OPERATOR AND MAINTENANCE MANUAL DELIVERY DOCUMENT

Dear FIRE CHIEF OR TRAINING OFFICER,

This date, 24 JULY 09, Sutphen Corporation delivered to
(Date)
GREEN VALLEY AZ 2 Operator/Service Manual(s) for
(Fire Department) (No. Rec'd)

Service and operation of SPH 100 HS 4596.

1. Sutphen recommends the manual be thoroughly read and studied before trying to operate this apparatus.
2. Sutphen further recommends that this manual be readily available to persons operating and/or servicing this equipment.
3. Sutphen also recommends that no operator drive or work on Sutphen apparatus without being trained by Training Officer or person(s) attending the Demonstration of Operation.
4. We recommend that users of the apparatus view the video/cd with the training officer prior to use of the vehicle.
5. We recommend that the driver be certified or be CDL licensed before driving the apparatus.

Included with these manuals: Video(s) as indicated below

SUTPHEN DEMO & HYD & ELEC ROM
CLASS 1 HALE MENITOR

We recommend the above as we want to eliminate any potential injury resulting from the misuse or negligence on the part of the operator. This is why it is so important to have properly trained personnel to operate the Sutphen apparatus.

1.1 Introduction

This manual has been prepared with the assistance of service and engineering specialists to acquaint you with the operation and maintenance of your new apparatus. You are urged to read this manual carefully. Following the instructions and recommendations in this manual will help ensure the safe and enjoyable operation of your apparatus.

After you have read this manual, it should be stored in the apparatus or another location which enables quick and easy reference for all firefighters.

Throughout this manual, the words **WARNING**, **DANGER**, and **CAUTION** appear. These serve as reminders to follow all instructions carefully. Failure to follow instructions can cause personal injury or damage to your apparatus.

This manual has been written to help in the setup and use of the tower during emergencies.

There may be circumstances that arise throughout the life of this apparatus which do not appear in this manual. At all times, common sense and safety should be your first consideration.

Sutphen knows your apparatus best and has the parts and factory-trained technicians available to keep your apparatus in an ever-ready state. Sutphen Corporation works towards giving you complete satisfaction. Please do not hesitate to contact Sutphen Corporation at 1-866-287-5549.

 Operator Manual

1.2 Aerial Platform Operation

Operation Safety Points

When the truck is delivered, a factory-trained representative will demonstrate the proper use of the apparatus. The department must continue this to achieve a proficient level of training.

The aerial tower is only as good or as safe as the operator is competent. Continued training and familiarization is essential.

An operator **MUST** be at the lower control station anytime the aerial is being operated.

Personnel should not climb the aerial tower until the lower controls operator indicates that it is safe to do so. The upper power switches must be turned off in the platform and at the turntable pedestal before climbing the ladder.

Rating of the aerial: Model SPH 100 - 1,000 lbs.

Rating in the bucket: Model SPH 100 - 500 lbs. while flowing water
or with charged waterway

Do not operate turntable controls while personnel are climbing the tower.

Personnel should use an approved life belt when operating on the aerial tower.

At night, the entire aerial tower should be well lighted.

Do not forcefully extend the end of the tower against a structure.

Never use the aerial as a battering ram.

Never use the aerial for pulling down walls or structural members.

Never willingly or intentionally abuse an aerial by careless handling, overloading, or use for which it was not designed.

ALL OUT.

Operate the aerial with deliberate motions and smooth application of power.

Training and practice with the apparatus on a regular basis is a must for safe operation.

Auxiliary ground pads should always be used under the outrigger feet when operating the aerial tower.

Do not use auxiliary ground pads under the rear jacks unless they are metal, as these jacks are used as a grounding point.

Safety lock pins on stabilizers shall always be in place.

Never move the vehicle with stabilizers in contact with ground.

Most problems encountered with operation of the tower are caused by inadequate maintenance. To keep the tower fully operational, routine lubrication policies should be followed.

The aerial should be inspected and tested annually in accordance with NFPA 1914, Testing Fire Department Aerial Apparatus.

Frequently inspect the chassis and running gear and maintain in good mechanical condition following recommended schedules in this manual. The aerial tower is of no use unless it can be transported to where it is needed. Careful, safe driving rules should be observed for the same reason.

Carefully and frequently check and inspect the entire aerial for loose bolts or rivets, unlubricated bearing surfaces, bent, warped, or twisted parts, hydraulic leaks, defective electric control equipment, etc. Follow the recommended maintenance schedules in this manual.

