis and PFR started. Remaval EPP from gear.
7/30 - Paul will give information to Simon on how to proceed

7/7- Dealer ordered part. - customer vehicle. Email request Canadian gear to be sent back to WPAC
7/15 - Part arrival at Ford will anaylsis at TRW Need PFR.
7/16 - Part arrival at TRW 26 Mile will perform standard B3A test procedures.
7/17 - Confirmed the B3A found not high resistance and going to X-Ray
7/20 - Part in Liviona for anaylsis currently X-ray machine down. If not able to X-ray will ship part to UK for anaylsis.
7/21 - X-ray confirmed no raised rivit and need confirmation from UK on either to woodpecker test or ship to UK. Woodpecker the part at 26 Mile.
7/22 - Will start testing process on oscillascope to evaluate EPP and relay. Currently part set a A3A with the start of woodpeckering based on the scope test will evaluate the next steps
7/27 - Run all test then remove the relay X-ray and shipment of part.
7/28 - A3A has occured once again part needs to be shipped to UK for deeper evaluation and testing.

6/30- NO P/S ASSIST, NO COMM /W PSCM
7/1 - dealer ordered part
7/14 -gear sent to dealer
8/3 - Came into Ford today, data pulled
8/4- delivered to 26 mile
8/10- level 1 testing able to pull data using gas tune, retested HEV tune and could not pull data, verified with 26-mile. Testing started in 26-mile.
8/11- Instrument setup the micro to check for micro or CAN Bus issues.
8/12- Martha to start QCCAR, Geoff & Thiha continue to test the micro circuits
8/20 - Part is intermittent are testing all joints and ciruits for intermitten occurances.
8/24 - Checking voltages. Not starting up properly
9/2- crystal not operating properly faulty all the time now, needs further testing to find cause.
9/8- Thiha to send Geoff crystal/micro information to follow up on the testing
9/11- Thiha sent traces to Geoff to discuss next steps, part will likely be sent to UK for additional analysis.
9/14- Thiha to check one more scope trace and send out to UK this afternoon for addition testing.
9/21- ignition cycling if still does not fail thermo chamber testing. Thiha sent Geoff traces today
9/22-RUA# 002886- traces sent to Geoff and 26-mile to ship gear to UK for level 3 analysis.
9/24- gear shipped to UK yesterday for level 3 testing. Jason to get tracking number
10/1- resonator stopped working swapped out same issue, isolated to micro issue, will swap out micro and check results.
10/2- Geoff will try to get micro swapped out on Monday to verify resenator starts up.
10/5- Geoff investigation other checks to verify possible micro/resonator issue.
10/9- Geoff investigation micro operation, end of next week to complete analysis.
10/19-New software written tomorrow or Wednesday to analyze micro operation, temp. cycle unit with new software to check RAM & flash operation.
10/21- Running hot/cold cycling with the new software, no failures at this time.
10/26- Running +85degC & -40degC since Wednesday with no faults. Looking to send out resonator to Murata & install new resonator to see if it powers up properly.
11/16 Report back from Murata - Resonator is faulty. Should have another update 11/18. Micro is suspect as well, in the cue to be analyzed in UK.
10/27- has resonator out will send out to Murata. The latest tests has failed get with micro expert to identify part of the code.

7/17- emailed Canadian contact to send gear back to the WPAC
8/12- resent email to Canadian contact to check if dealer shipped gear
8/31- talked to Trevor in parts sent EPAS gear back Friday. Should see gear end of this week.
9/8- talked to Vic Mackers at Canadian hotline he will ship part to WPAC today.

7/17- Dealer replacing gear for intermittent loss of assist, submit hot process. No codes listed
7/24 - Part received in Washington performing Level 1 anaylsis. Need to start documention
7/27 - Level 2 anaylsis and PFR started.
7/28 - UK and TRW software working on the anaylsis test at 26 mile for evaluation of part.
7/30 - Not repeatable. Waiting to get on EDF stand. Only know it failed at 50°c. Code never latched out. Need to

7/24 - Part received in Washington performing Level 1 anaylsis. Need to start documention
7/27 - Level 2 anaylsis and PFR started.
7/28 - Jim L. has part for deeper dive anaylsis.
7/29 - Failure has been reproduced next steps are testing the area of the failure.
7/30 - Need to rule out harness. J. Loria to take off tq sensor cover for further evaluation of sensor. Loria should communicate with UK team during evaluation for recommended steps..
8/3- Found reluctor ring contact bend down on CB. Rogersville & QAO to construct fishbone for possible causes
8/4- Rogersville implemented a quality alert on the process line and QAO has 100% inspection for a bent pin. Need to get 8D out.
8/6- Rogersville to investigate mark on tooth for possible causes. Hella to update 8D late next week.
8/10- Martha updated QAO control plan- IPA teeth inspected before installed in gear. 200% IPA inspection at QAO & Rogersville for containment Rogersville testing part on line to see if it will be kicked out & check possible causes of marks on teeth.
8/11- Todd Williams to put IPA through mechanical displacement test. Then take to lab to check mark on tooth

7/22- Local dealer Bob Thibodeau will replace gear tomorrow I will pickup and deliver tomorrow
7/24 - Part received in Washington performing Level 1 anaylsis. Need to start documention
7/27 - Level 2 anaylsis and PFR started
7/28 - UK and TRW software working on the anaylsis test at 26 mile for evaluation of part.
7/30 - Will turn on again to see if code repeats
8/6- 26-mile verified code will repeat after sitting for a few days, possible contaimination, use PUMA tool to confirm load data, finish fault store data
8/12- nothing found in the fault data pulling out the power filter stage for testing
8/31- Xrayed and sent to tyco
9/1- last check part stuck in customs on the way to Tyco

7/22- unknown codes & information, submit hot process form.
7/29 - Part Arrival at Ford.
7/30 - Arrived at 26 mi

7/23 - dealer performed Interactive Diagnosis pulled snap shot data B3A & C69. lead to Gear replacement.
8/3 - Came into Ford today, data pulled
8/4- Delivered to 26 mile
8/6- X-ray's confirm raised rivet contact, confirm relay date code & Thiha to check contact resistances.

7/29- No CQIS claim or information. submit Hot request to get gear back to WPAC
8/6- gear returned to WPAC, data pulled
8/10- take gear this Tuesday to 26-mile for testing
8/12- confirmed raised rivet on Xray. Confirm resistance checks at 26-mile

7/29- submit Hot request to get gear back to WPAC
8/3 - Came into Ford today, data pulled
8/4- Delivered to 26 mile
8/10- raise priority level to test next with FR0008
8/12- starting to test waiting on UK for direction also FR0008 & FR0016
8/20 - Waiting on direction form UK based on there testing to set up 26 Mile in parellel with FR008 and FR0016
8/24 - Torque sensor issue with signal.
8/27- Jim Loria found problem with TS, shipped part to Rogersville for more testing
8/31- arrived in Rogersville will get update on timing today from Todd Williams & Angie Caudil
9/4- TS Passed the Rogersville testing by Todd Williams. Apparently it is an intermittent issue but Todd states this is an issue that Hella is aware of based on previous problems on another program. Shipped out to Hella for testing. Include Ian Ingram on testing results.
9/9- Shipped out to Hella today for testing. Ian Ingram sent email to update after Hella testing.
9/14- Hella received part today in there Logistik center will ship part to there lab- send out testing results tomorrow.
9/16- Markus Dura reporting out of Hella Mike Davies & Ian Ingram will follow-up
9/18- Hella has seem this jitter issue on earlier failure, need to review containment actions & dates and update 8D with new part.
9/22- Ian Ingram will report out the latest information out of Hella to complete the 8D
9/24- Part to be analysed by On-Semi, expected to confirm jitter issue. Test at On-Semi upgraded in Apr-09 to detect this failure mode, On-Semi will test this part on the upgraded test. Hella will update the 8D to reflect 'clean' date for Ford.
9/28- part is now at On-Semi and they will run it through the 'upgraded' test programs. Hella has updated the 8D report with week 31 the 'clean' date at On-Semi. Check timing from On-Semi to QAO/HSAP for clean dates.

7/29- submit Hot request to get gear back to WPAC
8/6- gear returned to WPAC, data pulled
8/10- take gear this Tuesday to 26-mile for testing
8/12- confirmed raised rivet on Xray. Confirm resistance checks at 26-mile

7/29- no EPAS codes listed in AWS report. Gear will come back normal part return routing to WPAC
8/24- Pulled EFF & Buffer Data
8/27- Mike Taylor to bring EPP to Livonia for X-Ray

8/5- submitted dealer hot process form to return gear
8/12- Pulled EFF & Buffer data, does not match interactive diagnosis(see FR0048). Found out dealer had 2 warranty gears and sent wrong EPAS gear with RO. This gear replaced today should be back next week.
8/25- Pulled Eff & Buffer data code BBA
8/27- dropped gear off at 26-mile
8/31- Geoff Jacks requested part to be sent to UK for testing
9/2- part has not been shipped Geoff wants 26-mile to perform testing.
9/10- cannot duplicate code put in thermo chamber for hot test.
9/11- still cannot duplicate any codes at this time

8/4- customer backed into a curb, then set P07AE-09 this should be rejected
8/5- submitted dealer hot process form to return gear
8/12- Pulled EFF & Buffer data sent out for evaluation. Check date when can install on EDF stand. Will take to 26-mile Thursday.
8/17 - Part on EDF evaluation. Average torque to rotate is 5.2 N/m. No visible debrie. Tear down approved. Check Tie Rod lash, no visual damage on gear. Forward functional data to Wes
8/20 - email from Ford
I am OK with letting this go. Hard to have the dealer go back to the owner for payment. Agree with you Wes that

8/5- submitted dealer hot process form to return gear **8/6-** gear returned to WPAC, data pulled **8/10**- take gear this Tuesday to 26-mile for testing **8/11**- take gear to Livonia Tech 3 for Xray. **8/12-** confirmed raised rivet on Xray. Confirm resistance checks at 26-mile
8/5- Dealer sent gear back normal parts return with 700 tag 8/25- TS harness cut & damaged near second retainer to the IPA- HSAP issue
8/7- Dealer sent gear back normal part return, no codes listed in the AWS report. 8/27- dropped gear off at 26-mile 8/31- Jim Loria found issue with TS, needs additional analysis before sending to Rogersville 9/1- Jim found one channel of the TS dropping low indicating a shorted circuit, will continue to test circuits 9/2- Jim found 50 ohm short between channel 2 & ground. Further testing to find cause. 9/4- path of moisture through the TS harness this is old version harness. To finish up testing on TS at 26-mile and ship TS to Hella for level 3 analysis. Include Ian Ingram on all the sensor testing information. 9/9- arrived at Hella emails sent to Ian Ingram to give a status update on testing. 9/14- testing results from Hella will be done Tuesday morning and sent out. 9/16- TS testing still on-going at Hella will Markus will report back complete testing results when finished
8/24- Pulled EFF & Buffer Data 8/27- dropped gear off at 26-mile 8/31- Geoff Jacks requested part to be sent to UK for testing 9/2- part has not been shipped Geoff wants 26-mile to perform testing. 9/10- cannot duplicate code put in thermo chamber for hot test. 9/14- confirmed Rev fitted capacitor
8/25- Pulled Eff & Buffer data code BD0,BD2,BD4 an B90 final code set 8/31- Jim Loria testing, no updates at this time. 9/1- Jim cannot get the code to reproduce, further testing needed 9/9- part sent back to Simon/Thiha for further intermittent testing. 9/10- Simon could not duplicate any codes will talk to Jim Loria on further testing 9/11- part has been run over the weekend still cannot duplicate any codes at this time, compare 9/14- cannot reproduce any faults, testing will start this week to check for intermittents. 9/14- Insert square wave and cycle ignition 5 sec on & off. Check back with results 9/30- gear is queue for ignition cycling testing 10/5- currently ignition cycling, going to do wiggle testing of the ribbon cable while cycling
8/27- Tomorrow Mike Taylor to bring EPP to Livonia for X-Ray

8/12- Retreived the EFF & Buffer data, tech states he could not communicate with the PSCM
8/17 -Part received at 26 Mile
8/20 - testing all joints and ciruits for intermitten occurances.
8/27- Still no communication. Geoff Jacks has next step testing for Simon to try.
9/21- Still cannot reproduce, to put through ignition cycling if that passes then thermo chamber to get the part to fail
9/30- to get a timeline of failed part when first tested at 26-mile. Geoff coming to 26-mile next week will help with diagnosis
10/6- had communication when first received, checked regulator passed voltage tests. Heated EPP still passes. Next step is to ignition cycle.
10/8- going into hot ignition cycling tomorrow
10/15-ECU cover taken off, water ingress in EPP, residue on back of PFS. If built at Schalke to ship for leak

8/14- Submit Hot Process request form
9/2- Pull EFF & buffer data at WPAC
9/4- Dropped gear off at 26-mile

8/14- Submit Hot Process request form
8/25- Cannot pull Eff & Buffer Data from EPAS module
8/27- dropped gear off at 26-mile
8/31- Not tested yet will be tested with FR0027 & 48
9/16- Thiha to send Geoff scope traces. ECU now reset and working at this time.
9/21- Simon found resistor failure in the ignition circuit.

8/25- vehicle returned with the same codes after EPAS gear replaced, tech replaced the ABS module vehicle fixed at this time. Geares not need to be tested, Pulled A8D code CAN BUS Lat Accel Absent fault
8/27- this warranty return is a non TRW issue. Vehicle returned with the same codes after gear replacement and replaced the ABS module the causal on the AWS claim to fix vehicle at this time.

8/25- earlier dealer states vehicle hit curb. FSE visited dealer and approved EPAS gear for binding while steering with no codes, steering wheel off center & frt tires badly cupped
8/27- Costas sent report to Bill Bouse & Wes Porter for review. Gear assembly showed evidence of impact. Wes Porter agreed.

9/2- Pulled EFF & Buffer data
9/4- dropped gear off at 26-mile
9/11- testing to start next week on B9A faults

8/31- submit hot process form to ship part back to WPAC
9/11- dealer shipped back park normal parts return to the WPAC, couple weeks for return.
9/18- pulled EFF & Buffer Data code BD2 I set before C69 latched out. Jason to ship gear to QAO for testing.
9/24- gear arrived in QAO for testing
9/30- TS PCB problem- QAO to send to Rogersville for inspection/test then send to Hella.
10/1- Martha to send out tracking number to Rogerville for arrival

8/31- submit hot process form
9/4- gear returned to 26-mile for testing
9/8- NTF at 26-mile, passed leak test & EDF test stand. Called dealer tech or service writer cannot remember if vehicle was driven straight in with no assist that set AF1 code then when tech pulled codes and road tested had B6A. He states the only set code was C1277 with the no PS assist fault in the message center.
9/14- cannot find any friction issues with this gear, passed leak testing no visible corrosion at the ITR, IPA areas. Passed EDF stand info sent to Bill. See if Ford would like to test on vehicle.
9/17- will pick-up gear today from 26-mile and return to Ford for on-vehicle testing
9/18- sent Bill B email that this friction code cleared will not reset, passed all 26-mile testing. Gear is here

8/28- tech states vehicle has no codes or lamps on and has communication, load tested battery and ignition feeds pass and never has PS assist. Tech will double check ignition feed for terminal tension or pin push out. Tech already ordered gear assembly per symptom chart.
8/31- Submit hot process form to ship part back to WPAC
9/18- pulled EFF & Buffer Data- only code listed A28(angle offset invalid fault) will give gear to Bill Bouse for on vehicle testing.
10/16- next step to put on EDF stand if passes to teardown., talk to Bill on location of gear 10/23
10/30- vehicle at 26-mile vehicle did fail with no assist and the TC lamp on to remove gear, leak test and remove ECU cover for voltage testing.

9/3- Submit hot process request form
9/23- will not get this gear back Ray(PM) states he accidently delivered gear to RCRC when the hot process forms were on his desk, so no 700 tag will be on this gear so we will not be getting this back from the RCRC.

9/3- Submit hot process request form
9/8- Delivered to WPAC today
9/9- pulled EFF & Buffer data at WPAC
9/10- shipped gear from WPAC to 26-mile
9/11- gear received at 26-mile
9/18- pulled codes and cannot duplicate addition testing needed
9/30- Simon to perform standard test on EPP

9/10- gear still in vehicle at the dealer, tech pulling all codes, pull batt feed see if vehicle has hard pull.
9/11- Tech will take snapshot data and email back. Dealer ordered EPAS gear and I submitted hot process request.
9/18- pulled EFF & Buffer data, no codes found cracked gear housing below the IPA. Impact on TS housing looks like it caused crack. Wes Porter to inspect damage Monday morning and be there for disassembly.
9/21- confirmed broken t-bar, checking impact study to brake t-bar. Also check possiblity where impact

9/11- Submit hot process form **9/24- pulled EFF & Buffer Data, only stored code is A28(angle offset invalid fault). no visible damage to the gear, get gear to 26-mile for testing** **9/25- gear in analysis at 26-mile** **9/29- found missing pinion nut on TS, QAO working containment actions and to start 8D.** **9/30- quality alert in that assembly station in QAO. Checking containment actions on mistake proofing pinion nut installation & torque.** **10/1-Increase the initial torque to monitor the angle in the torque gun, this in order to avoid double torque over one same component, complete.** **In process to develop a new torque socket for the station, this socket will include a position sensor to verify what socket is use in each torque (Pinion nut or pinion plug) in case the sensor detect an incorrect socket even the torque was correct the part will be rejected.**
9/11- Submit hot process form **9/18- pulled Eff & Buffer data does have B6A twice left at 26-mile for Costas to analyze.** **9/23- friction gear is similar to earlier 0 KM part with damaged datum on Pinion Housing, Pavel wants gear sent back to QAO for analysis. Shipped out from 26-mile.** **9/29- layout gear and compare with 0km part with same symptoms & friction code. Martha to add information to the 8D** **10/2- Angel Salazar to investigate gear handling on subframes at Benteler & HSAP to find possible area of**
9/21- Submit hot process form **10/5- pulled EFF/buffer fault data.** **10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis** **10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis** **10/28- code repeatable and link relay will not close. To send to the UK for level 3 testing.** **11/9- in Uk testing cannot reproduce at this time.**
9/21- Submit hot process form **9/25- pulled EFF & Buffer data, B9A code shipped to QAO for Analysis.** **9/29-estimate gears to QAO late this Thursday** **10/2- xray ribbon cable area, cannot duplicate fault or find any visual faults with the ribbon cable at this time.** **10/12- sergio in process to deliver to 26mile for testing**
9/21- Submit hot process form, little information on the repair. Tech was trying to fix the ABS steering angle sensor reading for a couple of days and looks like he replaced the gear for an erratic swa sensor reading. no PSCM code listed in interactive diagnosis so unsure why tech replaced the gear. could be a chargeback gear. **9/24- gear arrived at WPAC pulled EFF and Buffer data, return gear to 26 mile, steering angle sensor changes position turning full Left and right** **9/29-estimate gears to QAO late this Thursday** **10/2- put on EDF stand results check ok no problems found at this time. Sent out email to get help with next steps on this return. We might need to put on-vehicle for testing will talk with Ford.**

9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.
10/5- pull EFF/buffer fault data.
10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis.
10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis
11/9- passed leak test, not rev. cap. Testing on-going at QAO. Get update from Sergio does code repeat & next step testing.
11/18 - SA:Fault no reproduced. Leak test done OK. Ambient cycling ignition done

9/25- Submit hot process request back to WPAC, no information on this vehicle, tech was not able to get into Interative diagnosis.
10/5- pulled EFF/buffer fault data
10/12- dropped gear off at 26-mile, verified knocking noise, Jim loria to verify noise.
10/21- TS sent to Rogersville
10/23- part received at Rogersville today Update on Monday.
10/26- Comfirmed TS ASIC is prior build to FR0036 which same TS ASIC concern. Apr.09 is the build date and FR0036 was in June. Clean date week 31.
10/28- part arrived at Hella today for testing, lab testing to start Monday

9/28- Submit hot process request back to WPAC
10/5- pulled EFF/buffer fault data
10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis
10/23- gear passed pressure test bellows removed no signs of contamination. Put on EDF stand today and passed all checks. Costas checking next steps for testing. Possible false detection.

9/29- Submit hot process request form
10/5- pulled EFF/Buffer fault data has
10/12- dropped gear off at 26-mile, Jason to ship to QAO for analysis,
10/23- gear arrived yesterday, next step to pressure check for leaks, then normal TS testing procedure.
11/9- Sergio cannot duplicate code looking to engineering group on next step analysis before removal of any parts. Advised Jim Loria to send next step testing to Sergio.
11/18 - SA:Fault no reproduced. Leak test done OK. Ambient ignition done OK.
11/24- need to confirm with Jim Loria next step testing.
1/28- all testing has been perform in QAO and cannot get the code to return, ship back to 26mile so tri-

10/2- Submit hot process request form
10/16- EFF/Buffer fault data collected shipped to 26mile. B9A code filled stored data.
10/23- need to leak check gear and take upstairs for testing.
10/30- passed leak check, install gear on vehicle check for resetting B9A code. Sent fault data for review

10/2- Submit hot process request form
10/12- Pulled EFF/Buffer fault data, pulled B9A code, dropped off at 26-mile for analysis.
10/23- pass leak test, get update from Simon.
11/18 On hold pending outcome of other B9A investigations
10/30- hold for evaluation of B9A workshop this Tuesday.
1/18- still at 26-mile holding for next step testing.

10/6- Submit hot process request form
10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile, then ship to QAO for testing.
10/23- gear arrived yesterday, next step to pressure check for leaks then get the PFS serial# and send to Geoff Jacks for next step analysis
10/27- a low resistance(25 Ohms) between Vlink and 0volts, measuring resistance between pin10 (Motor_relay_HS) and pin9 (hall_supply_0volts) of the ribbon cable the 25 Ohms are found. To send to UK for testing.
11/4- x-ray has not shown any anomalies removed the motor PCB, cut away some of the connector plastic of the motor to allow inspection of the solder joints.
11/16 Analysis continuing with Nidec
11/23- Nidec to check pin resistance measurement for shorts ICA. Mike Davies advised Ford of changes

10/5- Submit hot process request form
10/12- pulled EFF/Buffer fault data has B3A code, dropped off at 26-mile for analysis.
10/14- x-ray parts did not show cold weld, raised rivet or offset bridge. Next to check resistances
10/16- thiha to check resistance, if fail will ship to Tyco. if pass resistance test will put on puma cycle.
10/29- failed resistance test at 26mile, shipped to Tyco. Tyco did receive the relay today
11/9- checking with Tyco on relay testing from last week. Mike Davies to follow up
11/19- still working with Tyco to check proper contact resistances.
11/23- confirm plastic contamination, need to confirm where plastic came from coil base or cover. RUA# 2961

10/6- Submit hot process request form

10/12- Submit hot process request form
10/30- pulled EFF/Buffer Data dropped off at 26-mile
11/4- shipped to Rogersville
11/6- arrived at Rogersville put on truck to QAO
11/12- testing starting today in QAO
11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found
11/24- passed hot ignition cycling, in normal operation B3A set. Advised to send Simon the EFF data for Michelle to decode Monday.
11/30- EFF data decoded Geoff to look at and make decision on analysis.
12/14- Next step testing
1/7- EFF shows that the link voltage (drive stage supply voltage) is very low at less than 3V. This has led

10/12-Submit hot process request form
10/16- pulled EFF/buffer fault data, ship from WPAC to 26-mile for analysis.
10/23- pass leak test, get update from Simon.
10/28- mike to x-ray part in Livonia this week.
10/29- did not find anything in the xray this morning. Resistance test then hot Puma testing.
11/02- passed the resistance, hot puma & resistance test. Ambient tested over the weekend no problems found at this time
11/6- hot & cold ignition cycling testing next, x-ray ribbon cable.
11/17 passed bench testing. Hot / cold next

10/16- Submit hot process request form **10/30- pulled EFF/Buffer Data dropped off at 26-mile to ship to QAO** **11/6- x-ray leading to offset bridge suspected, to hot puma test next.** **11/23- passed hot puma test. Check resistance before sending to Tyco should fail resistance test if this is an offset bridge.** **11/24- after testing found high resistance.** **12/14- raise RUA- 03161 & PFR. ship relay out to Tyco today**
10/16- Submit hot process request form **10/30- pulled EFF/Buffer Data dropped off at 26-mile** **11/4- shipped to Rogersville** **11/6- arrived at Rogersville put on truck to QAO** **11/12- testing starting today in QAO** **11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found** **11/19- hot ignition cycling,** **11/20- high resistance found contact 4 recheck with amp load across contact. Martha to follow up.** **11/24- passed load test across contacts. Sergio to send Simon EFF fault data for Michelle to decode on**
10/27- Submit hot process request form
10/27- Submit hot process request form **11/5- Pulled EFF/Buffer fault data at WPAC** **11/12- testing starting today in QAO** **11/18 - SA: Leak test done OK. Ignition ambient done OK Nothing abnormal found,** **11/19- next to hot woodpecker test**
10/27- Submit hot process request form **11/5- Pulled EFF/Buffer fault data at WPAC**

10/27- Submit hot process request form **11/5- Could not pull EFF/Buffer fault data from module no communication.** **11/16 Shipped to UK** **11/17 Under Analysis** **11/17 under analysis in UK, still ignition cycling trying to reproduce no com** **11/19- swapped parts IC14 power supply for the monitor micro, part in thermo chamber part failed again.** **11/23- Geoff to send power supply chip for the monitor micro to Infineon tomorrow for analysis.** **11/30- Infineon received chip and will send update when their testing is completed.** **12/3- Infineon has confirmed IC14 has identified irregularities on the leadframe.**
10/27- Submit hot process request form **11/5- did not notice any abnormal noise turning the input shaft back & forth, no codes in the fault data.** **11/9- dropped off at 26-mile for Costas testing leak test then EDF test stand.** **11/12- all the testing at 26-mile could not duplicate the noise from the gear. NTF at this time. Unknown if we should put on-vehicle for testing.**
10/27- Submit hot process request form **11/13- pulled EFF/Buffer data shipped to 26-mile** **11/20- ship part to QAO, should be in QAO Nov. 25th, date range fits rev. cap remove PFS after leak check.**
10/27- Submit hot process request form **11/5- pulled EFF/Buffer fault data at WPAC** **11/6- dropped gear off at 26-mile for analysis** **11/9- EPP sent out for x-ray in Livonia** **11/18 - Mike to X Ray again zoomed in today, potential raised rivet**
11/3- Submit hot process request form **11/12- Pulled EFF/Buffer fault data and verify noise in gear while turning** **11/19- failed EDF stand results, possible bent rack, gear sent to Harold for teardown** **11/30- Costas states The RBNA is in material lab where they will do further investigation on surface**
11/4- Submit hot process request form **11/13- Pulled EFF/Buffer fault data, shipped to 26-mile** **12/1- passed leak test, brough upstairs to start testing.** **12/7- x-ray looks like an offset bridge, passed Puma test then found 4 ohms on phase 2 that went away after rechecking the other phases. Need to capture scope traces after hot puma test.** **12/14- raise RUA# 03160, get additional testing information and send to Tyco.**

11/11- Submit hot process request form **11/20- pull EFF/Buffer fault data, ship to QAO** **12/3- fault repeats suspect B-FET-3, damaged on the power FET Pack. Sergio to cut the wirebond on MOSFET_G6 and measure voltage to isolate power module. Short stays on the power module.** **12/7- confirmed power module QAO sent direct to supplier(Fairchild) for analysis.** **12/14- shipped to Fairchild stuck in customs, QAO to send paperwork.** **1/7- Kimball/TRW in discussions with Fairchild on testing & analysis. EOS is Fairchilds claim, TRW working with Fairchild on this analysis.** **1/25- get build dates from each power module and compare dates. Sergio to send Geoff information. Line**
11/11- Submit hot process request form **12/2- pulled Eff & Buffer data, ship gear to QAO** **12/7- In process to QAO** **12/15- B25 fault repetitive. PH3&VLINK found shorted to 0 volts. Short traveled with ECU. Isolate by cutting bond wires and then perform power module swap. Wait for Sergio to return this week.** **1/12- confirmed FET power pack, ship to Fairchild for B-FET-3.** **1/18- part stuck in customs waiting on paper work from QAO. Guillermo to check status and get update by next Monday** **2/2- part has been examined by Fairchild, needs further testing. Failure is electrical short and maybe an EOS event or device related and suggests to further analyze in fab site. Checked plant LogIQ status no EPAS codes set at all test stations. Happened 22 days after build and did not leave dealer after dropped**
11/30- Submit hot process request form **12/15- found out PM left dealership so will not be hot processed. will get the gear sent through normal parts returns to the WPAC.** **1/7- Pulled EFF & Buffer Data, did not notice any noise turning the input shaft back & forth**
11/12- Submit hot process request form **11/20- pull EFF/Buffer fault data, ship to 26mile**
12/2- pulled Eff & Buffer data, ship gear to QAO **12/7- In process to QAO** **12/15- B7E fault repetitive. Measures taken with ECU functional sw. leakage on motor phase 3. cut the bond wire for the gate of Phase 3 bottom** **1/5- Jose to perform power module swap, wait for Sergio to return this week** **1/13- short followed the ECU, Geoff to review report from QAO.** **1/22- work being completed further testing needed,results leading to diode fault.** **1/25- diode 21 ok, EPP needs level 3 testing to ship to UK, tracking # 8674 8338 0093** **1/27- just arrived in the UK for testing.**
11/12- Submit hot process request form **11/20- pull EFF/Buffer fault data, ship to 26mile** **12/1- passed leak test, brough upstairs to start testing.** **12/7- able to get this B9A to reset sent to UK** **12/14- RUA 03162- need PFR sent, additional bench testing in UK.**

11/24- Submit hot process request form
12/2- pulled Eff & Buffer data, ship gear to QAO
12/7- In process to QAO

11/30- Submit hot process request form
12/10- pulled EFF & Buffer data and shipped gear to 26-mile
12/17- Mike to xray and Michelle to hot puma test before the break.
12/21- offset bridge
- Re-Puma (3 or 4 times)
- Perform resistance test while hot.
- I think x-ray is then sufficient evidence to send part to Tyco.
- Remove relay
- Photograph top of relay (ensure bar code is clear of glue residue)
- Raise RUA
- Send to Tyco

11/30- Submit hot process request form
12/21- pulled EFF & Buffer data, ship to QAO

11/30- Submit hot process request form
12/21- pulled EFF & Buffer data, ship to QAO
1/13- Jose to start the friction testing today.