All members should frequently practice the different phases of aerial operations.

Never set up the aerial on marshy ground, freshly filled ground, or other soft surface.

 Operator Manual

Never apply opposing alternating control when operating the aerial, either in a side-to-side motion, a front-to-rear motion, or an up-and-down motion. This may set up an accelerated oscillation, which could put undue strain on the structure and cause immediate or eventual failure of the aerial tower and injury to the occupants and bystanders.

Do not overload the aerial. Learn and observe the load limit indicated at the operator's positions.

When raising an aerial platform to rescue people at roofs or windows, avoid raising the platform in line with the people. Either raise off to one side and rotate to the people or raise perpendicular to them and rotate toward them. This is because panic-stricken persons seeing the platform within reach below them could try jumping into it.

Although the aerial is designed for one person setup, it is a good safety practice to designate a person to observe the right-side stabilizer when the stabilizers are being set up. This person can place the stabilizer pad and observe that it is placed evenly and correctly and that the stabilizer is set properly.

Many accidents with aerial devices nationwide occur during nonemergency operation. For this reason, the aerial should not be operated by one person alone. Operators checking out or operating the tower alone in front of the station can forget something or be overconfident and get into trouble. "Two heads are better than one".

Never allow an untrained person or a person who is not thoroughly familiar with this aerial to operate it unless constantly supervised.

ALL OUT.

That person must:

1. Be capable of spotting the vehicle properly.
2. Be able to stabilize the vehicle properly.
3. Know the location of every control.
4. Know what each control does and how it works.
5. Be able to operate all controls smoothly and safely.
6. Know the location of safety devices, how they work, and how to operate them.
7. Be familiar with the loads that the aerial can safely accommodate under various operating conditions.
8. Be aware of how to operate the aerial under unusual circumstances.

When you consider the cost of an aerial platform, the lives that could be at stake, and the damage that could occur to the equipment, the importance of practice and training becomes very clear.

WARNING

Before operating this apparatus you must:

1. *Be thoroughly familiar with this instruction manual.*
2. *Be thoroughly trained in the operation of this apparatus.*
3. *Operate this apparatus in strict accordance with the manufacturer's recommendations.*
4. *Operate this apparatus in accordance with departmental rules and regulations.*
5. *Always set up the apparatus on concrete, blacktop, or gravel. Surface must be firm and solid.*

Failure to do so could result in injury or death to persons operating or working on or around this apparatus.

Failure to do so could also result in damage to this apparatus.

1.3 Safety Tags

On the following pages are the various safety tags found on the apparatus. All of the tags found here may not be used on your particular vehicle, as some are related to optional equipment. Included in this manual is a drawing showing the locations of these various tags on the apparatus. Should any of these tags become damaged or lost throughout the life of your vehicle, please contact Sutphen Corporation at 1-866-287-5549 for replacements.

SAFETY INSTRUCTIONS

Jump Starting Precautions:

1. Jump starting with voltages greater than 16 volts DC or reversing the polarity will damage the engine computer.
2. Before attempting to jump-start the engine, make sure jumper cables are connected properly (positive to positive, negative to negative) and in the proper sequence (connect positive to positive first). Failure to do so can result in alternator and/or equipment damage.
3. Reversing battery polarity can also result in personal injury caused by a sudden discharge of electrolyte from the battery vents or by the sudden rupture of the battery case caused by an explosion of internal hydrogen gas.

Battery Charging Precautions

1. When using battery charger to charge batteries, set on 12 VOLT LOW CHARGE. Do not exceed a maximum of 16 volts DC.
2. Electrical damage or explosion can occur when charging batteries or boosting batteries.

Welding Precautions:

1. Serious damage to the ECM(s) and DDEC components may result from welding if all ECM connectors are not disconnected.
2. Serious damage to the multiplexed platform controls may occur if the power supply to them is not disconnected.

SAFETY INSTRUCTIONS

Before raising cab:

1. Read operator manual.
2. Provide sufficient cab clearance.
3. Secure or remove any loose items.
4. Make sure nothing is on the front bumper.
5. Make sure cab doors are shut and latched.
6. Make sure cab tilts fully and the safety bar engages.

Before lowering cab:

1. Make sure all service items are removed from engine area.
2. Raise cab to maximum height to release safety latch.
3. Make sure all personnel are clear of cab area.
4. Pull safety latch handle and hold out to lower cab.