11/30- Submit hot process request form
12/21-pulled EFF & Buffer data, sent to QAO
1/13- fault code is not reproducing, to analyze data to find potential cause and lead toward next step testing.
1/15-ambient cycling latched code BC5 found scratches on the PCB, QAO to ship to UK for further testing.
1/20- arrived in UK today.
1/29- Geoff still able to repeat B25, other testing being done unable to analyze further. Make sure this is not a rev. cap

11/30- submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- raised rivet** **- Did it fail hot or room temp?** **- Next step - perform resistance check immediately after failing Puma.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **- Send to Tyco**
12/4- Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- could not see any issues with xray** **- Perform resistance test at room temp.** **-Re-Puma (3 or 4 times - if not already done)** **- Perform resistance test while hot** **1/15- tri- temp ign. Cycling, try to get in chamber next week.** **1/18- set aside for FR0096(B9A) testing.**
12/4- Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21- offset bridge** **Re-Puma (3 or 4 times)** **- Perform resistance test while hot.** **- I think x-ray is then sufficient evidence to send part to Tyco.** **- Remove relay** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA**
12/4- Submit hot process request form **12/10- pulled EFF & Buffer data and shipped gear to 26-mile** **12/17- Mike to xray and Michelle to hot puma test before the break.** **12/21-Re-Puma recheck resistance** **- Photograph top of relay (ensure bar code is clear of glue residue)** **- Raise RUA** **1/11- could not confirm issue with xray, have not duplicated the code, perform the standard test and conf. with Geoff to find next step testing.** **1/18- hot woodpecker couple of times and check resistances. Geoff & Thiha to follow up on the details.** **1/25- attach relay back on board or into a KG unit for additional Puma testing.** **2/3- several attemps to put relay back on a known good PCB with no luck, possible relay damage from**

1/11- Pulled EFF & buffer data also pulled BB9 & BB5 with the BB7 code. Ship to QAO. **2/1- leak tested no leaks, benched tested cannot duplicate code.**
1/11- Pulled EFF & buffer data also pulled BD4 & B95 with the B90 code. Shipped to QAO. **2/1- leak tested no leaks, benched tested cannot duplicate code** **2/3- EFF data shows a problem with the channel 1 torque. Check for any potential damage on the harness. Nothing obvious found. EFF data shows data original fault occurred at low temperature, at 4° C. Need to test at cold temperatures.** **2/5- ambient ignition cycling did not reproduce any code, bully testing next. Data shows code reset at 4degC.** **3/8- in process to 26mile for cold testing** **3/10-Checking the west building today to put in for cold testing** **3/19- will go into the cold chamber after DR0004 is done testing.** **3/26- will be hooked after DR0004 is done testing In the east building**
1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC **2/2- tech should not have replaced gear with no lamps or symptoms after clearing code and road testing, did not record any interactive diagnosis so tech did not follow interactive diagnosis for this repair.** **3/8- shipped to QAO for standard no com testing** **4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time** **4/19- pass through bully test several times to confirm an intermittent**
1/11- pulled EFF & Buffer data unknown why gear was replaced no B codes need to investigate further. Gear at WPAC **3/8- shipped to QAO for standard no com testing** **4/9-Samuel doing ignition test at hot, cold and ambient. No faults at this time**

1/11- Pulled EFF & buffer data also had BD0-BD3 codes with BB7. shipped out to QAO **2/1- leak tested no leaks, benched tested cannot duplicate code**
1/11- pulled EFF & buffer data, I did notice the cricket noise turning the input shaft back & forth. Shipped to 26mile
1/14- Pulled EFF data, did not notice any squeak noise turning input shaft. Ship to 26mile 1/15
1/14- code cleared and did not reset, unknown why dealer replaced gear, need to pull CQIS report. **1/18- Found out dealers FSE advised to replace the steering gear for one time code set.** **1/25- passed leak test, check on xray results and testing** **1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week.** **2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco.** **2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps** **2/11- RUA raised shipped to Tyco today est. date to Tyco 2/17**
1/14- pulled eff & buffer data, ship to 26 mile for analysis. Shipped to 26mile 1/15 **1/25- passed leak test. check on xray results and testing,** **1/28 check on xray results and testing, Mike Taylor has been out all week, will get results next week.** **2/1- xrays were taken today and indicates offset bridge. Get photos of relay, raise RUA send to Tyco.** **2/5- Thiha has raised RUA on unit hot puma & ignition cycling has not raised any codes and all the resistance reading in specs. To check with Geoff for next steps** **2/11- RUA raised shipped to Tyco today, est. date to Tyco 2/17.**

1/14- Pulled eff & buffer data need to check repair order, could be charged back to dealer, torques sensor harness is taped from IPA to EPP. Will check CQIS & aws reports. **1/22- talked to dealer harness was damaged when customer brought vehicle to dealer, no accidents or previous known work done. Dealer tried to repair harness dealer could not remember location of repair, need to find area of damage, most likely customer damage.** **1/28- took pictures of the harness unable to deterime where & how the damage occurred on the TS harness. Not sure any further testing can be done. Will discuss with Ford on next steps.**
1/15- pulled EFF & Buffer Data, sent to Ford make decision what to do with gear. **1/20- Ford/TRW team talked with tech to get specific information, tech did not think the TC lamp was on during his road test with stored code C1278 that the tech could remember but followed advice of hotline, testing all wiring and connectors if good to replace the EPAS gear.** **3/8- in process to QAO for standard no com testing** **3/10 - intercepted gear at Rogersville Andy E will ship gear directly to Tim Snider. FedEx tracking #037996760000241. It should arrive there by Friday. Gear to be installed on vehicle and tested for C1277 codes.** **4/19- cannot get the gear to fail at this time, further road testing needed to confirm NPF.**
1/21- Pulled EFF & Buffer Data, ship gear to QAO **2/2- In QAO today will start leak testing** **2/3 - Rattle comes from inside EPP. Confirmed comes from link relay. Cold weld issue** **2/5 - Need to take relay out & remove PFS to confirm cold weld or loose screw.** **2/12- Suspected cold weld. Traceability suggests failure is from same time period as 4 x 0km failures . Shipped to Tyco**
1/21- pulled EFF & Buffer Data, did not pull any B codes only A5D. Check CQIS report found dealer replaced epas gear & ABS module same symptom. After going through owner relations for buy back they replaced another EPAS gear and they said they drove over 700 miles and code did not reset?? have the first EPAS gear at WPAC. **2/22- this gear would be a good option to install on vehicle and check for any codes. This was installed on hybrid that is why code is C1B00-64 instead of a C1277 on a non-hybrid.** **3/8- shipped to QAO today** **3/17- arrived in QAO ready for testing**

1/22- pulled EFF & buffer data, did not notice any codes to cause no assist. Check CQIS why gear was replaced **3/2- shipped gear to QAO for testing** **4/12-hot, ambient, & cold testing done with no faults.** **4/19- pass through bully test several times to confirm an intermittent**
1/22-pulled EFF & buffer data, shipped to QAO **2/8- Jim Loria looked at the EFF data and is confirming the sensor is defective, probably either bent vane or water ingress. channel 1 is not working properly. Need to hook it up to Canopy next week and try rocking the input shaft and see if that affects the problem.** **3/3- with lack of resources at 26-mile suggest to send to QAO to continue testing since channel 1 was failing from the decoded EFF data. Find gear at 26mile** **3/8- shipped to QAO for testing failed at ambient temp.** **3/18- shipped out of Rogersville to QAO** **3/26- Found an extra V clip on the gear between housing and IPA (rotor side). Hella torque sensor windings are damaged due to this. QAO handling** **3/29- get 8D started and put in quality line alert with pictures with the handling of v clips.**

1/29- pulled EFF & Buffer data shipped to QAO. Found 2-pin connector corroded **2/26- Sergio will take photo's of the ECU water contamination in the ECU & 2-pin that could have set codes. EPP leak check was ok no leaks.** **3/20- looks like water contamination entered the 2-pin battery connector harness. Have updated photo's.**
1/29- pulled EFF & Buffer data shipped to QAO. Visual inspection of harness ok **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/25- found 2 ECU terminals shorted from straind of wire causing code. Geoff will write cars report so QAO can ship to Kimball for analysis.** **3/3- have containment 8D on this wire strand shorting ECU terminals, sent Ford 8D with latest PFR, also send IDE connector dates. VCARs written to ship board to Kimball to update 8D.**
2/4- Pulled EFF & Buffer data shipped gear to QAO. Dealer noticed damage to the RF hub cap rear and RF tire damage **2/15- gears just arrived at QAO, B3A testing ongoing will be able to start testing near end of this week** **2/22- gear passed leak test now going to lab for testing.** **2/26- cannot duplicate the code ambient testing & bully testing. decoded EFF data does not show any faults in the data when BD2 code set. Advised to send Jim Loria the information and discuss details** **3/5- still cannot duplicate code during hot test at EPP level.** **3/10- continue ambient end of line testing.** **3/24- found intermittent open in channel 1 while scoping the signals, used test box & known good cable still has int. open. Send to Rogersville for testing, remove TS & write QCCARS then send to Hella.** **3/29- in Rogersville for line testing then will ship out to Hella.**

2/4- Pulled EFF & Buffer data no codes, some fluid residue below the IPA. No fluid in the gear. Fluid could be from the brake reservior or the transaxle seal. Had to return gear back to the dealer
2/4- Pulled EFF & Buffer data, shipped gear to QAO **2/26- need to leak test and start lab testing** **3/2- Fault is reproduced at ambient after motor is slightly rotated. Motor elec. position does not change its value. Encoders fault. Need to define next steps? EFF data 21° C.** **3/3- scope traces on encoder A & B during repeat failure.** **3/5- testing indicating motor PCB, sent Geoff testing data.** **3/12- Despite encoders have correct supply, both are not reading. Send to UK tracking # 9373 7349 8749**

2/5- Pulled EFF & Buffer data shipped gear to QAO **2/12- failed leak test, no evidence of moisture dealer could have damaged boot. Gear being tested upstairs.** **2/26- Decode EFF send to Geoff on next step testing.** **3/8- resistance measurement ambient & cold** **3/19- ship down to QAO now that they have cold testing available. This is only the EPP assembly in small box.** **3/30- link relay is not closing fully on startup, second key up it works normal. Failed with 1 amp load. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault.** **4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday.**
2/5- Pulled EFF & Buffer data shipped gear to QAO. Also had BB9 & BB5. Could hear something rattling in EPP. Could be relay cold weld
2/11- Inspected 2-pin & 3-pin conn. Did not see any problems or contaminates on the terminals pulled EFF/Buffer data, was able to communicate with no problems. Unit still at WPAC, was checking all reporting data for potential chargeback, did not find anything. will ship out next week **2/25-gear should arrive in QAO 3/1** **3/5- leak tested no leaks, initial bench testing cannot reproduce no com** **3/29- passed cold ambient & hot testing with no faults & CAN Bus ok. Next steps to bully test if that passes to remove cover check ribbon cable for intermittent connections** **4/12- bully testing passed.** **4/21- removing ECU cover and do visual & wiggle testing.**
2/11- found damaged TS harness with cut wires at first retainer near EPP. Pulled EFF & buffer data. Shipped to 26mile have pictures.

2/11- pulled EFF/buffer data, shipped to 26-mile **2/19- relay x-rayed potential offset bridge, measure resistance, hot puma & measure resistance again. Raise RUA and ship to Tyco** **2/26- puma testing needs to be done then RUA will be raised and relay shipped to Tyco on Monday** **3/8- RUA# 3404 ready to ship out to Tyco. Check that the proper RUA was sent to Tyco. Simon to check with Mike.**
2/12- turned input shaft notice cricket noise while turning input shaft back & forth from center.
2/19- pulled EFF data shipped to 26mile for standard testing. **2/26- need to leak test and xray** **3/1- leak tested had damage to boot & ITR, looks like damage happened after OTR was remove so unknow if damage occurred removing gear from vehicle or in shipping. Mike will xray EPP this week.** **3/8- mike to xray this Wednesday** **3/15- xray looks clean, next step is resistance testing.** **3/29- xray clean to resistance check & test with surrogate relay.** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- inline for thermo cycling after FR0165.** **4/21- perform resistance check will discuss relay in this Friday's teleconference**
2/19- pulled EFF data and shipped gear to 26mile check EFF data make sure it is not a cold latched concern before sending to QAO **2/25-gear should arrive in QAO 3/1** **3/3- Sergio found failed channel 1 in Torque sensor, used known good cable & hella test box to confirm. To send torque sensor to Rogersville for quality testing before shipping to Hella.** **3/8- TS arrived in Rogersville today for testing after testing is complete will ship off to Hella.** **3/15- TS arrived in Hella this morning.** **3/18- Hella found TS ASIC failure sent to OnSemi for analysis.** **3/31- Device failed on ATE (bin 12) at room temperature.** **X-ray and Sam analysis showed no anomalies.** **Further analysis to be done at ONSEMI Analysis Center Oudenaarde**

2/19- pulled EFF data and shipped to 26mile. Need to rattle test gear at 26mile, also will pull EFF data. **2/26-keep gear at 26mile. gear failed at 3.8degC send decoded EFF to Geoff find out what testing should be done next.** **3/19- ship down to QAO now that they have cold testing available.** **3/30- link relay is not closing fully on startup, second key up it works normal. Failed 1 amp load test. Could there be a problem in the PFS leadframe? a photo of the PFS with wires connected, be able to show Tyco a clear picture of fault.** **4/9- Signals scoped at EPP level . Link relay failing. Ship relay to Tyco** **4/21- QAO confirmed Open circuit on contacts with coil energized shipped link relay to Tyco yesterday. RUA-3618** **5/5- week 22-09 relay, at Tyco will report out next week.**
2/19- pulled EFF data and shipped gear to QAO. **2/25-gear should arrive in QAO 3/1**
2/19- pulled EFF data and shipped to QAO, include tech comments friction code cleared and did not reset on road test. **2/25-gear should arrive in QAO 3/1** **3/3- In lab ready for testing**
3/1- pulled EFF/buffer data shipped gear to QAO decoded temp 50degC **3/10- damaged TS harness about 2" from the overmold at IPA. Red wire open Sergio to ship harness back to Englebert & Joel for analysis.**

3/15- pulled EFF & Buffer data, shipped to 26mile for analysis **3/22- need to leak test gear today** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- inline for thermo cycling after FR0151** **4/21- perform resistance check will discuss relay in this Friday's teleconference** **4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps.** **4/26- discussed with Ford will send to Tyco for further testing** **5/5- week 37-08 relay, in process to tyco** **5/12- Tyco to perform Fritt test to 5A.**
3/15- pulled EFF & buffer data, notice damaged torques sensor harness, shipped to 26mile.

3/22- Pulled EFF/Buffer data shipped gear to QAO **4/9- Faulty FET POWER pack. PH3/PH2/0_volts/LINK_voltage shorted, Geoff to approve shipment to Fairchild for level 3 analysis.** **4/16- Geoff advised to ship FET power pack to Fairchild for analysis.** **4/21- looking for anti-static bags to ship power module FET.** **4/23- Rogersville sent out couple static bags to QAO should arrive Monday to ship out Power module FET to Fairchild.** **5/3- has static bags but waiting for Geoff to help fill out forms from Fairchild before shipping out.** **5/4- part shipped out today to Fairchild(China)**
3/22- Pulled EFF/Buffer data shipped gear to 26mile for xray **3/26- leak test gear today so Mike can xray all three B3A's next week** **4/6- xray is clean, resistance check ok, next step to hot resistance check then fit surrogate relay & tri-temp test with ignition cycling.** **4/9- surrogate relay on EPP is thermo cycling with ignition cycling.** **4/12- did not fail over the weekend** **4/16- remove surrogate relay this afternoon and thermo test over the weekend. Geoff to get relay batch numbers from Nidec on this one FR0151 & FR0157 all have similar motor build dates around 10/2008.** **4/21- need to do relay resistance check before Friday's teleconference** **4/23- have gone through a documented resistance measurement, are out of chambers and I am currently in discussion with G. Jacks to determine next steps.**

3/21- found cracked gear housing near outside housing large boot clamp. Have pictures **3/23- 26mile test plan:** **1- Leak test** **2- EDF (power off)** **3- Tear down and inspect components.** **3/25- Friday meeting to update 8D and find root cause at QAO.** **3/29- loose RNB balls failed QAO NVH 5/26/09 then gear teardown 6/29-7/15 before 7/29- revised teardown procedure. teardown done before revised teardown process could have caused the loose balls.** **Gear assembled 10/30/2009 and passed.**
3/29- Pulled eff & buffer data ship to QAO for analysis. **4/6- sent gears out to Rogersville to ship to QAO for testing** **4/15- gear in QAO ready for testing** **5/17- QAO has not started testing** **8/13- has performed ambient ignition cycling. Next to perform hot puma & then hot & cold ignition cycling.** **8/16- found link relay opening with light tapping, sending PFS to 26mile for xray.** **8/17- date code from the relay strongly suggests an offset bridge along with relay opening with light tapping. To raise RUA and send to Tyco for xray.** **8/18- Filipe carrying link relay back to Tyco**

3/29- Pulled eff & buffer data ship to QAO for analysis. Did not notice any damage to the TS harness. 4/6- sent gears out to Rogersville to ship to QAO for testing 4/15- gear in QAO ready for testing 4/19- Broken wire at Molex connector, get information from harness and ship to Delphi. 4/26- Delphi rep. picked up harness at QAO sending harness to Turkey for further analysis.follow-up from Dave Kerska, QCCAR # 378973. 5/17- Delphi verified damaged molex connector & broken red wire, sent Delphi presentation to Ford, harness sent to Wuppetal for further analysis. 6/2- Wuppertal plant states the copper strands are not damaged by a mechanical impact. The terminal is broken inside the connector. It is caused by a mechanical impact to the connector which is not caused by Delphi.
3/31- pulled eff buffer data and shipped gear to QAO 4/12- delay in shipping just sent out from 26mile should arrive QAO on Friday 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 6/29- not started, to measure phases before before first ignition. Perform iso test, to recordfirst ignition cycle with oscilloscope. Then proceed with testing. 8/18- Filipe carrying motor relay back to Tyco 9/1- Tyco torn down relay no small hot spot but no evidence of welding. NTF 9/7- perform high pot testing then check motor relay PCB cleareance.

3/31- pulled eff buffer data and shipped gear to QAO **4/6- sent gears out to Rogersville to ship to QAO for testing** **4/16- leak test passed also passed bully test 10X. Has been in the cold chamber 13hrs with no failure. Will hot & ambient test next**
3/31- pulled eff buffer data and shipped gear to 26mile for analysis. No visual damage to gear. Input shaft harder than normal to turn. **4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing.** **4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next to teardown for analysis.** **4/12- found bent rack near tooth to pinion area, no damage to ITR. Testing on going in materials lab.** **4/16- Jason to find out from Nick T what are the next steps in testing this gear** **4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report** **4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday**
3/31- noticed up & down input shaft movement, 26mile to analyze.
3/31- pulled eff buffer data and shipped gear to 26mile. No visual damage to gear. Input shaft harder than normal to turn in both directions. **4/7- need to leak check gear, inspect inner tie rods then put on EDF stand for testing.** **4/9- passed leak check no corrosion or no damage to ITR's failed EDF stand, next inline after FR0178 for teardown analysis.** **4/12- bent rack near ball screw threaded area, on going testing in the materials lab** **4/16- Jason to find out from Nick T what are the next steps in testing this gear** **4/21- request in lab downstairs to do a dye check and detect cracks first before we destroy the part for a hardness test. Hardness check should be next week. Nick T & Phil Mikula working to get summary report** **4/23- yesterday checking for signs of impact. Piece sent to lab to check for core & case depth hardness. Report out late Monday**

4/12- pulled EFF buffer data, shipped out to QAO **4/21- xray indicates offset bridge- ship to Tyco** **5/5- week 24 relay, just arrived will send out report to verify offset bridge**
4/12- pulled EFF buffer data, shipped to 26mile **4/21- xray clean had high resistance on PH3, next to load test and check resistance.** **4/26- perform constant voltage test fixed 100ma/5amp current test today.** **5/3- failed the voltage test with fixed current.** **5/5- relay ready to ship to Tyco, Mike Fontana to send out report analysis to Ford team & Tyco.** **5/6- Geoff sent out information to Ford, 26mile to ship to Tyco for level 3 diagnosis. RUA# 3590**
4/19- Pulled EFF buffer data, shipped gear to QAO **4/26- gear arrived today** **5/17- failed leak test around one of the TS cover screws, performed cold & ambient testing with no failure at this time.** **5/21- Unit will be frozen and bully tested. Also Performance test will be performed at cold temperature. Planned to be done tomorrow morning** **6/2- passed all bully testing & cold/ambient ign. Cycling.** **6/7-in lab for cold Performance & Puma testing. SAM testing** **6/15- confirmed moisture intrusion, EPP failed leak test** **6/25- EPP sent to Anting for analysis.** **7/26- same 2-pin PFS leak as FR0208. investigation ongoing at Kimball & Anting.**
4/19- did not notice any gear damage or noise turning input shaft. Shipped gear to QAO. **4/26- gear arrived today** **5/3- EDF test stand passed with no noise or friction issues, I will check AWS & CQIS reports to make sure vehicle did not return.** **5/4- primarily checking for belt slip, QAO EDF test stand needs to be updated to perform all four tests w/dynamic assists. Talk with Chris Manjos to help set-up SW** **5/17- talked to Pepe the SW was updated for the full EDF testing, the gear still needs to go back through to verify the full test.**

4/19- Pulled EFF buffer data, shipped gear to QAO **4/26- gear arrived today** **4/30- TS swapping exercise lead to defective torque sensor, no visual torque sensor issues need to discuss next steps with engineering. Before sending to Hella.** **5/3- check with Jim Loria next steps before shipping TS out to hella** **5/13- TS failed with four codes BD0-BD3 shipped from Rogersville to Hella, QCCAR #379423** **5/21- Vcc- signal is open against ground. Could be broken cable or weld issue on the FFC cable to pin 1, open when there should be 5v. Hella will send out report this Tuesday 5/25.**
4/19- was able to communicate with EPAS gear, gear not failing at this time. No codes in gear **4/26- gear arrived today** **8/5- NTF with all the standard testing in QAO, to send PFR**
4/19- Pulled EFF buffer data, shipped gear to QAO **4/26- gear arrived today** **5/3- leak tested, now at the lab ready for testing**

4/26- pulled EFF Buffer data, shipped to 26mile for testing **5/5- xray clean, next to perform standard resistance testing** **5/7- resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest.** **5/17- passed tri-temp ignition cycling at this time** **6/7- 5amp hot test then check hot puma test.** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases.** **6/21- passed 1000v isolation test, ship to Tyco for testing. Raise RUA.** **6/28- RUA raised sent to Tyco** **7/9- NFF with all of Tyco's testing, next to open relay and visual inspection.**
4/26- pulled EFF Buffer data, shipped to QAO for testing **5/24 performance test,bully test, hot/ambient/cold/audit rig ignition cycling all passed, next to puma test then ribbon cable test. JM** **6/7- found one finger of the torque sensor bend down towards the PCB. Put in 8D need to find root cause, Guillermo sent Ford 8D on 0Km bent finger.** **6/14- The damage to the warranty return is due to a handling issue. We cannot determine where the damage occurred - Rogersville or QAO, but we did take the following proactive measures: We attempted to assemble a known bent rotor in order to verify that the Prodel line would reject rotor fingers bent in the upward direction. Part was rejected at the rotor weld station for B1 fault: bent rotor vane. We created a monthly electrician PM to verify correct axis alignment on station B2/B3 - weld stations. This will ensure that the part is being loaded/unloaded correctly and that no tooling is contacting the rotor fingers.**
4/26- pulled EFF Buffer data, kept at WPAC deciding if dealer should be charged back for diagnosis. Code C1963 does not lead to EPAS gear with not stored epas codes & did not perform interactive diagnosis. **4/30- decided by all dealer chargeback did not follow PPT "F" properly for ABS code C1963. the gear will be returned to the dealer.** **5/5- checking to see if gear can be tested on-vehicle checking with Russ Biyashev.**

4/26- pulled EFF buffer data, shipped to 26mile for testing **5/5- xray clean, next to perform standard resistance testing** **5/7-resistance check passed, tri-temp with ignition cycling, if fails then hook up surrogate relay and retest.** **5/17- has been running all last week with no faults, been taken off and put to the side for now.** **5/24- perform hot 5amp high resistance test.** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps. Need to purchase meeger tester for 1000v isolation test on motor phases.** **6/28- check 1000v test by end of week.** **7/9- passed isolation test to raise RUA and ship to Tyco.**
5/6- pulled EFF data & shipped to 26mile for testing **5/17- xray indicates raised rivet, further resistance testing before shipping to Tyco** **5/18- failed the 5A resistance measurement at Room Temp on the raised rivet shipped to Tyco**
5/6- pulled EFF data & shipped to 26mile for testing **5/17- xray clean, perform 5amp test at ambient & hot.** **6/14- 5amp amp test passed, next tri-temp ign. Cycling.** **6/21- passed ign. Cycling, next to perform 1000v iso. Test.** **6/28- 1000v test to be done by the end of the week** **7/12- passed isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**

5/6- pulled EFF data notice slight damage to ECU cover from shipping damage no return packing & shipped to QAO for testing **6/7- passed leak test, shipped to 26mile for xray of motor PCB ground plane issue.** **6/10- Isolation test(1000v) arc is observed between pins PL2.9 (Hall_supply) and PL2.12 (V_Star). Remove ECU first then resistance measurement to ground to verify PCB pin clearance.** **6/14- need to xray part to check motor PCB clearance issues.** **6/21- PCB in the UK for testing- xray PCB** **6/25- confirmed motor PCB clearance issue, shorting pin 12 to the ground plane.** **Pre-containment have pictures of the short**
5/6- pulled EFF data shipped gear to QAO **6/8- Possible damage at clock spring on IPA. In process of visual inspection**
5/7- pulled EFF data shipped to 26mile for xray & testing **5/17- needs to be leak tested today then ready for xray** **5/25- xray clean & passed the resistance test. Check with Geoff on next steps.** **6/7- 5amp test at anbient & hot if that passes tri-temp ign. Cycling** **6/10- put into tri-temp chamber with ign. Cycling** **6/14- passed 5 days of tri-temp ign. Cycling with no faults. 1000v iso test next step** **7/12- has performed all the relay testing and passed isolation(1000v) test. Next to take out relay send to Tyco.**
5/7- pulled EFF data shipped to QAO for testing, 2-pin conn. Has some corrosion & gear covered in clay or mud.Also had codes BD1,BD3. **5/27- found internal moisture leak in the EPP, moisture traces in the 2-pin. QAO to assemble PFS & ECU cover then ship to Anting for leak evaluation. SAM** **6/2- QAO shipped gear to Anting for leak testing around 2-pin.** **6/7- shipment arrived in Shanghai today at 5:55pm.** **6/14- check status of Anting testing, sent Raymond Qiu an email.** **6/21- emailed Raymond Qui to take backside pictures of the PFS with the plastic removed to verify water path from 2-pin. Report out as soon as Raymond responds.** **6/25- Anting will remove the molding to check conn. moulding area that it is in place at the 2-pin. Raymond Qiu will follow-up and get pictures.**

5/7- pulled EFF data shipped to QAO for testing **6/2- leak test passed, next bully testing. Pepe** **6/14- cold/ambient bully test passed, now cold ign. Cycling** **6/15- Unit is going to be measured and visual inspection will be performed at component level** **6/17- Pepe found twisting clockspring in the lock position he losses channel one. Some marking noted on the clockspring. High resistances notice on channel one.** **6/28- send PFR to Todd Williams & Angie Caudill. Discuss if TS should be sent to Rogersville for high resistance on channel one** **6/30- We agreed with clockspring torn down at QAO to ship TS to 26mile for Hella's inspection to see if problem is located directly to torque sensor ribbon cable of solder joints.** **7/7- Pepe shipping TS assembly to Rogers ville for analysis.**
5/7- pulled EFF buffer data & shipped to QAO **6/7- passed leak test, shipped to 26mile for xray** **6/9- xray tomorrow** **6/10- xray indicates raised rivet, cannot cause this code to set. Next hot puma** **7/19-High-Pot Test complete on EPP no issue found. Need make sure the B6B modified test is run on each of these (70sec loop at Tri-temp) Mike confirmed it has been done. Need EFF data Matrix this week. Salim to set up meeting next week**
5/20- pulled EFF & Buffer data, shipped to 26mile for xray **6/2- xray indicates offset bridge, resistance measurement passes, checking with Geoff on next step** **6/7- agreed for 26mile to raise RUA and send to tyco.** **6/14- check shipping status to Tyco.** **6/22- Tyco just received relay today**

5/24- pulled EFF & fault store shipped gear to QAO for analysis. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **6/25- indication cold weld of the link relay, relay build date 2/10/2009 PFS rattles & has open to send link relay to Tyco today**
5/24- pulled EFF & fault store shipped gear to QAO for analysis. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today**
5/24- pulled EFF & fault store shipped gear to 26mile for analysis. **6/7- inline for leak testing then xray** **6/9- xray tomorrow** **6/10- xray clean, next 5amp test** **6/14- passed 5amp & puma testing with no faults. Will consult Geoff on next steps** **6/14- passed 5amp & puma testing with no faults. 1000v isolation test next.** **7/12- passed tri-temp ignition cycling & isolation (1000v) test. Performed all the relay testing remove relay raise RUA send to Tyco.**

5/24- pulled EFF & fault store shipped gear to QAO for analysis. **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today**
5/21- dealer sent back a sunvisor instead of the EPAS gear back to WPAC, dealer charged back for the part. **7/7- dealer sent the proper EPAS gear back to the WPAC, part ready for xray at 26mile.** **9/9- clear xray, next to follow standard testing procedure.** **9/13- ign. Cycled over the weekend no problem found.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.** **10/5- ship to Tyco should arrive on 10/8.**

5/27- pulled EFF buffer data, ship gear to QAO for analysis. Also pulled BB7 & BB9 codes from fault store **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today**
5/28- did not notice any gear damage or noise while turning input shaft. 26mile to leak test then put on EDF & then check cricket noise. **6/7- check gear on NVH first then put on EDF tester.** **6/14- just a note on these returns, what I have notice with problems with the left trans axle seal leaking on the EPAS gear making the gear look like it leaks fluid then on turns the trans pump will whine & the steering gear gets replaced. This dealer added 1 quart of trans fluid on this repair.** **6/21- EPP was accidently removed from the gear, not sure if EPP should be reinstalled? Check with Ford** **7/7- reinstall EPP on gear, NVH test & EDF test to verify any noise concerns. Mark Bugosh is going to put the EPP back on and get the belt tension as good as he can, then give it to the lab downstairs.** **ETR# U2010-00605 for the lab to do EDF and NVH.**
5/28- pulled EFF data, shipped gear to QAO for testing. Also pulled BB7 from the fault store similar to FR0227 **6/7- shipped from 26mile to QAO today** **6/14- should be in QAO sometime today** **7/2- passed ign. Cycling, bully, hot/ambient puma testing with no failures** **7/7- shipped PFS to 26mile for xray of the link relay.** **9/1- PFS xray clean, next step to resistance testing ambient & hot.** **10/8- need to do hot resistance test** **10/20- hot resistance check was performed in QAO. To ship PFS to Tyco.** **11/1- waiting on Tyco relay workshop Nov.22-24** **11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis**

6/14- verified cricket noise while turning the input shaft. Close and store at 26mile

6/14- pulled EFF data and shipped to QAO for analysis **6/22- shipped from Rogersville to QAO** **7/20 - PFR Complete. Waiting Warranty team decision. Leaks at bellows. Discuss** **7/21- X-ray? Failed at orange connector at 750 and 1000V.** **7/21- symptoms appear to be another PCB motor clearance issue. Follow same process as FR0258** **9/9- advised to teardown and check PCB motor clearance**
6/14- pulled EFF data and shipped to QAO for analysis **6/22- shipped from Rogersville to QAO** **6/30- leak tested found leak at pinion plug, will start testing sometime this week.**
6/30- pulled EFF data, No Com with my Equipment at WPAC. shipped to QAO **7/7- leak tested passed, testing now starting.** **7/16-Low Impedance at Pin 2 of integrated can circuit. Have disconnected ribbon cable. Next step send to UK for Level 3 on Tues?** **7/28- somehow EPP shipped to the wrong location UK now trying to get EPP back from New Castle.** **7/30- EPP should arrive in UK on Monday, this is when the testing will start.** **8/2- UK has received the EPP today after testing something with the CAN IC circuit. Analysis still ongoing.** **8/4- confirmed a defective CAN IC chip needs to send to Infinion for further analysis.** **9/8- CAN IC chip EOS, excessive voltage on the CAN circuit. The ABS module was also replaced no ABS module return from Conti-Teves.**

6/30- pulled EFF data, BD0,BD4,B90 codes set, unknown why dealer removed both bolts for TS harness at IPA cannot be leak checked **7/7- leak test could not be performed missing bolts at the TS harness at the IPA, unknown why dealer removed bolts.** **testing now starting.** **7/20 - Functionals, bully, ignition cycling stop to stop. Still not reproducible** **7/26- put bolts back into the TS harness at the IPA and leak check to verify no leak paths. Then continue to test.** **7/30- signs of moisture inside IPA unknown when bolts were removed from the TS harness, when reassembled TS failed leak test** **8/5- Dave Kerska finding out what plant to send the TS harness to in Turkey or Germany.**
6/30- pulled EFF data BD0 & BD2 with c69 lock out code, no visible damage to TS harness. shipped to QAO for analysis **7/7- leak tested passed, testing now starting.** **7/20- One channel for IPA no signal. No visual damage. IPA T1 signal absent. Known TS issue by using the TS swapping exercise. Ship TS to Rogersville.** **8/5- gear shipped out of Rogersville to Hella** **8/11- Hella just received warranty return today and has confirmed no channel 1. will report out when they find root cause.** **8/26- ASIC failed on Automatic testequipment at room temperature. X-ray and Sam analysis showed no anomalies. Further investigations were started and we expect update of the analysis (with root cause) latest on 3th of september from the sub-supplier.**
6/30- pulled EFF data and ship to QAO **7/7- leak tested passed, testing now starting.** **7/16-Low Impedance between terminals 9 and 10 on PL2 connector (Motor PCB clearance? symptoms same as FR0074).** **7/19-Compare to clean date and check how many line rejects Nidec has had (Jacks/Davies). Check xray next.** **9/9- advised to teardown and check PCB motor clearance**

6/30- pulled EFF data and ship to 26mile for xray. **8/26- x-ray clean, next tri temp ignition cycling** **9/13- tri temp ign. Cycled over weekend cannot reproduce code.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**
6/30- pulled EFF data and ship to 26mile for xray. **8/26- x-ray clean, next tri temp ignition cycling** **9/13- tri temp ign. Cycled over weekend cannot reproduce code.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**
6/30- pulled EFF data shipped to QAO for analysis. **7/7- leak tested passed, testing now starting.** **7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position** **7/20-Fault at IPA or Harness, blue wire under torque sensor cover is damaged and out of position.** **7/22- harness shipped from QAO to Delphi**
6/30- pulled EFF data shipped to QAO for analysis. **7/7- Fault is not possible to reproduce. Testing is ongoing. Bully test passed, Performance testing passed. I will tear down to EPP level to perform ignition cycling (HOT and COLD).**

6/30- pulled EFF data and shipped to 26mile for xray **8/26- x-ray clean, next tri-temp with the application SW** **9/1- during anbient bench testing on power up able to get B6B to set right away. Vlink short circuit low side drive. Next to cut away red plastic to verify PCB motor pin clearance on PL2.**
7/13- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor. **7/19 3 0km failures same R227 resistance failures. Also found some at hot Puma QAO.** **7/19-Component location drawing sent to Ford.**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/9- no testing needed after xray, this falls outside the 6 months in service range. Xray suspect offset bridge, to remove the relay**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/27- passed leak test, failed the 5amp load test cycled the ignition now passes load test. Advised to let it sit over the weekend and recheck 5amp load test see if it fails again.** **9/1- has recheck the 5amp load test and the resistance are a little over what a normal reading would be. Raise RUA and ship relay to Tyco.** **9/13- shipped relay to Tyco**

7/16/2010- dealer states fluid leaking out of the boots, chargeback gear to dealer#2776. gear covered in oil, most likely trans fluid.
7/16- pulled EFF data, need to check CQIS report **8/3- Tim Snider picked up gear from 26mile and will do on-vehicle testing at Ford.**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/26- xray questionable, the bridge is very close to the frame but is not actually touching, next tri-temp ignition cycling.** **9/17- to perform 5amp resistance test & hot puma** **9/27- passed resistance test, hot puma, and all high pot testing NTF. Next to tear relay out and ship to Tyco.**
7/16- pulled EFF data shipped to 26mile for xray & analysis. **8/9- no testing needed after xray, this falls outside the 6 months in service range.**

7/16- pulled EFF data shipped to 26mile pull ECU cover check R227 resistor **7/23-Guillermo sent revised 8d out but still waiting some information.**
7/16- pulled EFF data, no visible gear damage. Rack turns smooth input shaft solid. Unknown issue sent to QAO for analysis. **8/3- passed EDF test stand, next EOL testing, not sure EOL will detect any issue with this concern with no codes. Check with Ford if this should be sent back for on-vehicle testing.** **8/9- Gear passed EDF stand test.QAO to ship gear back to 26mile so Ford can put on-vehicle test.** **8/12- Jason received gear at WPAC, need to give to Tim Snider for on-vehicle testing.** **8/23- Jason to give gear to Mike Bahena to deliver to Tim Snider** **11/12- note from Tim Snider** **I have this gear next to my desk. There does not seem to be much desire from Dynamics to evaluate this gear as part of a TGW investigation since they believe this is a bump steer issue and there is a design change coming 2011 MY post Job 1 on the knuckle to fix it. Point 12, the outer tie rod ball center, will**
7/16- pulled Eff data, steering stiff turning the input shaft. Noticed a nick mark on the tip of the datum no other damage noticed. **8/6- a friction rejection was confirmed as a bent pinion housing. Will send PFR out later today.** **11/16- to ship parts to 26mile for further analysis** **12/2-RBNA received at 26mile** **12/7- PH at QAO in process to 26mile will be sent to Burlington with FR0239 once it arrives and BNA will be sent back to QAO for storage hold.**
7/30- pulled EFF data and shipped gear to QAO for analysis. Also has a stored B90 code

7/30- pulled EFF data and shipped gear to QAO for analysis.
7/30- pulled EFF data and shipped gear to QAO for analysis.
7/30- pulled EFF data and shipped gear to QAO for analysis.
7/30- pulled EFF data and shipped gear to QAO for analysis.

7/30- pulled EFF data and shipped gear to 26mile for xray and analysis **8/9- no testing needed after xray, this falls outside the 6 months in service range.**
7/30- pulled EFF data and shipped gear to 26mile for xray and analysis **8/9- no testing needed after xray, this falls outside the 6 months in service range.**
7/30- IBH boot has slight nick could be a hole, notice slight ticking noise while turning. **8/19- passed leak test and EDF test stand** **8/24-gear failed NVH, suspect on Rack and Ballnut. We'll try some testing on the rack & ballnut.** **8/27- confirmed rack & ballnut to ship to INA for testing.**
7/30- pulled EFF data and shipped gear to QAO for analysis. **8/9- no testing needed after xray, this falls outside the 6 months in service range.**

7/30- pulled EFF data and shipped gear to QAO for analysis. Very stiff turning input shaft. **8/27- this is confirmed bent rack, send Nick data for further information.** **11/3- Jason Johnson to request rack & ballnut back for 26mile evaluation. 12/2- RBNA received at 26mile**
8/23- pulled EFF & stored data shipped to QAO for analysis. **8/27- shipped out of Rogersville on Friday's truck.** **9/8- all ambient & cold ignition cycling & EOL testing performed with no faults. Next puma testing then remove TS cover.** **9/9- removed TS cover found corrosion in the housing, on the sensor & shaft. Looking for next steps from the TS team.** **9/10- shrink tube on harness is no damaged or cracked, green seal slightly swelled. Check with Joel what next steps should be. Send out current information and pictures.** **9/21- harness failed the vacuum test install known good harness and that passed, put original harness on with pressure in dunk tank could not find any bubbles. Could only find small nick on the shrink tube. To contact Joel to see if more testing is needed or ship harness back to 26mile for testing.**
9/2- pulled EFF & stored data and shipped to QAO for analysis. **9/22- during leak teat at QAO notice hole in the TS cover, removed cover and some metal shaving in IPA and rust marks on the harness holder. Sam to remove the plastic cover to check PCB. Unknown who drilled hole in TS cover, no vehicle history.**
9/2- pulled EFF & stored data and shipped to QAO for analysis. **10/15- leak test passed, now testing in tri-temp chamber.**

9/2- pulled EFF & stored data and shipped to QAO for analysis. To check high resistance at R227. **9/20- R227 has impact mark on the resistor but passes all the resistance measurements.** **9/21- next step** **1) Run the attached configuration while drawing some current.** **2) Measure the 2.5V ref with a scope while drawing some current.to use 2.5v ref voltage with canape with temp changes.** **9/24- instructions to test from Geoff** **We need to draw a comparison between CANape and scope measurements. I would like to see a direct comparison as follows:** **1) a) Measure the 2.5V Ref with CANape (I sent you a configuration for doing this which included 'ADC.Pseudobuffer[12] to [15]'**
9/2- could not pull any data using my Canape at WPAC, tried 3 times no communication with ECU. **9/29- Andy Partridge gave Pepe instruction for testing this no comm gear for this regulator issue. Waiting on testing to be completed.** **9/30- there is no low impedance path's to any of the suggested tests. Took more measurements on IC14.** **10/4- passed all Andy's suggested testing at QAO next step to ship gear to UK for level 3 analysis. To ship ECU only.** **10/6- ECU arrived in the UK today.** **10/8- UK found regulator failure, to xray before shipping to Infineon.** **10/25- regulator testing in progress.** **10/27 Regulator now with Infineon.** **11/8- Infineon detected a metal sliver between the pins of the regulator leadframe. Now checking for**
9/20- shipped gear to 26mile for xray & analysis. Pulled EFF & stored data. **9/23- leak test passed sent upstairs for Mike Taylor to xray.**
9/20- shipped gear to Rogersville then to QAO for analysis. Pre-containment for the R227 resistor impact.

9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. **9/28- TS harness failed leak test now in lab.** **10/4- found internal IPA corrosion on the shaft, & board. To take pictures of the harness shrink tube for damage. Send pics to joel & Engelbert.** **10/6- ship harness to 26mile for Joel to analyze.FEDEX : 9373 7350 9810** **10/11- joel performed xray clear next step to pressure test TS harness.**
9/20- shipped gear to QAO for analysis, pulled EFF & stored data, no visible damage. Precontainment for the R227 resistor impact.
9/27- pulled EFF & stored data, shipped to 26mile for xray and analysis. **9/29- received gear today and passed leak test ready for xray.** **10/8- xray clear not fault found, follow standard test procedure.** **10/18- The Tri-Temp, 5 amp resistance checks, and the PUMA testing have been completed with no trouble found** **11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop.** **11/2- sent to Tyco for Nov.22-24 relay workshop** **11/29- surface contamination, still under analysis to find source. Under F-TIR for chemical analysis results by 12/8.**
9/27- pulled EFF & stored data, shipped to QAO for analysis. **10/20- visual inspection does show contact of R227. further testing ongoing.** **10/22- R227 & C17 have damage but the gear will not fail at this time. Will continue to test.**

9/27- pulled EFF & stored data, shipped gear to QAO for analysis. Pre-containment for the R227 resistor impact
10/5- took pictures of corrosion in the 2-pin, did not want to pull any data, going to measure how far 2-pin was installed in connector. Ford to visually inspect this Friday.
10/5- pulled EFF & fault store data, shipped gear to QAO for analysis. **10/18- leak test passed sent to lab to start analysis.**

10/5- only have A28,A29, A65 codes stored in the fault store. No visual damage to gear. Have gear at wpac.
10/5- tech states TC lamp on doing parking lot manuvers.
10/18- pulled EFF & stored data shipped gear to QAO for analysis. **11/4- TS harness leak at shrink tube area, no visual signs with microscope. To ship Joel the TS harness for pressure test.** **11/8- Joel has the harness and will PSI test tomorrow.**
10/25- no stored codes in memory, boot damaged from ITR unscrewed from the rack, unknown how that happened. No Ford warranty noted. **11/1- sent out torque specs to Ford engineering to prove ITR's were torqued properly from QAO plant before gear was sent to HSAP. Field Misuse**

10/25- pullled EFF & stored data, IBH broken mount from shipping back to WPAC no shippign foam to protect gear.
11/5- pulled EFF and stored data no damage shipped to QAO for analysis.
11/15- pulled EFF & stored data shipped to QAO for analysis
11/15- pulled EFF & stored data shipped to QAO for analysis. **11/22- check EFF for signature status for a regulator issue. Then check for double start-up. Otherwise normal gear level testing.**

11/15- pulled EFF & stored data shipped to 26mile for analysis. Did not notice any issues with the bushings. Tech should have performed an alignment first before replacing the gear. **11/29- passed EDF testing and the bushings are not worn, Jason to ship gear back to WPAC for dealer chargeback.** **12/3- did not see any deterorated of mounting bushing on the gear. Tech replaced the gear performed a complete alignment. Tech should have performed full alignment before gear replacement. Chargeback due to no problems found with bushings. Gear was EDF tested at 26mile with NTF. WPAC could not chargeback because gear was sent out for more testing,**
12/7- pulled EFF & stored data, could not turn input shaft, found internal corrosion OBH ITR nut rusted. Advised to reinstall new boot clamps and leak check
11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up
11/24- pulled EFF & stored data, shipped gear to QAO for analysis. No damage to TS harness. Check for regulator double start-up
12/13- pulled EFF & stored data, shipped gear to QAO for analysis **1/18- found leak at pinion plug during leak test. Performed tri-temp ignition cycling & dynamic testing NTF. Removed IPA cover oil film on the finger ring. Advised Pepe to complete the PFR and send out to decide on next steps.**

12/20- have pictures of a hole drilled into the EPP, looks like hole was drill through the Rh floor board, unknown of any aftermarket accessory installed on this vehicle.
12/20- pulled EFF & stored data shipped gear to QAO for analysis.
1/10- pulled Eff & stored data, shipped gear to QAO for analysis
6/15- QAO to complete level 1 & 2 testing when gear arrives from HSAP **6/18- QAO found damaged open R227 resistor , ship to Kimball.** **6/21- have presentation and suspect root cause from Anting.**
7/7- In process to QAO for evaluation, check R227 resistor for damage.
9/17- The VRT reported a vehicle found in the yard because it did not start the engine. There were noticed that when the Gear was disconnected the vehicle started without problems. So, the vehicle was taken to the repair area inside the building. I met the VRT analyst Izaguirre in the repair area. Izaguirre could not to get communication with the Gear. The conclusion was the problem is with the High Speed CAN in the Gear EPP circuit. As soon as another witness Gear was connected the vehicle worked fine. **9/24- indication of CAN HI & LOW shorted, check for something on the rails then check every IC to regulator.** **9/27- testing on this shorted regulator IC12 leading to level 3 analysis to be performed in the UK.** **10/4- just arrived in UK today** **10/6- confirmed input to regulator has gone short circuit, more testing needed on that circuit.**

8/16 BC5 (repeated four times) and B69. This vehicle has not been verified for water presence yet. FR0135(BC5) confirmed 2-pin conn. Corrosion. **8/23- did not arrived at QAO yet**
8/16- It was found with water in the 2-pin and the CAN socket (please see picture attached). The Yazaki connectors were checked by the Yazaki supplier representative. He did not find anything wrong with them. Currently the Gear and the Yazaki harness are in the quarantine crib. The VRT desicion (Fernando Ulloa) is to send both parts to Ford USA in order to continue the analysis over there about how the water got to ingress in the sockets. **8/23- did not arrive at QAO yet**
8/23- did not arrive at QAO yet **8/5- The Gear without assistance was removed from the car and I have already shipped it to TRW QOA (FedEx track # 8699 4789 8215. The Gear will be delivered by this Monday 9th.** **8/30- testing still on going with no fault found at this time, will talk with Geoff to see if the cover can be remove to inspect for moisture.**
9/17- TRW 26-mile received gear from Chicago plant and confirmed no communication 10/2- material check of the substance on the ignition pin is super glue. Unknown how substance got there. 10/15- checking areas in the process supply line for contaminate(super glue) to drip on ignition terminal. 10/26- Check QAO electrical checks would fail using there connections. find out if an EPP would fail with this
7/27- just arrived at QAO testing starting today **8/3- failed the isolation(1000v) test indicating PCB motor clearance issue. Looking to xray before board to make sure no other concerns before motor PCB removal.** **8/9- agreed to remove motor PCB 99% sure motor PCB terminal clearance issue.**

4/6- Link relay voltage is not reaching the working value due high value of resistance between contacts when is relay is closed, when this value should be close to 0. Part is disassembled in order to confirm the relay that is the root cause for B43. Relay that is not working properly is confirmed. **5/5- week 45- 09 relay, no updates from Tyco.** **5/24- xray clean pass all resistance testing, switching marks on all contacts, slight plastic contaimination on contact 4 that may have caused the malfunction.**
5/5- week 28-09 relay, black plastic particles on base and bridge of contact# 3. material analysis to check coil base or cover.
2/12- Voltage at phase1 never reaches the closed contact status. Further testing **Confirmes motor relay failure has been declared. relay must be send to TYCO for further analysis.** **2/15- relay has been shipped to Tyco**
4/30- found one bent tooth on the torque sensor ring, small impact mark on the base of the sensor, unknown root cause at this time. **5/17- QAO working on root cause where tooth bent, checking Rogersville & Hella handling.**

6/10- cut TS harness at EPP conn. get the harness under a microscope to understand the mechanism of the failure. talk to Angel to support the VTR team on getting the part to them for analysis **6/21- Guillermo to check lastest status with Angel.**
5/24- in process from QAO to UK **6/21- checking for regulator issue on this return.**
3/26- ignition cycled at cold, ambient and hot– The testing consisted of ignition on for 5 seconds, off for 5seconds **– Torque simulator attached to cause the motor to rotate** **• Ambient 24 hours** **• -20°C 12 hours** **• 90°C 3 hours** **Unit has also been subjected to the following tests:** **– Bully test** **No faults or LICs generated**
4/21- ambient & hot testing done. Next step to hot puma then bully test. **5/18- EPP has passed all the testing in QAO EPP shipped to UK for further testing.** **5/24- IC12 5v regulator not coming up at times similar to FR0110. testing ongoing to find root cause of fault.**
12/9- no faults reproduced, ECU lid removed no optical abnormalies, passed cycling overnight. Next steps vibration testing, Measurements of integrity of relevant signals (Motor Relay Drive, VSTAR etc), Motor relay contact resistance measurements and tomorrow X ray of motor relay **12/14- Int. code raised B6B on hot Puma test. x-ray clear & resistance test passed. Compare scope traces at point of failure.Hot Puma testing for the next two days until failure. Noise difference between known good relay and this relay.** **1/6- noisey relay stops with known good relay. Advised to ship EPP to Geoff for further testing before shipping relay to Tyco.**

5/8- (QAO) At PUMA unit was warmed until 100°C, but fault was not repeatable. **Some axial movements were done in order to find out fault.** **- Unit is fault cleaned and turned back on. Fault is not present.** **- Ignition Cycling. Fault is not raised.** **- Unit was cold during 24 hours. Fault is not raised.** **5/24--xray clean, tri-temp ignition cycling, bully test , 5amp load testing passed resistance measurement.** **6/7- Tyco received relay testing ongoing** **7/7- NFF with Tyco's testing, will discuss further with Tyco this Monday.**
6/21- no codes in fault store, will edf test next. functional data sent out to Ford passed functional data. **6/22-Gear will be proceed to teardown and report published tomorrow.** **6/25- has been torn down and everything looks normal, no unusual findings. Send pics & report to Ford.**
3/9- Bully Test 5 times. No fault found after test repeatibility
4/22- BBhighX Open circuit on contacts with coil energised --- Old PUMA failure. Shipped to Tyco **5/5- week 31-09 relay, testing started will report out next week. Suspect offset bridge.**
4/22- E30/A30 & BBHighX ----- Open link relay coil --- Recent PUMA failure. New failure mode.I have not seen any open coil in this relays **4/27- should arrive at Tyco this Thursday** **5/5- week 1- 2010 relay, testing started will report out next week.** **5/12- Perform additional tests more specifically related to finding intermittent open coil.**

9/14- second time in customer feels pressure in the steering wheel and the vehicle will pull one way or another. No codes or message in the message center. Tech cannot duplicate customer concern. Vehicle returned third time. replaced EPAS gear per dealership customer still unhappy with steering on vehicle, customer bought 20 vehicles from dealer, so dealer bought customer out of this vehicle so now dealer owns vehicle drove vehicle over 100 miles with new EPAS gear cannot duplicate. dealer could not duplicate any steering concerns with original gear. tech did not attempt Interactive diagnosis on this vehicle to perform symptom tests.
9/15- submit hot process to dealer to get gear sent back to WPAC
9/18- pulled EFF & Buffer data only code listed A8E(CAN Veh Lat Accel Invalid Fault). Will give the gear to Mike Bahena for on vehicle testing.
9/28- Mike to install on vehicle sometime today for testing
10/1- Mike drove the vehicle and could not duplicate any steering issues, will drive again tomorrow. If nothing is found will pull the buffer data, take to 26-mile to install on EDF stand.
10/12- cannot find any problems on vehicle Mike Bahena to take to 26-mile to install on EDF stand for testing.
10/15- vehicle passed the EDF stand testing, next to teardown for inspection.

9/17- gear hot processed back to WPAC
9/24- gear arrived at WPAC yesterday pulled EFF & Buffer data, no codes, gear has visible cut boot damage, take gear to 26-mile, Mike Puleri wants to be present for teardown.
9/28- preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation.
9/28- preproduction gears sent in proto-type dunage wrapped in bubble wrap is the initial belief of cut boot issue on this vehicle. Clean date is July 16th for correct shipping dunage. Costa to perform proper friction evaluation.
9/30- bellows removed and some rust spotting noted need to get Harold to teardown entire gear and take pictures to send out.

9/21- gear will not be returned, tech found poor ignition feed connection at the 3-pin. Unknown what the cause is
9/24- tech could dupicate the no com after 35 miles of driving, to return vehicle to customer. Advised the tech to replace the gear per harness testing passed. When backorder gear comes in tech will call to hot process gear back to WPAC
10/1- submittted the hot process request form.
10/12- pulled EFF & Buffer fault data, has communication
10/15- no com repeatable during ignition cycling, micro not starting up properly, going to UK for additional testing.
10/23 all voltages to the hardware of the micro working properly at this time.
10/26- get with the micro experts & FSL to proceed on next step testing.
11/3- need to consult the micro expert for next step testing, currently micro expert working on FR0027(No Com). Will get to this return next week. Work to ongoing.
12/14- Put original code back in and perform ignition cycling to duplicate failure
1/7- testing ongoing, still cannot duplicate no com.
1/11- Next step to modify application now starting to fail again, using Vector boot code to send out information.
1/29- with John micro expert leaving UK will need to find other option to contiue work. Outsourcing could be other option with FR-0047.
2/12- new software guy appointed to work on testing this Monday.
2/23- when unit powers up at times get stuck in a start up loop. When it fails the frequency measured on the probe is 10.42khz, potential PLL issue.
3/1- take micro off ECU and put on development board to confirm micro failure.
3/17- micro taken off and put on development board testing is now in progress.
3/22- has not duplicated code after installing micro on board next step is to tri-temp test. Update Ford on results next Monday.
4/19- Geoff put micro on KG ECU and was able to get to fail. Sent ECU back to FSL in Germany with instructions on how to replicate the code.
4/26- FSL able to get micro to fail, trying to construct testing using dev. Board. Geoff to follow-up with FSL and get an answer on containment.
5/19- FSL flew engineer into Munich to check modification plan to monitor certain signals from the micro on the ECU. Testing still ongoing
6/7- Geoff has meeting tomorrow with FSL will get latest update on status .
6/25- FSL confirmed micro fault sent micro to Malaysia for level 3 analysis.
7/9- FSL developing a new test on their assembly line to detect this condition to contain this issue, should have

10/30- picked gear up from WHQ garage, pulled eff/buffer fault data and dropped off at 26-mile for testing.
11/11- Jim Loria to start testing this week.
12/14- Jason check with Jim Loria latest updates on analysis
1/11- ignition cycle for 24-48 hrs to try to duplicate, may need vibration test. Need information from Jim what has been tested up to this point.
2/10- add temp cycle-ignition test info when Jim gets back to 26 mile. The plan is to read the fault codes to see if a sensor code was logged during testing

11/20- Submit hot process request
12/15- Just found out this vehicle was in an accident in the body shop and damaged the EPAS gear that set the codes.

12/10- Submit hot process request
1/7- No communication with Canape, pulled bus data had 5 can bus codes. Ship to 26mile.
1/25- no faults on bench was able to get into ECU with no problems also looks like tech have cleared codes. next inline for ignition cycling. Continue with the standard ignition cycling if still with not duplicate to tri-temp cycling. If all electrical testing is NTF do all mechanical testing check put on EDF stand, check belt slip check other parts for exceeding rack travel(A29)
2/8- CARS written and inline waiting for EDF stand for testing.
2/22- all EDF test stand data came back normal and no codes latched, send to teardown to check for any belt slip. Send information when testing done so we can close out

1/4- Submit hot process request form 2/9- inadvertantly shipped to some supplier in the mid-west (somebody screwed up the shipping docs.). It is coming back to me, and will be rerouted to WPAC. 2/10- Vic has received the gear back today and will ship to WPAC 3/2- Pulled EFF/Buffer data Greg Bendzinski to pickup gear and return it to 26mile. Upstairs in lab
2/3- submit hot process request 2/12- Pulled EFF/buffer data. Has codes B90 & BD3 then set C69. shipped gear to 26mile 2/19- should arrive in QAO on 2/22 2/23- confirm TS issue should arrive in QAO on 2/22 3/3- fault reproduced while turning the input had known good harness & hella test box to confirm TS was the cause. Rogersville received the TS today will test when line is converted to D3 before sending to Hella. 3/5- passed testing at Rogersville, they discussed this concern with Jim Loria and advised it is possible to pass with this type of short. Rogerville will ship to Hella 3/8-Rogersville shipped TS out to Hella. 3/15- gear arrived in Hella this morning, testing started 3/22- 8D submitted to Ford overwinded and bent FFC & Plate protection broken in clockspring. 3/24- discuss areas of potential losing center position. At Rogersville? QAO & during analysis. Need to incorporate test during analysis to check clockspring out of position.
2/5- Pulled Eff & Buffer data, gear binds when you turn input shaft to the right. Ship gear to QAO 2/8- vehicle impacted curb but Ford wants to see EDF test results and teardown at 26mile- 2/9- Jason will followup EDF testing & teardown. Inline waiting for EDF after DR0007 is tested. 2/22- failed EDF test stand right away with high torque reading, could see bowed pinion housing Jason to send out EDF data to Ford. This is a warranty return checking to see if we chargeback the dealer. Need to teardown gear for complete details of impact.
2/26- submit hot process request form to dealer 3/15- pulled EFF & fault data, ship to 26mile for analysis. 3/22- need to leak test today 4/6- xray looks like offset bridge, do hot puma testing then raise RUA and sent to Tyco. 4/9- xray indicates offset bridge also failed resistance check, sending relay to Tyco today.
3/1- submit hot process request, to pickup gear at garage 3/5. 3/5- picked up gear and dropped off at 26mile pulled fault & EFF data. 3/15- able to duplicate code turning gear to the end of travel, testing does indicate torque sensor need to hook up test harness & hella test box to confirm. 3/16- Jim has confirmed there is an intermittent problem with the Torque Sensor on channel 2 while turning input shaft to end stop. Shipping to Rogersville tomorrow. 3/19- gear is at Rogersville, need to bench test then put on line when line changes next week. 3/23- QCCAR #374081 issued for TS shipping out to Hella. 3/29- arrived in Hella Friday should have results by TS meeting this Wednesday 3/31- we believe this is the same case as DR0011 damaged clock spring due to improper IPA reworked, IPA was manual centered at QAO without special tool. 8D in process. Hella has pictures

3/10- talked to tech found orange water in the drivers side ITR boot, did not notice any damage to boot will inspect boot better after gear is replaced.
3/18- talked to PM to hot process the part back, Vic Matckar will not return until mar.22 to request gear back from dealer.
4/21- still trying to get gear sent back from Oakville, confirmed bellows sliced, see tech comments on 3/19.
4/28- talked to Vic Matckars and they cannot locate the gear, they think the gear was scrapped at WEPEC. From the information this gear will not be returned. The new hot process request now in place will have the dealer send the gear directly back to the WPAC instead of sending the gear back to Oakville then to WPAC.

3/22-submit hot process request gear back to WPAC
3/29- pulled eff fault data shipped gear to 26mile, vehicle has a separate SWA sensor with auto park. Unknown if tech found wiring issue after installing new gear. This would be good for on vehicle test. (check customer verbatims).

hot process gear back to WPAC after replacement
4/26- pulled EFF buffer data, shipped gear to 26mile for testing.
5/5- xray indicates offset bridge, check resistances, need to raise RUA then ship to Tyco.
5/12- sent out to Tyco for analysis.

hot process gear back to WPAC after replacement 5/3- pulled EFF data, shipped gear to 26mile for testing 5/7- leak test today, then EDF test stand testing 5/17- Leak test passed, EDF failed terribly. Ron said the rack bar is extremely bent in the BNA area. Could not run power ON tests. Could not run power OFF free pinion torque because it was too high. Power OFF mechanical friction was ~3kN. Gear is upstairs now awaiting teardown. Will be a couple days due to current gears in cue already. ITR's looked perfect though, no signs of over travel or bending. 6/4- confirmed bent rack, Jason to sent out Harold's teardown report.
4/16- sent out hot process request 5/3- pulled EFF & Buffer data, shipped gear to 26mile for testing, 26mile will start the testing hot/cold ign. Cycling 5/7- leak test today, then will start tri-temp testing 5/11- Leak test passed. Was brought upstairs Friday I believe. Need to confirm w M. Taylor 5/17- undergone testing that indicates a ribbon cable failure- sending to UK for further testing. 6/28- motor ribbon cable insertion process, bent terminals in connector, new design insertion tool in testing phase at this time. 8/16- target date still set for the beginning of December 2010 for all plants to be online with alignment tool.
6/21- no codes pulling EFF or fault data, good chance tech mis-diagnosed vehicle returned 3k later with frt. Wheel bearing noise while turning & replaced RF bearing to fix. Can perform NVH & EDF test. Can chargeback steering gear if all tests pass. 7/12- Mike F to follow-up on lab doing NVH test & EDF testing. 7/27- Jason wrote the ETR and brought it to the lab this afternoon.
6/21- checking inventory for new 2011 D3 gears, so I can hot process gear back. 2011 MKT w/APA. 6/22- still checking to see if QAO can send new 2011 D3 gear out to dealer. 7/12- talked to tech found out OBH boot had hole in it a water came out causing the scraping metal noise. Also dealer installed wrong M/Y steering gear on vehicle installed aa5z-3504-je and should be aa5z-3504-ke or ne. advised Ron SM of this issue to change gear when parts are available. gear hot processed back to WPAC
7/9-Pulled EFF data, no codes, could feel slight bind in gear, ship gear to 26mile for analysis. 7/26- arrived at Rogersville in process to QAO 8/20- found belt damage inside have pictures, unknown cause. See what Ford wants to do with the gear. 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford 8/23- Ship gear assembly back to 26mile to try an understand cause of damaged belt.. Sent PFR to Ford. Sam to overnight belt back to 26mile let Gates engineering check belt. 8/27- Gates engineers took belt back to plant in US to measure center to center to check for belt stretch. Then will be sent back to their UK plant for final analysis. 9/1- Gates testing did verify issue with belt sent belt to UK for level 3 analysis.

7/28- pulled EFF data, also has BAD code that set once with B25 8/19- The data shows that Phase 3 top and bottom FETs are short circuit. Power module is having short circuit between V0 and V link terminals. PM will need to be returned to Fairchild in Suzhou, China. 8/26- Mosfet power pack shipped to Fairchild in China. Tracking number is: 9373 7350 7806 9/1- still need 8D update from Fairchild TRW to visit facility and check on this issue. 9/16- power module root caused as EOS by Fairchild. I have 8D available.
7/28- checked data found out after the steering gear was replace vehicle had the same noise, cannot chargeback hotline advised to replace the gear. Found RF shock and knuckle assembly fixed the noise. Case closed
8/6- pulled EFF data, no codes in the EPAS gear. This was dealer mis-diagnosis read the dealer comments.
8/20- pulled EFF & fault store data and shipped to 26mile for analysis. 9/9- confirmed offset bridge with xray, to tear out relay to get date code. 9/13 why was this shipped to Ford with post containment if this was an offset bridge.

8/20- no codes, snapping noise while turning under heavy load. Did not notice any noise while turning input shaft. Ford to put On-vehicle for noise test. 9/2- delivered gear to Tim Snider at PDC 10/6- This gear is still in queue to be EDF tested. need to write an ETR for it and we should have it tested by the end of the week if not sooner. Nick Borgerding will send results as soon as possible.
10/5- pulled EFF & stored data, TS harness melted by tech using torch to remove gear hold down bolt near the IPA. 10/8- gear passed leak test taken upstairs for xray 10/22- xray clear, tri-temp testing over the week-end, John to check results. 11/1- John B to pull relay raise RUA & ship to Tyco for relay workshop. 11/2- sent to Tyco for Nov.22-24 relay workshop
12/7- pulled EFF & stored data, shipped to QAO for analysis, no damage to TS harness.
8/10- possible R227 issue at the chicago assemby plant. Contain EPP's at QAO between 4/26-5/10
6/4- able to reproduce the code at 60-70degC 6/7- using PCB test software will not fail, Geoff to check PFR and decide next steps 6/10- issue with VSW supply, R227 measures open circuit. C17 observed to be missing
waiting on next steps
3/31- in process of evaluation

4/13- - As observed Phase 1 and phase 2 do not reach the Vlink level after power up, swapping exercise - The problem does not travel with the ECU problem travels with Motor Relay. Path 4-5 open NOK. Path 3-4- 0.1 ohm OK Coil resistance-170 ohm, Contact 5 not closing.
waiting on next steps

Gear location	Report State
4/15 WPAC parts review 4/20 EPP in UK for further testing 5/8 micro sent to FSL 5/21micro sent back to Shirley 6/5- sent back to FSL acknowledge testing failure 6/15 - Freescale in Malaysia now testing after initial evaluation in Germany	8D in process - 346199

5/27 parts review part taken to Washington to ship out to the UK 6/1 in UK for testing 6/4- relay sent to Tyco 6/15 - Tyco in Portugal	8D in process - 346200

5/20 WPAC parts review 5/20 EPP in Washington for testing. 5/27 EPP shipped to UK 5/28 EPP arrived at UK 6/10- Capacitor sent to Epcos	8D in process - 346201
6/8 WPAC No Parts Review 6/8 taken to Washington for analysis 6/9 sent to UK 6/18 sent at Tyco	8D in process - 346202

5/25 ordered gear for customer on back order 6/4 dealer received gear waiting for dealer to send back 6/9 part sent out will be here for tomorrow 6/11 part arrived at WPAC 6/12- gear at Wasington to pull Level 1 codes & testing 6/17- EPP ship to Europe	8D in process
1814	
6/9- dealer ordered gear on back order. Waiting on FSE to meet TRW at dealer so TRW can pull data and exchange warranty service gear. 6/12 dropped replacement gear at dealer waiting for tech to replace. Will pick-up and deliver to Washington 6/16 dropped gear off at Washington late afternoon 6/18 - Sent to TYCO for anyalsis. Tracking number:918881479187	8D in process

REPAIR 05/11/2009 03:42PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
FAV REQUEST. UNIT HAS NO POWER ASSIST. TRW REQUESTED FEEDBACK FOR ANALYSIS.
ADD-ON 05/11/2009 03:48PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
SERVICE WRITER INDICATES THIS VEHICLE IS A RENTAL UNIT THAT BELONGS TO DOLLARE RENTAL CAR. THE VEHICLE HAS NO POWER ASSIT AND/OR IT WAS TOWED TO THE DEALER AT THE BEGINNING OF THE MONTH. SW STEVE INDICATED THE MESSAGE CENTER DISPLAYED - POWER STEERING ASSIST FAULT.
ADD-ON 05/11/2009 04:06PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
ASKED SW TO SPEAK WITH TECHNICIAN LESS. LESS INDICATED THE STEERING ASSIST IS HARD. TECHNICIAN WAS UNABLE TO DRIVE THE VEHICLE. DURING DIAGNOSIS THE TECHNICIAN USED THE INTERACTIVE DIAGNOSIS OUTLINED IN THE ON-LINE WORKSHOP MANUAL. THE IDS DISPLAYED TWO CODES: U2011-49-48 FOR THE PSCM MODULE AND CODE U3000-96-C8 PSCM. LESS FOLLOWED THE PINPOINT TEST AND CLEARED THE CODES. RE-RAN THE DIAGNOSTICS AND CODE U3000-96-C8 PSCM CAME COMING BACK. FURTHER PINPOINT TEST DIAGNOSIS INDICATED TO REPLACE THE EPAS ASSEMBLY. ASKED LESS IF ANY OTHER WARNING LIGHT OR CONCERNS WITH THE VEHICLE. LESS INDICATED NONE. VEHICLE STARTS AND RUNS O.K. NO OTHER CODES IN THE NETWORK, BESIDES THE EPAS CODES. LESS INDICATED THEY ORDERED A NEW ASSEMBLY SINCE 05/05/09 AND WERE TOLD THE PART IS D99. ADVISED LESS TO MONITOR PACO TICKET FOR UPDATES. IF ANY CONCERNS PLEASE CALL JOSE AT 1-313-317-7047
ADD-ON 05/11/2009 04:07PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
THE VEHICLE IS STILL NOT REPAIRED AND/OR IT IS AT THE DEALER WAITING FOR THE BACK ORDER PARTS.
ADD-ON 05/11/2009 04:09PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
DEALER ORDERED REPLACEMENT PART # AE5Z-3504-B WITH ENGINEERING # AE5C-3504-BB. DEALER P&A ORDER 01376. DEALER REPAIR ORDER: 28039 LINE 1. PARTS MANAGER E-MAIL ADDRESS: CPRIOLE@PACIFICOCARS.COM

Dealer did not mention PSCM code U3000-49(B32) the first time they pulled codes. After clearing codes U3000-96 was the only code that would not clear and still no steering assist, also was the only code that showed up in the Interactive Online Diagnosis screen shot. Dealer performed pin point test (PPT"C") for U3000-96(B69) lead to replace the EPAS gear.

No Assist with "Power Steering Assist Fault" in the vehicles message center. Dealer scan tool pulled stored codes of C200D-49(B9A) and C1B00-62(B93) with the U3000-96(C69) lockout code which the C69 would not clear. Tech states he set code U3000-96(C69) after he charged the battery, tech had low voltage ABS code C1676 that cleared after charging the battery. PPT"C" lead to EPAS gear replacement

REPAIR 05/27/2009 01:43PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
NO FAV OASIS CONTACT. SUPPLIER TRW USING LOG VIEW DATA FROM EPAS DIAGNOSTICS. VIN # 3FAHP0HA9AR[redacted], AND P&A 00815. REQUEST TO OBTAIN DEALER DIAGNOSTICS AND/OR INFORMATION FOR PART EXCHANGE.
OWNER 05/27/2009 01:43PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
THE OWNER INDICATES THEY JUST BOUGHT THE VEHICLE AND WAS DRIVEN OVER THE WEEKEND. OWNER NOTED THE STEERING GOT HARD AND ALMOST LOST CONTROL WHILE DRIVING THROUGH A CURVE. OWNET PULLED ON THE SIDE OF THE ROAD, TURNED THE VEHICLE OFF AND/OR RESTARTED. THE STEERING RETURNED TO NORMAL. CUSTOMED SCHEDULED DEALER VISIT ON 05/25.
ADD-ON 05/27/2009 01:46PM JOSE CHACON(PCE) MSS - FCSD - VSP C/P SVC ENG
SPOKE WITH SW PAM AND/OR TECHNICIAN MICHAEL. MICHAEL INDICATED THE INSTRUMENT PANEL WARNING MESSAGE WAS ON WITH "POWER STEERING FAULT"

4991 . ROAD TEST TO VERIFY CONCERN, UNABLE TO DUPLICATE. SELF TESTED POWER STEERING CONTROL MODULE, U2011:49 08. CHECKED OASIS FOR CONCERNS, NONE. CONTACTED FORD TECH HOTLINE. ADVISED TO CHECK FOR WIRING CONCERNS IN THE HAR NESS TO STEERING MODULE. TESTED HARNESS, IN VARIOUS LOCATION, AND FOUND N O FAULTS. ADVISED TO FOLLOW INTERACTIVE DIAGNOSTICS. PERFORMED INTERACTIVE. TECH REPLACED THE GEAR SECOND TIME BACK FOR THE SAME CODE. TOOK OVER 3K MILES FOR THE CODE TO RESET.

REPAIR 06/11/2009 12:17PM DEREK HARMON MSS - FCSD - TECH SVC HOTLINE
TAR OPENED AT THE REQUEST OF THE PCE JOSE CHACON. VEHICLE HAS MULTI DTC'S STORED IN MEMORY. THE VEHICLE IS A UNSOLD VEHICLE & DLR IS WAITING ON PART FOR THE REPAIR. PCE & PVT ARE REQUESTING A FSE TO VISIT THE DLR TO REVIEW THE FREEZE FRAM DATA & COMMUNCATE FINDING.
ADD-ON 06/11/2009 12:18PM DEREK HARMON MSS - FCSD - TECH SVC HOTLINE
ADDITIONAL REPORT TO REVIEW ON THIS SUBJECT VEHICLE IS 9FJAG436. EHTR
ADD-ON 06/11/2009 05:12PM IAN GRIFFIN(FSE) MSS - FCSD - REG - DETROIT
SET UP VISIT WITH JOSE CHACON AND SERVICE MANAGER BRIAN GRAHAM AT THE DEALERSHIP TOMORROW AT 8:00. PCE WILL BE BRINGING ENGINEERS WITH HIM AND A NEW RACK FOR THE ISSUE. DEALER REPORTED NO FREEZE FRAME DATA, BUT THE CODE IS A HARD FAULT.
ADD-ON 06/12/2009 08:36AM DEREK HARMON MSS - FCSD - TECH SVC HOTLINE
EHTR
ADD-ON 06/15/2009 08:27AM IAN GRIFFIN(FSE) MSS - FCSD - REG - DETROIT
DEALERSHIP IS CURRENTLY INSTALLING RACK DROPPED OFF BY ENGINEERING. ENGINEERING HAS ISSUED A 700 TAG TO PICK UP THE OLD PART. DEALERSHIP IS TO KEEP ORDER FOR RACK IN THE SYSTEM AND ENGINEERING WILL PICK UP THE RACK WHEN IT ARRIVES SINCE ENGINEERING DELIVERED RACK. THEY ARE BASICALLY JUST GOING TO PICK UP THE NEW ONE THAT GETS SHIPPED INSTEAD OF CANCELLING ORDER BECAUSE THEY BROUGHT THEIR OWN RACK OUT ON FRIDAY. DEALERSHIP TO CALL FSE AND LET ME KNOW IF THE VEHICLE IS REPAIRED AFTER REPLACEMENT.
ADD-ON 06/16/2009 06:49AM IAN GRIFFIN(FSE) MSS - FCSD - REG - DETROIT
DEALERSHIP EMAILED FSE AND INDICATED THAT THE VEHICLE IS REPAIRED

POWER STEERING ASSIST FAILURE* DISPLAYED ON DASH. VERY HARD TO TURN AND AFTER MOVING "SERVICE ADVANCETRAC" DISPLAYED ON DASH AS WELL. DEALER STOCK UNIT JUST OFF TRUCK. HOTLINE CONCTACTED AND RECOMMENED TO SWAP WITH KNOW GOOD AND NO PROBLEMS SEVERAL ATTEMPTS MADE TO GET INTO PCM IDS AT 61.07 AND IDS WILL DISPLAY STATED UNIQUE PCM IDENTIFIER IS NOT PRESENT. CUSTOMER STAES THAT THE POWER STEERING IS INOP THEREE IS A MESSAGE ON DASH. ROAD TEST VERIFY CONCERN EEC TEST CODE C1277 AND CODE 3000 CALL HOTLINE REPLACE POWER STEERING GEAR ROAD TEST OK CHECKED AND RESET FRONT AND REAR ALIGNMENT 9911

REPAIR 06/17/2009 05:42:17 M MARSHALL EXTRA MSG - FOUD - TECH SVC HOTLINE
WEB FORM DATA - CONCERN: NO POWER STEERING, "POWER STEERING ASSIST FAULT" IN MESSAGE CENTER. DIAGNOSTICS: WENT THROUGH INTERACTIVE DIAGNOSTICS VIA PTS, LEADS TO GEAR REPLACEMENT PARTS REPLACED:: NONE YET TECH QUESTION: THIS IS A CAR MODIFIED TO A COUNTY CONSTABLES CAR. I CANT FIND ANYTHING TIED INTO THE P/S SYSTEM OR NETWORK, BUT IM CONCERNED ABOUT REPLACING THE GEAR WITHOUT SOME FURTHER VERIFICATION. WERE YOU ABLE TO VERIFY THE CONCERN? YES IS THERE AN APPROPRIATE PINPOINT TEST IN THE WSM FOR THIS

NO STEERING ASSIST DIAGNOSTICS:
INTERACTIVE DIAG PARTS REPLACED:: NONE...I FOUND WIRES FROM STEERING SHFT TORQUE SENSORS CUT POSSIBLY DUE TO ASSEMBLY ALL WIRES IN THAT HARNESS WERE CUT EXCEPT YELLOW WIRE I CANT TELL YOU WHAT CIRCUIT THEY ARE BECAUSE I CANT PULL THEM UP IN THE WIRING DIAGRAM ANYWAY I FIXED ALL THE WIRING NOW THE TORQUE SENSOR CODES ARE GONE BUT THE U3000 STILL REMAINS IN CONTINUOUS MEMORY BUT SYSTEM ON DEMAND SAYS PASS BUT STILL WONT CLEAR U3000 TECH QUESTION: I PERFORMED THE INTERACIVE DIAG AND IT SAYS TO PUT EPAS GEAR ASSEMBLY IN IT I JUST WANTED TO CHECK WITH YOU GUYS TO MAKE SURE THAT IS CORRECT. COULD THE WIRES HAVE SHORTED OUT THE MODULE? WERE YOU ABLE TO VERIFY THE CONCERN? YES IS THERE AN APPROPRIATE PINPOINT TEST IN THE WSM FOR THIS CONCERN? YES WAS THE PINPOINT TEST FOLLOWED? YES

DIAGNOSTICS - LAPTOP LOCKED UP MANY TIMES GETTING INTO INTERACTIVE DIAGNOSTICS. ALSO LOCKED UP MANY TIMES AFTER GETTING INTO INTERACTIVE DIAG. CAUSING A LOCK UP AND FORCING A COMPLETE REBOOT. DIAGNOSTIC ALSO REQUIRED A EXTENSIVE TEST DRIVE WITH NO POWER STEERING ASST. DRIVING THE VEHICLE FOR 10 MIN AT HWY SPEED PINPOINT TEST (C2). THIS TESTING LEADS US TO REQUIRE REPLACEMENT OF THE POWER STEERING UNIT. CALLED HOTLINE AND ENGINEERING. GOT TO DALE BOUSE - 313-805-2289 THE PS ENGINEER. HE ADVISED THAT THE CODE WE HAVE HAS LOCKED THE POWER STEERING UNIT AND REPLACEMENT IS NECESSARY. HE WANTED

WEB FORM DATA - CONCERN: INSTRUMENT CLUSTER MALFUNCTIONING/SWEEPING, AIRBAG LIGHT COMES ON ADV TRAC LIGHT ON, PS INOP DIAGNOSTICS: EEC TESTS. MONITORED PID DATA MULTIPLE MODULES. FUSES/RELAYS OK. VISUAL OK PARTS REPLACED:: NONE TECH QUESTION: CANNOT ACCESS INTERACTIVE DIAGNOSTICS SO NO HELP AVAILABLE. HAD ALL KINDS OF NETWORK CODES. ERASED CODES. NONE RETURNED. ALL MODULES PASS. ONLY CONCERN REMAINING IS NO P/S. ANY KNOWN CONCERNS? WERE YOU ABLE TO VERIFY THE CONCERN? YES IS THERE AN APPROPRIATE PINPOINT TEST IN THE WSM FOR THIS CONCERN? NO WAS THE PINPOINT TEST FOLLOWED?

Customer Comment: CUSTOMER STATES ON SATURDAY THE POWER STEERING WENT OUT, POWER STEERING ASSIST FAULT, CHECK ENGINE LIGHT ON. AC WENT OUT BUT THINK ITS WORKING AGAIN. HAPPENED ALL WHILE DRIVING.
Technician Comment:VERIFIED CONCERN, HOOKED UP VCM WITH LAP TOP, FOLLOWED ON LINE INTERACTION DIAGNOSING SOFTWARE. CHECKED FOR DAMAGE (NONE)TEST DROVE, COMPUTER STATED DAIG, TO REPLACE ELECTRONIC RACK. REPLACED RACK AND PERFORMED ALIGNMENT.CODES ON BACK..

No codes or messages in the message center, repair order only lists "when turning the steering wheel is binding", tech states diagnosis lead to EPAS gear replacement. Enterprise Rent A Car vehicle, vehicle delivery date 4/23/2009.

No Steering Assist with "Power Steering Assist Fault" in the vehicles message center. Dealer did not perform Interactive Diagnostics and did not call Hotline so no details on the failure or codes from the technician were listed. From the CANape data retrieved at 26-mile tech had Ford scan tool code C200B-2F (BD2) & C200C-2F (BD1 & BD3) then code U3000-96 (C69) latched and would not clear.

07/02/2009 06:34PM DAVID KNAPP MSS - FCSD - TECH SVC HOTLINE WEB FORM DATA - CONCERN: POWER STEERING ASSIST FAULT, NO ASSIST DIAGNOSTICS: RETRIEVED CODE U3000-96. INSPECTED FUSES AND ALL COMPONENTS AND CONNECTORS. UNABLE TO ENTER INTERACTIVE DIAGNOSTICS. HAD FSE ON THE PHONE TO TROUBLESHOOT INTERACTIVE DIAG PROBLEM TO NO AVAIL. IT LOOKS LIKE IT WILL NEED A STEERING GEAR BUT
-THIS UNIT HAS NO POWER STEERING ASSIST AND THERE WAS A U2011 AND U3000:96 IN THE PSCM, HOWEVER THE PSCM MODULE IS COMMUNICATING NORMALLY. -I CLEARED DTC'S AND ONLY THE U300:96 RETURNS AND THERE IS STILL NO P/S ASSIST. -I TRIED TO ACCESS THE INTERACTIVE DIAGNOSIS IN THE ONLINE SHOP MANUAL, BUT I WAS NOT ABLE TO ACCESS THIS. -I HAVE CHECKED ALL PSCM MODULE POWER & GROUND PINS AT THE PSCM MODULE FOR GOOD POWER & GROUND AND THEY ARE OK. -WITH JOHN ON THE PHONE I WALKED HIM THROUGH THE ONLINE SHOP MANUAL SECTION 211-00A AND HE WAS FINALLY ABLE TO ACCESS THE PSCM INTERACTIVE DIAGNOSIS SECTION OF THE SHOP MANUAL.

WEB FORM DATA - CONCERN: CUSTOMER STATES VEHICLE HAS NO POWER STEERING DIAGNOSTICS: IDS TEST UNABLE TO COMUNICATE WITH POWER STERING MODULE PARTS REPLACED:: NONE TECH QUESTION: WOULD LIKE TO KNOW IF THERE IS ANY KNOWN CONCERNS WERE YOU ABLE TO VERIFY THE CONCERN? vehicle came in twice for transmission work prior to replacing the EPAS gear. tech replaced the transmission at 21k miles vehicle returned 31k with damaged boot.

This Saturday 8th, AXIS (the company in charge of the sales yard) reported a vehicle that had lost the Gear assistance. The VRT analyst G. Izaguirre went to AXIS to check this car. When the vehicle was turned ON the assistance was back. Izaguirre drove the car to the Final assy repair bay where I met him to review this case
Vehicle rotation # 5310 / VIN : AR[redacted]
EPP # 100841177J30494 / Build Julian date : 124

1. When the steering wheel became stuck, what did the driver do to unstick it? The driver did not do anything, the steering got unstuck it hen he stopped
2. Did the steering wheel become stuck in a turn or while driving straight? The steering got stuck in 3 times, 2 in a curve and 1 in a slight curve.
3. If this happened in a turn, approximately what angle was the wheel? 1st time= -30°…..2nd Time= 30°….. 3rd Time= 5°
4. Driver reports the steering wheel was stuck at least three times. Were the driving conditions the same each time it became stuck, and did the driver do the same action each time to unstuck it? Yes, the driver did not do anything to unstuck it, he said he tried to unstuck it putting force in the steering wheel with no success, until the third time putting this force the steering was released.

First time in customer had collision warning system unavailable & C/C in the message center and the C/C was in/op. tech cleared codes checked all module tech could not duplicate concern. Second time back customer complaint of

I suspect that there is a flaw in the Active Park Assist SW that was exploited by the Magna testing, but I don't think this is an issue we are seeing in production with Valeo. I suspect that Magna used the Angle control in a subtlety different way than Valeo thus exposing the issue. The likely of a true monitor failure is very low and because this occurred in a cobbled vehicle I think it is an issue we need to study and understand, but not consider a true field APA failure. I will work to understand if any data traces from Magna exist that can help us.

FSE ALSO TOUCHED VARIOUS COMPONENTS AND FELT THE NOISE TRASMIT TO VARIOUS SUSPENSION COMPONENTS. FSE UNABLE TO LOCATE THE SOURCE OF THE NOISE. FSE REMOVED THE STEERING AND SUSPENSION FROM THE DRIVER SIDE OF THE VEHICLE AND DISASSEMBLED EACH COMPONENT LOOKING FOR THE CAUSE OF THE NOISE. FSE UNABLE TO IDENTIFY A CAUSE. FSE REINSTALLED ALL COMPONENTS ON THE VEHICLE AND THE NOISE ON THE DRIVER SIDE WAS NOT LONGER PRESENT. THE NOISE WAS STILL PRESENT ON THE PASSENGER SIDE. FSE ROAD TESTED THE VEHICLE AT VARIOUS SPEEDS AND CONDITIONS AND THE NOISE STILL DID NOT COME BACK ON THE DRIVER SIDE OF THE VEHICLE. FSE ADVISED DEALER TO REPEAT THE DISASSEMBLY AND REASSEMBLY PROCEDURE ON THE PASSENGER SIDE THAT WE PERFORMED ON THE DRIVER SIDE AND RETEST TO CONFIRM THE NOISE IS RESOLVED ON BOTH SIDES. DEALER TO ADVISE.ADD-ON 07/15/2010 06:15PM MARTY EVELAND(FSE) MSS - FCSD - REG - DENVER FSE FOLLOW UP AT DEALER 7/15. TECHNICIAN COMPLETED THE R&R PROCEDURE ON THE PASSENGER SIDE OF THE VEHICLE AS DIRECTED BY FSE WHICH RESOLVED THE NOISE ON THE PASSENGER SIDE ALSO. VEHICLE WAS QUITE AND NO ABNORMAL NOISE COULD BE VERIFIED, SO THE VEHICLE

TRACTION CONTROLL LIGHT ON IN LIMP MOAD
DIAG CONCERN PERFORM END PERFORM ELECT. DIAG RETREIVE CODES U2025 P0709 P1280 U0131 U0401 CALLED HOT LINE REPLACE MODULE THAT ONLY COMES WITH RACK AND PINION REPACE RACK AND ALIGNFRONT END ROAD TEST GOOD.
TECH ALSO REPLACE LF WHEEL BEARING NOISE ON THE SAME REPAIR ORDER I BELIEVE THIS CAUSED THE TC LAMP ON & TO ACTIVATE TC AND SLOW THE VEHICLE DOWN.
VEHICLE RETURNED 100 MILES LATER VEHICLE CAME BACK WITH SIMILAR COMPLAINT WENT FROM 60MPH DOWN TO 10 MPH, DEALER COULD NOT DUPLICATE THE CONCERN SO NTF AT THIS TIME.

C S THAT THE TRAC LIGHT COMES ON AND OFF ADVISE SEEMED TO WORK FOR ABOUT A MONTH BUT NOW HAS SAME SYMPTOMS AT BEFORE. COMES ON INTERMITTENTLY DURING HIGHWAY DRIVING ROAD TEST. TRAC LIGHT COMES ON WHEN MAKE LEFT TURN AND GOES OUT ON NEXT TURN. RETRIEVE DTCS ALL PASS. PERFORM P P TEST G FOUND DISABLE SWITCH BAD. REPLACE SWITCH & RETEST. NOT FIXED. CONTACT HOTLINE. CONTINUE WITH P P G. ALL WIRING OK. RECONTACT HOTLINE. MONITOR SENSOR CLUSTER PIDS ALL OK. REPLACE EPAS MODULE PER HOTLINE. ALIGN ALL 4 WHEELS & RETEST. NOT FIXED. CALL HOTLINE. REMOVE PIN 18 CIRCUIT. THIS IS A HOTLINE MISDIAGNOSIS, THERE WERE NO CODES IN THE SYSTEM & THE HOTLINE REP. WHEN AWAY FROM THE SHOP MANUAL AND HAD THE TECH REPLACE THE PSCM, THINKING THAT THE SWA SENSOR WAS IN THE EPAS GEAR AND WITH VEHICLES WITH APA IT HAS A SWA SENSOR IN THE COLUMN. SO THE NEXT TIME THEY CALLED IN THEY FOLLOWED THE ppt PROPERLY AND REPLACED THE IC TO FIX THE VEHICLE BECAUSE THAT CONTROLS THE TC LAMP OPERATION

Unit reported as Steering gear with lack of assist. Checking DTC’s it was found U3000-96 code related to an internal component failure. Checking by CCP B3A fault confirmed.

9:00am-9:30am U502
9:30am-10am CD3/D3-

Hello ,

Eric Estes invites you to attend this online meeting.

Topic: TRW/Ford Warranty Review
Date: Every Monday,

Time: 8:30-10 am, Eastern Daylight Time (New York, GMT-04:00)
Meeting Number: 272 507 023
Meeting Password: (This meeting does not require a password.)

To join the online meeting (Now from iPhones too!)
---
1. Go https://trwnameduser.webex.com
2. Enter Meeting Number: 272 507 023
3. Click "Join Now".

To view in other time zones or languages, please click the link:
https://trw.webex.com/trw/j.php?ED=144609377&UID=1159864637&ORT=MiMxMQ%3D%3D

To join the teleconference only

Call-in toll-free number: 1-866-2519196 (US/Canada)
Call-in number: 1-248-2265571 (US/Canada)
Show global numbers: https://www2.audiocontrols.net/WebExAdaptor/globalnumber?participantcode=1842273552&tollfreecc=1&tollfree=866-2519196&tollnumbercc=1&tollnumber=248-2265571
Conference Code:

For assistance
---
1. Go to https://trwnameduser.webex.com/trw/mc
2. On the left navigation bar, click "Support".

You can contact me at:
anthony.fleenor@trw.com

To add this meeting to your calendar program (for example Microsoft Outlook), click this link:
https://trw.webex.com/trw/j.php?ED=144609377&UID=1159864637&ICS=MI&LD=1&RD=2&ST=1&SHA2=Z6RvPjCBufVgVTBOjPdJs7m9fw-oiH2xzQXO9yYGMG8=&RT=MiMxMQ%3D%3D

The playback of UCF (Universal Communications Format) rich media files requires appropriate players. To view this type of rich media files in the meeting, please check whether you have the players installed on your computer by going to https://trw.webex.com/trw/systemdiagnosis.php

http://www.webex.com

IMPORTANT NOTICE: This WebEx service includes a feature that allows audio and any documents and other materials exchanged or viewed during the session to be recorded. By joining this session, you automatically consent to such recordings. If you do not consent to the recording, do not join the session

Subject: Help with U502 EPAS warranty analysis

Hi Srini,
I talked to Shane and he thought that you might be able to help us with the following analysis. We have a loss of assist failure on U502 which results in a diagnostic code of B9A. Based on previous analysis (see attached powerpoint), there appears to be a trend for hot ambient conditions because most of the warranty returns are coming back between May and Sept and the R/1000 are large in southern states. Next step on this analysis is to get the temperature and humidity of the city in which the vehicle was repaired. In the excel file attached, can you use the "3504 only" tab and use the dealer name column (column O) to look up the city and then the temperature and humidity in that city around the date of repair of the vehicle. I'm sure there will be a range but please pick the highest temperature and highest humidity you see in the range. I'm out on Monday but please let Laura Napoli know if you have any questions.

This is the first step in the analysis. Next step is match the ambient temperature and humidity with the actual temperature of the board inside the EPP. Laura is working on getting this information from the warranty returns through TRW and we would like to get this to you next.

Thank you very much. Your help is appreciated!

Matthew (Matt) Surella
Steering EPAS Supervisor / MBB

Subject: RE: Huntington Ford

I updated my U502 chart today, most of the warranty gears sent are in my chart. All the Ford codes, VIN#'s, dealer name & mileage are in the 2012 U502 open tab.

The relay PCA clean dates have been added to the pareto.

Let me know if you have any questions

Eric,

I have attached the list of U502 ECBs that have been returned to WPAC to your attention.
<< File: U502 Steering Gears ECBs sent to WPAC.xls >>

Could you please tell me root cause of each gear (by VIN) and which BSAQ project addresses each claim. Here is the list of BSAQ projects that we have for steering gear modules.

SAQ2011161617 EPAS B3A motor relay contamination (U3000, U2011 codes)T210R

SAQ2011187769 U502 EPAS gears with C200D DTC (B9A) - Ribbon Misalignment

SAQ2012206614 U502 EPAS gears with C200D DTC (B9A) - Conformal Coating

Subject: RE: Huntington Ford

Marty I believe we are building with clean parts I have MAO tearing down parts to confirm the relay dates. The issue is very intermittent but when the sulfur from the relay contact cleaning solution was getting trapped between a slight crack between the silver & copper bi-metal relay contact. During high humidity and activations this solution now a copper sulfide solution would wick out of this tiny crack onto the top of the contact surface using a capillary effect and would cause intermittent resistance. The fix is to scrap the first 1000 relay contacts at our Tier 3 supplier make proper machine adjustments so the relay contact machine is fully up to temperature then we will never see this crack between the layers during multiple testing at Tyco.
I can estimate this clean date near the beginning of January 2012 but looking for an actual date that Marion plant received these clean relays.

See attachment for all the current 2012 returns at this time

<< File: U502 pareto 1-18.xlsx >>

I'll keep you updated, Thanks

Eric

Eric,

Can you provide a list of all of the U502 gears that were reviewed (from warranty) and tell me what issues were identified?
Neither Brad nor I knew that there were B3A isssues as mentioned below.

Thanks.

Subject: Huntington Ford

Brad/Marty picked up the gear yesterday and found B3A(motor relay) was the only code stored. We have seen 6 relays with CuS (Copper Sulfide) on all 6 of the contacts. We are looking at a few causes now and discussing with Tyco today.

Case Number	Ford DTCs	TRW Code (Symptom)	Component	Gear Location	Current Updates
UR0090 RUA# 5175	U2011-49	B3A	EPP	In eval Tyco	10/17- B3A reapeating PH2 motor relay open contacts. Ship to Tyco 12-7- Tyco found NTF with the relay. SEM on contacts some material found on the contacts that does not affect the operation.
UR0125	U3000-49	A16		in eval MAO	11/11- all a codes set no stored b-codes vehicle only set the TC lamp on it did not lose assist. PPT lead to gear replacement with resetting U3000-49, shipped gear to MAO. No ther parts replaced
UR0126 RUA# 5408	U3000-72	A30, E30	EPP	in process UK	12/6-fault following ECU found low resistance on R28 generating incorrect Vbatt readings on ECU. 1/10- Sergio to raise RUA ship to UK.
UR0127	U0300-00	BFD	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis
UR0128	U3000-49	B25	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis
UR0129	U3000-49	BC5	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis
UR0130	C200B-2F C200B-62	BD2,BD4	TS	in eval MAO	11/11- no damage to the ts harness. pulled stored and EFF data from gear, shipped to MAO for analysis
UR0131	U3000-49 U3000-96	B7E,BAD	EPP	in eval MAO	11/11- pulled stored and EFF data from gear, shipped to MAO for analysis
UR0132	U3000-49 U3000-96	BAE	EPP	in process MAO	11/23- pulled stored and EFF data from gear, shipped to MAO for analysis
UR0133 RUA# 5364	U2011-49 U3000-96	B3A	EPP	in process UK	12/13- could duplicate B3A failure in lab. surrogate relay test OK, ribbon cable wiggle test ok, 5amp test done found faulty motor relay. Save for workshop next year.
UR0134	TC lamp on	mult can codes A2A		in eval MAO	12/9- Tech states intermittent TC lamp on while driving could not get the lamp to come on but tech states he lost communication with the PSCM unknow if he had IDS issues hotline advised to replace PSCM if all the wiring was tested.
UR0135	C200B-2F	BD0, BD2	TS	in eval MAO	12/9- pulled stored and EFF data shipped to MAO for analysis
UR0136	TC lamp on	mult can codes		in eval MAO	12/9- tech replaced the steering gear for C1B00 and mult can codes in all modules and vehicle came back with same TC lamp on in the CQIS report. Unknown what the fix was tech did not mention what was done to fix this issue in AWS, most likely CAN electrical connection issue.
UR0137 RUA# 5414	U2011-49	B3A	EPP	in Eval Tyco	12/20- surrogate relay test ok, wiggle ribbon cable ok, 5amp test cannot find any problems with link relay
UR0138 RUA# 5406	U3000-49	B43	EPP	in Eval Tyco	12/20- surrogate relay test ok, wiggle ribbon cable ok, 5amp test contact issue on link relay
UR0139	C1B00-29 no assist	no stored A or B codes		in eval MAO	12/9- pulled stored and EFF data shipped no codes had one E66 code shipped to MAO for analysis Tech states that there are 8-9 modules that fail the network test then tech states no communication with the PSCM. I had no problems with the communication.
UR0140	C200D-49	B9A	EPP	in eval MAO	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.
UR0142	U3000-49	BA4,BA5,BC2	EPP	in eval MAO	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.

UR0143	U3000-49 U3000-96	B43,B25	EPP	in eval MAO	12/19- pulled EFF and stored data, going to freight ship to MAO on 1/6.
UR0144	PS in/op	no codes		chargeback	12/19- found out dealer replaced two EPAS gears, this was the first did not find anything wrong with the gear. Tech states in the cqis report that this vehicle had a u3000-96 after pulling codes the gear never had a u3000-96. to chargeback the gear.
UR0145	U2011-49	B3A	EPP	in eval MAO	12/19- pulled EFF and stored data, had E66,A66 & A3A codes. going to freight ship to MAO on 1/6.
UR0146	Int. No Com	no codes		in eval MAO	12/19- tech states he has intermittent no communication in the CQIS report. After 15min road test lost communication, problem int. with can bus
UR0147	U2011-49	B3A	EPP	in eval MAO	12/21- pulled EFF & stored data, relay code ship to MAO for analysis
UR0148	U3000-49 U3000-96	B24, BB9	EPP	in eval MAO	12/21- inspection and pulled EFF & stored data, ship to MAO for analysis
UR0149	U2011-49 U3000-96	B3A	EPP	in process MAO	1/17- pulled EFF & stored codes found relay code only set
UR0150	U3000-49 U3000-96	BA4,BA5,BC2,BC1	EPP	in process MAO	1/18- inspected and pulled EFF & stored data, ship to MAO for further analysis.
UR0151	C200B-2F C200B-62 U3000-96	BD2,BD4	TS	in process MAO	1/18- inspect TS harness ok, pulled EFF & stored data, ship to MAO for further analysis
